REGISTRATION DOCUMENT

dated 19 May 2014

of

UBS AG
(a corporation limited by shares established under the laws of Switzerland)

which may also be acting through its Jersey branch:

UBS AG, Jersey Branch
(the Jersey branch of UBS AG)

or through its London branch:

UBS AG, London Branch
(the London branch of UBS AG)

This document has been prepared for the purpose of providing disclosure information with regard to UBS AG (the "**Issuer**") as issuer of debt or derivative securities and constitutes a registration document (the "**Registration Document**") within the meaning of Art. 5 (3) of Directive 2003/71/EC, as amended, in particular by Directive 2010/73/EU, (the "**Prospectus Directive**") and § 12 (1) of the German Securities Prospectus Act (*Wertpapierprospektgesetz* – "**WpPG**") in connection with Art. 14 and Annex XI of the Commission Regulation (EC) No. 809/2004 of 29 April 2004 (the "**Regulation**").

IMPORTANT NOTICES

This Registration Document has been approved by the Federal Financial Services Supervisory Authority (*Bundesanstalt für Finanzdienstleistungsaufsicht* – "BaFin") in accordance with § 13 (1) of the WpPG. This Registration Document as well as any securities notes or (base) prospectuses, either incorporating information from this Registration Document by reference or of which this Registration Document forms part, are available to the public in printed format, free of charge, at the registered offices of the Issuer. In addition, the Registration Document as well as any securities notes or (base) prospectuses, either incorporating information from this Registration Document by reference or of which this Registration Document forms part, are published on the UBS website, at www.ubs.com/keyinvest or a successor address.

No person has been authorised to give any information or to make any representation not contained in or not consistent with this Registration Document, and, if given or made, such information or representation must not be relied upon as having been authorised by the Issuer, or any trustee or any dealer appointed in relation to any issue of debt or derivative securities by the Issuer.

This Registration Document is not intended to provide the basis of any credit or other evaluation and should not be considered as a recommendation by the Issuer, any trustee or any dealer appointed in relation to any issue of debt or derivative securities by the Issuer that any recipient of this Registration Document should purchase any debt or derivative securities issued by the Issuer. Each investor contemplating purchasing debt or derivative securities issued by the Issuer should make its own independent investigation of the financial condition and affairs, and its own appraisal of the creditworthiness, of the Issuer. No part of this Registration Document constitutes an offer or invitation by or on behalf of the Issuer, any trustee or any dealer appointed in relation to any issue of debt or derivative securities by the Issuer or any of them to any person to subscribe for or to purchase any of the debt or derivative securities issued by the Issuer.

This Registration Document is valid for a period of twelve months from the date of its approval. Neither the delivery of this Registration Document or of any securities notes or (base) prospectuses, either incorporating information from this Registration Document by reference or of which this Registration Document forms part, nor the offering, sale or delivery of any debt or derivative securities shall, in any circumstances, create any implication that there has been no change in the affairs of the Issuer since the date hereof. The contents of this Registration Document will be updated in accordance with the provisions of the Prospectus Directive and the WpPG. Any dealer or trustee appointed in relation to any issue of debt or derivative securities by the Issuer expressly does not undertake to review the financial condition or affairs of the Issuer or its subsidiary undertakings during the life of such securities.

The distribution of this Registration Document and the offer or sale of securities issued by the Issuer may be restricted by law in certain jurisdictions. Persons into whose possession this Registration Document or any securities issued by the Issuer come must inform themselves about, and observe, any such restrictions.

I. Persons Responsible

UBS AG, having its registered offices at Bahnhofstrasse 45, 8001 Zurich, Switzerland, and Aeschenvorstadt 1, 4051 Basel, Switzerland, accepts responsibility for the information contained in this Registration Document and declares that the information contained in this Registration Document is, to the best of its knowledge, accurate and that no material facts have been omitted.

Where this Registration Document contains information obtained from third parties, such information was reproduced accurately, and to the best knowledge of the Issuer - as far as it is able to ascertain from information provided or published by such third party - no facts have been omitted which would render the reproduced information inaccurate or misleading.

II. Statutory Auditors

Based on article 31 of the Articles of Association of UBS AG dated 7 February 2014 ("**Articles of Association**"), UBS AG shareholders elect the auditors for a term of office of one year. At the Annual General Meeting of shareholders of UBS ("**AGM**") on 3 May 2012, 2 May 2013 and 7 May 2014, Ernst & Young Ltd., Aeschengraben 9, CH-4002 Basel ("**Ernst & Young**") were elected as auditors for the financial statements of UBS AG and the consolidated financial statements of the UBS Group for a one-year term.

Ernst & Young is a member of the Swiss Institute of Certified Accountants and Tax Consultants based in Zurich, Switzerland.

III. Risk Factors

Investing in the debt or derivative securities of the Issuer involves certain issuer-specific risks. Investments in debt or derivative securities of the Issuer should not be made until all these risk factors have been acknowledged and carefully considered. When making decisions relating to investments in the debt or derivative securities of the Issuer, potential investors should consider following risks factors in respect of the Issuer, which may affect the Issuer's ability to fulfil its obligations under its debt or derivative securities and, if necessary, consult their legal, tax, financial or other advisor.

Prospective investors in any debt or derivative securities of the Issuer should read the entire Registration Document and the relevant securities note or (base) prospectus, either incorporating information from this Registration Document by reference or of which this Registration Document forms part, containing disclosure on certain debt or derivative securities (and where appropriate, the relevant summary note applicable to the relevant debt or derivative securities).

As a global financial services provider, the business activities of UBS AG with its subsidiaries (together "**UBS Group**", "**Group**" or "**UBS**") are affected by certain risks, including those described below, which may impact UBS's ability to execute its strategy and affect its business activities, financial condition, results of operations and prospects. Because the business of a broad-based international financial services firm such as UBS is inherently exposed to risks that become apparent only with the benefit of hindsight, risks of which UBS is not presently aware or which it currently does not consider to be material could also impact its ability to execute its strategy and affect its business activities, financial condition, results of operations and prospects. The sequence in which the risk factors are presented below is not indicative of their likelihood of occurrence or the potential magnitude of their consequences.

General insolvency risk

Each investor bears the general risk that the financial situation of the Issuer could deteriorate. The Securities constitute immediate, unsecured and unsubordinated obligations of the Issuer, which, in particular in the case of insolvency of the Issuer, rank *pari passu* with each other and all other current and future unsecured and unsubordinated obligations of the Issuer, with the exception of those that have priority due to mandatory statutory provisions. The obligations of the Issuer created by the Securities are not secured by a system of deposit guarantees or a compensation scheme. In case of an insolvency of the Issuer, Securityholders may, consequently, suffer a **total loss** of their investment in the Securities.

Effect of downgrading of the Issuer's rating
The general assessment of the Issuer's creditworthiness may affect the value of the Securities. This assessment generally depends on the ratings assigned to the Issuer or its affiliated companies by rating agencies such as Standard & Poor's Credit Market Services Europe Limited, Fitch Ratings Limited and Moody's Investors Service, Inc. As a result, any downgrading of the Issuer's rating by a rating agency may have a negative impact on the value of the Securities.

Regulatory and legislative changes may adversely affect UBS's business and ability to execute its strategic plans
Fundamental changes in the laws and regulations affecting financial institutions can have a material and adverse effect on UBS's business. In the wake of the 2007–2009 financial crisis and the following instability in global financial markets, regulators and legislators have proposed, have adopted, or are actively considering, a wide range of changes to these laws and regulations. These measures are generally designed to address the perceived causes of the crisis and to limit the systemic risks posed by major financial institutions. They include the following:

– significantly higher regulatory capital requirements;

– changes in the definition and calculation of regulatory capital;

– changes in the calculation of risk-weighted assets ("**RWA**");

– the introduction of a more demanding leverage ratio;

– new or significantly enhanced liquidity requirements;

– requirements to maintain liquidity and capital in jurisdictions in which activities are conducted and booked;

– limitations on principal trading and other activities;

– new licensing, registration and compliance regimes;

– limitations on risk concentrations and maximum levels of risk;

– taxes and government levies that would effectively limit balance sheet growth or reduce the profitability of trading and other activities;

– cross-border market access restrictions;

– a variety of measures constraining, taxing or imposing additional requirements relating to compensation;

– adoption of new liquidation regimes intended to prioritize the preservation of systemically significant functions;

– requirements to adopt structural and other changes designed to reduce systemic risk and to make major financial institutions easier to manage, restructure, disassemble or liquidate, including ring-fencing certain activities and operations within separate legal entities; and

– requirements to adopt risk governance structures at a local jurisdiction level.

Many of these measures have been adopted and their implementation had a material effect on UBS's business. Others will be implemented over the next several years; some are subject to legislative action or to further rulemaking by regulatory authorities before final implementation. As a result, there remains a high level of uncertainty regarding a number of the measures referred to above, including whether (or the form in which) they will be adopted, the timing and content of implementing regulations and interpretations and / or the dates of their effectiveness. The implementation of such measures and further, more restrictive changes may materially affect UBS's business and ability to execute its strategic plans.

Notwithstanding attempts by regulators to coordinate their efforts, the measures adopted or proposed differ significantly across the major jurisdictions, making it increasingly difficult to manage a global institution. The absence of a coordinated approach, moreover, disadvantages institutions headquartered in jurisdictions that

impose relatively more stringent standards. Switzerland has adopted capital and liquidity requirements for its major international banks that are the strictest among the major financial centers. This could disadvantage Swiss banks such as UBS when they compete with peer financial institutions subject to more lenient regulation or with unregulated non-bank competitors.

Regulatory and legislative changes in Switzerland
In September 2011, the Swiss Parliament adopted the "too-big- to-fail" ("**TBTF**") law to address the issues posed by large banks. The law became effective on 1 March 2012. Accordingly, Swiss regulatory changes have generally proceeded more quickly than those in other major jurisdictions, and the Swiss Financial Market Supervisory Authority ("**FINMA**"), the Swiss National Bank ("**SNB**") and the Swiss Federal Council are implementing requirements that are significantly more onerous and restrictive for major Swiss banks, such as UBS, than those adopted or proposed by regulatory authorities in other major global financial centers.

Capital regulation: The provisions of the revised banking ordinance and capital adequacy ordinance implementing the Basel III capital standards and the Swiss TBTF law became effective on 1 January 2013. As a systemically relevant Swiss bank, UBS is subject to base capital requirements, as well as a "progressive buffer" that scales with UBS's total exposure (a metric that is based on UBS's balance sheet size) and market share in Switzerland. In addition, the Swiss governmental authorities have the authority to impose an additional countercyclical buffer capital requirement of up to 2.5% of RWA. This authority has been exercised to impose an additional capital charge of 1% in respect of RWA arising from Swiss residential mortgage loans (increasing to 2% effective from the end of June 2014). In addition, UBS and FINMA have mutually agreed to an incremental operational capital requirement to be held against litigation, regulatory and similar matters and other contingent liabilities, which added CHF 22.5 billion to UBS's RWA at 31 December 2013. There can be no assurance that UBS will not in the future be subject to increases in capital requirements either from the imposition of additional requirements or changes in the calculation of RWA or other components of the existing minimum capital requirement.

Liquidity and funding: UBS is required to maintain a Liquidity Coverage Ratio ("**LCR**") of high-quality liquid assets to estimated stressed short-term funding outflows and will be required to maintain a Net Stable Funding Ratio ("NSFR") intended to ensure that UBS is not overly reliant on short-term funding and that it has sufficient long-term funding for illiquid assets. UBS currently calculates these ratios under supervisory guidance from FINMA, as neither the international nor Swiss standards for the calculation of these requirements have been fully implemented. These requirements, together with liquidity requirements imposed by other jurisdictions in which UBS operates, will likely require UBS to maintain substantially higher levels of overall liquidity. Increased capital requirements and higher liquidity requirements make certain lines of business less attractive and may reduce UBS's overall ability to generate profits. The LCR and NSFR calculations make assumptions about the relative likelihood and amount of outflows of funding and available sources of additional funding in a market or firm-specific stress situation. There can be no assurance that in an actual stress situation UBS's funding outflows would not exceed the assumed amounts.

Resolution planning and resolvability: The revised banking act and capital adequacy ordinances provide FINMA with additional powers to intervene to prevent a failure or resolve a failing financial institution. These measures may be triggered when certain thresholds are breached and permit the exercise of considerable discretion by FINMA in determining whether, when or in what manner to exercise such powers. In case of a threatened insolvency, FINMA may impose more onerous requirements on UBS, including restrictions on the payment of dividends and interest. Although the actions that FINMA may take in such circumstances are not yet defined, UBS could be required directly or indirectly, for example, to alter its legal structure (e.g., to separate lines of business into dedicated entities, with limitations on intra-group funding and certain guarantees), or to further reduce business risk levels in some manner. The banking act also provides FINMA with the ability to extinguish or convert to common equity the liabilities of a bank in connection with its resolution.

Swiss TBTF requirements require systemically important banks, including UBS, to put in place viable emergency plans to preserve the operation of systemically important functions despite a failure of the institution, to the extent that such activities are not sufficiently separated in advance. The Swiss TBTF law provides for the possibility of a limited reduction of capital requirements for systemically important institutions that adopt measures to reduce resolvability risk beyond what is legally required. Such actions would likely include an alteration of the legal structure of a bank group in a manner that would insulate parts of the group to exposure from risks arising from other parts of the group thereby making it easier to dispose of certain parts of the group in a recovery scenario, to liquidate or dispose of certain parts of the group in a resolution scenario or to execute a debt bail-in. In view of these factors, UBS intends to establish a group holding company through a share for share exchange offer, which will commence later this year, subject to regulatory approvals. UBS also

intends to establish a banking subsidiary in Switzerland in mid-2015. The scope of this future subsidiary's business is expected to include UBS's Retail & Corporate business and the Swiss-booked Wealth Management business. These structural changes have been discussed with FINMA and other regulatory authorities. The dialogue with regulators will continue and the changes remain subject to some uncertainties that may affect their feasibility, scope or timing.UBS may consider further changes to the legal structure of the Group in response to regulatory requirements in Switzerland or in other countries in which it operates, including to improve the resolvability of the UBS Group, to respond to Swiss and other capital requirements (including seeking potential reduction in the progressive buffer requirement as applied to UBS) and to respond to regulatory required changes in legal structure. Movement of businesses to a new subsidiary ("subsidiarization") will require significant time and resources to implement. "Subsidiarization" in Switzerland and elsewhere may create operational, capital, funding and tax inefficiencies and increase UBS's and counterparties' credit risk. Refer to "Regulatory and legislative changes outside Switzerland" for a description of other regulatory and legislative developments that may affect these decisions and further discussion of these risks.

In September 2013, the Swiss National Council approved two motions for the mandatory structural reform of banks in Switzerland that would, if also adopted by the Council of States, result in the submission to Parliament of a law requiring the separation of certain investment banking activities from systemically relevant activities, such as retail and commercial banking. No date has been set for the debate. It is unclear whether, when and in what form such a law will be adopted.

Market regulation: The Swiss government is working on fundamentally reviewing the rules on market infrastructure and on the relationship between UBS and its clients. These laws may, if enacted, have a material impact on the market infrastructure that UBS uses, available platforms, collateral management and the way UBS interacts with clients. In addition, these initiatives may cause UBS to incur material implementation costs.

Regulatory and legislative changes outside Switzerland

Regulatory and legislative changes in other locations in which UBS operates may subject UBS to a wide range of new restrictions both in individual jurisdictions and, in some cases, globally.

Banking structure and activity limitations: Some of these regulatory and legislative changes may subject UBS to requirements to move activities from UBS AG branches into subsidiaries. Such "subsidiarization" can create operational, capital and tax inefficiencies, increase UBS's aggregate credit exposure to counterparties as they transact with multiple UBS AG affiliates, expose UBS's businesses to higher local capital requirements, and potentially give rise to client and counterparty concerns about the credit quality of individual subsidiaries. Such changes could also negatively impact UBS's funding model and severely limit its booking flexibility.

For example, UBS has significant operations in the UK and currently uses UBS AG's London branch as a global booking center for many types of products. UBS is being required by the UK Prudential Regulatory Authority and by FINMA to increase very substantially the capitalization of its UK bank subsidiary, UBS Limited, and expects to be required to change its booking practices to reduce or even eliminate its utilization of UBS AG London branch as a global booking center for the ongoing business of the Investment Bank. In addition, the UK Independent Commission on Banking has recommended structural and non-structural reforms of the banking sector, most of which have been endorsed by the UK government and implemented in the Financial Services (Banking Reform) Act. Key measures proposed include the ring-fencing of retail banking activities in the UK (which UBS does not expect to impact UBS directly), additional common equity tier 1 capital requirements of up to 3% of RWA for retail banks, and the issuance by UK banks of debt subject to "bail-in" provisions. Furthermore, the European Commission's recent proposals in light of the Liikanen report also advocate a Volcker-style prohibition on proprietary trading together with a separation of trading from banking activities. The applicability and implications of such changes to branches and subsidiaries of foreign banks are not yet entirely clear, but they could have a material effect on UBS's businesses located or booked in the UK.

In February 2014, the Federal Reserve Board issued final rules for foreign banking organizations ("**FBO**") operating in the US (under section 165 of the Dodd-Frank Wall Street Reform and Consumer Protection Act) that include the following: (i) a requirement for FBO with more than USD 50 billion of US non-branch assets to establish an intermediate holding company ("**IHC**") to hold all US subsidiary operations, (ii) risk-based capital and leverage requirements for the IHC, (iii) liquidity requirements, including a 30-day onshore liquidity requirement for the IHC, (iv) risk management requirements including the establishment of a risk committee and the appointment of a US chief risk officer, (v) stress test and capital planning requirements and (vi) a debt-to-equity limit for institutions that pose "a grave threat" to US financial stability. Requirements differ based on the overall size of the foreign banking organization and the amount of its US-based assets. UBS expects that it

will be subject to the most stringent requirements based on its current operations. UBS will have until 1 July 2016 to establish an IHC and meet many of the new requirements. UBS must submit an implementation plan by 1 January 2015 and the IHC will not need to comply with the US leverage ratio until 1 January 2018.

US regulators published final regulations implementing the Volcker Rule in December 2013 and generally extended until 2015 the time to conform to this rule and the related regulations. In general, the Volcker Rule prohibits any banking entity from engaging in proprietary trading and from owning interests in hedge funds and other private fund vehicles. The Volcker Rule also broadly limits investments and other transactional activities between a bank and funds that the bank has sponsored or with which the bank has certain other relationships. The Volcker Rule permits UBS and other non-US banking entities to engage in certain activities that would otherwise be prohibited to the extent that they are conducted solely outside the US and certain other conditions are met. One impact will be the need to establish an extensive global compliance framework designed to ensure compliance with the Volcker Rule and the terms of the available exemptions. Moreover, the Volcker Rule could have an impact on the way in which UBS organizes and conducts certain business lines. UBS continues to evaluate the final rule and its impact on its activities. The Volcker Rule could have a substantial impact on market liquidity and the economics of market-making activities.

OTC derivatives regulation: In 2009, the G20 countries committed to require all standardized over-the-counter ("**OTC**") derivative contracts to be traded on exchanges or trading facilities and cleared through central counterparties by the end of 2012. This commitment is being implemented through the Dodd-Frank Wall Street Reform and Consumer Protection Act in the US and corresponding legislation in the European Union, Switzerland and other jurisdictions, and will have a significant impact on UBS's OTC derivatives business, which is conducted primarily in the Investment Bank. For example, UBS expects that, as a rule, the shift of OTC derivatives trading to a central clearing model will tend to reduce profit margins in these products, although some market participants may be able to offset this effect with higher trading volumes in commoditized products. Although UBS is preparing for these thematic market changes, they are likely to reduce the revenue potential of certain lines of business for market participants generally, and UBS may be adversely affected.

UBS AG registered as a swap dealer with the Commodity Futures Trading Commission ("**CFTC**") in the US at the end of 2012, enabling the continuation of swaps business with US persons. UBS also expects that UBS AG will be required to register as a securities-based swap dealer with the US Securities and Exchange Commission ("**SEC**"). Regulations issued by the CFTC impose substantial new requirements on registered swap dealers for clearing, trade execution, transaction reporting, recordkeeping, risk management and business conduct. Certain of the CFTC's regulations, including those relating to swap data reporting, recordkeeping, compliance and supervision, are expected to apply to UBS AG globally. In July 2013, the CFTC approved final cross-border guidance that defines the extraterritorial application of its swaps regulations. This guidance may allow non-US swap dealers, such as UBS AG, to operate on the basis of "substituted compliance," under which they may comply with home country requirements instead of the corresponding CFTC requirements if the CFTC determines the home country requirements to be "comprehensive and comparable." In December 2013, the CFTC issued comparability determinations for Switzerland (as well as the home countries of certain other non-US swap dealers) that will allow UBS to comply with relevant Swiss regulations instead of CFTC requirements for many, but not all, of the CFTC regulations for which substituted compliance is available. While the CFTC deferred a comparability determination on swap data reporting requirements as UBS continues to review the issue, it granted reporting no-action relief that allows UBS AG (and other non-US swap dealers) to delay reporting transactions with non-US persons for several months. The CFTC's regulations will apply to swaps between non-US persons and non-US swap dealers when US personnel are involved, but in January 2014, the CFTC delayed the applicability of US regulations in this context until 15 September 2014, giving additional time for foreign swap dealers to comply with US requirements regarding transactions with non-US persons conducted from the US. Application of these requirements to UBS's swaps business with non-US persons continues to present a substantial implementation burden, will likely duplicate or conflict with legal requirements applicable to UBS outside of the US and may place UBS at a competitive disadvantage to firms that are not CFTC-registered swap dealers.

Regulation of cross-border provision of financial services: In many instances, UBS provides services on a cross-border basis and is therefore sensitive to barriers restricting market access for third-country firms. In particular, efforts in the European Union ("**EU**") to harmonize the regime for third-country firms to access the European market may have the effect of creating new barriers that adversely affect UBS's ability to conduct business in these jurisdictions from Switzerland. In addition, a number of jurisdictions are increasingly regulating cross-border activities on the basis of some notion of comity (e.g., substituted compliance, equivalence determination). While the issuance of such determinations in particular jurisdictions may ensure market access for UBS to those jurisdictions, a negative determination in other jurisdictions may negatively influence UBS's

ability to act as a global firm. In addition, as jurisdictions tend to apply such determinations on a jurisdictional level rather than on an entity level, UBS will generally need to rely on jurisdictions' willingness to collaborate.

Resolution and recovery; bail-in
UBS is currently required to produce recovery and resolution plans in the US, UK, Switzerland and Germany and is likely to face similar requirements for its operations in other jurisdictions, including its operations in the EU as a whole, as part of the proposed EU Bank Recovery and Resolution Directive. Resolution plans may increase the pressure on UBS to make structural changes, such as the creation of separate legal entities, if the resolution plan in any jurisdiction identifies impediments that are not acceptable to the relevant regulators. Such structural changes may negatively impact UBS's ability to benefit from synergies between business units, and if they include the creation of separate legal entities, may have the other negative consequences mentioned above with respect to "subsidiarization" more generally.

In addition, a number of jurisdictions, including Switzerland, the US, the UK and the EU, have implemented or are considering implementing changes that would allow resolution authorities to write down or convert into equity unsecured debt to effectuate a so-called "bail-in." Some jurisdictions are also considering adopting requirements that regulated firms maintain specified amounts of unsecured debt that could increase loss-absorbing capacity. The scope of bail-in authority and the legal mechanisms that would be utilized for the purpose are subject to a great deal of development and interpretation. Depending upon the outcome, bail-in authority may have a significant effect on UBS's funding costs.

Possible consequences of regulatory and legislative developments
The planned and potential regulatory and legislative developments in Switzerland and in other jurisdictions in which UBS has operations may have a material adverse effect on UBS's ability to execute its strategic plans, on the profitability or viability of certain business lines globally or in particular locations, and in some cases on its ability to compete with other financial institutions. They are likely to be costly to implement and could also have a negative impact on UBS's legal structure or business model, potentially generating capital inefficiencies and resulting in an impact on UBS's profitability. Finally, the uncertainty related to or the implementation of legislative and regulatory changes may have a negative impact on UBS's relationships with clients and its success in attracting client business.

UBS's capital strength is important in supporting its strategy, client franchise and competitive position
UBS's capital position, as measured by the fully applied common equity tier 1 and total capital ratios under Basel III requirements, is determined by: (i) RWA (credit, non-counterparty related, market and operational risk positions, measured and risk-weighted according to regulatory criteria); and (ii) eligible capital. Both RWA and eligible capital may fluctuate based on a number of factors. RWA are driven by UBS's business activities and by changes in the risk profile of its exposures, as well as regulatory requirements. For instance, substantial market volatility, a widening of credit spreads (the major driver of UBS's value-at-risk), adverse currency movements, increased counterparty risk, a deterioration in the economic environment, or increased operational risk could result in a rise in RWA. Eligible capital would be reduced if UBS experiences net losses or losses through other comprehensive income, as determined for the purpose of the regulatory capital calculation, which may also render it more difficult or more costly for UBS to raise new capital. In addition, eligible capital can be reduced for a number of other reasons, including certain reductions in the ratings of securitization exposures, acquisitions and divestments changing the level of goodwill, adverse currency movements affecting the value of equity, prudential adjustments that may be required due to the valuation uncertainty associated with certain types of positions, and changes in the value of certain pension fund assets and liabilities recognized in other comprehensive income. Any such increase in RWA or reduction in eligible capital could materially reduce UBS's capital ratios.

Risks captured in the operational risk component of RWA have become increasingly significant as a component of UBS's overall RWA as a result of significant reductions in market and credit risk RWA, as UBS executes its strategy, and increased operational risk charges arising from operational risk events (including charges arising from litigation, regulatory and similar matters). UBS has agreed with FINMA on a supplemental analysis that will be used to calculate an incremental operational risk capital charge to be held for litigation, regulatory and similar matters and other contingent liabilities. The incremental RWA calculated based on this supplemental analysis as of 31 December 2013 was CHF 22.5 billion. Future developments in and the ultimate elimination of the incremental RWA attributable to the supplemental analysis will depend on provisions charged to earnings for litigation, regulatory and similar matters and other contingent liabilities and on developments in these matters. There can be no assurance that UBS will be successful in addressing these matters and reducing or eliminating the incremental operational risk RWA.

The required levels and calculation of UBS's regulatory capital and the calculation of its RWA are also subject to changes in regulatory requirements or their interpretation, as well as the exercise of regulatory discretion. Changes in the calculation of RWA under Basel III and Swiss requirements (such as the revised treatment of certain securitization exposures under the Basel III framework) have significantly increased the level of UBS's RWA and, therefore, have adversely affected UBS's capital ratios. UBS has achieved substantial reductions in RWA, in part to mitigate the effects of increased capital requirements. However, there is a risk that UBS will not be successful in pursuing its plans to further reduce RWA, either because UBS is unable to carry out fully the actions it has planned or because other business or regulatory developments or actions to some degree counteract the benefit of its actions.

In addition to the risk-based capital requirements, UBS is subject to a minimum leverage ratio requirement for Swiss systemically relevant banks. The leverage ratio operates separately from the risk-based capital requirements, and, accordingly, under certain circumstances could constrain UBS's business activities even if UBS is able to satisfy other risk-based capital requirements. UBS has achieved substantial reductions in its balance sheet size and anticipates further reductions as it winds down its Non-core and Legacy Portfolio positions. These reductions would improve UBS's leverage ratio and contribute to its ability to comply with the more stringent leverage ratio requirements scheduled to become effective in future years. There can be no assurance that these plans will be executed successfully. There is also a risk that the minimum leverage ratio requirement will be increased significantly beyond the levels currently scheduled to come into effect, making it more difficult for UBS to satisfy the requirements without adversely affecting certain of its businesses.

Changes in the Swiss requirements for risk-based capital or leverage ratios, whether pertaining to the minimum levels required for large Swiss banks or to the calculation thereof, could have a material adverse effect on UBS's business and could affect UBS's competitive position internationally compared with institutions that are regulated under different regimes.

UBS may not be successful in completing its announced strategic plans or in implementing changes in its businesses to meet changing market, regulatory and other conditions

In October 2012, UBS announced a significant acceleration in the implementation of its strategy. The strategy included transforming UBS's Investment Bank to focus it on its traditional strengths, very significantly reducing Basel III RWA and further strengthening UBS's capital position, and significantly reducing costs and improving efficiency across the Group. UBS has made significant progress in implementing the strategy and as of the end of 2013 is ahead of the majority of its performance targets. There continues to be a risk that UBS will not be successful in completing the execution of its plans, or that its plans may be delayed or that the effects of its plans may differ from those intended.

Although UBS has substantially reduced the RWA and balance sheet usage associated with its Non-core and Legacy Portfolio positions, there can be no assurance that UBS will be able to exit them as quickly as its plans suggest or that it will not incur significant losses in doing so. The continued illiquidity and complexity of many of the legacy risk positions in particular could make it difficult to sell or otherwise exit these positions and reduce the RWA and the balance sheet usage associated with these exposures. At the same time, UBS's strategy rests heavily on its ability to reduce those RWA and balance sheet usage in order to meet its future capital targets and requirements without incurring unacceptable losses.

As part of its strategy, UBS has underway a program to achieve significant incremental cost reductions. The success of UBS's strategy and its ability to reach certain of the targets it has announced depends heavily on the effectiveness of the cost reduction and efficiency measures UBS is able to carry out. As is often the case with major cost reduction and efficiency programs, UBS's plans involve significant risks. Included among these are the risks that restructuring costs may be higher and may be recognized sooner than UBS has projected and that UBS may not be able to identify feasible cost reduction opportunities at the level of its objective that are also consistent with its business goals. In addition, when UBS implements its cost reduction and efficiency programs it may experience unintended consequences such as the loss or degradation of capabilities that UBS needs in order to maintain its competitive position and achieve its targeted returns.

UBS is exposed to possible outflows of client assets in its asset-gathering businesses and to changes affecting the profitability of its Wealth Management business division, and UBS may not be successful in implementing the business changes needed to address them. UBS experienced substantial net outflows of client assets in its wealth management and asset management businesses in 2008 and 2009. The net outflows resulted from a number of different factors, including UBS's substantial losses, the damage to UBS's reputation, the loss of client advisors, difficulty in recruiting qualified client advisors and tax, legal and regulatory developments concerning UBS's cross-border private banking business.

Many of these factors have been successfully addressed. UBS's Wealth Management and Wealth Management Americas business divisions recorded substantial net new money inflows in 2013.

Long-term changes affecting the cross-border private banking business model will, however, continue to affect client flows in the Wealth Management business division for an extended period of time. One of the important drivers behind the longer-term reduction in the amount of cross-border private banking assets, particularly in Europe but increasingly also in other regions, is the heightened focus of fiscal authorities on cross-border investments. Changes in local tax laws or regulations and their enforcement may affect the ability or the willingness of UBS's clients to do business with UBS or the viability of UBS's strategies and business model. In 2012 and 2013, UBS experienced net withdrawals in its Swiss booking center from clients domiciled elsewhere in Europe, in many cases related to the negotiation of tax treaties between Switzerland and other countries, including the treaty with Germany that was ultimately not ratified by Germany.

The net new money inflows in recent years in UBS's Wealth Management business division have come predominantly from clients in Asia Pacific and in the ultra high net worth segment globally. Over time, inflows from these lower-margin segments and markets have been replacing outflows from higher-margin segments and markets, in particular cross-border European clients. This dynamic, combined with changes in client product preferences as a result of which low-margin products account for a larger share of UBS's revenues than in the past, put downward pressure on UBS's return on invested assets and adversely affect the profitability of its Wealth Management business division. UBS has implemented changes in its product offerings and service improvements, and will continue its efforts to adjust to client trends and market dynamics as necessary, in an effort to overcome the effects of these changes in the business mix on its profitability, but there can be no assurance that UBS will be able to counteract those effects. In addition, UBS has made changes to its business offerings and pricing practices in line with the Swiss Supreme Court case concerning “retrocessions” and other industry developments. These changes may adversely affect UBS's margins on these products and the current offering may be less attractive to clients than the products it replaces. There can be no assurance that UBS will be successful in its efforts to offset the adverse impact of these trends and developments.

Global Asset Management experienced net outflows of client assets in 2012 and 2013. Further net outflows of client assets could adversely affect the results of this business division.

Material legal and regulatory risks arise in the conduct of UBS's business

The nature of its business subjects UBS to significant regulatory oversight and liability risk. As a global financial services firm operating in more than 50 countries, UBS is subject to many different legal, tax and regulatory regimes. UBS is involved in a variety of claims, disputes, legal proceedings and government investigations in jurisdictions where it is active. These proceedings expose UBS to substantial monetary damages and legal defense costs, injunctive relief and criminal and civil penalties, in addition to potential regulatory restrictions on its businesses. The outcome of most of these matters, and their potential effect on UBS's future business or financial results, is extremely difficult to predict.

UBS is subject to a large number of claims, disputes, legal proceedings and government investigations and expects that its ongoing business activities will continue to give rise to such matters in the future. The extent of UBS's financial exposure to these and other matters could be material and could substantially exceed the level of provisions that UBS has established for litigation, regulatory and similar matters.

In December 2012, UBS announced settlements totaling approximately CHF 1.4 billion in fines by and disgorgements to US, UK and Swiss authorities to resolve investigations by those authorities relating to LIBOR and other benchmark interest rates. UBS AG entered into a non-prosecution agreement with the US Department of Justice and UBS Securities Japan Co. Ltd. also pled guilty to one count of wire fraud relating to the manipulation of certain benchmark interest rates. The settlements do not resolve investigations by other authorities or civil claims that have been or may in the future be asserted by private and governmental claimants with respect to submissions for LIBOR or other benchmark interest rates. The extent of UBS's financial exposure to these remaining matters is extremely difficult to estimate and could be material.

These settlements starkly illustrate the much-increased level of financial and reputational risk now associated with regulatory matters in major jurisdictions. Very large fines and disgorgement amounts were assessed against UBS, and the guilty plea of a UBS subsidiary was required, in spite of UBS's full cooperation with the authorities in the investigations relating to LIBOR and other benchmark interest rates, and in spite of UBS's receipt of conditional leniency or conditional immunity from antitrust authorities in a number of jurisdictions, including the US and Switzerland. UBS understands that, in determining the consequences to UBS, the

authorities considered the fact that it has in the recent past been determined to have engaged in serious misconduct in several other matters. The heightened risk level was further illustrated by the European Commission ("**EC**") announcement in December 2013 of fines against other financial institutions related to its Yen Interest Rate Derivatives ("**YIRD**") investigation. The EC stated that UBS would have been subject to fines of approximately EUR 2.5 billion had UBS not received full immunity for disclosing to the EC the existence of infringements relating to YIRD.

Under the non-prosecution agreement UBS entered into in connection with the LIBOR matter, UBS has agreed, among other things, that, for two years from 18 December 2012 it will not commit any US crime, and it will advise the Department of Justice of all potentially criminal conduct by UBS or any of its employees relating to violations of US laws concerning fraud or securities and commodities markets. UBS is also obligated to continue to cooperate fully with the Department of Justice. Failure to comply with these obligations could result in termination of the non-prosecution agreement and potential criminal prosecution in relation to the matters covered by the non-prosecution agreement. As a result of this history and UBS's ongoing obligations under the non-prosecution agreement, UBS's level of risk with respect to regulatory enforcement may be greater than that of some of its peer institutions.

Considering UBS's overall exposures and the current regulatory and political climate affecting financial institutions, UBS expects charges associated with legal, regulatory and similar matters to remain at elevated levels through 2014.

Ever since its losses in 2007 and 2008, UBS has been subject to a very high level of regulatory scrutiny and to certain regulatory measures that constrain its strategic flexibility. While UBS believes that it has remediated the deficiencies that led to the material losses during the 2007–2009 financial crisis, the unauthorized trading incident announced in September 2011 and the LIBOR-related settlements of 2012, the effects of these matters on its reputation and relationships with regulatory authorities have proven to be more difficult to overcome. For example, following the unauthorized trading incident FINMA informed UBS that it would not be permitted to undertake acquisitions in its Investment Bank unit (unless FINMA granted an exception), and that material new business initiatives in that unit would be subject to FINMA oversight. UBS is determined to address the issues that have arisen in the above and other matters in a thorough and constructive manner. UBS is in active dialogue with its regulators concerning the actions that it is taking to improve its operational risk management and control framework, but there can be no assurance that its efforts will have the effects desired. Although the special restrictions mentioned above have recently been withdrawn by FINMA, this example illustrates that difficulties associated with UBS's relationships with regulatory authorities have the potential to adversely affect the execution of its business strategy.

Operational risks may affect UBS's business

All of UBS's businesses are dependent on UBS's ability to process a large number of complex transactions across multiple and diverse markets in different currencies, to comply with requirements of many different legal and regulatory regimes to which UBS is subject and to prevent, or promptly detect and stop, unauthorized, fictitious or fraudulent transactions. UBS's operational risk management and control systems and processes are designed to help ensure that the risks associated with its activities, including those arising from process error, failed execution, unauthorized trading, fraud, system failures, cyber-attacks, breaches of information security and failure of security and physical protection, are appropriately controlled.

For example, cyber-crime is a fast growing threat to large organizations that rely on technology to support their business, like UBS. Cyber-crime can range from internet-based attacks that interfere with the organizations' internet websites, to more sophisticated crimes that target the organizations, as well as their clients, and seek to gain unauthorized access to technology systems in efforts to disrupt business, steal money or obtain sensitive information.

A major focus of US governmental policy relating to financial institutions in recent years has been fighting money laundering and terrorist financing. Regulations applicable to UBS and its subsidiaries impose obligations to maintain effective policies, procedures and controls to detect, prevent and report money laundering and terrorist financing, and to verify the identity of their clients. Failure to maintain and implement adequate programs to combat money laundering and terrorist financing could have serious consequences, both in legal terms and in terms of UBS's reputation.

Although UBS is continuously adapting its capability to detect and respond to the risks described above, if its internal controls fail or prove ineffective in identifying and remedying them UBS could suffer operational

failures that might result in material losses, such as the loss from the unauthorized trading incident announced in September 2011.

Participation in high-volume and high-frequency trading activities, even in the execution of client-driven business, can also expose UBS to operational risks. UBS's loss in 2012 relating to the Facebook initial public offering illustrates the exposure participants in these activities have to unexpected results arising not only from their own systems and processes but also from the behavior of exchanges, clearing systems and other third parties and from the performance of third-party systems.

Certain types of operational control weaknesses and failures could also adversely affect UBS's ability to prepare and publish accurate and timely financial reports. UBS identified control deficiencies following the unauthorized trading incident announced in September 2011, and management determined that UBS had a material weakness in its internal control over financial reporting as of the end of 2010 and 2011, although this has not affected the reliability of UBS's financial statements for either year.

In addition, despite the contingency plans UBS has in place, its ability to conduct business may be adversely affected by a disruption in the infrastructure that supports its businesses and the communities in which UBS is located. This may include a disruption due to natural disasters, pandemics, civil unrest, war or terrorism and involve electrical, communications, transportation or other services used by UBS or third parties with whom UBS conducts business.

UBS's reputation is critical to the success of UBS’s business

UBS's reputation is critical to the success of UBS’s strategic plans. Damage to its reputation can have fundamental negative effects on UBS's business and prospects. Reputational damage is difficult to reverse, and improvements tend to be slow and difficult to measure. This was demonstrated in recent years, as UBS's very large losses during the financial crisis, the US cross-border matter and other events seriously damaged UBS's reputation. Reputational damage was an important factor in UBS's loss of clients and client assets across UBS's asset-gathering businesses, and contributed to its loss of and difficulty in attracting staff, in 2008 and 2009. These developments had short-term and also more lasting adverse effects on UBS's financial performance, and UBS recognized that restoring its reputation would be essential to maintaining its relationships with clients, investors, regulators and the general public, as well as with its employees. More recently, the unauthorized trading incident announced in September 2011 and UBS's involvement in the LIBOR matter also adversely affected UBS's reputation. Any further reputational damage could have a material adverse effect on UBS's operational results and financial condition and on UBS’s ability to achieve its strategic goals and financial targets.

Performance in the financial services industry is affected by market conditions and the macroeconomic climate

The financial services industry prospers in conditions of economic growth; stable geopolitical conditions; transparent, liquid and buoyant capital markets and positive investor sentiment. An economic downturn, continued low interest rates or weak or stagnant economic growth in UBS's core markets, or a severe financial crisis can negatively affect UBS's revenues and ultimately its capital base.

A market downturn and weak macroeconomic conditions can be precipitated by a number of factors, including geopolitical events, changes in monetary or fiscal policy, trade imbalances, natural disasters, pandemics, civil unrest, war or terrorism. Because financial markets are global and highly interconnected, even local and regional events can have widespread impacts well beyond the countries in which they occur. A crisis could develop, regionally or globally, as a result of disruptions in emerging markets as well as developed markets that are susceptible to macroeconomic and political developments, or as a result of the failure of a major market participant. UBS has material exposures to a number of these markets, both as a wealth manager and as an investment bank. Moreover, UBS's strategic plans depend more heavily upon its ability to generate growth and revenue in emerging markets, causing UBS to be more exposed to the risks associated with them. The continued absence of sustained and credible improvements to unresolved issues in Europe, continued US fiscal and monetary policy issues, emerging markets fragility and the mixed outlook for global growth demonstrate that macroeconomic and political developments can have unpredictable and destabilizing effects. Adverse developments of these kinds have affected UBS's businesses in a number of ways, and may continue to have further adverse effects on UBS’s businesses as follows:

– a general reduction in business activity and market volumes, as UBS has recently experienced, affects fees, commissions and margins; local or regional economic factors, such as the ongoing European sovereign debt concerns, could also have an effect on UBS;

- a market downturn is likely to reduce the volume and valuations of assets UBS manages on behalf of clients, reducing its asset- and performance-based fees;

- the ongoing low interest rate environment will further erode interest margins in several of UBS's businesses;

- reduced market liquidity or volatility limits trading and arbitrage opportunities and impedes UBS's ability to manage risks, impacting both trading income and performance-based fees;

- deteriorating market conditions could cause a decline in the value of assets that UBS owns and accounts for as investments or trading positions;

- worsening economic conditions and adverse market developments could lead to impairments and defaults on credit exposures and on trading and investment positions, and losses may be exacerbated by declines in the value of collateral UBS holds; and

- if individual countries impose restrictions on cross-border payments or other exchange or capital controls, or change their currency (for example, if one or more countries should leave the euro), UBS could suffer losses from enforced default by counterparties, be unable to access its own assets, or be impeded in – or prevented from – managing its risks.

Because UBS has very substantial exposures to other major financial institutions, the failure of one or more of such institutions could have a material effect on UBS.

The developments mentioned above have in the past affected and could materially affect the performance of UBS's business units and of UBS as a whole, and ultimately its financial condition. As discussed below, there is also a somewhat related risk that the carrying value of goodwill of a business unit might suffer impairments and deferred tax assets levels may need to be adjusted.

UBS holds legacy and other risk positions that may be adversely affected by conditions in the financial markets; legacy risk positions may be difficult to liquidate

UBS, like other financial market participants, was severely affected by the financial crisis that began in 2007. The deterioration of financial markets since the beginning of the crisis was extremely severe by historical standards, and UBS recorded substantial losses on fixed income trading positions, particularly in 2008 and 2009. Although UBS has very significantly reduced its risk exposures starting in 2008, and more recently as it progresses its strategy and focuses on complying with Basel III capital standards, UBS continues to hold substantial legacy risk positions, primarily in its Non-core and Legacy Portfolio. In many cases these risk positions remain illiquid, and UBS continues to be exposed to the risk that the remaining positions may again deteriorate in value. In the fourth quarter of 2008 and the first quarter of 2009, certain of these positions were reclassified for accounting purposes from fair value to amortized cost; these assets are subject to possible impairment due to changes in market interest rates and other factors.

Moreover, UBS holds positions related to real estate in various countries, and could suffer losses on these positions. These positions include a very substantial Swiss mortgage portfolio. Although management believes that this portfolio has been very prudently managed, UBS could nevertheless be exposed to losses if the concerns expressed by the Swiss National Bank and others about unsustainable price escalation in the Swiss real estate market come to fruition. Other macroeconomic developments, such as the implications on export markets of any return of crisis conditions within the eurozone and the potential implications of the recent decision in Switzerland to reinstate immigration quotas for EU / EEA countries, could also adversely affect the Swiss economy, UBS's business in Switzerland in general and, in particular, UBS's Swiss mortgage and corporate loan portfolios.

In addition, UBS is exposed to risk in its prime brokerage, reverse repo and Lombard lending activities, as the value or liquidity of the assets against which UBS provides financing may decline rapidly.

UBS's global presence subjects it to risk from currency fluctuations

UBS prepares its consolidated financial statements in Swiss francs. However, a substantial portion of its assets, liabilities, invested assets, revenues and expenses are denominated in other currencies, particularly the US dollar, the euro and the British pound. Accordingly, changes in foreign exchange rates, particularly between the

Swiss franc and the US dollar (US dollar revenues account for the largest portion of UBS's non-Swiss franc revenues) have an effect on UBS's reported income and expenses, and on other reported figures such as other comprehensive income, invested assets, balance sheet assets, RWA and tier 1 capital. For example, in 2011 the strengthening of the Swiss franc, especially against the US dollar and euro, had an adverse effect on UBS's revenues and invested assets. Because exchange rates are subject to constant change, sometimes for completely unpredictable reasons, UBS's results are subject to risks associated with changes in the relative values of currencies.

UBS is dependent upon its risk management and control processes to avoid or limit potential losses in its counterparty credit and trading businesses

Controlled risk-taking is a major part of the business of a financial services firm. Credit risk is an integral part of many of UBS's retail, corporate, wealth management and Investment Bank activities, and UBS's non-core activities transferred to Corporate Center – Non-core and Legacy Portfolio, including lending, underwriting and derivatives activities. Changes in interest rates, credit spreads, securities' prices, market volatility and liquidity, foreign exchange levels and other market fluctuations can adversely affect UBS's earnings. Some losses from risk-taking activities are inevitable, but to be successful over time, UBS must balance the risks it takes against the returns it generates. UBS must, therefore, diligently identify, assess, manage and control its risks, not only in normal market conditions but also as they might develop under more extreme (stressed) conditions, when concentrations of exposures can lead to severe losses.

As seen during the financial crisis of 2007–2009, UBS is not always able to prevent serious losses arising from extreme or sudden market events that are not anticipated by UBS's risk measures and systems. Value-at-risk, a statistical measure for market risk, is derived from historical market data, and thus by definition could not have anticipated the losses suffered in the stressed conditions of the financial crisis. Moreover, stress loss and concentration controls and the dimensions in which UBS aggregates risk to identify potentially highly correlated exposures proved to be inadequate. Notwithstanding the steps UBS has taken to strengthen its risk management and control framework, UBS could suffer further losses in the future if, for example:

– UBS does not fully identify the risks in its portfolio, in particular risk concentrations and correlated risks;

– UBS's assessment of the risks identified or its response to negative trends proves to be untimely, inadequate, insufficient or incorrect;

– markets move in ways that UBS does not expect – in terms of their speed, direction, severity or correlation – and UBS's ability to manage risks in the resultant environment is, therefore, affected;

– third parties to whom UBS has credit exposure or whose securities UBS holds for its own account are severely affected by events not anticipated by UBS's models, and accordingly UBS suffers defaults and impairments beyond the level implied by its risk assessment; or

– collateral or other security provided by UBS's counterparties proves inadequate to cover their obligations at the time of their default.

UBS also manages risk on behalf of its clients in its asset and wealth management businesses. The performance of assets UBS holds for its clients in these activities could be harmed by the same factors. If clients suffer losses or the performance of their assets held with UBS is not in line with relevant benchmarks against which clients assess investment performance, UBS may suffer reduced fee income and a decline in assets under management, or withdrawal of mandates.

If UBS decides to support a fund or another investment that it sponsors in its asset or wealth management businesses, it might, depending on the facts and circumstances, incur charges that could increase to material levels.

Investment positions, such as equity holdings made as a part of strategic initiatives and seed investments made at the inception of funds that UBS manages, may also be affected by market risk factors. These investments are often not liquid and generally are intended or required to be held beyond a normal trading horizon. They are subject to a distinct control framework. Deteriorations in the fair value of these positions would have a negative impact on UBS's earnings.

Valuations of certain positions rely on models; models have inherent limitations and may use inputs which have no observable source

If available, fair values of a financial instrument or non-financial asset or liability are determined using quoted prices in active markets for identical assets or liabilities. Where the market is not active, fair value is established using a valuation technique, including pricing models. Where available, valuation techniques use market observable assumptions and inputs. If such information is not available, inputs may be derived by reference to similar instruments in active markets, from recent prices for comparable transactions or from other observable market data. If market observable data is not available, UBS selects non-market observable inputs to be used in its valuation techniques. UBS also uses internally developed models. Such models have inherent limitations; different assumptions and inputs would generate different results, and these differences could have a significant impact on UBS's financial results. UBS regularly reviews and updates its valuation models to incorporate all factors that market participants would consider in setting a price, including factoring in current market conditions. Judgment is an important component of this process, and failure to make the changes necessary to reflect evolving market conditions could have a material adverse effect on UBS's financial results. Moreover, evolving market practice may result in changes to valuation techniques that have a material impact on financial results. Changes in model inputs or calibration, changes in the valuation methodology incorporated in models, or failure to make the changes necessary to reflect evolving market conditions could have a material adverse effect on UBS's financial results.

Liquidity and funding management are critical to UBS's ongoing performance

The viability of UBS's business depends upon the availability of funding sources, and UBS's success depends upon its ability to obtain funding at times, in amounts, for tenors and at rates that enable UBS to efficiently support its asset base in all market conditions. A substantial part of UBS's liquidity and funding requirements is met using short-term unsecured funding sources, including retail and wholesale deposits and the regular issuance of money market securities. The volume of UBS's funding sources has generally been stable, but could change in the future due to, among other things, general market disruptions or widening credit spreads, which could also influence the cost of funding. A change in the availability of short-term funding could occur quickly. Reductions in UBS's credit ratings can increase UBS's funding costs, in particular with regard to funding from wholesale unsecured sources, and can affect the availability of certain kinds of funding. In addition, as UBS experienced in connection with Moody's downgrading of UBS's long-term rating in June 2012, ratings downgrades can require UBS to post additional collateral or make additional cash payments under master trading agreements relating to UBS's derivatives businesses. UBS's credit ratings, together with its capital strength and reputation, also contribute to maintaining client and counterparty confidence and it is possible that ratings changes could influence the performance of some of UBS's businesses.

More stringent Basel III capital and liquidity requirements will likely lead to increased competition for both secured funding and deposits as a stable source of funding, and to higher funding costs. The addition of loss-absorbing debt as a component of capital requirements and potential future requirements to maintain senior unsecured debt that could be written down in an insolvency or other resolution of UBS, or a subsidiary, may increase UBS's funding costs or limit the availability of funding of the types required.

UBS might be unable to identify or capture revenue or competitive opportunities, or retain and attract qualified employees

The financial services industry is characterized by intense competition, continuous innovation, detailed (and sometimes fragmented) regulation and ongoing consolidation. UBS faces competition at the level of local markets and individual business lines, and from global financial institutions that are comparable to UBS in their size and breadth. Barriers to entry in individual markets and pricing levels are being eroded by new technology. UBS expects these trends to continue and competition to increase. UBS's competitive strength and market position could be eroded if UBS is unable to identify market trends and developments, does not respond to them by devising and implementing adequate business strategies, adequately developing or updating its technology, particularly in trading businesses, or is unable to attract or retain the qualified people needed to carry them out.

The amount and structure of UBS's employee compensation are affected not only by UBS's business results but also by competitive factors and regulatory considerations. Constraints on the amount or structure of employee compensation, higher levels of deferral, performance conditions and other circumstances triggering the forfeiture of unvested awards may adversely affect UBS's ability to retain and attract key employees, and may in turn negatively affect UBS's business performance. UBS has made changes to the terms of compensation awards to reflect the demands of various stakeholders, including regulatory authorities and shareholders. These terms include the introduction of a deferred contingent capital plan with many of the features of the loss-absorbing capital that UBS has issued in the market but with a higher capital ratio write-down trigger,

increased average deferral periods for stock awards, and expanded forfeiture provisions for certain awards linked to business performance. These changes, while intended to better align the interests of UBS's staff with those of other stakeholders, increase the risk that key employees will be attracted by competitors and decide to leave UBS, and that UBS may be less successful than its competitors in attracting qualified employees. The loss of key staff and inability to attract qualified replacements, depending upon which and how many roles are affected, could seriously compromise UBS's ability to execute its strategy and to successfully improve its operating and control environment.

In a referendum in March 2013, the Swiss cantons and voters accepted an initiative to give shareholders of Swiss listed companies more influence over board and management compensation (the Minder Initiative). In November 2013, the Swiss Federal Council issued the final transitional ordinance implementing the constitutional amendments resulting from this initiative, which came into force on 1 January 2014. The ordinance requires public companies to specify in their articles of association ("**AoA**") a mechanism to permit a "say-on-pay" vote, setting out three requirements: (i) the vote on compensation must be held annually, (ii) the vote on compensation must be binding rather than advisory and (iii) the vote on compensation must be held separately for the board of directors and members of the executive board. In addition, shareholders will need to determine the details of the "say- on-pay" vote in the AoA, in particular the nature of the vote, timing aspects and the consequences of a "no" vote. Each company affected by the Minder Initiative must undertake a first binding vote on management compensation and remuneration of the board of directors at its 2015 annual general meeting.

The EU has adopted legislation that caps the amount of variable compensation in proportion to the amount of fixed compensation for employees of a bank active within the EU. This legislation will apply to employees of UBS in the EU. These and other similar initiatives may require UBS to make further changes to its compensation structure and may increase the risks described above.

UBS's financial results may be negatively affected by changes to accounting standards

UBS reports its results and financial position in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("**IASB**"). Changes to IFRS or interpretations thereof may cause UBS's future reported results and financial position to differ from current expectations. Such changes may also affect UBS's regulatory capital and ratios. UBS monitors potential accounting changes and when these are finalized by the IASB, UBS determines the potential impact and discloses significant future changes in its financial statements. Currently, there are a number of issued but not yet effective IFRS changes, as well as potential IFRS changes, some of which could be expected to impact UBS's reported results, financial position and regulatory capital in the future.

UBS's financial results may be negatively affected by changes to assumptions supporting the value of UBS's goodwill

The goodwill UBS has recognized on the respective balance sheets of its operating segments is tested for impairment at least annually. UBS's impairment test in respect of the assets recognized as of 31 December 2013 indicated that the value of UBS's goodwill is not impaired. The impairment test is based on assumptions regarding estimated earnings, discount rates and long-term growth rates impacting the recoverable amount of each segment and on estimates of the carrying amounts of the segments to which the goodwill relates. If the estimated earnings and other assumptions in future periods deviate from the current outlook, the value of UBS's goodwill may become impaired in the future, giving rise to losses in the income statement. In the third quarter of 2012, for example, the recognition by the Investment Bank of a full impairment of goodwill and of an impairment of other non-financial assets resulted in a charge of almost CHF 3.1 billion against UBS's operating profit before tax.

The effect of taxes on UBS's financial results is significantly influenced by reassessments of its deferred tax assets

The deferred tax assets UBS has recognized on its balance sheet as of 31 December 2013 in respect of prior years' tax losses reflect the probable recoverable level based on future taxable profit as informed by its business plans. If the business plan earnings and assumptions in future periods substantially deviate from current forecasts, the amount of recognized deferred tax assets may need to be adjusted in the future. These adjustments may include write-downs of deferred tax assets through the income statement.

UBS's effective tax rate is highly sensitive both to its performance and to the accuracy of new business plan forecasts. UBS's results in recent periods have demonstrated that changes in the recognition of deferred tax assets can have a very significant effect on UBS's reported results. If the Group's performance is expected to improve, particularly in the US, UK or Switzerland, UBS could potentially recognize additional deferred tax

assets as a result of that assessment. The effect of doing so would be to significantly reduce the Group's effective tax rate in years in which additional deferred tax assets are recognized. Conversely, if UBS's performance in those countries is expected to produce diminished taxable profit in future years, UBS may be required to write down all or a portion of the currently recognized deferred tax assets through the income statement. This would have the effect of increasing the Group's effective tax rate in the year in which any write-downs are taken.

In 2014, notwithstanding the effects of any potential reassessment of the level of deferred tax assets, UBS expects its effective tax rate to be in the range of 20% to 25%. Consistent with past practice, UBS expects to revalue its overall level of deferred tax assets in the second half of 2014 based on a reassessment of future profitability taking into account updated business plan forecasts. The full year effective tax rate could change significantly on the basis of this reassessment. It could also change if aggregate tax expenses for locations other than Switzerland, the US and UK differ from what is expected. UBS's effective tax rate is also sensitive to any future reductions in statutory tax rates, particularly in the US and Switzerland. Reductions in the statutory tax rate would cause the expected future tax benefit from items such as tax loss carry-forwards in the affected locations to diminish in value. This in turn would cause a write-down of the associated deferred tax assets.

In addition, statutory and regulatory changes, as well as changes to the way in which courts and tax authorities interpret tax laws could cause the amount of taxes ultimately paid by UBS to materially differ from the amount accrued.

This is a potential risk particularly as UBS considers reorganizations of its legal entity structures in the US, UK and Switzerland in response to regulatory changes. The tax authorities in these countries may prevent the transfer of tax losses incurred in one legal entity to newly organized or reorganized subsidiaries or affiliates that are expected to carry on businesses formerly conducted by the transferor. Were this to occur in situations where there were also limited planning opportunities to utilize the tax losses in the originating entity, the deferred tax assets associated with such tax losses could be written down through the income statement.

In 2011, the UK government introduced a balance sheet based levy payable by banks operating or resident in the UK. A net charge of CHF 124 million was recognized in operating expenses (within operating profit before tax) in 2013. The Group's bank levy expense for future years will depend on both the rate of the levy and the Group's taxable UK liabilities at each year-end; changes to either factor could increase the cost. This expense will likely increase if, for example, UBS changes its booking practices so as to book more liabilities into its UK bank subsidiary, UBS Limited. UBS expects that the annual bank levy charge will continue to be recognized for IFRS purposes as an expense arising in the final quarter of each financial year, rather than being accrued throughout the year, as it is charged by reference to the year-end balance sheet position.

IV. Information about UBS AG

UBS AG ("**Issuer**") with its subsidiaries (together "**UBS Group**", "**Group**" or "**UBS**") draws on its 150-year heritage to serve private, institutional and corporate clients worldwide, as well as retail clients in Switzerland. UBS's business strategy is centered on its (in its own opinion) pre-eminent global wealth management businesses and its (in its own opinion) leading universal bank in Switzerland, complemented by its Global Asset Management business and its Investment Bank, with a focus on capital efficiency and businesses that offer a superior structural growth and profitability outlook. Headquartered in Zurich and Basel, Switzerland, UBS has offices in more than 50 countries, including all major financial centers.

On 31 March 2014 UBS's common equity tier 1 capital ratio[1] was 13.2% on a fully applied basis and 17.9% on a phase-in basis, invested assets stood at CHF 2,424 billion, equity attributable to UBS shareholders was

[1] Based on the Basel III framework, as applicable to Swiss systemically relevant banks. The common equity tier 1 capital ratio is the ratio of common equity tier 1 capital to risk-weighted assets. The information provided on a fully applied basis entirely reflects the effects of the new capital deductions and the phase out of ineligible capital instruments. The information provided on a phase-in basis gradually reflects those effects during the transition period. For information as to how common equity tier 1 capital is calculated, refer to the "Capital management" section of UBS AG's first quarter 2014 report.

CHF 49,023 million and market capitalization was CHF 70,180 million. On the same date, UBS employed 60,326 people[2].

The rating agencies Standard & Poor's Credit Market Services Europe Limited ("**Standard & Poor's**"), Fitch Ratings Limited ("**Fitch Ratings**") and Moody's Investors Service, Inc., ("**Moody's**") have published credit ratings reflecting their assessment of the creditworthiness of UBS AG, i.e. its ability to fulfill in a timely manner payment obligations, such as principal or interest payments on long-term loans, also known as debt servicing. The ratings from Fitch Ratings and Standard & Poor's may be attributed a plus or minus sign, and those from Moody's a number. These supplementary attributes indicate the relative position within the respective rating class. UBS AG has long-term senior debt ratings of A (negative outlook) from Standard & Poor's, A2 (stable outlook) from Moody's and A (stable outlook) from Fitch Ratings.

The following table gives an overview of the rating classes as used by the three major rating agencies and their respective meaning. UBS's rating is indicated by the red box.

Standard & Poor's			**Moody's**		**Fitch Ratings**	
Long-term issuer credit rating			Long-term rating		Long-term Issuer Default Rating	
AAA	Extremely strong capacity to meet financial commitments		Aaa	Highest quality	AAA	Highest credit quality
AA+	Very strong capacity to meet financial commitments		Aa1	High quality	AA+	Very high credit quality
AA			Aa2		AA	
AA-			Aa3		AA-	
A+	Strong capacity to meet its financial commitments		A1	Upper-medium grade	A+	High credit quality
A			A2		A	
A-			A3		A-	
BBB+	Adequate capacity to meet its financial commitments		Baa1	Medium grade	BBB+	Good credit quality
BBB			Baa2		BBB	
BBB-			Baa3		BBB-	
BB+	Significant speculative characteristics	Less vulnerable in the near term than other lower-rated obligors	Ba1	Speculative, subject to substantial credit risk	BB+	Speculative
BB			Ba2		BB	
BB-			Ba3		BB-	
B+		More vulnerable than the obligors rated 'BB'	B1	Speculative, subject to high credit risk	B+	Highly speculative
B			B2		B	
B-			B3		B-	
CCC+		Currently vulnerable	Caa1	Speculative, of poor standing and subject to very high credit risk	CCC	Substantial credit risk
CCC			Caa2		CC	Very high levels of credit risk
CCC-			Caa3		C	Exceptionally high levels of credit risk
CC		Currently highly vulnerable	Ca	Highly speculative, likely in, or very near, default with some prospect of recovery of principal and interest	RD	Restricted default
R	Under regulatory supervision		C	Typically in default, with little prospects for recovery of principal or interest	D	Default
SD	Selective default					
D	Default					

Standard & Poor's and Fitch Ratings are registered as credit rating agencies under Regulation (EC) No 1060/2009 as amended by Regulation (EU) No 513/2011 (the "**CRA Regulation**"). Moody's is not established in the EEA and is not certified under the CRA Regulation, but the rating it has issued is endorsed by Moody's Investors Service Ltd., a credit rating agency established in the EEA and registered under the CRA Regulation.

[2] Full-time equivalents.

Corporate Information

The legal and commercial name of the Issuer is UBS AG.

The company was incorporated under the name SBC AG on 28 February 1978 for an unlimited duration and entered in the Commercial Register of Canton Basel-City on that day. On 8 December 1997, the company changed its name to UBS AG. The company in its present form was created on 29 June 1998 by the merger of Union Bank of Switzerland (founded 1862) and Swiss Bank Corporation (founded 1872). UBS AG is entered in the Commercial Registers of Canton Zurich and Canton Basel-City. The registration number is CHE-101.329.561.

UBS AG is incorporated and domiciled in Switzerland and operates under the Swiss Code of Obligations and Swiss Federal Banking Law as an Aktiengesellschaft, a corporation that has issued shares of common stock to investors.

According to article 2 of the Articles of Association, the purpose of UBS AG is the operation of a bank. Its scope of operations extends to all types of banking, financial, advisory, trading and service activities in Switzerland and abroad.

UBS AG shares are listed on the SIX Swiss Exchange and the New York Stock Exchange.

The addresses and telephone numbers of UBS AG's two registered offices and principal places of business are: Bahnhofstrasse 45, CH-8001 Zurich, Switzerland, telephone +41 44 234 1111; and Aeschenvorstadt 1, CH-4051 Basel, Switzerland, telephone +41 61 288 5050.

V. Business Overview

Business Divisions and Corporate Center

UBS operates as a group with five business divisions (Wealth Management, Wealth Management Americas, Retail & Corporate, Global Asset Management and the Investment Bank) and a Corporate Center. Each of the business divisions and the Corporate Center are described below. A description of the Group's strategy can be found in the annual report 2013 of UBS AG as of 31 December 2013 in the English language (the "**Annual Report 2013**", attached to this Registration Document as Appendix 2), on pages 26-29 (inclusive); a description of the businesses, strategies, clients, organizational structures, products and services of the business divisions and the Corporate Center can be found in the Annual Report 2013, on pages 33-49 (inclusive).

Wealth Management

Wealth Management provides comprehensive financial services to wealthy private clients around the world - except those served by Wealth Management Americas. Its clients benefit from the entire spectrum of UBS resources, ranging from investment management to estate planning and corporate finance advice, in addition to specific wealth management products and services.

Wealth Management Americas

Wealth Management Americas provides advice-based solutions and banking services through financial advisors who deliver a fully integrated set of products and services specifically designed to address the needs of ultra high net worth and high net worth individuals and families. It includes the domestic US business, the domestic Canadian business and international business booked in the US.

Retail & Corporate

Retail & Corporate maintains, in its own opinion, a leading position across retail, corporate and institutional client segments in Switzerland and constitutes a central building block of UBS Switzerland's pre-eminent (in its own opinion) universal bank model. It provides comprehensive financial products and services embedded in a true multi-channel experience, offering clients convenient access. It continues to enhance the range of life-cycle products and services offered to clients, while pursuing additional growth in advisory and execution services.

Global Asset Management

Global Asset Management is, in its own opinion, a large-scale asset manager with diversified businesses across investment capabilities, regions and distribution channels. It offers investment capabilities and styles across all

major traditional and alternative asset classes including equities, fixed income, currencies, hedge funds, real estate, infrastructure and private equity that can also be combined into multi-asset strategies. The fund services unit provides professional services including fund set-up, accounting and reporting for both traditional investment funds and alternative funds.

Investment Bank

The Investment Bank provides corporate, institutional and wealth management clients with expert advice, innovative financial solutions, outstanding execution and comprehensive access to the world's capital markets. It offers financial advisory and capital markets, research, equities, foreign exchange, precious metals and tailored fixed income services in rates and credit through its two business units, Corporate Client Solutions and Investor Client Services. The Investment Bank is an active participant in capital markets flow activities, including sales, trading and market-making across a range of securities.

Corporate Center

The Corporate Center comprises Corporate Center – Core Functions and Corporate Center – Non-core and Legacy Portfolio. Corporate Center – Core Functions provides Group-wide control functions including finance, risk control (including compliance) and legal. In addition, it provides all logistics and support functions including operations, information technology, human resources, corporate development, regulatory relations and strategic initiatives, communications and branding, corporate real estate and administrative services, procurement, physical security, information security, offshoring and treasury services such as funding, balance sheet and capital management. Corporate Center – Core Functions allocates most of its treasury income, operating expenses and personnel associated with the abovementioned activities to the businesses. Corporate Center – Non-core and Legacy Portfolio comprises the non-core businesses and legacy positions previously part of the Investment Bank.

Competition

The financial services industry is characterized by intense competition, continuous innovation, detailed (and sometimes fragmented) regulation and ongoing consolidation. UBS faces competition at the level of local markets and individual business lines, and from global financial institutions that are comparable to UBS in their size and breadth. Barriers to entry in individual markets and pricing levels are being eroded by new technology. UBS expects these trends to continue and competition to increase.

Recent Developments:

*UBS's results as of and for the quarter ended 31 March 2014, as presented in UBS AG's first quarter 2014 report in the English language (including unaudited consolidated financial statements of UBS Group) (the "**First Quarterly Report at 31 March 2014**", attached to this Registration Document as Appendix 1)*

UBS Group: Net profit attributable to UBS shareholders for the first quarter of 2014 was CHF 1,054 million compared with CHF 917 million in the fourth quarter of 2013. Operating profit before tax was CHF 1,393 million compared with CHF 449 million in the prior quarter. Operating income increased by CHF 951 million, mainly due to an increase in net interest and trading income as well as due to higher other income. Operating expenses were virtually unchanged. On an adjusted[3] basis, profit before tax was CHF 1,486 million compared with CHF 755 million in the prior quarter. Adjusted operating income increased by CHF 732 million to CHF 7,147 million, reflecting an increase of CHF 597 million in adjusted net interest and trading income as well as CHF 77 million higher adjusted other income. Adjusted operating expenses were virtually unchanged at CHF 5,661 million, reflecting an increase of CHF 214 million in personnel expenses and CHF 114 million higher charges for provisions for litigation, regulatory and similar matters, offset by a reduction of CHF 328 million in other non-personnel expenses. UBS recorded a net tax expense of CHF 339 million compared with a net tax benefit of CHF 470 million.

[3] Unless otherwise indicated, first-quarter 2014 "adjusted" figures exclude each of the following items, to the extent applicable, on a Group and business division level: own credit gain of CHF 88 million, gains on sales of real estate of CHF 23 million and net restructuring charges of CHF 204 million. For the fourth quarter of 2013, the items excluded were an own credit loss of CHF 94 million, gains on sales of real estate of CHF 61 million, a loss related to the buyback of debt in a public tender offer of CHF 75 million and net restructuring charges of CHF 198 million.

Wealth Management: Profit before tax was CHF 619 million in the first quarter of 2014, an increase of CHF 148 million compared with the fourth quarter of 2013. Adjusted[3] for restructuring charges, profit before tax increased by CHF 147 million to CHF 659 million. This reflects CHF 84 million higher operating income, largely as a result of higher transaction-based income, and a CHF 63 million decline in adjusted operating expenses, mainly as CHF 86 million higher charges for provisions for litigation, regulatory and similar matters were more than offset by lower other general and administrative expenses and lower variable compensation expenses. The gross margin on invested assets increased 2 basis points to 87 basis points. Net new money was CHF 10.9 billion compared with CHF 5.8 billion in the prior quarter.

Wealth Management Americas: Profit before tax was USD 272 million in the first quarter of 2014 compared with USD 254 million in the fourth quarter of 2013. Adjusted[3] for restructuring charges, profit before tax increased slightly to USD 284 million. Total operating income increased to USD 1,865 million from USD 1,851 million, as continued growth in managed account fees was partly offset by lower net interest income and lower other income as the prior quarter included a USD 15 million insurance reimbursement. The first quarter included credit loss recoveries of USD 19 million compared with credit loss expenses of USD 9 million in the prior quarter. Total operating expenses decreased by USD 2 million to USD 1,594 million. The first quarter included USD 12 million of restructuring charges compared with USD 29 million in the prior quarter. Net new money inflows decreased to USD 2.1 billion from USD 4.9 billion in the prior quarter.

Retail & Corporate: Profit before tax was CHF 386 million in the first quarter of 2014 compared with CHF 332 million in the fourth quarter of 2013. Adjusted[3] for restructuring charges, profit before tax increased by CHF 57 million to CHF 401 million, mainly as adjusted operating expenses decreased by CHF 55 million, primarily as a result of lower charges for provisions for litigation, regulatory and similar matters. Operating income was virtually unchanged. The annualized net new business volume growth rate for the retail business was 4.3% compared with negative 0.3% in the prior quarter.

Global Asset Management: Profit before tax was CHF 122 million in the first quarter of 2014 compared with CHF 130 million in the fourth quarter of 2013. Adjusted[3] for restructuring charges, profit before tax was CHF 126 million compared with CHF 143 million due to lower operating income partly offset by lower operating expenses. Excluding money market flows, net new money inflows were CHF 13.0 billion compared with net outflows of CHF 4.6 billion in the prior quarter.

Investment Bank: Profit before tax was CHF 425 million in the first quarter of 2014 compared with CHF 297 million in the fourth quarter of 2013. Adjusted[3] for restructuring charges, profit before tax was CHF 549 million compared with CHF 386 million. This increase was mainly due to higher revenues in both Investor Client Services and Corporate Client Solutions, partly offset by an increase in operating expenses. Fully applied risk-weighted assets were unchanged at CHF 62 billion.

Corporate Center – Core Functions recorded a loss before tax of CHF 176 million in the first quarter of 2014 compared with a loss of CHF 565 million in the prior quarter. The first quarter included operating expenses remaining in Corporate Center – Core Functions, after service allocations, of CHF 227 million and treasury income remaining in Corporate Center – Core Functions of negative CHF 46 million, partly offset by an own credit gain of CHF 88 million.

Corporate Center – Non-core and Legacy Portfolio recorded a loss before tax of CHF 225 million in the first quarter of 2014 compared with a loss of CHF 446 million in the prior quarter, mainly due to an improvement of CHF 49 million in debit valuation adjustments, revaluation gains in UBS's credit business and lower losses from unwind and novation activities. Furthermore, the fourth quarter of 2013 included a charge of CHF 68 million for the annual UK bank levy. The first quarter included total operating expenses of CHF 254 million compared with CHF 317 million in the prior quarter. Fully applied risk-weighted assets decreased by CHF 3 billion to CHF 60 billion.

Balance sheet: As of 31 March 2014, UBS's balance sheet assets stood at CHF 983 billion, a decrease of CHF 36 billion from 31 December 2013, primarily due to a continued reduction in positive replacement values in both Corporate Center – Non-core and Legacy Portfolio and the Investment Bank. Funded assets, which represent total assets excluding positive replacement values and collateral delivered against over-the-counter derivatives, increased by CHF 3 billion to CHF 742 billion. This increase mainly reflected client-driven increases in trading portfolio assets in the Investment Bank and lending activity in Wealth Management, partly offset by reduced collateral trading assets in Corporate Center – Core Functions. Excluding currency effects, funded assets increased by approximately CHF 6 billion.

<u>Capital management</u>: UBS's fully applied common equity tier 1 ("**CET1**") capital ratio improved 0.4 percentage points to 13.2% as of 31 March 2014. Fully applied CET1 capital increased by CHF 1.0 billion to CHF 29.9 billion, mainly due to the first quarter net profit. On a phase-in basis, CET1 capital ratio declined 0.6 percentage points to 17.9%, mainly due to the CHF 1.0 billion decrease in phase-in CET1 capital to CHF 41.2 billion, mostly arising from the effect of capital deductions related to transitional effects applicable from 1 January 2014, partly offset by the first quarter net profit. Risk-weighted assets increased by CHF 2 billion to CHF 227 billion on a fully applied basis and by CHF 1 billion to CHF 230 billion on a phase-in basis. UBS's Swiss SRB leverage ratio improved 0.3 percentage points to 5.0% on a phase-in basis due to the reduction of the leverage ratio denominator as well as through the issuance of low-trigger, loss-absorbing, Basel III-compliant subordinated notes.

UBS announces further plans to modify legal structure

As stated by means of a news release issued on 6 May 2014, UBS has already announced a series of measures to improve the resolvability of the Group. As a substantial step on this path, UBS intends to establish a group holding company through a share for share exchange offer, which will commence later this year, subject to regulatory approvals. UBS anticipates that the measures to improve resolvability will allow the firm to qualify for a capital rebate under the Swiss "too-big-to-fail" requirements. This rebate would result in lower overall capital requirements for UBS.

Following completion of the transaction, UBS expects to propose a supplementary capital return of at least CHF 0.25 per share to shareholders of the new group holding company.

As reported in 2013, UBS also intends to establish a banking subsidiary in Switzerland in mid-2015. The scope of this future subsidiary's business is expected to include the Retail & Corporate business and the Swiss-booked Wealth Management business.

In the UK, and in consultation with the UK and Swiss regulators, UBS expects to commence the implementation of a revised business and operating model for UBS Limited in the second quarter of 2014. This will result in UBS Limited bearing and retaining a greater degree of the risk and reward of its business activities. UBS AG expects to increase the capitalization of UBS Limited accordingly.

In the US, UBS will comply with new rules for foreign banks under the Dodd-Frank Wall Street Reform and Consumer Protection Act that will require an intermediate holding company to own all of its operations other than US branches of UBS AG by 1 July 2016. As a result, UBS will designate an intermediate holding company to hold all US subsidiaries of UBS.

The announced plans do not require UBS to raise additional equity capital, and are not expected to materially affect the firm's capital-generating capability.

These structural changes have been discussed with FINMA and other regulatory authorities. The dialogue with regulators will continue and the changes remain subject to some uncertainties that may affect their feasibility, scope or timing.

UBS's Investor Update

This section discusses targets developed for UBS Group, and each of its business divisions and its Corporate Center, by UBS's management. These targets represent goals and do not represent forecasts or estimates. While these targets represent UBS's judgments concerning the matters described, a number of risks, uncertainties and other important factors could cause actual developments and results to differ materially from UBS's targets. For a discussion of these risks, see the "Risk Factors" section above.

On 6 May 2014, UBS provided an update on the execution of its strategy and steps to further unlock the bank's potential.

UBS aims to sustain its position as the world's pre-eminent (in UBS's own opinion) wealth manager by providing clients with a broad scope of products and services, cutting-edge capabilities and superior investment and wealth management advice. Its wealth management businesses will strive to achieve growth of 10-15% in their combined adjusted annual pre-tax profit by investing for growth and delivering the entire bank to clients.

UBS seeks to maintain its position as the leading (in UBS’s own opinion) universal bank in Switzerland and sustain its strong momentum in its home market. Retail & Corporate is a leading innovator in online and mobile banking services and differentiates itself through the high degree of integration it has with the other UBS businesses.

Global Asset Management seeks to strengthen its role as a trusted partner for its clients and, drawing on the full breadth of the firm's capabilities, deliver high-quality solutions. Through a combination of favorable industry fundamentals and strategic initiatives, it targets an adjusted annual pre-tax profit of CHF 1 billion in the medium term.

The Investment Bank aims to strengthen its position in the target segments advisory, research, equities, foreign exchange and precious metals, and to continue to deliver focused, high-quality rates and credit capabilities. Operating within its limits including CHF 70 billion in Basel III fully applied risk-weighted assets (“**RWA**”) and CHF 200 billion in funded assets, the Investment Bank will continue to target an adjusted annual pre-tax return on attributed equity of greater than 15%.

Having achieved its 2014 fully applied CET1 ratio target of 13%, UBS is committed to also achieving its post-stress fully applied CET1 ratio target of 10% this year. On achievement of these goals, UBS intends to pay out at least 50% of net profits in capital returns to shareholders while still investing for growth.

UBS aims to further increase cost efficiency and has strengthened cost management and transparency. Compared with 2013, the bank is targeting a CHF 1.4 billion reduction in Corporate Center operating expenses by year-end 2015. After that, UBS expects further cost reductions of CHF 0.7 billion in Non-Core and Legacy Portfolio as it fully exits the portfolio. The cost/income ratio target ranges for Wealth Management, Wealth Management Americas and the Investment Bank have been adjusted to reflect the intent to reduce Corporate Center allocated costs and enhance front-office efficiency. This will allow for continued investments in profitable growth while maximizing cost efficiency. The Group's adjusted cost/income ratio target from 2015 remains unchanged at 60–70%.

UBS is targeting a Swiss SRB leverage ratio denominator of CHF 900 billion by 2016 (based on the rules applicable today). UBS achieved its 13% fully applied CET1 ratio target in the first quarter of 2014 and will maintain this ratio as the core measure of its capital strength – the foundation of its overall strategy. Capital and balance sheet will continue to be managed in a three-pronged approach which balances CET1, CET1 post-stress and the Swiss SRB leverage ratio.

UBS continues to make strong progress in the reduction of its Non-core and Legacy Portfolio. RWA excluding operational risk have been reduced by nearly 60% over the last 5 quarters, well ahead of plan. While this process will incur some costs during the run-down, and does consume capital, its risks are well understood. The 2015 Basel III RWA target for Non-core and Legacy Portfolio has been reduced to ~CHF 40 billion from ~CHF 55 billion, reflecting progress to date and expected future reductions.

Annual performance targets

Complete list of UBS Group and business division annual external performance targets, which supersedes previous targets. Performance targets assume constant FX rates.

The following are targets developed for UBS Group, and each of its business divisions and its Corporate Center, by UBS's management. These targets represent goals and do not represent forecasts or estimates. While these targets represent UBS's judgments concerning the matters described, a number of risks, uncertainties and other important factors could cause actual developments and results to differ materially from UBS's targets. For a discussion of these risks, see the section “Risk Factors” above.

Group:

- Basel III fully applied CET1 ratio: 13%
- Basel III RWA: <CHF 215 billion by 31.12.15 (previously <CHF 225 billion)
- Basel III RWA: <CHF 200 billion by 31.12.17
- Swiss SRB leverage ratio denominator of CHF 900 billion by 2016 (based on the rules applicable today) (new target)
- Adjusted cost/income ratio: 60–70% from 2015

• Adjusted return on equity: >15% from 2015 (while UBS continues to target a Group return on equity of greater than 15% in 2015, given elevated operational risk RWA, it may not achieve that until 2016.)

Wealth Management:

• Net new money growth rate: 3–5%
• Gross margin: 95–105 bps
• Adjusted cost/income ratio: 55–65% from 2015 (remains 60–70% for 2014)

Wealth Management Americas:

• Net new money growth rate: 2–4%
• Gross margin: 75–85 bps
• Adjusted cost/income ratio: 75–85% from 2015 (remains 80-90% for 2014)

Retail & Corporate:

• Net new business volume growth for retail business: 1-4%
• Net interest margin: 140–180 bps
• Adjusted cost/income ratio: 50–60%

Global Asset Management:

• Net new money growth rate: 3–5% excluding money market (previously including money market)
• Gross margin: 32–38 bps
• Adjusted cost/income ratio: 60–70%
• Adjusted annual profit before tax: CHF 1 billion in the medium term (new target)

Investment Bank:

• Adjusted annual pre-tax return on attributed equity: >15%
• Adjusted cost/income ratio: 70–80% from 2015 (remains 65–85% for 2014)
• Basel III RWA limit of CHF 70 billion
• Funded assets limit of CHF 200 billion

Corporate Center – Core Functions:

• CHF 1.0 billion annual net cost reduction by year-end 2015 (measured by 2015 year-end exit rate versus FY13 adjusted operating expenses, net of changes in charges for provisions for litigation, regulatory and similar matters; measured net of FX movements and changes in regulatory demand of temporary nature.)

Corporate Center – Non-core and Legacy Portfolio:

• Basel III RWA: ~CHF 40 billion by 31.12.15 (previously ~CHF 55 billion)
• Basel III RWA: ~CHF 25 billion by 31.12.17
• CHF 0.4 billion annual net cost reduction by year-end 2015 (measured by 2015 year-end exit rate versus FY13 adjusted operating expenses, net of changes in charges for provisions for litigation, regulatory and similar matters.)
• CHF 0.7 billion additional annual net cost reduction after 2015 (reduction in annual adjusted operating expenses versus FY13.)

Results of the Annual General Meeting of UBS AG

At the Annual General Meeting held on 7 May 2014 UBS AG shareholders approved the Annual Report and Consolidated Financial Statements for 2013 and confirmed Ernst & Young AG, Basel, as auditors and the Independent Proxy (ADB Altorfer Duss & Beilstein AG, Zurich). They also approved the distribution of a dividend of CHF 0.25 per share from capital contribution reserves.

Compensation Report approved
In an advisory vote, a majority of shareholders (85.93%) approved the Compensation Report for 2013.

Discharge approved
Shareholders approved the discharge of the members of the Board of Directors and the Group Executive Board for the 2013 financial year (87.30%).

Amended Articles of Association approved
Shareholders approved the amended Articles of Association of UBS AG to implement the new Ordinance Against Excessive Compensation in Listed Stock Corporations (73.38%).

EU Capital Requirements Directive of 2013 (CRD IV) approved
In an advisory vote, a majority of shareholders (98.34%) approved the EU Capital Requirements Directive of 2013 (CRD IV).

Elections to the Board of Directors
The Annual General Meeting confirmed in office the Chairman of the Board of Directors, Axel A. Weber (96.09%) and fellow Board members Michel Demaré (98.13%), David Sidwell (98.04%), Reto Francioni (98.87%), Ann F. Godbehere (97.81%), Axel P. Lehmann (98.31%), Helmut Panke (97.91%), William G. Parrett (94.24%), Isabelle Romy (98.69%), Beatrice Weder di Mauro (98.70%) and Joseph Yam (98.26%). Detailed CVs of all the members of the Board of Directors are available at www.ubs.com/bod.

Elections to the Human Resources and Compensation Committee
Shareholders elected Ann F. Godbehere (97.35%), Michel Demaré (97.45%), Helmut Panke (97.40%), and Reto Francioni (98.54%) to the Human Resources and Compensation Committee.

1,666 shareholders attended the Annual General Meeting, representing 1,994,794,917 votes.

VI. Organisational Structure of the Issuer

UBS AG is the parent company of the UBS Group. UBS Group legal entity structure is designed to support its businesses with an efficient legal, tax and funding framework considering regulatory restrictions in the countries where UBS operates. UBS operates as a group with five business divisions and a Corporate Center. Neither the business divisions nor the Corporate Center are separate legal entities. Currently, they primarily operate out of UBS AG, through its branches worldwide. Businesses also operate through local subsidiaries where necessary or desirable.

UBS has announced that it intends to establish a group holding company through a share for share exchange offer, which will commence later this year, subject to regulatory approvals. UBS has also announced that it intends to establish a banking subsidiary in Switzerland in mid-2015. The scope of this future subsidiary's business is expected to include the Retail & Corporate business and the Swiss-booked Wealth Management business.
In the UK, and in consultation with the UK and Swiss regulators, UBS expects to commence the implementation of a revised business and operating model for UBS Limited in the second quarter of 2014. This will result in UBS Limited bearing and retaining a greater degree of the risk and reward of its business activities. UBS AG expects to increase the capitalization of UBS Limited accordingly.

In the US, UBS will comply with new rules for banks under the Dodd-Frank Wall Street Reform and Consumer Protection Act that will require an intermediate holding company to own all of its operations other than US branches of UBS AG by 1 July 2016. As a result, UBS will designate an intermediate holding company to hold all US subsidiaries of UBS.

These structural changes have been discussed with the Swiss Financial Market Supervisory Authority FINMA and other regulatory authorities. The dialogue with regulators will continue and the changes remain subject to some uncertainties that may affect their feasibility, scope or timing.

UBS AG's significant subsidiaries as of 31 December 2013 are listed in the Annual Report 2013, on pages 481-482 (inclusive) of the English version.

VII. Trend Information

Outlook

As stated in the outlook statement presented in UBS AG's first quarter 2014 report, including unaudited consolidated financial statements of UBS Group and issued on 6 May 2014, at the start of the second quarter of 2014, many of the underlying challenges and geopolitical issues that UBS has previously highlighted remain. The continued absence of sustained and credible improvements to unresolved issues in Europe, continuing US fiscal and monetary policy issues, geopolitical instability and the mixed outlook for global growth would make improvements in prevailing market conditions unlikely. Despite these challenges, UBS will continue to execute on its strategy in order to ensure the firm's long-term success and to deliver sustainable returns for shareholders.

VIII. Administrative, Management and Supervisory Bodies of UBS AG

UBS AG is subject to, and acts in compliance with, all relevant Swiss legal and regulatory requirements regarding corporate governance. In addition, as a foreign company with shares listed on the New York Stock Exchange ("**NYSE**"), UBS AG is in compliance with all relevant corporate governance standards applicable to foreign listed companies.

UBS AG operates under a strict dual board structure, as mandated by Swiss banking law. The Board of Directors ("**BoD**") decides on the strategy of the Group upon the recommendation of the Group Chief Executive Officer ("**Group CEO**"), and supervises and monitors the business, whereas the Group Executive Board ("**GEB**"), headed by the Group CEO, has executive management responsibility. The functions of Chairman of the BoD and Group CEO are assigned to two different people, ensuring a separation of power. This structure establishes checks and balances and preserves the institutional independence of the BoD from the day-to-day management of the Group, for which responsibility is delegated to the GEB under the leadership of the Group CEO.

No member of one board may be a member of the other. The supervision and control of the GEB remains with the BoD. The Articles of Association and the Organization Regulations of UBS AG with their annexes govern the authorities and responsibilities of the two bodies.

Board of Directors

The BoD is the most senior body of UBS AG. The BoD consists of at least six and a maximum of twelve members. All the members of the BoD are elected individually by the Annual General Meeting of Shareholders ("**AGM**") for a term of office of one year. The BoD's proposal for election must be such that three-quarters of the BoD members will be independent. Independence is determined in accordance with the Swiss Financial Market Supervisory Authority ("**FINMA**") circular 08/24, the NYSE rules and the rules and regulations of other securities exchanges on which UBS shares are listed, if any, applying the strictest standard. The Chairman is not required to be independent.

The BoD has ultimate responsibility for the success of the UBS Group and for delivering sustainable shareholder value within a framework of prudent and effective controls. It decides on UBS Group's strategic aims and the necessary financial and human resources upon recommendation of the Group CEO and sets the UBS Group's values and standards to ensure that its obligations to its shareholders and others are met.

The BoD meets as often as business requires, and at least six times a year.

Members of the Board of Directors

Members and business addresses	Title	Term of office	Current principal positions outside UBS AG
Axel A. Weber UBS AG, Bahnhofstrasse 45, CH-8001 Zurich	Chairman	2015	Member of the board of the Institute of International Finance and the International Monetary Conference; member of the European Banking Group, the European Financial Services Roundtable and the Group of Thirty, Washington, D.C.; research fellow at the Center for Economic Policy Research, London, and the Center for Financial Research, Cologne; senior research fellow at the Center for Financial Studies, Frankfurt/Main; member of the

			Monetary Economics and International Economics Councils of the leading association of German-speaking economists, the *Verein für Socialpolitik*; member of the Advisory Board of the German Market Economy Foundation and of the Advisory Board of the Department of Economics at the University of Zurich; member of the IMD Foundation, Lausanne and of the International Advisory Panel of the Monetary Authority of Singapore
Michel Demaré Syngenta International AG, Schwarzwaldallee 215, CH-4058 Basel	Independent Vice Chairman	2015	Chairman of the board of Syngenta, a member of the IMD Supervisory Board, Lausanne, and Chairman of SwissHoldings, Berne. Chairman of the Syngenta Foundation for Sustainable Agriculture. Member of the advisory board of the Department of Banking and Finance, University of Zurich. Member of the board of Louis-Dreyfus Commodities Holdings BV
David Sidwell UBS AG, Bahnhofstrasse 45, CH-8001 Zurich	Senior Independent Director	2015	Director and Chairperson of the Risk Policy and Capital Committee of Fannie Mae, Washington D.C.; Senior Advisor at Oliver Wyman, New York; Chairman of the board of Village Care, New York; Director of the National Council on Aging, Washington D.C.
Reto Francioni Deutsche Börse AG, D-60485 Frankfurt am Mai	Member	2015	CEO of Deutsche Börse AG and holding various mandates on the boards of Deutsche Börse Group subsidiaries; professor at the University of Basel. 			Agenda Council "Fiscal Issues" of the World Economic Forum
Joseph Yam UBS AG, Bahnhofstrasse 45, CH-8001 Zurich	Member	2015	Executive Vice President of the China Society for Finance and Banking. Distinguished research fellow of the Institute of Global Economics and Finance; member of the board of Community Chest of Hong Kong; member of the International Advisory Council of China Investment Corporation. Member of the board of Johnson Electric Holdings Limited and of UnionPay International Co., Ltd.

Organizational principles and structure
Following each AGM, the BoD meets to appoint its Chairman, Vice Chairman, Senior Independent Director, the BoD committees members and their respective Chairpersons. At the same meeting, the BoD appoints a Company Secretary, who acts as secretary to the BoD and its committees.

The BoD committees comprise the Audit Committee, the Corporate Responsibility Committee, the Governance and Nominating Committee, the Human Resources and Compensation Committee and the Risk Committee. The BoD has also established an ad-hoc committee on strategy and an ad-hoc special committee.

Audit Committee
The Audit Committee ("**AC**") is comprised of five BoD members, with all members having been determined by the BoD to be fully independent and financially literate.

The AC does not itself perform audits, but monitors the work of the external auditors who in turn are responsible for auditing UBS AG's and the Group's annual financial statements and for reviewing the quarterly financial statements.

The function of the AC is to serve as an independent and objective body with oversight of the following: (i) UBS AG's and UBS Group's accounting policies, financial reporting and disclosure controls and procedures, (ii) the quality, adequacy and scope of external audit, (iii) UBS AG's and UBS Group's compliance with financial reporting requirements, (iv) the senior management's approach to internal controls with respect to the production and integrity of the financial statements and disclosure of the financial performance, and (v) the performance of UBS's Group Internal Audit in conjunction with the Chairman of the BoD and the Risk Committee.

The AC reviews the annual and quarterly financial statements of UBS AG and the Group as proposed by management, with the external auditors and Group Internal Audit in order to recommend their approval, (including any adjustments the AC considers appropriate), to the BoD.

Periodically, and at least annually, the AC assesses the qualifications, expertise, effectiveness, independence and performance of the external auditors and their lead audit partner, in order to support the BoD in reaching a decision in relation to the appointment or dismissal of the external auditors and the rotation of the lead audit partner. The BoD then submits these proposals for approval to the AGM.

The members of the AC are William G. Parrett (Chairperson), Michel Demaré, Ann F. Godbehere, Isabelle Romy and Beatrice Weder di Mauro.

Group Executive Board
Under the leadership of the Group CEO, the GEB has executive management responsibility for the UBS Group and its business. It assumes overall responsibility for the development of the UBS Group and business division strategies and the implementation of approved strategies. All GEB members (with the exception of the Group CEO) are proposed by the Group CEO. The appointments are made by the BoD.

Members of the Group Executive Board

Member and business address	Function
Sergio P. Ermotti UBS AG, Bahnhofstrasse 45, CH-8001 Zurich	Group Chief Executive Officer
Markus U. Diethelm UBS AG, Bahnhofstrasse 45, CH-8001 Zurich	Group General Counsel
Lukas Gähwiler UBS AG, Bahnhofstrasse 45, CH-8001 Zurich	Chief Executive Officer UBS Switzerland, Chief Executive Officer Retail & Corporate
Ulrich Körner UBS AG, Bahnhofstrasse 45, CH-8001 Zurich	Chief Executive Officer Global Asset Management, Chief Executive Officer UBS Group EMEA
Philip J. Lofts UBS AG, 677 Washington Boulevard, Stamford, CT 06901 USA	Group Chief Risk Officer
Robert J. McCann UBS AG, 1200 Harbor Boulevard, Weehawken, NJ 07086 USA	Chief Executive Officer Wealth Management Americas, Chief Executive Officer UBS Group Americas
Tom Naratil UBS AG, Bahnhofstrasse 45, CH-8001 Zurich	Group Chief Financial Officer, Group Chief Operating Officer
Andrea Orcel UBS AG, Bahnhofstrasse 45, CH-8001 Zurich	Chief Executive Officer Investment Bank
Chi-Won Yoon UBS AG, 2 International Finance Centre 52/F, 8 Finance Street, Central, Hong Kong	Chief Executive Officer UBS Group Asia Pacific
Jürg Zeltner UBS AG, Bahnhofstrasse 45, CH-8001 Zurich	Chief Executive Officer UBS Wealth Management

No member of the GEB has any significant business interests outside UBS AG.

Potential conflicts of interest

Members of the BoD and GEB may act as directors or executive officers of other companies (for current principal positions outside UBS AG, if any, of BoD members, please see above under "Members of the Board of Directors") and may have economic or other private interests that differ from those of UBS AG. Potential conflicts of interest may arise from these positions or interests. UBS is confident that its internal corporate governance practices and its compliance with relevant legal and regulatory provisions reasonably ensure that any conflicts of interest of the type described above are appropriately managed, including through disclosure when appropriate.

IX. Major Shareholders

Under the Swiss Federal Act on Stock Exchanges and Securities Trading of 24 March 1995, as amended (the "**Swiss Stock Exchange Act**"), anyone holding shares in a company listed in Switzerland, or holding derivative rights related to shares of such a company, must notify the company and the SIX Swiss Exchange if the holding attains, falls below or exceeds one of the following threshold percentages: 3, 5, 10, 15, 20, 25, 33 1/3, 50 or 66 2/3% of the voting rights, whether or not such rights may be exercised.

The following are the most recent notifications of holdings in UBS AG's share capital filed in accordance with the Swiss Stock Exchange Act, based on UBS AG's registered share capital at the time of the disclosure:

- 18 September 2013, Government of Singapore Investment Corp disclosed a change of its corporate name to GIC Private Limited and a holding of 6.40%;
- 30 September 2011: Norges Bank (the Central Bank of Norway), 3.04%;
- 17 December 2009: BlackRock Inc., New York, USA, 3.45%.

Voting rights may be exercised without any restrictions by shareholders entered into UBS's share register, if they expressly render a declaration of beneficial ownership according to the provisions of the Articles of Association. Special provisions exist for the registration of fiduciaries and nominees. Fiduciaries and nominees are entered in the share register with voting rights up to a total of 5% of all shares issued, if they agree to disclose upon UBS AG's request beneficial owners holding 0.3% or more of all UBS AG shares. An exception to the 5% voting limit rule exists for securities clearing organizations such as The Depository Trust Company in New York.

As of 31 March 2014, the following shareholders (acting in their own name or in their capacity as nominees for other investors or beneficial owners) were registered in the share register with 3% or more of the total share capital of UBS AG: Chase Nominees Ltd., London (11.98%); GIC Private Limited, Singapore (6.39%); the US securities clearing organization DTC (Cede & Co.) New York, "The Depository Trust Company" (6.28%); and Nortrust Nominees Ltd., London (3.51%).

UBS holds UBS AG shares primarily to hedge employee share and option participation plans. In addition, the Investment Bank holds a limited number of UBS AG shares in its capacity as a liquidity provider to the equity index futures market and as a market-maker in UBS AG shares and derivatives on UBS AG shares. Furthermore, to meet client demand, UBS has issued structured debt instruments linked to UBS AG shares, which are economically hedged by cash-settled derivatives and, to a limited extent, own shares held by the Investment Bank. As of 31 March 2014, UBS held 92,241,706 UBS AG shares, corresponding to 2.4% of the total share capital of UBS AG. As of 31 December 2013, UBS had disposal positions relating to 284,975,843 voting rights of UBS AG, corresponding to 7.4% of the total voting rights of UBS AG. 7.0% of this consisted of voting rights on shares deliverable in respect of employee awards.

Further details on the distribution of UBS AG's shares, also by region and shareholders' type, and on the number of shares registered, not registered and carrying voting rights as of 31 December 2013 can be found in the Annual Report 2013, on pages 258-261 (inclusive) of the English version.

X. Financial Information concerning the Issuer's Assets and Liabilities, Financial Position and Profits and Losses

A description of UBS AG's and UBS Group's assets and liabilities, financial position and profits and losses for financial year 2012 is available in the financial information section of the annual report of UBS AG as of 31 December 2012 in the English language ("**Annual Report 2012**", attached to this Registration Document as Appendix 3), and for financial year 2013 in the financial information section of the Annual Report 2013 as well as in the First Quarterly Report at 31 March 2014. The Issuer's financial year is the calendar year.

Historical Financial Information

With respect to the financial year 2012, reference is made to the following parts of the Annual Report 2012 (within the Financial information section, English version):

1. the Consolidated Financial Statements of UBS Group, in particular to the Income Statement on page 323, the Balance Sheet on page 325, the Statement of Cash Flows on pages 329-330 (inclusive) and the Notes to the Consolidated Financial Statements on pages 331-455 (inclusive); and

2. the Financial Statements of UBS AG (Parent Bank), in particular to the Income Statement on page 460, the Balance Sheet on page 461, the Statement of Appropriation of Retained Earnings on page 462, the Notes to the Parent Bank Financial Statements on pages 463-482 (inclusive) and the Parent Bank Review on pages 457-459 (inclusive); and

3. the section entitled "Introduction and accounting principles" on page 316.

With respect to the financial year 2013, reference is made to the following parts of the Annual Report 2013 (within the Financial information section, English version):

1. the Consolidated Financial Statements of UBS Group, in particular to the Income Statement on page 350, the Balance Sheet on page 353, the Statement of Cash Flows on pages 357-358 (inclusive) and the Notes to the Consolidated Financial Statements on pages 359-505 (inclusive); and

2. the Financial Statements of UBS AG (Parent Bank), in particular to the Income Statement on page 510, the Balance Sheet on page 511, the Statement of Appropriation of Retained Earnings on page 512, the Notes to the Parent Bank Financial Statements on pages 513-531 (inclusive) and the Parent Bank Review on pages 507-509 (inclusive); and

3. the section entitled “Introduction and accounting principles” on page 344.

With respect to the financial year 2014, reference is made to the First Quarterly Report at 31 March 2014 (please see section "Interim Financial Information" below).

The annual financial reports form an essential part of UBS AG's reporting. They include the audited consolidated financial statements of UBS Group, prepared in accordance with International Financial Reporting Standards, as issued by the International Accounting Standards Board, and the audited financial statements of UBS AG (Parent Bank), prepared in order to meet Swiss regulatory requirements and in compliance with Swiss GAAP. The Financial information section of the annual reports also includes certain additional disclosures required under US Securities and Exchange Commission regulations. The annual reports also include discussions and analysis of the financial and business results of UBS, its business divisions and the Corporate Center.

Auditing of Historical Annual Financial Information

The consolidated financial statements of UBS Group and the financial statements of UBS AG (Parent Bank) for financial years 2012 and 2013 were audited by Ernst & Young. The reports of the auditors on the consolidated financial statements can be found on pages 321-322 (inclusive) of the Annual Report 2012 and on pages 348-349 (inclusive) of the Annual Report 2013 (Financial information section, English version). The reports of the auditors on the financial statements of UBS AG (Parent Bank) can be found on pages 483-484 (inclusive) of the Annual Report 2012 and on pages 532-533 (inclusive) of the Annual Report 2013 (Financial information section, English version).

Interim Financial Information

Reference is also made to UBS's First Quarterly Report at 31 March 2014, which contains information on the financial condition and the results of operation of the UBS Group as of and for the quarter ended on 31 March 2014. The interim financial statements are not audited.

XI. Legal and Arbitration Proceedings

The Group operates in a legal and regulatory environment that exposes it to significant litigation and similar risks arising from disputes and regulatory proceedings. As a result, UBS (which for purposes of this section may refer to UBS AG and/or one or more of its subsidiaries, as applicable) is involved in various disputes and legal proceedings, including litigation, arbitration, and regulatory and criminal investigations.

Such matters are subject to many uncertainties and the outcome is often difficult to predict, particularly in the earlier stages of a case. There are also situations where the Group may enter into a settlement agreement. This may occur in order to avoid the expense, management distraction or reputational implications of continuing to

contest liability, even for those matters for which the Group believes it should be exonerated. The uncertainties inherent in all such matters affect the amount and timing of any potential outflows for both matters with respect to which provisions have been established and other contingent liabilities. The Group makes provisions for such matters brought against it when, in the opinion of management after seeking legal advice, it is more likely than not that the Group has a present legal or constructive obligation as a result of past events, it is probable that an outflow of resources will be required, and the amount can be reliably estimated. If any of those conditions is not met, such matters result in contingent liabilities.

Specific litigation, regulatory and other matters are described below, including all such matters that management considers to be material and others that management believes to be of significance due to potential financial, reputational and other effects. The amount of damages claimed, the size of a transaction or other information is provided where available and appropriate in order to assist users in considering the magnitude of potential exposures.

In the case of certain matters below, UBS states that it has established a provision, and for the other matters it makes no such statement. When UBS makes this statement and it expects disclosure of the amount of a provision to prejudice seriously its position with other parties in the matter, because it would reveal what UBS believes to be the probable and reliably estimable outflow, UBS does not disclose that amount. In some cases UBS is subject to confidentiality obligations that preclude such disclosure. With respect to the matters for which UBS does not state whether it has established a provision, either (a) it has not established a provision, in which case the matter is treated as a contingent liability under the applicable accounting standard, or (b) it has established a provision but expects disclosure of that fact to prejudice seriously its position with other parties in the matter because it would reveal the fact that UBS believes an outflow of resources to be probable and reliably estimable.

With respect to certain litigation, regulatory and similar matters as to which UBS has established provisions, UBS is able to estimate the expected timing of outflows. However, the aggregate amount of the expected outflows for those matters for which it is able to estimate expected timing is immaterial relative to its current and expected levels of liquidity over the relevant time periods.

The aggregate amount provisioned for litigation, regulatory and similar matters as a class is disclosed in Note 14a to the unaudited consolidated financial statements included in UBS AG's first quarter 2014 report. It is not practicable to provide an aggregate estimate of liability for UBS's litigation, regulatory and similar matters as a class of contingent liabilities. Doing so would require UBS to provide speculative legal assessments as to claims and proceedings that involve unique fact patterns or novel legal theories, which have not yet been initiated or are at early stages of adjudication, or as to which alleged damages have not been quantified by the claimants. Although UBS therefore cannot provide a numerical estimate of the future losses that could arise from the class of litigation, regulatory and similar matters, it can confirm that it believes that the aggregate amount of possible future losses from this class that are more than remote substantially exceeds the level of current provisions.

The risk of loss associated with litigation, regulatory and similar matters is a component of operational risk for purposes of determining UBS’s capital requirements. Information concerning UBS’s capital requirements and the calculation of operational risk for this purpose is included in the "Capital management" and "Risk management and control" sections of UBS AG’s first quarter 2014 report.

[2] Provisions, if any, for the matters described in (a) item 4 of this section are recorded in Wealth Management, (b) item 7 of this section are recorded in Wealth Management Americas, (c) item 11 of this section are recorded in the Investment Bank, (d) items 3 and 10 of this section are recorded in Corporate Center – Core Functions and (e) items 2 and 6 of this section are recorded in Corporate Center – Non-core and Legacy Portfolio. Provisions for the matters described in items 1 and 9 of this section are allocated between Wealth Management and Retail & Corporate, provisions for the matter described in item 5 of this section are allocated between the Investment Bank and Corporate Center – Non-core and Legacy Portfolio, and provisions for the matter described in item 8 of this section are allocated between the Investment Bank and Corporate Center – Core Functions.

1. Inquiries regarding cross-border wealth management businesses

Following the disclosure and the settlement of the US cross-border matter, tax and regulatory authorities in a number of countries have made inquiries and served requests for information located in their respective jurisdictions relating to the cross-border wealth management services provided by UBS and other financial institutions. As a result of investigations in France, in May and June 2013, respectively, UBS (France) S.A. and UBS AG were put under formal examination ("mise en examen") for complicity in having illicitly solicited clients on French territory, and were declared witness with legal assistance ("témoin assisté") regarding the laundering of proceeds of tax fraud and of banking and financial solicitation by unauthorized persons. Separately, in June 2013, the French banking supervisory authority's disciplinary commission reprimanded UBS (France) S.A. for having had insufficiencies in its control and compliance framework around its cross-border activities and "know your customer" obligations. It imposed a penalty of EUR 10 million, and a provision in that amount is reflected on UBS's balance sheet at 31 March 2014. In Germany, several authorities have been conducting investigations against UBS Deutschland AG, UBS AG, and against certain employees of these entities concerning certain matters relating to the cross-border business. UBS is cooperating with these authorities within the limits of financial privacy obligations under Swiss and other applicable laws. Settlement discussions are ongoing with respect to the German investigations.

2. Claims related to sales of residential mortgage-backed securities and mortgages

From 2002 through 2007, prior to the crisis in the US residential loan market, UBS was a substantial issuer and underwriter of US residential mortgage-backed securities ("**RMBS**") and was a purchaser and seller of US residential mortgages. A subsidiary of UBS, UBS Real Estate Securities Inc. ("**UBS RESI**"), acquired pools of residential mortgage loans from originators and (through an affiliate) deposited them into securitization trusts. In this manner, from 2004 through 2007, UBS RESI sponsored approximately USD 80 billion in RMBS, based on the original principal balances of the securities issued.

UBS RESI also sold pools of loans acquired from originators to third-party purchasers. These whole loan sales during the period 2004 through 2007 totaled approximately USD 19 billion in original principal balance.

UBS was not a significant originator of US residential loans. A subsidiary of UBS originated approximately USD 1.5 billion in US residential mortgage loans during the period in which it was active from 2006 to 2008, and securitized less than half of these loans.

Securities lawsuits concerning disclosures in RMBS offering documents: UBS is named as a defendant relating to its role as underwriter and issuer of RMBS in a large number of lawsuits related to approximately USD 13 billion in original face amount of RMBS underwritten or issued by UBS. Some of the lawsuits are in their early stages, and have not advanced beyond the motion to dismiss phase; others are in varying stages of discovery. Of the USD 13 billion in original face amount of RMBS that remains at issue in these cases, approximately USD 3 billion was issued in offerings in which a UBS subsidiary transferred underlying loans (the majority of which were purchased from third-party originators) into a securitization trust and made representations and warranties about those loans ("**UBS-sponsored RMBS**"). The remaining USD 10 billion of RMBS to which these cases relate was issued by third parties in securitizations in which UBS acted as underwriter ("**third-party RMBS**").

In connection with certain of these lawsuits, UBS has indemnification rights against surviving third-party issuers or originators for losses or liabilities incurred by UBS, but UBS cannot predict the extent to which it will succeed in enforcing those rights. A class action settlement by a third-party issuer received final approval by the district court in 2013. The settlement reduced the original face amount of RMBS at issue in these cases from USD 37 billion to USD 13 billion, and the original face amount of RMBS at issue in cases involving third-party issuers from USD 34 billion to USD 10 billion, as noted above. The third-party issuer will fund the settlement at no cost to UBS. In January 2014, certain objectors to the settlement filed a notice of appeal from the district court's approval of the settlement.

Loan repurchase demands related to sales of mortgages and RMBS: When UBS acted as an RMBS sponsor or mortgage seller, it generally made certain representations relating to the characteristics of the underlying loans. In the event of a material breach of these representations, UBS was in certain circumstances contractually obligated to repurchase the loans to which they related or to indemnify certain parties against losses. UBS has received demands to repurchase US residential mortgage loans as to which UBS made certain representations at the time the loans were transferred to the securitization trust. UBS has been notified by certain institutional purchasers and insurers of mortgage loans and RMBS of their contention that possible breaches of representations may entitle the purchasers to require that UBS repurchase the loans or to other relief. The table "Loan repurchase demands by year received – original principal balance of loans" summarizes repurchase demands received by UBS and UBS's repurchase activity from 2006 through 29 April 2014. In the table, repurchase demands characterized as Demands resolved in litigation and Demands rescinded by counterparty are considered to be finally resolved. Repurchase demands in all other categories are not finally resolved.

Loan repurchase demands by year received – original principal balance of loans [1]

USD million	2006-2008	2009	2010	2011	2012	2013	2014, through 29 April	**Total**
Resolved demands

Demands resolved or expected to be resolved through enforcement of indemnification rights against third-party originators		77	2	45	124	99	30	**377**
Demands in dispute								
Demands in litigation			346	732	1,041			**2,118**
Demands in review by UBS				2	2	3		**8**
Demands rebutted by UBS but not yet rescinded by counterparty		1	2	1	17	515	115	**651**
Total	122	205	368	1,084	1,421	618	145	**3,962**

[1] Loans submitted by multiple counterparties are counted only once.

Payments that UBS has made or agreed to make to date to resolve repurchase demands equate to approximately 62% of the original principal balance of the related loans. Most of the payments that UBS has made or agreed to make to date have related to so-called "Option ARM" loans; severity rates may vary for other types of loans or for Option ARMs with different characteristics. Actual losses upon repurchase will reflect the estimated value of the loans in question at the time of repurchase as well as, in some cases, partial repayment by the borrowers or advances by servicers prior to repurchase. It is not possible to predict future losses upon repurchase for reasons including timing and market uncertainties.

In most instances in which UBS would be required to repurchase loans due to misrepresentations, UBS would be able to assert demands against third-party loan originators who provided representations when selling the related loans to UBS. However, many of these third parties are insolvent or no longer exist. UBS estimates that, of the total original principal balance of loans sold or securitized by UBS from 2004 through 2007, less than 50% was purchased from surviving third-party originators. In connection with approximately 60% of the loans (by original principal balance) for which UBS has made payment or agreed to make payment in response to demands received in 2010, UBS has asserted indemnity or repurchase demands against originators. Since 2011, UBS has advised certain surviving originators of repurchase demands made against UBS for which UBS would be entitled to indemnity, and has asserted that such demands should be resolved directly by the originator and the party making the demand.

UBS cannot reliably estimate the level of future repurchase demands, and does not know whether its rebuttals of such demands will be a good predictor of future rates of rebuttal. UBS also cannot reliably estimate the timing of any such demands.

Lawsuits related to contractual representations and warranties concerning mortgages and RMBS: In 2012, certain RMBS trusts filed an action in the Southern District of New York ("**Trustee Suit**") seeking to enforce UBS RESI's obligation to repurchase loans in the collateral pools for three RMBS securitizations ("**Transactions**") with an original principal balance of approximately USD 2 billion for which Assured Guaranty Municipal Corp. ("**Assured Guaranty**"), a financial guaranty insurance company, had previously demanded repurchase. Plaintiffs in the Trustee Suit have recently indicated that they intend to seek damages beyond the loan repurchase demands identified in the complaint, specifically for all loans purportedly in breach of any of the three Transactions. Discovery is ongoing. With respect to the loans subject to the Trustee Suit that were originated by institutions still in existence, UBS intends to enforce its indemnity rights against those institutions. Related litigation brought by Assured Guaranty was resolved in 2013.

In 2012, the Federal Housing Finance Agency ("**FHFA**"), on behalf of Freddie Mac, filed a notice and summons in New York Supreme Court initiating suit against UBS RESI for breach of contract and declaratory relief arising from alleged breaches of representations and warranties in connection with certain mortgage loans and UBS RESI's alleged failure to repurchase such mortgage loans. The lawsuit seeks, among other relief, specific performance of UBS RESI's alleged loan repurchase obligations for at least USD 94 million in original principal balance of loans for which Freddie Mac had previously demanded repurchase; no damages are specified. In 2013, the Court dismissed the complaint for lack of standing, on the basis that only the RMBS trustee could assert the claims in the complaint, and the complaint was unclear as to whether the trustee was the plaintiff and had proper authority to bring suit. The trustee subsequently filed an amended complaint, which UBS moved to dismiss. The motion remains pending.

In 2013, Residential Funding Company LLC ("**RFC**") filed a complaint in New York Supreme Court against UBS RESI asserting claims for breach of contract and indemnification in connection with loans purchased from UBS RESI with an original principal balance of at least USD 460 million that were securitized by an RFC affiliate. This is the first case filed against UBS seeking damages allegedly arising from the securitization of whole loans purchased from UBS. Damages are unspecified.

UBS also has tolling agreements with certain institutional purchasers of RMBS concerning their potential claims related to substantial purchases of UBS-sponsored or third-party RMBS.

As reflected in the table "Provision for claims related to sales of residential mortgage-backed securities and mortgages", UBS's balance sheet at 31 March 2014 reflected a provision of USD 819 million with respect to matters described in this item 2. As in the case of other matters for which UBS has established provisions, the future outflow of resources in respect of this matter cannot be determined with certainty based on currently available information, and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that UBS has recognized.

UBS has received requests from both the Special Inspector General for the Troubled Asset Relief Program ("**SIGTARP**") (who is working in conjunction with the US Attorney's Office for Connecticut and the US Department of Justice, Criminal Division, Fraud Section) and the SEC for information relating to its practices in connection with purchases and sales of mortgage-backed securities. UBS is cooperating with the authorities in these matters, which are in an early stage. Numerous other banks reportedly have received similar requests.

Provision for claims related to sales of residential mortgage-backed securities and mortgages

USD million	
Balance as of 31 December 2013	**807**
Increase in provision recognized in the income statement	15
Release of provision recognized in the income statement	0
Provision used in conformity with designated purpose	(3)
Balance as of 31 March 2014	**819**

3. Claims related to UBS disclosure

A putative consolidated class action has been filed in the United States District Court for the Southern District of New York against UBS, a number of current and former directors and senior officers and certain banks that underwrote UBS's May 2008 Rights Offering (including UBS Securities LLC) alleging violation of the US securities laws in connection with UBS's disclosures relating to UBS's positions and losses in mortgage-related securities, UBS's positions and losses in auction rate securities, and UBS's US crossborder business. In 2011, the court dismissed all claims based on purchases or sales of UBS ordinary shares made outside the US, and, in 2012, the court dismissed with prejudice the remaining claims based on purchases or sales of UBS ordinary shares made in the US for failure to state a claim. Plaintiffs have appealed the court's decision. UBS, a number of senior officers and employees and various UBS committees have also been sued in a putative consolidated class action for breach of fiduciary duties brought on behalf of current and former participants in two UBS Employee Retirement Income Security Act ("**ERISA**") retirement plans in which there were purchases of UBS stock. In 2011, the court dismissed the ERISA complaint. In 2012, the court denied plaintiffs' motion for leave to file an amended complaint. On appeal, the Second Circuit upheld the dismissal of all counts relating to one of the retirement plans. With respect to the second retirement plan, the Court upheld the dismissal of some of the counts, and vacated and remanded for further proceedings with regard to the counts alleging that defendants had violated their fiduciary duty to prudently manage the plan's investment options, as well as the claims derivative of that duty.

In 2012, a consolidated complaint was filed in a putative securities fraud class action pending in federal court in Manhattan against UBS AG and certain of its current and former officers relating to the unauthorized trading incident that occurred in the Investment Bank and was announced in September 2011. The lawsuit was filed on behalf of parties who purchased publicly traded UBS securities on any US exchange, or where title passed within the US, during the period 17 November 2009 through 15 September 2011. In 2013, the district court granted UBS's motion to dismiss the complaint in its entirety. Plaintiffs have filed a notice of appeal.

4. Madoff

In relation to the Bernard L. Madoff Investment Securities LLC ("**BMIS**") investment fraud, UBS AG, UBS (Luxembourg) SA and certain other UBS subsidiaries have been subject to inquiries by a number of regulators, including the Swiss Financial Market Supervisory Authority ("**FINMA**") and the Luxembourg Commission de Surveillance du Secteur Financier ("**CSSF**"). Those inquiries concerned two third-party funds established under Luxembourg law, substantially all assets of which were with BMIS, as well as certain funds established in offshore jurisdictions with either direct or indirect exposure to BMIS. These funds now face severe losses, and the Luxembourg funds are in liquidation. The last reported net asset value of the two Luxembourg funds before revelation of the Madoff scheme was approximately USD 1.7 billion in the aggregate, although that figure likely includes fictitious profit reported by BMIS. The documentation establishing both funds identifies UBS entities in various roles including custodian, administrator, manager, distributor and promoter, and indicates that UBS employees serve as board members. UBS (Luxembourg) SA and certain other UBS subsidiaries are

responding to inquiries by Luxembourg investigating authorities, without however being named as parties in those investigations. In 2009 and 2010, the liquidators of the two Luxembourg funds filed claims on behalf of the funds against UBS entities, non-UBS entities and certain individuals including current and former UBS employees. The amounts claimed are approximately EUR 890 million and EUR 305 million, respectively. The liquidators have filed supplementary claims for amounts that the funds may possibly be held liable to pay the BMIS Trustee. These amounts claimed by the liquidator are approximately EUR 564 million and EUR 370 million, respectively. In addition, a large number of alleged beneficiaries have filed claims against UBS entities (and non-UBS entities) for purported losses relating to the Madoff scheme. The majority of these cases are pending in Luxembourg, where appeals have been filed by the claimants against the 2010 decisions of the court in which the claims in a number of test cases were held to be inadmissible. In the US, the BMIS Trustee has filed claims against UBS entities, among others, in relation to the two Luxembourg funds and one of the offshore funds. A claim was filed in 2010 against 23 defendants, including UBS entities, the Luxembourg and offshore funds concerned and various individuals, including current and former UBS employees. The total amount claimed against all defendants in this action was not less than USD 2 billion. A second claim was filed in 2010 against 16 defendants including UBS entities and the Luxembourg fund concerned. The total amount claimed against all defendants was not less than USD 555 million. Following a motion by UBS, in 2011 the District Court dismissed all of the BMIS Trustee's claims other than claims for recovery of fraudulent conveyances and preference payments that were allegedly transferred to UBS on the ground that the BMIS Trustee lacks standing to bring such claims. In 2013, the Second Circuit Court of Appeals rejected the BMIS Trustee's appeal against that ruling and upheld the District Court's decision. The BMIS Trustee has sought leave to appeal to the US Supreme Court, which has invited the Solicitor General of the United States to file a brief expressing the views of the United States as to whether review should be granted. In Germany, certain clients of UBS are exposed to Madoff-managed positions through third-party funds and funds administered by UBS entities in Germany. A small number of claims have been filed with respect to such funds.

5. Transactions with Italian public sector entities

A number of transactions that UBS Limited and UBS AG respectively entered into with public sector entity counterparties in Italy have been called into question or become the subject of legal proceedings and claims for damages and other awards. In Milan, in 2012, civil claims brought by the City of Milan against UBS Limited, UBS Italia SIM Spa and three other international banks in relation to a 2005 bond issue and associated derivatives transactions entered into with Milan between 2005 and 2007 were settled without admission of liability. In 2012, the criminal court in Milan issued a judgment convicting two current UBS employees and one former employee, together with employees from the three other banks, of fraud against a public entity in relation to the same bond issue and the execution, and subsequent restructuring, of the related derivative transactions. In the same proceedings, the Milan criminal court also found UBS Limited and three other banks liable for the administrative offense of failing to have in place a business organizational model capable of preventing the criminal offenses of which its employees were convicted. The sanctions against UBS Limited, which are not effective until appeals are exhausted, are confiscation of the alleged level of profit flowing from the criminal findings (EUR 16.6 million), a fine in respect of the finding of the administrative offense (EUR 1 million) and payment of legal fees. UBS's balance sheet at 31 March 2014 reflected a provision in the amount of EUR 17.7 million for this potential exposure. UBS Limited and the individuals appealed that judgment, and in March 2014, the Milan Court of Appeal handed down its judgment in short form. It overturned all findings of liability against UBS Limited and convictions of the UBS individuals and acquitted them, stating that the conduct did not occur. The court indicated that it would issue a full judgment including the reasons for its rulings within 90 days. The appellate prosecutor has until July 21, 2014 to decide whether to pursue a further appeal to the Court of Cassation in Rome..

Derivative transactions with the Regions of Calabria, Tuscany, Lombardy, Lazio and Campania, and the City of Florence have also been called into question or become the subject of legal proceedings and claims for damages and other awards. In 2012, UBS AG and UBS Limited settled all civil disputes with the Regions of Tuscany, Lombardy and Lazio without any admission of liability. In 2013, a settlement of all civil and administrative disputes was reached with the City of Florence. An oral agreement in principle was reached with the Region of Calabria subject to conditions which have not yet occurred. UBS's balance sheet at 31 March 2014 reflected a provision in connection with that oral agreement.

6. Kommunale Wasserwerke Leipzig GmbH ("**KWL**")

In 2006 and 2007, KWL entered into a series of Credit Default Swap ("**CDS**") transactions with bank swap counterparties, including UBS. UBS also entered into back-to-back CDS transactions with the other counterparties, Depfa Bank plc ("**Depfa**") and Landesbank Baden-Württemberg ("**LBBW**"), in relation to their

respective swaps with KWL. As a result of the KWL CDS transactions and the back-to-back CDS transactions with Depfa and LBBW, UBS is owed a total amount of approximately USD 319.8 million, plus interest, which remains unpaid. Specifically, under the CDS contracts between KWL and UBS, the last of which were terminated by UBS in 2010, a net sum of approximately USD 137.6 million, plus interest, has fallen due from KWL but not been paid.

In 2010, UBS issued proceedings in the English High Court against KWL seeking various declarations from the English court, in order to establish that the swap transactions between KWL and UBS are valid, binding and enforceable as against KWL and in respect of UBS's role as portfolio manager. UBS issued separate proceedings in the English High Court against Depfa and LBBW seeking declarations as to the parties' obligations under the back-to-back CDS transactions and monetary claims. UBS contends that it is owed USD 83.3 million, plus interest, by Depfa. UBS contends that it is owed EUR 75.5 million, plus interest, by LBBW. Depfa and LBBW are defending against the claims and have also issued counterclaims. Additionally, Depfa added a claim against KWL to the proceedings against it and KWL served a defense. The English court ruled in 2010 that it had jurisdiction and would hear the proceedings. UBS issued a further claim in the English proceeding seeking declarations concerning the validity of its early termination of the remaining CDS transactions with KWL and later added a monetary claim. Also, in 2010, KWL issued proceedings in Leipzig, Germany against UBS, Depfa and LBBW. The Leipzig court has also ruled that it is for the London court and not the Leipzig court to determine the validity and effect of a third party notice served by LBBW on UBS in the Leipzig proceedings.

In the English proceedings, KWL is defending against UBS's claims and has served a counterclaim which also joins UBS Limited and Depfa to the proceedings. As part of its assertions, KWL claims damages of at least USD 68 million in respect of UBS AG's termination of some of the CDS contracts, whilst disputing that any monies are owed to UBS AG pursuant to another CDS contract. UBS, UBS Limited and Depfa are defending against KWL's counterclaims, and Depfa has asserted additional claims against UBS and UBS Limited. Both KWL and Depfa have mutually exclusive claims for payment of USD 32.6 million which has previously been paid by Depfa to UBS. Trial in the English proceedings began in April 2014 and is expected to run through July 2014.

In the proceedings brought by KWL against LBBW in Leipzig, in June 2013, the court ruled in LBBW's favor. KWL appealed against that ruling and the court is expected to make its first decision on the appeal by 30 May 2014.

UBS's balance sheet at 31 March 2014 reflected provisions with respect to matters described in this item 6 in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which UBS has established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information, and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that UBS has recognized.

In 2011, the former managing director of KWL and two financial advisers were convicted in Leipzig, Germany, on criminal charges related to certain KWL transactions, including swap transactions with UBS and other banks. Following further criminal proceedings brought against them in Dresden, Germany, relating to the same transactions, they were each convicted of embezzlement in 2013 and given longer sentences. All three have lodged appeals

Since 2011, the SEC has been conducting an investigation focused on, among other things, the suitability of the KWL transactions, and information provided by UBS to KWL. UBS has provided documents and testimony to the SEC and is continuing to cooperate with the SEC.

7. Puerto Rico

Declines in Puerto Rico municipal bond and closed-end fund prices since August 2013 have led to multiple regulatory inquiries, as well as customer complaints and arbitrations with aggregate claimed damages exceeding USD 300 million filed by clients in Puerto Rico who own those securities. A shareholder derivative action also was filed in February 2014 against various UBS entities and current and certain former directors of the closed-end funds, alleging hundreds of millions in losses in the funds. An internal review also disclosed that certain clients, many of whom acted at the recommendation of one financial advisor, invested proceeds of non-purpose loans in closed-end fund securities in contravention of their loan agreements.

In 2011, a purported derivative action was filed on behalf of the Employee Retirement System of the Commonwealth of Puerto Rico ("**System**") against over 40 defendants, including UBS Financial Services Inc. of Puerto Rico ("**UBS PR**") and other consultants and underwriters, trustees of the System, and the President and

Board of the Government Development Bank of Puerto Rico. The plaintiffs alleged that defendants violated their purported fiduciary duties and contractual obligations in connection with the issuance and underwriting of approximately USD 3 billion of bonds by the System in 2008 and sought damages of over USD 800 million. UBS is named in connection with its underwriting and consulting services. In 2013, the case was dismissed by the Puerto Rico Court of First Instance on the grounds that plaintiffs did not have standing to bring the claim. That dismissal was subsequently overturned by the Puerto Rico Court of Appeals. In February 2014, UBS's petition for appeal was denied by the Supreme Court of Puerto Rico, and UBS filed motions for reconsideration. Also, in 2013, an SEC Administrative Law Judge dismissed a case brought by the SEC against two UBS executives, finding no violations. The charges had stemmed from the SEC's investigation of UBS's sale of closed-end funds in 2008 and 2009, which UBS settled in 2012.

UBS's balance sheet at 31 March 2014 reflected provisions with respect to matters described in this item 7 in amounts that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which UBS has established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information, and accordingly may ultimately prove to be substantially greater (or may be less) than the provisions that UBS has recognized.

8. Foreign exchange, LIBOR, and benchmark rates

Foreign exchange-related regulatory matters: Following an initial media report in 2013 of widespread irregularities in the foreign exchange markets, UBS immediately commenced an internal review of its foreign exchange business, which includes UBS's precious metal business. Since then, various authorities reportedly have commenced investigations concerning possible manipulation of foreign exchange markets, including FINMA, the Swiss Competition Commission ("**WEKO**"), the US Department of Justice ("**DOJ**"), the US Commodity Futures Trading Commission ("**CFTC**"), the UK Financial Conduct Authority ("**FCA**") (to which certain responsibilities of the UK Financial Services Authority ("**FSA**") have passed) and the Hong Kong Monetary Authority ("**HKMA**"). WEKO stated in March 2014 that it had reason to believe that certain banks may have colluded to manipulate foreign exchange rates. A number of authorities also reportedly are investigating potential manipulation of precious metal prices. UBS and other financial institutions have received requests from various authorities relating to their foreign exchange businesses, and UBS is cooperating with the authorities. UBS has taken and will take appropriate action with respect to certain personnel as a result of its ongoing review.

Foreign exchange-related civil litigation: Several putative class actions have been filed since November 2013 in US federal courts against UBS and other banks. These actions are on behalf of putative classes of persons who engaged in foreign currency transactions. They allege collusion by the defendants and assert claims under the antitrust laws and for unjust enrichment. The defendants (including UBS) have not yet filed responsive pleadings.

LIBOR and other benchmark-related regulatory matters: Numerous government agencies, including the SEC, the CFTC, the DOJ, the FCA, the UK Serious Fraud Office ("**SFO**"), the Monetary Authority of Singapore ("**MAS**"), the HKMA, FINMA, the various state attorneys general in the US, and competition authorities in various jurisdictions have conducted or are continuing to conduct investigations regarding submissions with respect to British Bankers' Association LIBOR (London Interbank Offered Rate) and other benchmark rates, including HIBOR (Hong Kong Interbank Offered Rate) and ISDAFIX.. These investigations focus on whether there were improper attempts by UBS (among others), either acting on its own or together with others, to manipulate LIBOR and other benchmark rates at certain times.

In 2012, UBS reached settlements with the FSA, the CFTC and the Criminal Division of the DOJ in connection with their investigations of benchmark interest rates. At the same time FINMA issued an order concluding its formal proceedings with respect to UBS relating to benchmark interest rates. UBS has paid a total of approximately CHF 1.4 billion in fines and disgorgement – including GBP 160 million in fines to the FSA, USD 700 million in fines to the CFTC, and CHF 59 million in disgorgement to FINMA. Under a non-prosecution agreement ("**NPA**") that UBS entered into with the DOJ, UBS has agreed to pay a fine of USD 500 million. Pursuant to a separate plea agreement between the DOJ and UBS Securities Japan Co. Ltd. ("**UBSSJ**"), UBSSJ entered a plea to one count of wire fraud relating to the manipulation of certain benchmark interest rates, including Yen LIBOR. The NPA, which (along with the plea agreement) covered conduct beyond the scope of the conditional leniency / immunity grants described below, required UBS to pay the USD 500 million fine to DOJ after the sentencing of UBSSJ, and provided that any criminal penalties imposed on UBSSJ at sentencing be deducted from the USD 500 million fine. At the sentencing hearing held in 2013, the court approved the proposed plea agreement and imposed a USD 100 million fine against UBSSJ, as agreed to by the DOJ and

UBSSJ under the plea agreement. Since the sentencing, UBS has paid a fine of USD 400 million to the DOJ, and UBSSJ has paid the USD 100 million fine imposed by the sentencing court. The conduct described in the various settlements and the FINMA order includes certain UBS personnel: engaging in efforts to manipulate submissions for certain benchmark rates to benefit trading positions; colluding with employees at other banks and cash brokers to influence certain benchmark rates to benefit their trading positions; and giving inappropriate directions to UBS submitters that were in part motivated by a desire to avoid unfair and negative market and media perceptions during the financial crisis. The benchmark interest rates encompassed by one or more of these resolutions include Yen LIBOR, GBP LIBOR, CHF LIBOR, Euro LIBOR, USD LIBOR, EURIBOR (Euro Interbank Offered Rate) and Euroyen TIBOR (Tokyo Interbank Offered Rate). UBS has ongoing obligations to cooperate with authorities with which it has reached resolutions and to undertake certain remediation with respect to benchmark interest rate submissions. In addition, under the NPA, UBS has agreed, among other things, that for two years from 18 December 2012 UBS will not commit any US crime, and it will advise DOJ of any potentially criminal conduct by UBS or any of its employees relating to violations of US laws concerning fraud or securities and commodities markets. Any failure to comply with these obligations could result in termination of the NPA and potential criminal prosecution in relation to the matters covered by the NPA. Investigations by the CFTC and other government authorities remain ongoing notwithstanding these resolutions.

UBS has been granted conditional leniency or conditional immunity from authorities in certain jurisdictions, including the Antitrust Division of the DOJ and the Swiss Competition Commission ("**WEKO**"), in connection with potential antitrust or competition law violations related to submissions for Yen LIBOR and Euroyen TIBOR. WEKO has also granted UBS conditional immunity in connection with potential competition law violations related to submissions for Swiss franc LIBOR and certain transactions related to Swiss franc LIBOR. The Canadian Competition Bureau (“**Bureau**”) had granted UBS conditional immunity in connection with potential competition law violations related to submissions for Yen LIBOR, but in January 2014, the Bureau announced the discontinuation of its investigation into Yen LIBOR for lack of sufficient evidence to justify prosecution under applicable laws. As a result of these conditional grants, UBS will not be subject to prosecutions, fines or other sanctions for antitrust or competition law violations in the jurisdictions where it has conditional immunity or leniency in connection with the matters covered by the conditional grants, subject to its continuing cooperation. However, the conditional leniency and conditional immunity grants UBS has received do not bar government agencies from asserting other claims and imposing sanctions against UBS, as evidenced by the settlements and ongoing investigations referred to above. In addition, as a result of the conditional leniency agreement with the DOJ, UBS is eligible for a limit on liability to actual rather than treble damages were damages to be awarded in any civil antitrust action under US law based on conduct covered by the agreement and for relief from potential joint and several liability in connection with such civil antitrust action, subject to UBS satisfying the DOJ and the court presiding over the civil litigation of its cooperation. The conditional leniency and conditional immunity grants do not otherwise affect the ability of private parties to assert civil claims against UBS.

In 2013, the European Commission (“**EC**”) announced a decision adopted in the Commission’s Yen Interest Rate Derivatives (“**YIRD**”) investigation, under which UBS has received full immunity from fines for disclosing to the Commission the existence of infringements relating to YIRD.

In 2013, the MAS announced the results of its investigation of benchmark submissions by 20 banks, including UBS. The investigation related to various benchmark submissions, including the Singapore Interbank Offered Rates and the Swap Offered Rates, and covered the period from 2007 to 2011. The MAS found deficiencies in the governance, risk management, internal controls and surveillance systems for the banks' benchmark submission processes and directed the banks to correct the deficiencies and set aside additional statutory reserves with MAS at zero interest for one year. The MAS also announced proposed changes to its regulatory framework for financial benchmarks that are designed to enhance the integrity of the process for setting benchmarks.

In 2013, UBS entered into an enforceable undertaking in relation to an investigation by the Australian Securities and Investments Commission (“**ASIC**”) into conduct relating to Australian Bank Bill Swap Rate (“**BBSW**”) submissions. An independent expert engaged by UBS at ASIC's request concluded that, to the extent there may have been any impact of such conduct on the market as a whole, it would have been insignificant. The enforceable undertaking requires UBS to ensure that its participation in relation to the setting of Australian interest rate benchmarks upholds the integrity and reliability of those benchmarks and is in accordance with its obligations under the CFTC order. UBS also agreed to make a voluntary contribution of AUD 1 million to fund independent financial literacy projects in Australia. ASIC has the power to investigate, conduct further surveillance or pursue criminal prosecution of UBS or its representatives in relation to any contravention. ASIC

acknowledged UBS's cooperation and the fact that it was the first bank to report this conduct to it. ASIC's inquiries in relation to the BBSW rate set are ongoing.

In March 2014, the HKMA announced the conclusion of its investigations into the fixing of HIBOR. The HKMA found that some UBS traders made change requests to the UBS HIBOR submitter between September 2006 and June 2009, but said they had "negligible impact" on the actual outcome of the HIBOR fixing. The HKMA found no evidence of collusion among the banks to rig the rate. The HKMA also found that UBS failed to report to the HKMA the misconduct of its staff in relation to HIBOR submissions and further found material weaknesses in UBS's internal controls and governance in managing the HIBOR submission process and in other areas. UBS ceased to be a HIBOR panel bank in 2010. The HKMA has required that UBS make improvements in its processes.

In 2011, the Japan Financial Services Agency ("**JFSA**") commenced administrative actions and issued orders against UBS Securities Japan Ltd ("**UBS Securities Japan**") and UBS AG, Tokyo Branch in connection with their investigation of Yen LIBOR and Euroyen TIBOR. These actions were based on findings by the Japan Securities and Exchange Surveillance Commission ("**SESC**"), and, in the case of UBS AG, Tokyo Branch, the JFSA, that a former UBS Securities Japan trader engaged in inappropriate conduct relating to Euroyen TIBOR and Yen LIBOR, including approaching UBS AG, Tokyo Branch, and other banks to ask them to submit TIBOR rates taking into account requests from the trader for the purpose of benefiting trading positions.

LIBOR and other benchmark-related civil litigation: A number of putative class actions and other actions are pending in, or expected to be transferred to, the federal courts in New York against UBS and numerous other banks on behalf of parties who transacted in certain interest rate benchmark-based derivatives linked directly or indirectly to US dollar LIBOR, Yen LIBOR, Euroyen TIBOR and EURIBOR. Also pending are actions asserting losses related to various products whose interest rate was linked to US dollar LIBOR, including adjustable rate mortgages, preferred and debt securities, bonds pledged as collateral, loans, depository accounts, investments and other interest bearing instruments. All of the complaints allege manipulation, through various means, of various benchmark interest rates, including LIBOR, Euroyen TIBOR or EURIBOR rates and seek unspecified compensatory and other damages, including treble and punitive damages, under varying legal theories that include violations of the US Commodity Exchange Act, the federal racketeering statute, federal and state antitrust and securities laws and other state laws. In 2013, a federal court in New York dismissed the federal antitrust and racketeering claims of certain US dollar LIBOR plaintiffs and a portion of their claims brought under the Commodity Exchange Act (“**CEA**”) and state common law. The same court subsequently denied the parties' requests for reconsideration and plaintiffs' motion for interlocutory appeal and to amend the complaints to include additional antitrust and CEA allegations. It granted certain plaintiffs permission to assert claims for unjust enrichment and breach of contract. Motions to dismiss these unjust enrichment and breach of contract claims are pending, as is a renewed motion to dismiss by UBS and other defendants that seeks dismissal of further CEA claims. Certain plaintiffs have also appealed the dismissal of their antitrust claims, but the appellate court denied these appeals as premature, without prejudice to bringing the appeals again after final disposition of the LIBOR actions. UBS and other defendants in other lawsuits including the one related to Euroyen TIBOR have filed motions to dismiss. In March 2014, the court in the Euroyen TIBOR lawsuit dismissed the plaintiff's federal antitrust and state unfair enrichment claims, and dismissed a portion of the plaintiff's CEA claims.

With respect to additional matters and jurisdictions not encompassed by the settlements and order referred to above, UBS's balance sheet at 31 March 2014 reflected a provision of an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which UBS has established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information, and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that UBS has recognized.

9. Swiss retrocessions

The Swiss Supreme Court ruled in 2012, in a test case against UBS, that distribution fees paid to a bank for distributing third party and intra-group investment funds and structured products must be disclosed and surrendered to clients who have entered into a discretionary mandate agreement with the bank, absent a valid waiver.

FINMA has issued a supervisory note to all Swiss banks in response to the Supreme Court decision. The note sets forth the measures Swiss banks are to adopt, which include informing all affected clients about the

Supreme Court decision and directing them to an internal bank contact for further details. UBS has met the FINMA requirements and has notified all potentially affected clients.

It is expected that the Supreme Court decision will result in a significant number of client requests for UBS to disclose and potentially surrender retrocessions. Client requests are being assessed on a case-by-case basis. Considerations to be taken into account when assessing these cases include, among others, the existence of a discretionary mandate and whether or not the client documentation contained a valid waiver with respect to distribution fees.

UBS's balance sheet at 31 March 2014 reflected a provision with respect to matters described in this item 9 in an amount that UBS believes to be appropriate under the applicable accounting standard. The ultimate exposure will depend on client requests and the resolution thereof, factors that are difficult to predict and assess. Hence as in the case of other matters for which UBS has established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information, and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that UBS has recognized.

10. Banco UBS Pactual tax indemnity

Pursuant to the 2009 sale of Banco UBS Pactual S.A. ("**Pactual**") by UBS to BTG Investments, LP ("**BTG**"), BTG has submitted contractual indemnification claims that UBS estimates amount to approximately BRL 2.5 billion, including interest and penalties, which is net of liabilities retained by BTG. The claims pertain principally to several tax assessments issued by the Brazilian tax authorities against Pactual relating to the period from December 2006 through March 2009, when UBS owned Pactual. These assessments are being or will be challenged in administrative proceedings. BTG has also provided notice to UBS of several additional Pactual-related inquiries by the Brazilian tax authorities that relate to the period of UBS's ownership of Pactual, but involving substantially smaller amounts. In 2013, approximately BRL 128 million in tax claims relating to the period for which UBS has indemnification obligations were submitted for settlement through amnesty programs announced by the Brazilian government in 2013.

UBS's balance sheet at 31 March 2014 reflected a provision with respect to matters described in this item 10 in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which UBS has established provisions, the future outflow of resources in respect of this matter cannot be determined with certainty based on currently available information, and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that UBS has recognized.

11. Matters relating to the CDS market

In 2013 the EC issued a Statement of Objections against thirteen credit default swap ("**CDS**") dealers including UBS, as well as data service provider Markit and the International Swaps and Derivatives Association ("**ISDA**"). The Statement of Objections broadly alleges that the dealers infringed EU antitrust rules by colluding to prevent exchanges from entering the credit derivatives market between 2006 and 2009. UBS has submitted its response to the Statement of Objections. Since mid-2009, the Antitrust Division of the DOJ has also been investigating whether multiple dealers, including UBS, conspired with each other and with Markit to restrain competition in the markets for CDS trading, clearing and other services. In January and April 2014, putative class action plaintiffs filed consolidated amended complaints in the Southern District of New York against twelve dealers, including UBS, as well as Markit and ISDA, alleging violations of the US Sherman Antitrust Act and common law. Plaintiffs allege that the defendants unlawfully conspired to restrain competition in and / or monopolize the market for CDS trading in the US in order to protect the dealers' profits from trading CDS in the over-the-counter market. Plaintiffs assert claims on behalf of all purchasers and sellers of CDS that transacted directly with any of the dealer defendants since 1 January 2008, and seek unspecified trebled compensatory damages and other relief.

12. Lehman principal protection notes

From March 2007 through September 2008, UBS Financial Services Inc. ("**UBSFS**") sold approximately USD 1 billion face amount of structured notes issued by Lehman Brothers Holdings Inc. ("**Lehman**"), a majority of which were referred to as "principal protection notes," reflecting the fact that while the notes' return was in some manner linked to market indices or other measures, some or all of the investor's principal was an unconditional obligation of Lehman as issuer of the notes. Based on its role as an underwriter of Lehman structured notes, UBSFS was named as a defendant in a putative class action asserting violations of disclosure

provisions of the federal securities laws. In August 2013, UBSFS agreed to a proposed USD 120 million settlement of the case, which was approved by the Court in December 2013. Previously, certain of the other underwriter defendants and the former officers and directors of Lehman reached separate settlements regarding the same case. UBSFS also has been named in numerous individual civil suits and customer arbitrations, a small number of which were pending as of 31 March 2014. The individual customer claims, some of which have resulted in awards payable by UBSFS, relate primarily to whether UBSFS adequately disclosed the risks of these notes to its customers.

Besides the proceedings specified above under (1) through (12) no governmental, legal or arbitration proceedings (including any such proceedings which are pending or threatened, of which UBS AG is aware) which may have, or have had in the recent past, significant effects on UBS AG's and/or UBS Group's financial position or profitability, are or have been pending during the last twelve months until the date of this document, nor is the Issuer aware that any such governmental, legal or arbitration proceedings are threatened.

XII. Significant Changes in the Financial or Trading Position; Material Adverse Change in Prospects

There has been no significant change in the financial or trading position of UBS Group or of UBS AG since 31 March 2014.

There has been no material adverse change in the prospects of UBS AG or UBS Group since 31 December 2013.

XIII. Material Contracts

No material contracts have been concluded outside of the ordinary course of of UBS AG's or UBS Group's business, which could result in any member of the UBS Group being under an obligation or entitlement that is material to UBS AG's ability to meet its obligations to the investors in relation to the issued securities.

XIV. Documents on Display

- The Annual Report of UBS AG as of 31 December 2012, comprising the sections (1) Operating environment and strategy, (2) Financial and operating performance, (3) Risk, treasury and capital management, (4) Corporate governance, responsibility and compensation, (5) Financial information (including the "Report of the Statutory Auditor and the Independent Registered Public Accounting Firm on the Consolidated Financial Statements" and the "Report of the Statutory Auditor on the Financial Statements");

- The Annual Report of UBS AG as of 31 December 2013, comprising the sections (1) Operating environment and strategy, (2) Financial and operating performance, (3) Risk, treasury and capital management, (4) Corporate governance, responsibility and compensation, (5) Financial information (including the "Report of the statutory auditor and the independent registered public accounting firm on the consolidated financial statements" and the "Report of the statutory auditor on the financial statements"); and

- UBS's report for the quarter ended 31 March 2014 (including unaudited consolidated financial statements); and

- The Articles of Association of UBS AG,

shall be maintained in printed format, for free distribution, at the offices of the Issuer for a period of twelve months after the publication of this document. In addition, the annual and quarterly reports of UBS AG are published on UBS's website, at www.ubs.com/investors or a successor address. The Articles of Association of UBS AG are also available on UBS's Corporate Governance website, at www.ubs.com/governance.

Appendix F

First Quarterly Report as at 31 March 2014

Our financial results for the *first* quarter of 2014.

This Page is intentionaly left blank

Dear shareholders,

For the first quarter of 2014, we reported a net profit attributable to shareholders of CHF 1,054 million and diluted earnings per share of CHF 0.27. We recorded an adjusted[1] Group profit before tax of CHF 1,486 million, a solid performance achieved despite a volatile operating environment.

We are pleased to have surpassed our long-stated fully applied Basel III common equity tier 1 (CET1) ratio target of 13% already in the first quarter. Our premier CET1 ratio is the result of actively reducing risk-weighted assets (RWA) and building Basel III-compliant capital by growing our retained earnings. We continued to deleverage our balance sheet, reducing total assets by CHF 36 billion during the quarter. Our Basel III funding and liquidity ratios as well as our Swiss SRB leverage ratio remained comfortably above our regulatory requirements and we expect to meet the fully applied 2019 leverage ratio regulatory requirements ahead of schedule. Our fully applied leverage ratio improved meaningfully to 3.8% due to a combination of reducing the denominator to below CHF 1 trillion and increasing the numerator through higher CET1 capital and the issuance of EUR 2.0 billion of low-trigger, loss-absorbing, Basel III-compliant subordinated notes. This brings our total amount of low-trigger tier 2 capital to CHF 7.1 billion, against an expected progressive buffer requirement of around CHF 9 billion by 2019. Our fully applied total capital ratio already stands at 16.8%, versus our expected requirement of around 17.5% by 2019.

Wealth Management delivered an increase in adjusted[1] profit before tax to CHF 659 million due to higher operating income and lower operating expenses. Transaction-based income increased, largely due to higher client activity across all regions, most notably in Asia Pacific. The gross margin on invested assets increased 2 basis points to 87 basis points, as income growth outpaced an increase in average invested assets. Net new money was strong at CHF 10.9 billion, with Asia Pacific and emerging markets as the main contributors. We achieved a net new money growth rate that was comfortably within the upper end of our target range. The adjusted[1] cost/income ratio improved and was within our target range and we expect further reductions in future.

Wealth Management Americas made a strong start to the year with a record adjusted[1] profit before tax of USD 284 million. An increase in operating income, mainly due to higher managed account fees, was largely offset by higher adjusted[1] operating expenses. The business continued to attract client assets, with net new money amounting to USD 2.1 billion. While the net new money growth rate was 0.9%, improved performance from experienced financial advisors was offset by outflows from financial advisor attrition. The business maintained both its adjusted[1] cost/income ratio and its gross margin on invested assets within target ranges.

Our **Retail & Corporate** business recorded a higher adjusted[1] profit before tax of CHF 401 million, mainly due to lower operating expenses as a result of lower litigation expenses. Net new business volume growth for our retail business was 4.3%, ahead of target. The adjusted[1] cost/income ratio and net interest margin were both within our target range. Our new e-banking platform received the highest accolade possible in the cross-industry Best of Swiss Web 2014 awards and was cited as an outstanding project in terms of technology and expertise. As the leading universal bank in Switzerland and an important provider of pension advisory services, we are giving our private and wealth management client advisors additional training in this area and are launching a nationwide campaign to raise public awareness of the importance of retirement planning.

Global Asset Management recorded a lower adjusted[1] profit before tax of CHF 126 million. The business's adjusted[1] cost/income ratio remained outside its target range. Excluding money market flows, net new money was very strong at CHF 13.0 billion, the highest amount since the third quarter of 2005, and included significant net inflows from both third parties and UBS's wealth management clients. Including money market flows, total net new money reached CHF 9.6 billion, the highest amount since the third quarter of 2006. The net new money growth rate was ahead of target at 6.6%. The gross margin on invested assets was 31 basis points, slightly below target.

The **Investment Bank** increased adjusted[1] profit before tax to CHF 549 million. Operating income was positively affected by strong revenues, particularly in debt capital markets and equities. In cash equities we recorded our best first-quarter performance since 2011. As a result of improved performance, operating expenses increased on higher variable compensation expenses, partly offset by lower general and administrative expenses. At CHF 62 billion, fully applied RWA remained unchanged and were consistent with our target of less than CHF 70 billion. The adjusted[1] cost/income ratio improved and was well within the target range. The business achieved an improved adjusted[1] return on attributed equity of 28% compared with 20% in the prior quarter. Resources and risk were managed in line with client activity and our return on attributed equity result was comfortably ahead of our greater than 15% target.

1 Please refer to the "Group performance" section of our First Quarter 2014 Report for more information on adjusted results.

Corporate Center – Core Functions recorded a loss before tax of CHF 176 million. After allocations to the business divisions and Non-core and Legacy Portfolio, total operating expenses increased to CHF 227 million. A gain on own credit was partly offset by negative treasury income remaining after allocations. The loss before tax in **Corporate Center – Non-core and Legacy Portfolio** reduced to CHF 225 million, mainly due to an improvement in debit valuation adjustments, revaluation gains in our credit business and lower losses from unwind and novation activities. We continued to make progress in reducing balance sheet assets, which declined by CHF 25 billion. Fully applied RWA decreased by CHF 3 billion to CHF 60 billion at the end of the quarter. We expect to make further progress in exiting the remaining Non-core and Legacy positions during 2014.

Underlining our commitment to vocational training and our apprenticeship and graduate training programs, we joined the Global Apprenticeships Network. Every year, UBS offers training programs to more than 2,000 young people. As a member of this network, we will benefit from sharing best practices in the design and implementation of apprenticeships and on-the-job training programs. This constitutes a strong talent pipeline and contributes to UBS's competitiveness and success and underlines our desire to contribute to the communities in which we operate.

As we continue to build on our enviable franchise in Asia Pacific, events such as our UBS Greater China Conference underline our commitment to the region. Held in Shanghai for the fourteenth consecutive year, the event attracted over 1,700 delegates, including close to 1,000 domestic and international investors. Participants listened to numerous panel discussions and keynote addresses from experts in the fields of politics, business and economics over five days. These focused on the theme "New reforms, new era, new opportunities" and covered global as well as Chinese issues.

We were honored by the external recognition received in relation to our efforts to be a responsible corporate citizen. In RobecoSAM's Corporate Sustainability Assessment, we were named as one of the top three leaders in our sector for 2014. Together with S&P Dow Jones Indices, RobecoSAM publishes the globally recognized Dow Jones Sustainability Indices, which track leading sustainability-driven companies worldwide. It defines leading companies as those that integrate environmental and social factors into their long-term strategies and performance reviews.

Together with the presentation of our financial results for the first quarter, we are providing an update to investors on our strategic progress and the compelling prospects for our future. We continue to execute our strategy as we move to the next phase of delivering attractive and sustainable returns to shareholders.

To provide even greater transparency with regards to our financial performance, we are now disclosing our quarterly results by region as well as by business division. The fact that every one of our business divisions and regions is profitable reflects our successful strategy and the strong positions we have created both in the areas in which we choose to do business and on a geographical basis.

On the day we are issuing this report, we are also providing to our investors an update on our strategy and performance objectives. Our strategy remains unchanged. Our performance has proven that the model works and is right for UBS. We continue to target a 15% return on equity and remain committed to a capital return payout ratio of at least 50% of net profit. We have retained most of our Group and business division targets. Based in part on the progress we have made since our Investor Day in 2012, we are also announcing a number of new or revised objectives. For example, we are supplementing our Group RWA reduction goals with a new target Group leverage ratio denominator of CHF 900 billion to be achieved by 2016. New business division objectives include the aspiration of our wealth management businesses to deliver annual growth in adjusted annual profit before tax of 10–15% over the cycle, and a new Global Asset Management target of CHF 1 billion in adjusted annual pre-tax profit. Three of our business divisions have also reduced or narrowed their cost/income ratio targets, supported by our commitment to deliver CHF 2.1 billion of net cost reductions in the Corporate Center. More information about the investor update, including a complete list of our external performance targets, can be found at *www.ubs.com/investors.*

We also announced today that we intend to establish a group holding company through a share for share exchange offer, which will commence later this year, subject to regulatory approvals. The establishment of a group holding company is intended, along with other measures we have already announced, to substantially improve the resolvability of UBS. We anticipate that these measures will allow UBS to qualify for a capital rebate under the Swiss "too-big-to-fail" requirements. This rebate would result in lower overall capital requirements for UBS. Following completion of the transaction, we expect to propose a supplementary capital return of at least CHF 0.25 per share to shareholders of the new group holding company.

We look forward to welcoming our shareholders to the Annual General Meeting (AGM) to be held in Basel on 7 May 2014. As part of the AGM, shareholders will be able to vote on the proposal of the Board of Directors for a 67% increase in dividend to CHF 0.25 per share for 2013 from CHF 0.15 a year earlier. This is a reflection of our success in delivering on our stated objective of progressive capital returns. The Board will also propose the approval of various amendments to the Articles of Association made in order to implement the new Ordinance Against Excessive Compensation in Listed Stock Corporations. The Ordinance, enacted by the Swiss Federal Council to implement the Minder initiative, entered into force on 1 January 2014. The first binding vote on

Axel A. Weber Chairman of the Board of Directors **Sergio P. Ermotti** Group Chief Executive Officer

the Board of Directors' and Group Executive Board's compensation will be held at the 2015 AGM.

Rainer-Marc Frey has decided not to seek re-election to the Board of Directors of UBS at this year's AGM due to other professional commitments. Since his election to the Board in October 2008, he has served on the Risk, the Audit and the Human Resources and Compensation Committees. We thank him for his valuable contribution to our success over the past six years.

Outlook – At the start of the second quarter of 2014, many of the underlying challenges and geopolitical issues that we have previously highlighted remain. The continued absence of sustained and credible improvements to unresolved issues in Europe, continuing US fiscal and monetary policy issues, geopolitical instability and the mixed outlook for global growth would make improvements in prevailing market conditions unlikely. Despite these challenges, we will continue to execute on our strategy in order to ensure the firm's long-term success and to deliver sustainable returns for our shareholders.

Yours sincerely,

Axel A. Weber
Chairman of the
Board of Directors

Sergio P. Ermotti
Group Chief Executive Officer

UBS and its businesses

We draw on our over 150-year heritage to serve private, institutional and corporate clients worldwide, as well as retail clients in Switzerland. Our business strategy is centered on our pre-eminent global wealth management businesses and our leading universal bank in Switzerland, complemented by our Global Asset Management business and our Investment Bank, with a focus on capital efficiency and businesses that offer a superior structural growth and profitability outlook. Headquartered in Zurich and Basel, Switzerland, we have offices in more than 50 countries, including all major financial centers, and approximately 60,000 employees. UBS AG is the parent company of the UBS Group (Group). Under Swiss company law, UBS AG is organized as an Aktiengesellschaft, a corporation that has issued shares of common stock to investors. The operational structure of the Group comprises the Corporate Center and five business divisions: Wealth Management, Wealth Management Americas, Retail & Corporate, Global Asset Management and the Investment Bank.

Wealth Management

Wealth Management provides comprehensive financial services to wealthy private clients around the world – except those served by Wealth Management Americas. Its clients benefit from the entire spectrum of UBS resources, ranging from investment management to estate planning and corporate finance advice, in addition to specific wealth management products and services.

Wealth Management Americas

Wealth Management Americas provides advice-based solutions and banking services through financial advisors who deliver a fully integrated set of products and services specifically designed to address the needs of ultra high net worth and high net worth individuals and families. It includes the domestic US business, the domestic Canadian business and international business booked in the US.

Retail & Corporate

Retail & Corporate maintains a leading position across retail, corporate and institutional client segments in Switzerland and constitutes a central building block of UBS Switzerland's pre-eminent universal bank model. It provides comprehensive financial products and services embedded in a true multi-channel experience, offering clients convenient access. It continues to enhance the range of life-cycle products and services offered to clients, while pursuing additional growth in advisory and execution services.

Global Asset Management

Global Asset Management is a large-scale asset manager with diversified businesses across investment capabilities, regions and distribution channels. It offers investment capabilities and styles across all major traditional and alternative asset classes including equities, fixed income, currencies, hedge funds, real estate, infrastructure and private equity that can also be combined into multi-asset strategies. The fund services unit provides professional services including fund set-up, accounting and reporting for both traditional investment funds and alternative funds.

Investment Bank

The Investment Bank provides corporate, institutional and wealth management clients with expert advice, innovative financial solutions, outstanding execution and comprehensive access to the world's capital markets. It offers financial advisory and capital markets, research, equities, foreign exchange, precious metals and tailored fixed income services in rates and credit through its two business units, Corporate Client Solutions and Investor Client Services. The Investment Bank is an active participant in capital markets flow activities, including sales, trading and market-making across a range of securities.

Corporate Center

The Corporate Center comprises Corporate Center – Core Functions and Corporate Center – Non-core and Legacy Portfolio. Corporate Center – Core Functions provides Group-wide control functions including finance, risk control (including compliance) and legal. In addition, it provides all logistics and support functions, including operations, information technology, human resources, corporate development, regulatory relations and strategic initiatives, communications and branding, corporate real estate and administrative services, procurement, physical security, information security, offshoring and treasury services such as funding, balance sheet and capital management. Corporate Center – Core Functions allocates most of its treasury income, operating expenses and personnel associated with the abovementioned activities to the businesses. Corporate Center – Non-core and Legacy Portfolio comprises the non-core businesses and legacy positions previously part of the Investment Bank.

UBS Group

Management report

Regulatory and legal developments and financial reporting changes

Regulatory and legal developments

Creation of Group Holding Company

We have announced that we intend to establish a group holding company through a share for share exchange offer, which will commence later this year, subject to regulatory approvals. The establishment of a group holding company is intended, along with other measures we have already announced, to substantially improve the resolvability of UBS. We anticipate that these measures will allow UBS to qualify for a capital rebate under the Swiss "too-big-to-fail" requirements. This rebate would result in lower overall capital requirements for UBS.

Swiss Federal Council approves revisions to Banking Ordinance and announces changes to Capital Adequacy Ordinance

In April 2014, the Swiss Federal Council approved a revised Banking Ordinance, implementing the new accounting legislation and regulations regarding unclaimed assets adopted by the Swiss parliament in March 2013. The revised Banking Ordinance will come into force on 1 January 2015. In addition, the Swiss Federal Council announced changes to the Capital Adequacy Ordinance. A notable change relates to the definition of the Swiss systemically relevant banks (SRB) leverage ratio denominator (LRD), which must follow Bank for International Settlements (BIS) requirements. This change will become effective 1 January 2015, with a one-year transition period under which the current SRB definition may still be used. Our current expectation is that post optimization, the resulting increase in the LRD will not be significant. The definition of the leverage ratio numerator remains unchanged and will not be aligned with BIS requirements. UBS is currently evaluating implementation including the optional transition period.

Initiative against "mass immigration" accepted in Switzerland

In February 2014, Swiss cantons and voters accepted an initiative against "mass immigration." The new constitutional provisions require that residence permits for foreign nationals be restricted using quantitative limits and quotas. These limits and quotas will apply to all permits covered by legislation on foreign nationals, including cross-border commuters, and businesses must give Swiss nationals priority when hiring staff. The Swiss Federal Council announced that a legislative text will be proposed by the end of 2014, while final ratification of the legislative transformation must take place within the next three years. The extent to which UBS could be impacted, such as in its recruitment of foreign nationals in Switzerland or due to effects on Swiss corporate clients and the Swiss economy, will depend on the final implementation of the initiative in Swiss law and any possible European Union (EU) reaction.

European Commission issues proposal on structural reform of banks

In January 2014, the European Commission (EC) issued a proposed regulation on "Structural measures improving the resilience of EU credit institutions." The proposal includes two main measures: (i) a ban on proprietary trading and investments in hedge funds and (ii) an additional potential separation of certain trading activities, including market-making, "risky securitization" and complex derivatives, which will not be mandatory, but rather based on supervisory discretion. Overall, there is a material degree of supervisory discretion in the application of the proposed requirements, particularly in relation to the separation of trading and investment banking activities. Potential derogations from the separation requirements are available for jurisdictions with equivalent legislation. Furthermore, the European Parliament and Council of the EU have yet to indicate their view on this topic, and changes to the proposals during the political negotiations are likely. In light of this, it is unclear at this stage whether, and to what extent, certain UBS branches and entities, in particular UBS AG London branch and UBS Limited, will be impacted.

Agreement reached on Single Resolution Mechanism

In March 2014, the European Parliament and Council of the EU reached preliminary political agreement on the Single Resolution Mechanism (SRM). In April 2014, the plenary vote of the European Parliament confirmed this agreement. Key elements of the SRM include the establishment of a Single Resolution Board and a Single Resolution Fund (SRF). Significant banks that are subject to direct European Central Bank (ECB) supervision under the Single Supervisory Mechanism (SSM) and cross-border banks will be resolved by the Single Resolution Board. The SRM is expected to enter into force on 1 January 2015, at which time the Single Resolution Board will be fully operational, while the resolution function of the SRM and the bail-in tool would apply as of 1 January 2016, in line with the EU Bank Recovery and Resolution Directive (BRRD). UBS Luxembourg SA will be subject to direct ECB supervision under the SSM, as set out in the ECB's announcement of the comprehensive assessment, meaning it is subject to the ECB's supervisory risk assessment, asset quality review and stress test. It would be subject to resolution by the Single Resolution Board should resolution prove necessary. It is expected that UBS's other EU entities would be resolved by national resolution authorities.

OECD presents a Common Reporting Standard for automatic information exchange in tax matters

The new Common Reporting Standard (CRS), presented in February 2014, draws on previous work by the Organization for Eco-

nomic Cooperation and Development (OECD) and the intergovernmental approach to implementing the US Foreign Account Tax Compliance Act (FATCA).

As the CRS is largely modeled on the US FATCA Model 1 Intergovernmental Agreement, leveraging existing compliance systems should be possible. However, the scope and type of the data to be exchanged are much wider and the volume of reporting is expected to be substantially higher under the CRS. According to the OECD, the automatic exchange of information on tax matters should start by the end of 2015 or early 2016. The extent to which UBS will be affected will depend on the commentary on the standard and technical solutions to implement the information exchanges, to be released by the OECD by mid-2014.

Agreement reached on MiFID II/MiFIR

In January 2014, a preliminary political agreement was reached on the review of the Markets in Financial Instruments Directive and Regulation package (MiFID II/MiFIR). In April 2014, the plenary vote of the European Parliament confirmed this agreement. This package introduces a wide set of reforms, including in respect of third-country access to European Economic Area (EEA) markets, new rules regarding market infrastructure and a sharpened set of investor protection rules, such as those related to inducements and tape recordings. The MiFID II/MiFIR package is expected to apply from the end of 2016 or early 2017. It is currently too early to assess its impact on UBS.

UK regulator outlines new rules on supervising international banks

In February 2014, the UK Prudential Regulation Authority (PRA) publicly consulted on its approach to supervising international banks, with particular focus on UK branches of non-EEA banks ("non-EEA branches"). The PRA's proposed approach, which applies to both new and existing branches, is centered on an assessment of: (i) the equivalence of the home state's supervision of the whole firm, (ii) the branch's UK activities and (iii) the level of assurance the PRA gains from the home state supervisor (HSS) over resolution. The PRA states that it will permit non-EEA branches to undertake retail banking activities beyond de minimis levels only if there is a very high degree of assurance from the HSS over resolution. The PRA also expects new non-EEA branches to focus on wholesale banking and to do so at a level that is not critical to the UK economy. The proposals potentially impact the scope of business that could be undertaken by UBS AG London branch. However, it is currently not possible to assess the impact as the proposals leave significant scope for supervisory discretion and the final outcome is dependent on the PRA's assessment of the Swiss supervisory and resolution authorities.

Business and operating model of UBS Limited under review

In response to regulatory developments and in consultation with the UK and Swiss regulators, the business and operating model of UBS Limited, our UK bank subsidiary, and its relationship with UBS AG, are currently being reviewed. During the second quarter of 2014, we expect to commence the implementation of a revised business and operating model, including changes to the company's risk profile, to the effect that UBS Limited will bear and retain a greater degree of the risk and reward of its business activities. UBS AG will increase the capitalization of UBS Limited to enable UBS Limited to comply with regulatory requirements given the changed risk profile.

US regulators approve enhanced leverage ratio requirement

US regulators approved a final enhanced supplementary leverage ratio requirement for US top-tier bank holding companies (BHC) with more than USD 700 billion in consolidated assets or USD 10 trillion in assets under custody, currently the eight largest US banks. Under the new rule, BHC are required to maintain a tier 1 capital leverage buffer of at least 2% above the Basel III minimum supplementary leverage ratio requirement of 3%, for a total of 5% (6% for insured depository institutions). UBS is not subject to this requirement.

Financial reporting changes

Operating income

In the first quarter of 2014, we amended our management discussion and analysis of operating income for Wealth Management, Wealth Management Americas and Retail & Corporate. We now disclose "recurring net fee income," which is part of total net fee and commission income in the UBS Group financial statements, as a separate line in the business division reporting tables. This includes fees for services provided on an ongoing basis such as portfolio management fees, asset-based investment fund fees, custody fees and account keeping fees, which are generated on the respective business division's client assets. The non-recurring portion of the net fee and commission income for these business divisions, which mainly consists of brokerage and transaction-based investment fund fees as well as credit card fees and fees for payment transactions, is now presented together with net trading income as "transaction-based income." With these changes, we aim to enhance the transparency of operating income disclosure for our client asset-gathering businesses.

In addition, we have added a tabular disclosure in the "Group performance" section with the operating income breakdown for Wealth Management, Wealth Management Americas and Retail & Corporate, as well as specific commentary on the new operating income lines of recurring net fee income and transaction-based income for these business divisions.

Refinement to the allocation of operating costs for internal services

To further enhance cost discipline and strengthen our efforts to reduce our underlying cost base, beginning this quarter, we have refined the way that operating costs for internal services are allocated from Corporate Center – Core Functions to the business divisions and Corporate Center – Non-core and Legacy Portfolio. Under this refinement, each year, as part of the annual business planning cycle, Corporate Center – Core Functions agrees with the

business divisions and Non-core and Legacy Portfolio cost allocations for services at fixed amounts or at variable amounts based on formulas, depending on capital and service consumption levels as well as the nature of the services performed. These pre-agreed cost allocations are designed with the expectation that Corporate Center – Core Functions recovers its costs, without a mark-up. Because actual costs incurred may differ from those expected, however, Corporate Center – Core Functions may recognize significant under- or over-allocations depending on various factors, including Corporate Center – Core Functions' ability to manage the delivery of its services and achieve cost savings. Each year these cost allocations will be reset, taking account of the prior year's experience and plans for the forthcoming period. We expect the refined approach to strengthen the effectiveness and efficiency of the services performed by Corporate Center – Core Functions, and in particular to facilitate the achievement of cost savings, by better aligning cost accountability with the management of these services. Prior periods have not been adjusted for this refinement.

Changes to key performance indicators (KPI) in 2014

In the first quarter of 2014, we made certain changes to our KPI framework to further enhance its relevance by reclassifying certain KPI to "Additional information," or redefining them to focus on our specific wealth management or retail businesses.

"Return on risk-weighted assets, gross (%)" for the Group is now reported as "Additional information" rather than as a KPI, as we consider this metric less meaningful and relevant than other existing KPI in measuring Group performance. We also report our "Swiss SRB Basel III common equity tier 1 (CET1) capital ratio (%) (phase-in)" as "Additional information" rather than as a KPI. Our Swiss SRB Basel III CET1 capital ratio on a fully applied basis remains a KPI. At Group level, we replaced the KPI "Net new money growth (%)" with "Net new money growth for combined wealth management businesses (%)," focusing on net new money generated only by our wealth management businesses, by excluding net new money from Global Asset Management and Retail & Corporate from this measure.

"Recurring income as a % of income (%)" is no longer a Wealth Management Americas KPI, but is instead reported as "Additional information," consistent with the way this metric is reported in Wealth Management.

We replaced our Retail & Corporate KPI "Net new business volume growth (%)" with "Net new business volume growth for retail business (%)," excluding our corporate and institutional business from this measure as its net new business volume is volatile by nature and therefore provides limited insight. The revised measure better reflects management's view on our business. As "Additional information," we also show "Business volume for retail business (CHF billion)" and "Net new business volume for retail business (CHF billion)." "Impaired loan portfolio as a % of total loan portfolio, gross (%)" is no longer a Retail & Corporate KPI, but is instead reported as "Additional information."

➔ Refer to the "Measurement of performance" section of our Annual Report 2013 for more information on our KPI framework

Offsetting Financial Assets and Financial Liabilities (Amendments to IAS 32, *Financial Instruments: Presentation)*

On 1 January 2014, UBS adopted *Offsetting Financial Assets and Financial Liabilities* (Amendments to IAS 32, *Financial Instruments: Presentation).* The amended IAS 32 restricts offsetting on the balance sheet to only those arrangements in which a right of set-off exists that is unconditional and legally enforceable, in the normal course of business and in the event of the default, bankruptcy or insolvency of the Group and its relevant counterparties and for which the Group intends to either settle on a net basis, or to realize the asset and settle the liability simultaneously. The amendments also provide incremental guidance for determining when gross settlement systems result in the functional equivalent of net settlement. UBS is no longer able to offset certain derivative arrangements under the revised rules. The prior period balance sheet information as of 31 December 2013 has been restated to reflect the effects of adopting these amendments. There was no impact on total equity, net profit or earnings per share. In addition, there was no material impact on the Group's Basel III capital, capital ratios and Swiss SRB leverage ratio.

Group performance

Net profit attributable to UBS shareholders for the first quarter of 2014 was CHF 1,054 million compared with CHF 917 million in the fourth quarter of 2013. Operating profit before tax was CHF 1,393 million compared with CHF 449 million in the prior quarter. Operating income increased by CHF 951 million, mainly due to an increase in net interest and trading income as well as due to higher other income. Operating expenses were virtually unchanged. We recorded a net tax expense of CHF 339 million compared with a net tax benefit of CHF 470 million.

1 Adjusted results are non-GAAP financial measures as defined by SEC regulations. 2 Comparative figures in this table may differ from those originally published in quarterly and annual reports due to adjustments following organizational changes and restatements due to the retrospective adoption of new accounting standards. 3 Corporate Center – Core Functions operating expenses presented in this table are after service allocations to business divisions and Corporate Center – Non-core and Legacy Portfolio. 4 Refer to "Note 10 Fair value measurement" in the "Financial information" section of this report for more information. 5 Refer to "Note 16 Changes in organization" in the "Financial information" section of this report for more information. 6 Reflects a foreign currency translation loss.

Performance: 1Q14 vs 4Q13

Operating profit before tax was CHF 1,393 million compared with CHF 449 million in the prior quarter, primarily reflecting an increase of CHF 951 million in operating income while operating expenses were virtually unchanged.

In addition to reporting our results in accordance with IFRS, we report adjusted results that exclude items that management believes are not representative of the underlying performance of our businesses. Such adjusted results are non-GAAP financial measures as defined by SEC regulations. For the first quarter of 2014, the items we excluded were an own credit gain of CHF 88 million, gains on sales of real estate of CHF 23 million and net restructuring charges of CHF 204 million. For the fourth quarter of 2013, the items we excluded were an own credit loss of CHF 94 million, gains on sales of real estate of CHF 61 million, a loss related to the buyback of debt in a public tender offer of CHF 75 million and net restructuring charges of CHF 198 million.

On this adjusted basis, profit before tax was CHF 1,486 million compared with CHF 755 million in the prior quarter.

Adjusted operating income increased by CHF 732 million to CHF 7,147 million, reflecting an increase of CHF 597 million in adjusted net interest and trading income as well as CHF 77 million higher adjusted other income.

Adjusted operating expenses were virtually unchanged at CHF 5,661 million, reflecting an increase of CHF 214 million in personnel expenses and CHF 114 million higher charges for provisions for litigation, regulatory and similar matters, offset by a reduction of CHF 328 million in other non-personnel expenses.

Operating income: 1Q14 vs 4Q13

Total operating income was CHF 7,258 million compared with CHF 6,307 million. On an adjusted basis, total operating income increased by CHF 732 million to CHF 7,147 million, mainly due to an increase of CHF 597 million in adjusted net interest and trading income, largely in the Investment Bank and in Corporate Center, both in Core Functions and in Non-core and Legacy Portfolio. Adjusted other income increased by CHF 77 million, partly reflecting increased revenues related to associates as well as from financial investments available-for-sale. Net fee and commission income increased by CHF 16 million as higher net brokerage fees and investment fund fees were largely offset by lower merger and acquisition and corporate finance fees as well as lower equity underwriting fees.

Net interest and trading income

Net interest and trading income increased by CHF 779 million to CHF 2,929 million. The first quarter of 2014 included an own credit gain on financial liabilities designated at fair value of CHF 88 million, primarily as life-to-date own credit losses partially reversed due to time decay, partly offset by the impact of a marginal tightening of our funding spreads over the quarter. The prior quarter included an own credit loss on financial liabilities of CHF 94 million. Excluding the effect of own credit, adjusted net interest and trading income increased by CHF 597 million to CHF 2,841 million, mainly as a result of increases in the Investment Bank and in Corporate Center, both in Core Functions and in Non-core and Legacy Portfolio.

Total net interest and trading income	**2,929**	2,150	3,703	36	(21)

In Wealth Management, net interest and trading income decreased by CHF 26 million. Net interest income decreased by CHF 17 million to CHF 496 million, mainly reflecting lower allocated revenues from Group Treasury. In addition, costs related to the multi-currency portfolio of unencumbered, high-quality, liquid assets managed centrally by Group Treasury increased. Furthermore, net interest income from client deposits declined, partly reflecting the adverse effect of the ongoing low interest rate environment on income from our replicating portfolios, although the rate of decline slowed from prior quarters. These factors were partly offset by higher net interest income from Lombard loans, mainly in Asia Pacific. Net trading income decreased by CHF 9 million to CHF 175 million.

In Wealth Management Americas, net interest and trading income decreased by CHF 16 million, reflecting a CHF 26 million decrease in net interest income due to lower income from the available-for-sale portfolio transferred to Group Treasury in 2013, mainly due to decreases related to future cash flow estimates that resulted in a lower amortized cost base for this portfolio. Net trading income increased by CHF 10 million to CHF 101 million.

In Retail & Corporate, net interest and trading income decreased by CHF 26 million. Net interest income decreased by CHF 17 million, mainly due to lower allocated revenues from Group Treasury. The deposit margin declined despite selective pricing adjustments as the ongoing low interest rate environment continued to have an adverse effect, although the rate of decline slowed from prior quarters. The increase in average client deposit volumes had a positive impact on interest income, while average loan volumes decreased slightly. The loan margin remained stable. Net trading income decreased by CHF 8 million.

In the Investment Bank, net interest and trading income increased by CHF 303 million. Corporate Client Solutions net interest and trading income increased by CHF 81 million, as risk management revenues improved mainly due to the positive effect of widening credit spreads during the quarter. Debt capital markets revenues also increased, due to higher revenues from both investment grade and leveraged finance as market activity levels improved. Investor Client Services net interest and trading income increased by CHF 222 million. In equities, net interest and trading income was CHF 589 million compared with CHF 472 million in the prior quarter, primarily due to higher derivatives revenues which benefited from higher market activity levels and a stronger trading performance, particularly in Europe, Middle East and Africa as well as Asia Pacific. Financing services revenues also increased across equity finance, prime brokerage and clearing and execution, mainly as a result of higher trading revenues and financing balances. In foreign exchange, rates and credit, net interest and trading revenues increased by CHF 105 million. Foreign exchange revenues increased, mainly due to higher revenues from our foreign exchange options and emerging market short-term interest rate businesses, stemming from improved market liquidity and higher client activity levels. Rates and credit revenues increased, mainly due to improved trading revenues in both the solutions and flow businesses.

Corporate Center – Core Functions net interest and trading income, excluding the effect of own credit, increased by CHF 196 million, mainly due to CHF 104 million lower losses from cross-currency basis swaps which are held as economic hedges. In addition, the first quarter of 2014 included a gain of CHF 49 million related to our macro cash flow hedges compared with a loss of CHF 10 million in the prior quarter.

In Corporate Center – Non-core and Legacy Portfolio, net interest and trading income increased by CHF 171 million. Non-core net interest and trading income increased by CHF 143 million, mainly as debit valuation adjustments improved to negative CHF 19 million from negative CHF 68 million. Furthermore, the first quarter of 2014 included lower losses from unwind and novation activities. Legacy Portfolio net interest and trading income increased by CHF 28 million, mainly as the prior quarter included a charge of CHF 34 million relating to tax obligations of the SNB StabFund.

Retail & Corporate	**12**	(17)	0		
Investment Bank	**0**	(1)	(1)	(100)	(100)
Corporate Center	**0**	11	(2)	(100)	(100)
of which: Non-core and Legacy Portfolio	***0***	*11*	*(2)*	*(100)*	*(100)*
Total	**28**	(15)	(15)		

Wealth Management Americas recorded net credit loss recoveries of CHF 17 million compared with net expenses of CHF 8 million. The first quarter included the full release of a loan loss allowance for a single client as well as releases of loan loss allowances on securities-backed lending facilities collateralized by Puerto Rico municipal securities and related funds.

Retail & Corporate recorded net credit loss recoveries of CHF 12 million compared with net credit loss expenses of CHF 17 million. The first quarter included a recovery of CHF 2 million related to net specific credit loss allowances compared with expenses of CHF 33 million in the prior quarter, which primarily related to corporate clients. The first quarter also included a release of CHF 10 million in collective loan loss allowances due to the ongoing review of the portfolio and, to a lesser extent, a model adjustment, compared with a release of CHF 16 million in the prior quarter.

In Non-core and Legacy Portfolio, credit losses were zero compared with net credit loss recoveries of CHF 11 million in the prior quarter, which mainly related to sales and redemptions of student loan auction rate securities impaired in prior periods.

➔ Refer to the "Wealth Management Americas," "Retail & Corporate" and "Corporate Center" sections of this report for more information

Net fee and commission income

Net fee and commission income increased by CHF 16 million to CHF 4,112 million.

Net brokerage fees increased by CHF 59 million to CHF 811 million, mainly in Wealth Management, largely due to higher client activity levels, and in the Investment Bank due to improved market activity levels.

Investment fund fees increased by CHF 43 million to CHF 933 million, primarily due to higher sales-based fees in Wealth Management in line with higher client activity levels, mainly in Asia Pacific, and higher asset-based mutual fund fees in Wealth Management Americas.

Underwriting fees decreased by CHF 31 million to CHF 320 million, mainly reflecting a decrease of CHF 54 million in equity underwriting fees as the market fee pool decreased. This was partly offset by an increase of CHF 22 million in debt underwriting fees.

Portfolio management and advisory fees decreased by CHF 17 million to CHF 1,719 million, mainly in Global Asset Management, largely due to a decrease in performance fees, partly offset by an increase in Wealth Management Americas, mainly due to higher managed account fees reflecting higher average invested assets.

➔ Refer to "Note 4 Net fee and commission income" in the "Financial information" section of this report for more information

Other income

Other income was CHF 189 million compared with CHF 75 million in the prior quarter.

Income from financial investments available-for-sale was CHF 39 million compared with CHF 16 million in the prior quarter, which included losses of CHF 37 million on the portfolio which was transferred from Wealth Management Americas to Group Treasury in 2013 as well as a gain of CHF 29 million resulting from the divestment of our participation in Euroclear Plc.

Income related to associates and subsidiaries was CHF 42 million compared with CHF 20 million in the prior quarter and included revenues related to the remeasurement of financial receivables due from an associate.

Other income excluding the items described above increased by CHF 69 million to CHF 108 million. Gains on sales of properties held for sale decreased to CHF 23 million from CHF 62 million. The prior quarter included a loss related to the buyback of debt in a public tender offer of CHF 75 million.

➔ Refer to "Note 5 Other income" in the "Financial information" section of this report for more information

Recurring net fee and transaction-based income in Wealth Management, Wealth Management Americas and Retail & Corporate

Recurring net fee income for Wealth Management, Wealth Management Americas and Retail & Corporate includes fees for services provided on an ongoing basis such as portfolio management fees, asset-based investment fund fees, custody fees and account keeping fees, which are generated on the respective business division's client assets. This is part of total net fee and commission income in the UBS Group financial statements. Transaction-based

income includes the non-recurring portion of the net fee and commission income for these business divisions, mainly consisting of brokerage and transaction-based investment fund fees as well as credit card fees and fees for payment transactions, together with the respective divisional net trading income.

In Wealth Management, recurring net fee income decreased by CHF 14 million to CHF 897 million, mainly as lower income due to the effect on the gross margin of ongoing outflows of assets from cross-border clients was partly offset by the positive effect of mandate sales efforts during the first quarter. Transaction-based income increased by CHF 119 million to CHF 542 million, largely due to seasonally higher client activity levels across all regions, most notably in Asia Pacific, and across all products including investment funds and structured products, as well as due to higher foreign exchange-related revenues.

In Wealth Management Americas, recurring net fee income increased by CHF 14 million to CHF 996 million, mainly due to an increase in managed account fees which were calculated on increased invested asset levels at the end of the prior quarter. Transaction-based income decreased by CHF 8 million to CHF 421 million.

In Retail & Corporate, recurring net fee income increased by CHF 17 million to CHF 144 million, mainly due to a reclassification from transaction-based income of CHF 14 million reflecting certain fees related to retail bank accounts. Transaction-based income decreased by CHF 22 million to CHF 234 million, mainly due to the abovementioned income reclassification as well as lower client activity levels and allocated revenues from Group Treasury.

Operating expenses: 1Q14 vs 4Q13

Total operating expenses increased by CHF 7 million to CHF 5,865 million. Restructuring charges were CHF 204 million compared with CHF 198 million in the prior quarter. Personnel-related restructuring charges increased by CHF 93 million to CHF 133 million, while non-personnel-related restructuring charges decreased by CHF 87 million to CHF 71 million.

On an adjusted basis excluding restructuring charges, total operating expenses were virtually unchanged at CHF 5,661 million,

1 Excluding adjusting items. 2 Includes expenses relating to performance awards and other variable compensation for the respective performance year. 3 Consists of amortization of prior years' awards relating to performance awards and other variable compensation. 4 Financial advisor compensation consists of grid-based compensation based directly on compensable revenues generated by financial advisors and supplemental compensation calculated based on financial advisor productivity, firm tenure, assets and other variables. It also includes costs related to compensation commitments with financial advisors entered into at the time of recruitment, which are subject to vesting requirements. 5 Consists of expenses related to contractors, social security, pension and other post-employment benefit plans and other personnel expenses. Refer to "Note 6 Personnel expenses" in the "Financial information" section of this report for more information. 6 Includes general and administrative expenses (excluding charges for provisions for litigation, regulatory and similar matters) as well as depreciation and impairment of property and equipment and amortization and impairment of intangible assets.

as an increase of CHF 214 million in personnel expenses and CHF 114 million higher charges for provisions for litigation, regulatory and similar matters were offset by a decrease of CHF 328 million in other non-personnel expenses.

➔ **Refer to “Note 16 Changes in organization” in the “Financial information” section of this report for more information on restructuring charges**

Personnel expenses

Personnel expenses increased by CHF 307 million to CHF 3,967 million. The first quarter of 2014 included CHF 133 million in personnel-related restructuring charges compared with CHF 40 million in the prior quarter. On an adjusted basis excluding restructuring charges, personnel expenses increased by CHF 214 million to CHF 3,834 million.

Expenses for salaries, excluding the effects of restructuring, increased by CHF 46 million, largely due to expenses for untaken vacation accruals compared with a release of accruals in the prior quarter.

Excluding the effects of restructuring, total variable compensation expenses increased by CHF 102 million, mainly due to higher expenses for performance awards, partly offset by lower severance expenses. Charges for the amortization of deferred compensation awards from prior years increased slightly to CHF 186 million from CHF 182 million, reflecting increased amortization expenses, largely offset by the effect of a release of prior year compensation accruals.

Financial advisor compensation in Wealth Management Americas increased by CHF 12 million.

Other personnel expenses increased by CHF 55 million on an adjusted basis, mainly due to higher charges for social security, partly offset by lower expenses for pension and other post-employment benefits plans and for training and recruitment.

➔ **Refer to “Note 6 Personnel expenses” in the “Financial information” section of this report for more information**

General and administrative expenses

General and administrative expenses decreased by CHF 277 million to CHF 1,679 million. On an adjusted basis, excluding net restructuring charges of CHF 63 million in the first quarter of 2014 compared with CHF 136 million in the prior quarter, general and administrative expenses decreased by CHF 204 million.

Net charges for provisions for litigation, regulatory and similar matters increased by CHF 114 million to CHF 193 million. In view of the current regulatory and political climate affecting financial institutions, and because we continue to be exposed to a number of significant claims and regulatory matters, we expect charges associated with litigation, regulatory and similar matters to remain at elevated levels through 2014.

Administration expenses, excluding the effects of restructuring, decreased by CHF 155 million, mainly as the prior quarter included a net charge of CHF 128 million for the annual UK bank levy.

Marketing and public relations expenses decreased by CHF 61 million, mainly due to seasonally lower advertising costs and costs related to sponsoring.

Professional fees, excluding the effects of restructuring, decreased by CHF 61 million, mainly due to lower consulting and audit fees.

Travel and entertainment and outsourcing of information technology and other services, excluding the effects of restructuring, decreased by CHF 29 million and CHF 15 million, respectively, partly related to seasonality.

➔ **Refer to “Note 7 General and administrative expenses” in the “Financial information” section of this report for more information**

➔ **Refer to “Note 14 Provisions and contingent liabilities” in the “Financial information” section of this report for more information**

Depreciation, impairment and amortization

Depreciation and impairment of property and equipment was CHF 199 million compared with CHF 221 million in the prior quarter, mainly as restructuring-related charges decreased to CHF 7 million from CHF 22 million.

Amortization and impairment of intangible assets was CHF 20 million compared with CHF 22 million in the prior quarter.

Tax: 1Q14 vs 4Q13

We recognized a net income tax expense of CHF 339 million for the first quarter of 2014 compared with a net tax benefit of CHF 470 million in the prior quarter. The first quarter net expense included a deferred tax expense of CHF 234 million in respect of the amortization of deferred tax assets previously recognized in relation to tax losses carried forward to reflect their offset against Swiss taxable profits for the quarter. In addition, it included net tax expenses of CHF 146 million in respect of taxable profits primarily relating to branches and subsidiaries outside of Switzerland. This was partly offset by a decrease in tax provisions of CHF 41 million in respect of tax matters which are now resolved.

The fourth quarter net benefit primarily reflected an increase in recognized deferred tax assets following a reassessment in connection with our annual business planning process.

In 2014, we expect the tax rate to be in the range of 20% to 25%, excluding any impact from deferred tax asset reassessments. Consistent with past practice, we expect to revalue our deferred tax assets in the second half of 2014 based on a reassessment of future profitability taking into account updated busi-

ness plan forecasts. The full year tax rate could change significantly as a result of this reassessment.

➔ **Refer to "Note 8 Income taxes" in the "Financial information" section of this report for more information**

Total comprehensive income attributable to UBS shareholders: 1Q14 vs 4Q13

Total comprehensive income attributable to UBS shareholders was CHF 1,465 million compared with CHF 376 million in the prior quarter. Net profit attributable to UBS shareholders was CHF 1,054 million compared with CHF 917 million. Other comprehensive income (OCI) attributable to UBS shareholders was positive CHF 411 million compared with negative CHF 541 million.

OCI in the first quarter included positive cash flow hedge OCI of CHF 210 million (net of tax) compared with negative CHF 294 million in the prior quarter, mainly reflecting decreases in long-term interest rates across all major currencies.

OCI on defined benefit plans (net of tax) was positive CHF 344 million compared with negative CHF 39 million in the prior quarter. A pre-tax OCI gain of CHF 544 million was recorded for the Swiss pension plan, which was primarily due to the reversal of the asset ceiling effect, resulting in a gain of CHF 808 million, partly offset by an increase in the defined benefit obligation resulting from a decrease in the applicable discount rate. Net pre-tax OCI on non-Swiss pension plans amounted to a loss of CHF 90 million.

OCI associated with financial investments available-for-sale was positive CHF 31 million (net of tax) compared with negative CHF 20 million in the prior quarter, mainly due to net unrealized gains as a result of decreases in long-term interest rates.

These increases in OCI were partly offset by foreign currency translation losses of CHF 174 million (net of tax), primarily related to a weakening of the US dollar against the Swiss franc, compared with losses of CHF 182 million in the prior quarter.

➔ **Refer to the "Statement of comprehensive income" in the "Financial information" section of this report for more information**

➔ **Refer to "Note 28 Pension and other post-employment benefit plans" in the "Financial information" section of our Annual Report 2013 for more information**

Net profit attributable to preferred noteholders: 1Q14 vs 4Q13

Net profit attributable to preferred noteholders was zero in both quarters.

We expect net profit attributable to preferred noteholders to be approximately CHF 110 million in 2014, all of which is expected to be recorded in the second quarter. For 2015, we also expect net profit attributable to preferred noteholders to be approximately CHF 110 million and for 2016 we expect it to be approximately CHF 85 million.

Performance by reporting segment: 1Q14 vs 4Q13

Management's discussion and analysis by reporting segment is provided in the "UBS business divisions and Corporate Center" section of this report.

Key figures and personnel: 1Q14 vs 4Q13

Cost/income ratio

The cost/income ratio improved to 81.1% in the first quarter of 2014 compared with 92.7% in the prior quarter. On an adjusted basis, the cost/income ratio improved to 79.5% from 88.0%.

Risk-weighted assets

Our phase-in Basel III risk-weighted assets (RWA) increased by CHF 1.3 billion to CHF 229.9 billion, mainly due to a CHF 3.5 billion increase in operational risk RWA and a CHF 1.8 billion increase in market risk RWA, partly offset by a CHF 4.3 billion reduction in credit risk RWA. Incremental operational risk RWA calculated by FINMA based on the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA increased by CHF 2.0 billion to CHF 24.5 billion as of 31 March 2014. Additionally, the increase in operational risk RWA resulted from a higher capital requirement based on the advanced measurement approach (AMA) model output using the latest FINMA-approved model parameters. The CHF 1.8 billion increase in market risk RWA was driven by a CHF 0.9 billion increase in incremental risk charge-related RWA and CHF 1.2 billion higher RWA related to securitizations/re-securitizations in the trading book. The CHF 4.3 billion reduction in credit risk RWA

was mainly due to lower RWA related to Corporates and Other exposure segments, partly offset by higher RWA related to Retail exposures.

➔ **Refer to the discussions of "Corporate Center – Non-core and Legacy Portfolio" and "Capital management" in the "Risk and treasury management" section of this report for more information on risk-weighted assets**

Net new money

In Wealth Management, net new money was CHF 10.9 billion and included one large outflow in Europe which was almost entirely offset by two asset reclassifications from service level upgrades, one in Switzerland of CHF 2.9 billion and one in Europe of CHF 1.7 billion. Excluding these effects, all regions reported net new money inflows, with Asia Pacific and emerging markets as the main contributors. Net inflows in Europe, excluding the aforementioned large items, primarily reflected positive net new money in domestic locations, partly offset by ongoing cross-border asset outflows. On a global basis, net new money from ultra high net worth clients was CHF 7.4 billion compared with CHF 8.5 billion of net inflows in the prior quarter.

In Wealth Management Americas, net new money totaled CHF 1.9 billion or USD 2.1 billion compared with CHF 4.4 billion or USD 4.9 billion in the prior quarter and decreased primarily due to lower inflows from recruited financial advisors and higher outflows from financial advisor attrition, partly offset by higher net inflows from financial advisors employed with UBS for more than one year.

In Global Asset Management, total net new money inflows were CHF 9.6 billion compared with net outflows of CHF 7.3 billion in the prior quarter. Excluding money market flows, net inflows were CHF 13.0 billion compared with net outflows of CHF 4.6 billion in the prior quarter. From third parties, net inflows were CHF 9.0 billion compared with net outflows of CHF 1.5 billion and were mainly into equities, fixed income, real estate and multi-asset. From clients of UBS's wealth management businesses, net inflows were CHF 4.0 billion compared with net outflows of CHF 3.2 billion in the prior quarter. Money market net outflows were CHF 3.4 billion compared with CHF 2.7 billion.

➔ **Refer to the "Wealth Management," "Wealth Management Americas" and "Global Asset Management" sections of this report for more information**

Invested assets

In Wealth Management, invested assets increased by CHF 13 billion to CHF 899 billion as of 31 March 2014, including net new money inflows of CHF 11 billion and positive market performance of CHF 9 billion, partly offset by negative currency translation effects of CHF 4 billion and CHF 2 billion of net reclassifications due to changes in service levels that did not affect net new money.

In Wealth Management Americas, invested assets increased by CHF 7 billion to CHF 872 billion. In US dollar terms, invested assets increased by USD 17 billion to USD 987 billion, reflecting positive market performance of USD 15 billion as well as net new money inflows of USD 2 billion.

In Global Asset Management, invested assets were CHF 596 billion as of 31 March 2014 compared with CHF 583 billion as of 31 December 2013. Net new money inflows of CHF 10 billion and positive market performance of CHF 6 billion were partly offset by negative currency translation effects of CHF 3 billion.

Personnel

We employed 60,326 personnel as of 31 March 2014, an increase of 121 compared with 60,205 personnel as of 31 December 2013. Personnel in the Investment Bank increased by 245, mainly due to increased front office personnel as well as an increase in personnel allocated from Corporate Center shared services units. Wealth Management personnel increased by 228 and Retail & Corporate personnel declined by 223, both mainly due to changes to allocations of Corporate Center shared services units' personnel.

➔ **Refer to the discussions of personnel in the "UBS business divisions and Corporate Center" section of this report for more information**

Performance: 1Q14 vs 1Q13

Net profit attributable to UBS shareholders was CHF 1,054 million in the first quarter of 2014 compared with CHF 988 million in the same quarter a year earlier. Operating profit before tax was CHF 1,393 million compared with CHF 1,447 million.

For the first quarter of 2014, adjusting items were an own credit gain of CHF 88 million, gains on sales of real estate of CHF 23 million and net restructuring charges of CHF 204 million. For the first quarter of 2013, adjusting items were an own credit loss of CHF 181 million, a net loss related to the buyback of debt in a public tender offer of CHF 92 million, a gain on the sale of Global Asset Management's Canadian domestic business of CHF 34 million, a net gain on the sale of our remaining proprietary trading business of CHF 31 million and net restructuring charges of CHF 246 million.

On an adjusted basis, profit before tax decreased by CHF 415 million to CHF 1,486 million, largely due to a decline of CHF 836 million in operating income, partly offset by a decline of CHF 420 million in operating expenses.

Adjusted operating income was CHF 7,147 million compared with CHF 7,983 million, mainly reflecting a decrease of CHF 1,016 million in adjusted net interest and trading income, largely in the Investment Bank and Non-core and Legacy Portfolio. Adjusted other income increased by CHF 149 million and net fee and commission income decreased by CHF 11 million.

Adjusted operating expenses decreased by CHF 420 million to CHF 5,661 million, mainly due to a decline of CHF 280 million in personnel expenses, largely due to lower total variable compensation and lower salary expenses, partly offset by higher charges for social security. Furthermore, charges for provisions for litigation, regulatory and similar matters declined by CHF 185 million, which was partly offset by CHF 45 million higher other non-personnel expenses, largely due to higher professional fees and higher outsourcing of information technology and other services.

UBS business divisions and Corporate Center

Management report

Wealth Management

Profit before tax was CHF 619 million in the first quarter of 2014, an increase of CHF 148 million compared with the fourth quarter of 2013. Adjusted for restructuring charges, profit before tax increased by CHF 147 million to CHF 659 million. This reflects CHF 84 million higher operating income, largely as a result of higher transaction-based income, and a CHF 63 million decline in adjusted operating expenses, mainly as CHF 86 million higher charges for provisions for litigation, regulatory and similar matters were more than offset by lower other general and administrative expenses and lower variable compensation expenses. The gross margin on invested assets increased 2 basis points to 87 basis points. Net new money was CHF 10.9 billion compared with CHF 5.8 billion in the prior quarter.

1 Comparative figures in this table may differ from those originally published in quarterly and annual reports due to adjustments following organizational changes and restatements due to the retrospective adoption of new accounting standards. 2 Refer to the "Capital management" section of our Annual Report 2013 for more information on the equity attribution framework. 3 Based on the Basel III framework as applicable for Swiss systemically relevant banks (SRB). Refer to the "Capital management" section of this report for more information. 4 Based on phase-in Basel III risk-weighted assets. 5 The leverage ratio denominator is also referred to as "total adjusted exposure" and is calculated in accordance with Swiss SRB leverage ratio requirements. Data represent the average of the total adjusted exposure at the end of the three months preceding the end of the reporting period. Refer to the "Capital management" section of this report for more information.

Regional breakdown of key figures[1, 2]

As of or for the quarter ended 31.3.14	Europe	Asia Pacific	Switzerland	Emerging markets	*of which: ultra high net worth*	*of which: Global Family Office[3]*
Net new money (CHF billion)	**(2.2)**	**5.0**	**4.4**	**3.3**	*7.4*	*(2.2)*
Net new money growth (%)	**(2.5)[4]**	**9.2**	**11.0**	**8.7[4]**	*7.1*	*(14.4)*
Invested assets (CHF billion)	**346**	**223**	**166**	**154**	*424*	*60*
Gross margin on invested assets (bps)	**85[4]**	**85**	**90**	**93[4]**	*55*	*37[5]*
Client advisors (full-time equivalents)	**1,504**	**1,100**	**763**	**789**	*649[6]*	

1 Refer to the "Measurement of performance" section of our Annual Report 2013 for the definitions of our key performance indicators. 2 Based on the Wealth Management business area structure, and excluding minor functions with 64 client advisors, and CHF 10 billion of invested assets, and CHF 0.4 billion of net new money inflows in the first quarter of 2014. 3 Joint venture between Wealth Management and the Investment Bank. Global Family Office is reported as a sub-segment of ultra high net worth and is included in the ultra high net worth figures. 4 Net new money growth rate and gross margin in the first quarter of 2014 for Europe and emerging markets are calculated based on invested assets as of 31 December 2013 adjusted for organizational shifts. 5 Gross margin includes income booked in the Investment Bank. Gross margin only based on income booked in Wealth Management is 20 basis points. 6 Represents client advisors who exclusively serve ultra high net worth clients. In addition to these, other client advisors may also serve certain ultra high net worth clients, but not exclusively.

Results: 1Q14 vs 4Q13

Operating income

Total operating income increased by CHF 84 million to CHF 1,943 million, mainly due to higher transaction-based income.

Net interest income decreased by CHF 17 million to CHF 496 million, mainly reflecting lower allocated revenues from Group Treasury. In addition, costs related to the multi-currency portfolio of unencumbered, high-quality, liquid assets managed centrally by Group Treasury increased. Furthermore, net interest income from client deposits declined, partly reflecting the adverse effect of the ongoing low interest rate environment on income from our replicating portfolios, although the rate of decline slowed from prior quarters. These factors were partly offset by higher net interest income from Lombard loans, mainly in Asia Pacific.

Recurring net fee income decreased by CHF 14 million to CHF 897 million, mainly as lower income due to the effect on the gross margin of ongoing outflows of assets from cross-border clients was partly offset by the positive effect of mandate sales efforts during the first quarter.

Transaction-based income increased by CHF 119 million to CHF 542 million, largely due to seasonally higher client activity levels across all regions, most notably in Asia Pacific, and across all products including investment funds and structured products, as well as due to higher foreign exchange-related revenues.

Other income decreased to CHF 9 million from CHF 11 million.

➔ **Refer to the "Regulatory and legal developments and financial reporting changes" section of this report for more information on the presentation of operating income**

Operating expenses

Total operating expenses decreased by CHF 64 million to CHF 1,325 million. Adjusted for restructuring charges of CHF 40 million compared with CHF 41 million, operating expenses decreased by CHF 63 million to CHF 1,285 million. Lower general and administrative expenses, excluding charges for provisions for litigation, regulatory and similar matters, as well as lower variable compensation expenses, were partly offset by CHF 86 million higher charges for provisions for litigation, regulatory and similar matters. Changes to allocations of Corporate Center shared service costs had the effect of increasing personnel and general and administrative expenses and, to a lesser extent, depreciation and impairment of property and equipment by a total of CHF 11 million, which was offset by decreased net charges from other business divisions.

Personnel expenses decreased by CHF 28 million to CHF 847 million. Adjusted for restructuring charges of CHF 25 million compared with CHF 13 million, personnel expenses decreased by CHF 40 million to CHF 822 million, mainly due to lower variable compensation expenses and pension plan costs. These decreases were partly offset by expenses for untaken vacation accruals compared with a release of accruals in the prior quarter as well as by the aforementioned changes to allocations of Corporate Center shared service costs.

General and administrative expenses decreased by CHF 12 million to CHF 412 million. Adjusted for restructuring charges of CHF 14 million compared with CHF 26 million, general and administrative expenses were stable at CHF 398 million, mainly as lower expenses, largely related to marketing, professional fees and information technology, were offset by CHF 86 million higher charges for provisions for litigation, regulatory and similar matters as well as by the aforementioned changes to allocations of Corporate Center shared service costs.

Net charges for services from other business divisions decreased by CHF 17 million to CHF 17 million, mainly due to lower charges from Retail & Corporate for services related to our multi-channel offering and due to the impact of the aforementioned changes to allocations of Corporate Center shared service costs.

Depreciation and impairment of property and equipment decreased by CHF 5 million to CHF 48 million, primarily as the prior quarter was affected by an impairment of previously capitalized software.

Cost/income ratio

The cost/income ratio improved to 68.2% compared with 74.7% in the prior quarter. Adjusted for restructuring charges, the cost/income ratio improved to 66.1% from 72.5%, mainly as a result of higher income coupled with lower operating expenses, and was within our target range of 60% to 70%.

Net new money

The annualized net new money growth rate was 4.9% compared with 2.7% for the prior quarter and was at the upper end of our target range of 3% to 5%. Net new money of CHF 10.9 billion included one large outflow in Europe which was almost entirely offset by two asset reclassifications from service level upgrades, one in Switzerland of CHF 2.9 billion and one in Europe of CHF 1.7 billion. Excluding these effects, all regions reported net new money inflows, with Asia Pacific and emerging markets as the main contributors. Net inflows in Europe, excluding the afore-

mentioned large items, primarily reflected positive net new money in domestic locations, partly offset by ongoing cross-border asset outflows. On a global basis, net new money from ultra high net worth clients was CHF 7.4 billion compared with CHF 8.5 billion of net inflows in the prior quarter.

Invested assets

Invested assets increased by CHF 13 billion to CHF 899 billion as of 31 March 2014, including net new money inflows of CHF 11 billion and positive market performance of CHF 9 billion, partly offset by negative currency translation effects of CHF 4 billion and CHF 2 billion of net reclassifications due to changes in service levels that did not affect net new money.

Gross margin on invested assets

The gross margin increased 2 basis points to 87 basis points as income growth outpaced the increase in average invested assets. The gross margin remained below our target range of 95 to 105 basis points.

Personnel: 1Q14 vs 4Q13

Wealth Management employed 16,642 personnel as of 31 March 2014 compared with 16,414 as of 31 December 2013, following an increase in both non-client-facing staff and client advisors. The number of client advisors increased by 56 to 4,220 from 4,164, mainly due to an increase in Asia Pacific, partly offset by a reduction in Europe. The increase in non-client-facing staff mainly reflected the aforementioned changes to allocations of Corporate Center shared services units' personnel of approximately 140 personnel.

Results: 1Q14 vs 1Q13

Profit before tax decreased by CHF 45 million to CHF 619 million. Adjusted for restructuring charges, profit before tax decreased by CHF 31 million to CHF 659 million, mainly as CHF 82 million higher charges for provisions for litigation, regulatory and similar matters were partly offset by increased recurring net fee income.

Total operating income increased by CHF 30 million to CHF 1,943 million, mainly reflecting higher recurring net fee income, partly offset by lower transaction-based income.

Net interest income decreased by CHF 12 million to CHF 496 million, primarily due to lower net interest income from client deposits, lower allocated revenues from Group Treasury and higher costs related to the multi-currency portfolio of unencumbered, high-quality, liquid assets managed centrally by Group Treasury. These effects were partly offset by higher net interest income from Lombard loans, mainly in Asia Pacific, emerging markets and Europe.

Recurring net fee income increased by CHF 41 million to CHF 897 million, primarily due to the effects of pricing measures, an increase in invested assets and mandate sales efforts. These increases were partly offset by lower income due to the effect on the gross margin of ongoing outflows of assets from cross-border clients and due to the migration into retrocession-free products for investment mandates during 2013.

Transaction-based income decreased by CHF 12 million to CHF 542 million. Compared with a strong first quarter of 2013, an increase in transaction-based income in Asia Pacific was more than offset by a decline in other regions.

Total operating expenses increased by CHF 75 million to CHF 1,325 million. Adjusted for restructuring charges of CHF 40 million compared with CHF 26 million, operating expenses increased by CHF 61 million to CHF 1,285 million, mainly due to CHF 82 million higher charges for provisions for litigation, regulatory and similar matters.

Personnel expenses increased by CHF 8 million to CHF 847 million. Adjusted for restructuring charges of CHF 25 million compared with CHF 3 million, personnel expenses declined by CHF 14 million to CHF 822 million, including lower personnel-related charges from Group Technology, decreased pension plan costs as well as various other decreases. These decreases were partly offset by increased variable compensation expenses and higher personnel expenses due to the aforementioned changes to allocations of Corporate Center shared service costs.

General and administrative expenses increased by CHF 67 million to CHF 412 million. Adjusted for restructuring charges, general and administrative expenses increased by CHF 72 million to CHF 398 million, primarily due to CHF 82 million higher charges for provisions for litigation, regulatory and similar matters.

Net charges for services from other business divisions decreased by CHF 2 million to CHF 17 million, including the impact of the aforementioned changes to allocations of Corporate Center shared service costs, partly offset by higher net charges from Retail & Corporate.

Wealth Management Americas

Wealth Management Americas reported a record quarterly profit before tax of USD 272 million in the first quarter of 2014 compared with the prior record of USD 254 million in the fourth quarter of 2013. Adjusted for restructuring charges, profit before tax increased slightly to USD 284 million. Net new money inflows decreased to USD 2.1 billion from USD 4.9 billion in the prior quarter.

Refer to the "Capital management" section of this report for more information. 6 Presented in line with historical reporting practice in the US market.

Results: 1Q14 vs 4Q13

Operating income

Total operating income increased to USD 1,865 million from USD 1,851 million, as continued growth in managed account fees was partly offset by lower net interest income and lower other income as the prior quarter included a USD 15 million insurance reimbursement. The first quarter included credit loss recoveries of USD 19 million compared with credit loss expenses of USD 9 million in the prior quarter.

Net interest income decreased by USD 26 million to USD 250 million due to lower income from the available-for-sale portfolio transferred to Group Treasury in 2013, mainly due to decreases related to future cash flow estimates that resulted in a lower amortized cost base for this portfolio. The average mortgage portfolio balance increased 6% and the average securities-backed lending portfolio increased 2% from the prior quarter.

Recurring net fee income increased by USD 31 million to USD 1,119 million, mainly due to a 4% increase in managed account fees which were calculated on increased invested asset levels at the end of the prior quarter.

Transaction-based income decreased by USD 4 million to USD 472 million, mainly due to lower non-recurring net fee and commission income resulting from lower client activity levels, partly offset by higher net trading income as the prior quarter was negatively impacted by trading losses related to the Puerto Rico municipal market.

➔ **Refer to the "Regulatory and legal developments and financial reporting changes" section of this report for more information on the presentation of operating income**

Other income decreased by USD 13 million to USD 6 million, mainly due to the aforementioned insurance reimbursement of USD 15 million in the prior quarter.

Credit loss recoveries were USD 19 million compared with net expenses of USD 9 million in the prior quarter. The first quarter included the full release of a loan loss allowance for a single client as well as releases of loan loss allowances on securities-backed lending facilities collateralized by Puerto Rico municipal securities and related funds.

➔ **Refer to the discussion of banking products in Wealth Management Americas in the "Risk management and control" section of this report for more information on our exposure to Puerto Rico municipal securities and related funds**

Operating expenses

Total operating expenses decreased by USD 2 million to USD 1,594 million. The first quarter included USD 12 million of restructuring charges compared with USD 29 million in the prior quarter.

1 Comparative figures in this table may differ from those originally published in quarterly and annual reports due to adjustments following organizational changes and restatements due to the retrospective adoption of new accounting standards. 2 Financial advisor compensation consists of grid-based compensation based directly on compensable revenues generated by financial advisors and supplemental compensation calculated based on financial advisor productivity, firm tenure, assets and other variables. 3 Compensation commitments with recruited financial advisors represents costs related to compensation commitments granted to financial advisors at the time of recruitment which are subject to vesting requirements. 4 Refer to "Note 16 Changes in organization" in the "Financial information" section of this report for information on restructuring charges. 5 Refer to the "Measurement of performance" section of our Annual Report 2013 for the definitions of our key performance indicators.

Adjusted for restructuring charges, personnel expenses were virtually unchanged at USD 1,257 million, as higher financial advisor compensation corresponding with higher compensable revenues was largely offset by lower salaries and other personnel costs, mainly due to lower other variable compensation expenses. Expenses for compensation commitments related to recruited financial advisors increased by USD 5 million to USD 180 million. Recruitment loans to financial advisors decreased by USD 46 million to USD 3,017 million.

Adjusted for restructuring charges, non-personnel expenses increased by USD 14 million to USD 325 million, mainly due to USD 34 million higher charges for provisions for litigation, regulatory and similar matters, which were partly offset by lower Corporate Center shared service costs.

Cost/income ratio

The cost/income ratio was 86.3% compared with 85.9% in the prior quarter. Adjusted for restructuring charges, the cost/income ratio was 85.7% compared with 84.3%, mainly due to lower income, and remained within the target range of 80% to 90%.

Net new money

The annualized net new money growth rate for the first quarter was 0.9% compared with 2.1% in the prior quarter and was below the target range of 2% to 4%. Net new money totaled USD 2.1 billion compared with USD 4.9 billion in the prior quarter and decreased primarily due to lower inflows from recruited financial advisors and higher outflows from financial advisor attrition, partly offset by higher net inflows from financial advisors employed with UBS for more than one year.

Including interest and dividend income, net new money was USD 7.6 billion compared with USD 14.3 billion in the prior quarter, which included seasonally higher dividend payments.

Invested assets

Invested assets increased by USD 17 billion to USD 987 billion, reflecting positive market performance of USD 15 billion as well as net new money inflows of USD 2 billion. Managed account assets increased by USD 12 billion to USD 320 billion and comprised 32% of total invested assets as of 31 March 2014.

Gross margin on invested assets

The gross margin on invested assets decreased 3 basis points to 76 basis points and was at the lower end of our target range of 75 to 85 basis points. The decrease in the gross margin was due to a 4% increase in average invested assets coupled with a 1% decrease in income (which excludes credit loss expense / recovery). The gross margin from recurring income declined 2 basis points and the gross margin from non-recurring income declined 1 basis point.

Personnel: 1Q14 vs 4Q13

As of 31 March 2014, Wealth Management Americas employed 16,356 personnel, an increase of 12 compared with 31 December 2013. Financial advisor headcount decreased by 24 to 7,113, mainly due to slightly higher attrition of lower-producing financial advisors. The number of non-financial advisor employees increased by 36 to 9,243, mainly due to an increase in personnel allocated from Corporate Center shared services units.

Results: 1Q14 vs 1Q13

Profit before tax increased by USD 62 million to USD 272 million in the first quarter of 2014 from USD 210 million in the first quarter of 2013 due to an overall improvement in revenues, partly offset by an increase in expenses. Adjusted for restructuring charges, profit before tax increased by USD 64 million to USD 284 million.

Total operating income increased by USD 169 million to USD 1,865 million, primarily due to a USD 171 million increase in recurring net fee income mainly due to an increase in managed account fees related to higher invested asset levels, as well as higher net interest income. Transaction-based income decreased by USD 58 million to USD 472 million, mainly due to lower commission from equities products.

Operating expenses increased by USD 108 million to USD 1,594 million. Adjusted for restructuring charges, operating expenses increased by USD 106 million to USD 1,582 million. Personnel expenses increased by USD 55 million to USD 1,257 million, mainly due to an increase of USD 46 million in financial advisor compensation corresponding with higher compensable revenues. Salaries and other personnel costs remained unchanged at USD 369 million.

Non-personnel expenses, adjusted for restructuring charges, increased by USD 51 million to USD 325 million, mainly due to USD 44 million higher charges for provisions for litigation, regulatory and similar matters.

Retail & Corporate

Profit before tax was CHF 386 million in the first quarter of 2014 compared with CHF 332 million in the fourth quarter of 2013. Adjusted for restructuring charges, profit before tax increased by CHF 57 million to CHF 401 million, mainly as adjusted operating expenses decreased by CHF 55 million, primarily as a result of lower charges for provisions for litigation, regulatory and similar matters. Operating income was virtually unchanged. The annualized net new business volume growth rate for our retail business was 4.3% compared with negative 0.3% in the prior quarter.

1 Comparative figures in this table may differ from those originally published in quarterly and annual reports due to adjustments following organizational changes and restatements due to the retrospective adoption of new accounting standards. 2 Refer to "Note 16 Changes in organization" in the "Financial information" section of this report for information on restructuring charges. 3 Refer to the "Measurement of performance" section of our Annual Report 2013 for the definitions of our key performance indicators. 4 Refer to the "Capital management" section of our Annual Report 2013 for more information on the equity attribution framework. 5 Based on the Basel III framework as applicable for Swiss systemically relevant banks (SRB). Refer to the "Capital management" section of this report for more information. 6 Based on phase-in Basel III risk-weighted assets. 7 The leverage ratio denominator is also referred to as "total adjusted exposure" and is calculated in accordance with Swiss SRB leverage ratio requirements. Data represent the average of the total adjusted exposure at the end of the three months preceding the end of the reporting period. Refer to the "Capital management" section of this report for more information.

Results: 1Q14 vs 4Q13

Operating income

Total operating income increased by CHF 1 million to CHF 932 million, mainly as a positive variance on credit loss expenses and higher recurring net fee income were almost entirely offset by lower net interest, transaction-based and other income.

Net interest income decreased by CHF 17 million to CHF 523 million, mainly due to lower allocated revenues from Group Treasury. The deposit margin declined despite selective pricing adjustments as the ongoing low interest rate environment continued to have an adverse effect, although the rate of decline slowed from prior quarters. The increase in average client deposit volumes had a positive impact on interest income, while average loan volumes decreased slightly. The loan margin remained stable.

Recurring net fee income increased by CHF 17 million to CHF 144 million, mainly due to a reclassification from transaction-based income of CHF 14 million reflecting certain fees related to retail bank accounts.

Transaction-based income decreased by CHF 22 million to CHF 234 million, mainly due to the abovementioned income reclassification as well as lower client activity levels and allocated revenues from Group Treasury.

➔ Refer to the "Regulatory and legal developments and financial reporting changes" section of this report for more information on the presentation of operating income

Other income decreased by CHF 5 million to CHF 19 million, mainly as the prior quarter included a gain of CHF 10 million from the divestment of our remaining participation in Euroclear plc. This was partly offset by higher income related to our participation in the SIX Group in the first quarter of 2014.

Net credit loss recoveries were CHF 12 million compared with net credit loss expenses of CHF 17 million in the prior quarter. The first quarter included a recovery of CHF 2 million related to net specific credit loss allowances compared with expenses of CHF 33 million in the prior quarter, which primarily related to corporate clients. The first quarter also included a release of CHF 10 million in collective loan loss allowances due to the ongoing review of the portfolio and, to a lesser extent, a model adjustment, compared with a release of CHF 16 million in the prior quarter. The remaining balance of collective loan loss allowances was CHF 5 million as of 31 March 2014.

Operating expenses

Total operating expenses decreased by CHF 52 million to CHF 547 million. Adjusted for restructuring charges of CHF 15 million compared with CHF 12 million, operating expenses decreased by CHF 55 million to CHF 532 million. This decrease was mainly due to CHF 41 million lower charges for provisions for litigation, regulatory and similar matters and lower technology expenses. Changes to allocations of Corporate Center shared service costs had the effect of decreasing personnel and general and administrative expenses and, to a lesser extent, depreciation and impairment of property and equipment by a total of CHF 10 million, which was offset by decreased net charges to other business divisions.

Personnel expenses increased by CHF 12 million to CHF 353 million, mainly due to higher variable compensation expenses, as well as expenses for untaken vacation accruals compared with a release of accruals in the prior quarter. These increases were partly offset by the aforementioned changes to allocations of Corporate Center shared service costs.

General and administrative expenses decreased by CHF 83 million to CHF 192 million, mainly due to the aforementioned lower charges for provisions for litigation, regulatory and similar matters as well as lower technology expenses and the impact of the abovementioned changes to allocations of Corporate Center shared service costs.

Net charges for services to other business divisions decreased by CHF 21 million to CHF 31 million, reflecting lower charges to Wealth Management related to our multi-channel offering as well as the aforementioned changes to allocations of Corporate Center shared service costs.

Cost/income ratio

The cost/income ratio improved 3.9 percentage points to 59.4% from 63.3%. Adjusted for restructuring charges, the cost/income ratio improved to 57.8% from 62.0%, reflecting lower expenses partly offset by reduced income, and was within our target range of 50% to 60%.

Net interest margin

The net interest margin decreased 4 basis points to 153 basis points, reflecting lower net interest income on a slightly lower average loan volume, and remained within the target range of 140 to 180 basis points.

Net new business volume growth for retail business

The annualized net new business volume growth rate for our retail business was 4.3% compared with negative 0.3% in the prior quarter, and was above the target range of 1% to 4%.

In the retail business, both net new client assets and, to a lesser extent, net new loans increased. A moderate increase in loans reflected our strategy to grow our business in high-quality loans moderately and selectively.

➔ Refer to the "Regulatory and legal developments and financial reporting changes" section of this report for more information on changes to our KPI framework

Personnel: 1Q14 vs 4Q13

Retail & Corporate employed 9,240 personnel as of 31 March 2014, a decrease of 223 compared with 9,463 as of 31 December 2013, including the aforementioned impact of changes to allocations of Corporate Center shared services units' personnel, which led to a decrease of approximately 140 personnel.

Results: 1Q14 vs 1Q13

Profit before tax increased by CHF 39 million to CHF 386 million. Adjusted for restructuring charges of CHF 15 million in both quarters, profit before tax increased by CHF 39 million to CHF 401 million, reflecting higher operating income as well as lower operating expenses.

Total operating income increased by CHF 13 million to CHF 932 million. Net interest income decreased by CHF 8 million, reflecting a decline in the deposit margin despite selective pricing adjustments as the ongoing low interest rate environment continued to have an adverse effect, although the rate of decline has slowed from prior quarters. This was partly offset by higher income resulting from an increase in average client deposit volumes. The loan margin and the average loan volume were broadly stable. Recurring net fee income increased by CHF 14 million to CHF 144 million, due to a reclassification of certain fees related to retail bank accounts from transaction-based income, amounting to CHF 14 million in the first quarter of 2014. Transaction-based income decreased by CHF 9 million to CHF 234 million, mainly reflecting the aforementioned income reclassification and lower allocated revenues from Group Treasury, partly offset by higher client activity levels. Other income increased by CHF 5 million due to higher income related to our participation in the SIX Group. Net credit loss recoveries were CHF 12 million compared with net credit loss expenses of zero in the first quarter of 2013.

Operating expenses decreased by CHF 25 million to CHF 547 million. Adjusted for restructuring charges of CHF 15 million in both quarters, operating expenses decreased by CHF 25 million to CHF 532 million, reflecting the effects of our ongoing cost reduction programs.

Personnel expenses decreased by CHF 25 million to CHF 353 million. Adjusted for restructuring charges of CHF 10 million compared with CHF 2 million, personnel expenses decreased by CHF 33 million, reflecting substantially lower levels of non-client-facing staff as well as lower variable compensation expenses. Furthermore, personnel expenses decreased due to the aforementioned changes to allocations of Corporate Center shared service costs in the first quarter of 2014.

Non-personnel expenses were unchanged at CHF 194 million. Adjusted for restructuring charges of CHF 5 million compared with CHF 13 million, non-personnel expenses increased by CHF 8 million to CHF 189 million, reflecting CHF 11 million higher charges for provisions for litigation, regulatory and similar matters, partly offset by lower occupancy expenses.

Global Asset Management

Profit before tax was CHF 122 million in the first quarter of 2014 compared with CHF 130 million in the fourth quarter of 2013. Adjusted for restructuring charges, profit before tax was CHF 126 million compared with CHF 143 million due to lower operating income partly offset by lower operating expenses. Excluding money market flows, net new money inflows were CHF 13.0 billion compared with net outflows of CHF 4.6 billion in the prior quarter.

1 Comparative figures in this table may differ from those originally published in quarterly and annual reports due to adjustments following organizational changes and restatements due to the retrospective adoption of new accounting standards. 2 This includes UBS and third-party fund assets, for which the fund services unit provides professional services, including fund set-up, accounting and reporting for traditional investment funds and alternative funds. 3 Inflows of assets under administration from new and existing funds less outflows from existing funds or fund exits. 4 Refer to the "Capital management" section of our Annual Report 2013 for more information on the equity attribution framework. 5 Based on the Basel III framework as applicable for Swiss systemically relevant banks (SRB). Refer to the "Capital management" section of this report for more information. 6 Based on phase-in Basel III risk-weighted assets. 7 The leverage ratio denominator is also referred to as "total adjusted exposure" and is calculated in accordance with Swiss SRB leverage ratio requirements. Data represent the average of the total adjusted exposure at the end of the three months preceding the end of the reporting period. Refer to the "Capital management" section of this report for more information.

Results: 1Q14 vs 4Q13

Operating income

Total operating income was CHF 451 million compared with CHF 482 million in the prior quarter. Performance fees were lower by CHF 25 million, mainly in O'Connor and A&Q. Net management fees were CHF 6 million lower, mainly in traditional investments and global real estate, partly offset by higher fees in O'Connor and A&Q.

Operating expenses

Total operating expenses were CHF 329 million compared with CHF 352 million in the prior quarter. Adjusted for restructuring charges of CHF 4 million in the first quarter compared with CHF

13 million in the prior quarter, operating expenses were CHF 14 million lower.

Personnel expenses were CHF 208 million compared with CHF 216 million. Adjusted for restructuring charges of CHF 3 million in the first quarter compared with CHF 1 million in the prior quarter, personnel expenses were CHF 10 million lower. This decrease was mainly due to lower variable compensation expenses, largely because the prior quarter included the full year impact of changes in effective deferral rates.

General and administrative expenses were CHF 114 million compared with CHF 126 million. Adjusted for restructuring charges of CHF 1 million in the first quarter compared with CHF 9 million in the prior quarter, general and administrative expenses were lower by CHF 4 million. Lower Corporate Center shared service costs, as well as lower professional fees and advertising expenses, were partly offset by higher other general and administrative expenses due to a CHF 14 million provision for a possible settlement related to a fund liquidation.

Cost/income ratio

The cost/income ratio was 72.9% compared with 73.0% in the prior quarter. Adjusted for restructuring charges, the cost/income ratio was 72.1% compared with 70.3%, above the target range of 60% to 70%.

Net new money

Total net new money inflows were CHF 9.6 billion compared with net outflows of CHF 7.3 billion in the prior quarter. The annualized net new money growth rate was positive 6.6% compared with negative 5.0% in the prior quarter and above the target range of 3% to 5%.

Excluding money market flows, net inflows were CHF 13.0 billion compared with net outflows of CHF 4.6 billion in the prior quarter. From third parties, net inflows were CHF 9.0 billion compared with net outflows of CHF 1.5 billion and were mainly into equities, fixed income, real estate and multi-asset. Regionally, net inflows from third parties were mainly from clients serviced from Europe, Middle East and Africa, Switzerland and Asia Pacific. From clients of UBS's wealth management businesses, net inflows were CHF 4.0 billion compared with net outflows of CHF 3.2 billion in the prior quarter and were mainly from clients serviced from Switzerland and Asia Pacific.

Money market net outflows were CHF 3.4 billion compared with CHF 2.7 billion. From third parties, net outflows were CHF 0.7 billion compared with net inflows of CHF 0.7 billion and were mainly from clients serviced from the Americas. From clients of UBS's wealth management businesses, net outflows were CHF 2.7 billion compared with CHF 3.3 billion. These net outflows included the impact of an ongoing initiative by Wealth Management Americas to increase deposit account balances in UBS banking entities that led to CHF 1.2 billion in outflows from money market funds managed by Global Asset Management during the quarter.

Invested assets

Invested assets were CHF 596 billion as of 31 March 2014 compared with CHF 583 billion as of 31 December 2013. Net new money inflows of CHF 10 billion and positive market performance of CHF 6 billion were partly offset by negative currency translation effects of CHF 3 billion.

As of 31 March 2014, CHF 62 billion, or 10%, of invested assets were money market assets and CHF 172 billion, or 29%, were in indexed strategies. On a regional basis, 34% of invested assets related to clients serviced from Switzerland, 23% from the Americas, 22% from Europe, Middle East and Africa, and 21% from Asia Pacific.

Gross margin on invested assets

The total gross margin was 31 basis points compared with 33 basis points in the prior quarter due to lower performance fees. The gross margin was slightly below the target range of 32 to 38 basis points.

Results by business line: 1Q14 vs 4Q13

Traditional investments

Operating income was CHF 261 million compared with CHF 268 million, mainly due to lower management fees.

The gross margin was 20 basis points compared with 21 basis points in the prior quarter.

Excluding money market flows, net new money inflows from third parties were CHF 8.3 billion and net inflows from clients of UBS's wealth management businesses were CHF 2.5 billion, resulting in total net inflows of CHF 10.8 billion compared with net outflows of CHF 5.2 billion. Equities net inflows were CHF 8.2 billion compared with net outflows of CHF 0.9 billion and were mainly into indexed strategies. Fixed income net inflows were CHF 1.1 billion compared with net outflows of CHF 3.1 billion. Multi-asset net inflows were CHF 1.5 billion compared with net outflows of CHF 1.2 billion.

Invested assets were CHF 517 billion as of 31 March 2014 compared with CHF 506 billion as of 31 December 2013. By mandate type, CHF 206 billion of invested assets related to equities, CHF 138 billion related to fixed income, CHF 62 billion related to money markets and CHF 111 billion related to multi-asset mandates, including CHF 5 billion of alternative investments not managed by the O'Connor and A&Q, global real estate or infrastructure and private equity investment areas.

O'Connor and A&Q

Operating income was CHF 66 million compared with CHF 76 million in the prior quarter as lower performance fees in both A&Q multi-manager and O'Connor single-manager funds were only partly offset by higher net management fees. As of 31 March 2014, over 85% of O'Connor and A&Q performance fee-eligible assets were above their high water marks compared with over 90% as of 31 December 2013.

The gross margin was 93 basis points compared with 113 basis points in the prior quarter due to lower performance fees.

Net new money inflows were CHF 1.8 billion compared with net outflows of CHF 0.5 billion.

Invested assets were CHF 30 billion as of 31 March 2014 compared with CHF 27 billion as of 31 December 2013.

Global real estate

Operating income was CHF 73 million compared with CHF 86 million in the prior quarter, largely due to lower performance fees in the first quarter and strong transaction fees in the prior quarter. The gross margin was 71 basis points compared with 83 basis points. Net new money inflows were CHF 0.4 billion compared with CHF 0.7 billion. Invested assets were CHF 40 billion as of 31 March 2014 compared with CHF 42 billion as of 31 December 2013.

Infrastructure and private equity

Operating income was CHF 9 million compared with CHF 10 million in the prior quarter as lower net management fees more than offset higher performance fees. The gross margin was 45 basis points compared with 50 basis points. Net new money outflows were CHF 0.1 billion compared with net inflows of CHF 0.3 billion. Invested assets were CHF 8 billion as of 31 March 2014, in line with 31 December 2013.

Fund services

Operating income was CHF 42 million, in line with the prior quarter. The gross margin on assets under administration was 4 basis points, also in line with the prior quarter. Net new assets under administration inflows were CHF 16.8 billion compared with net outflows of CHF 0.1 billion in the prior quarter. Total assets under administration were CHF 452 billion as of 31 March 2014 compared with CHF 432 billion as of 31 December 2013.

Personnel: 1Q14 vs 4Q13

Global Asset Management employed 3,730 personnel as of 31 March 2014 compared with 3,729 as of 31 December 2013.

Results: 1Q14 vs 1Q13

Profit before tax was CHF 122 million in the first quarter of 2014 compared with CHF 190 million in the first quarter of 2013. Adjusted for a CHF 34 million gain on the sale of our Canadian domestic business in the first quarter of 2013 and restructuring charges of CHF 4 million in both quarters, profit before tax was CHF 126 million compared with CHF 160 million.

Total operating income was CHF 451 million compared with CHF 517 million, or CHF 483 million after adjusting for the aforementioned sale of our Canadian domestic business. Net management fees were lower, primarily in traditional investments due to changes in the asset mix. Performance fees were also lower.

Total operating expenses were CHF 329 million compared with CHF 327 million in the first quarter of 2013. Adjusted for the aforementioned restructuring charges, operating expenses were CHF 2 million higher.

Investment performance

Key equity strategies had a mixed first quarter. US large cap strategies had a very good quarter, extending 2013's strong performance. Asian strategies also had a good quarter, partly reversing 2013's underperformance. After strong performance in 2013, global, US large cap growth, European concentrated alpha and Australian strategies were all close to benchmark for the quarter, while Swiss strategies underperformed. Pan-European strategies' underperformance for the quarter as a whole was moderated somewhat by outperformance towards the end of the quarter. Following sharp underperformance in 2013, emerging markets strategies showed improvement and ended the quarter just above benchmark.

After a strong end to 2013, fixed income strategies made a more muted start to 2014. Nevertheless, several key strategies outperformed, including global, European and Australian, as did other specialist strategies such as high yield. Those developed market key strategies that underperformed did so relatively modestly and, despite ongoing negative news flow, emerging markets strategies showed signs of stabilization.

In global investment solutions, key multi-asset strategies managed versus benchmarks were close to those benchmarks for the quarter. Asset allocation contributed positively, while security selection and currency detracted. Global convertibles showed improved performance, largely reversing weaker performance in 2013.

In O'Connor and A&Q, core single-manager funds delivered positive returns for the quarter, as did most multi-manager funds.

In global real estate, direct investment strategies delivered predominantly positive results in the first quarter with German, UK and US strategies delivering the strongest absolute returns. Multi-manager and real estate securities strategies generated positive absolute returns.

The direct infrastructure fund performed in line with its current yield objectives but longer-term total returns remained slightly below target. Infrastructure funds of funds continued to perform in line with their objectives in the quarter, while private equity funds of funds exceeded their objectives.

Investment performance versus peers, as represented by a broad range of UBS wholesale funds, remained solid. Fixed income funds showed improvement, while equity funds weakened over one year compared with the prior quarter-end. Across all asset classes, and on an asset-weighted basis, 66% of fund assets ranked in the top two quartiles over one year, 72% over three years and 77% over five years.

Investment performance – key composites versus benchmarks

The table below shows investment performance for approximately 41% of Global Asset Management's CHF 279 billion actively managed invested assets in traditional investments as of 31 March 2014. This figure excludes CHF 172 billion in indexed investments, CHF 62 billion in actively managed money market funds and CHF 83 billion in actively managed alternatives (including O'Connor and A&Q, global real estate and infrastructure and private equity).

1 Customized benchmark. 2 Benchmark was changed on 1 May 2013 to US T-Bills 30 Day. Periods prior to May 2013 calculated vs. Consumer Price Index. (+) above benchmark; (–) under benchmark; (=) equal to benchmark. All are before the deduction of investment management fees. Global composites are stated in US dollar terms, except for Global Bond Composite which is stated in Swiss franc terms; all others are in appropriate local currencies (unless otherwise stated). A composite is an aggregation of one or more portfolios in a single group that is representative of a particular strategy, style, or objective. The composite is the asset-weighted average of the performance results of all the portfolios it holds.

Investment performance – collective funds compared with peers

The table below shows investment performance versus peers of UBS Swiss, Luxembourg, German and Irish-domiciled wholesale funds available to clients of UBS's wealth management businesses and also distributed through other wholesale intermediaries. The UBS fund universe includes all actively managed funds totaling CHF 98 billion as of 31 March 2014. The peer universe includes all funds registered in countries included in the MSCI Europe Developed Markets Universe. Money market funds and indexed funds are excluded.

Total	**66**	**72**	**77**

Source: ThomsonReuters LIM 2.7 (Lipper Investment Management) data extracted on 7 April 2014 and analyzed by UBS Global Asset Management. Data shown is the asset-weighted percentage of funds achieving first or second quartile (i.e., above median) ranking in their peer group on a net of fees basis over each time period. Funds are included in the analysis for every time period for which they have a performance record.

Investment Bank

Profit before tax was CHF 425 million in the first quarter of 2014 compared with CHF 297 million in the fourth quarter of 2013. Adjusted for restructuring charges, profit before tax was CHF 549 million compared with CHF 386 million. This increase was mainly due to higher revenues in both Investor Client Services and Corporate Client Solutions, partly offset by an increase in operating expenses. Fully applied risk-weighted assets were unchanged at CHF 62 billion.

Results: 1Q14 vs 4Q13

Operating income

Total operating income increased 18% to CHF 2,190 million from CHF 1,861 million in the prior quarter as a result of improved revenues across both Investor Client Services and Corporate Client Solutions. Within Investor Client Services, both equities and foreign exchange, rates and credit recorded higher revenues, mainly reflecting seasonally higher client activity levels. Corporate Client Solutions revenues increased mainly due to higher revenues in debt capital markets. In US dollar terms, operating income increased 19%.

Operating expenses

Total operating expenses increased 13% to CHF 1,765 million compared with CHF 1,563 million. Adjusted for restructuring charges of CHF 124 million in the first quarter of 2014 compared with CHF 89 million in the prior quarter, operating expenses increased 11% to CHF 1,641 million from CHF 1,474 million, mainly due to higher variable compensation expenses as performance improved, partly offset by lower general and administrative expenses. In US dollar terms, adjusted operating expenses increased 13%.

Personnel expenses increased to CHF 1,191 million from CHF 860 million. The first quarter included restructuring charges of CHF 82 million compared with CHF 12 million in the prior quarter. On an adjusted basis, personnel expenses increased to CHF 1,109 million from CHF 848 million, largely due to higher variable compensation expenses.

General and administrative expenses decreased to CHF 499 million from CHF 629 million. The first quarter included restructuring charges of CHF 36 million compared with restructuring charges of CHF 63 million in the prior quarter. On an adjusted basis, general and administrative expenses decreased to CHF 463 million from CHF 566 million, mainly due to a charge of CHF 55 million for the annual UK bank levy in the prior quarter as well as lower professional fees and seasonally lower travel and entertainment costs in the first quarter.

Cost / income ratio

The cost / income ratio improved to 80.6% from 83.9%. On an adjusted basis, the cost / income ratio improved to 74.9% from 79.2% and was within our target range of 65% to 85%.

Risk-weighted assets

Fully applied risk-weighted assets were unchanged at CHF 62 billion as of 31 March 2014.

➔ **Refer to the "Capital management" section of this report for more information**

Funded assets

Funded assets increased to CHF 176 billion as of 31 March 2014 from CHF 162 billion as of 31 December 2013, consistent with our target of less than CHF 200 billion. This increase was mainly due to higher trading portfolio assets and collateral assets in our equities and foreign exchange, rates and credit businesses.

➔ Refer to the "Balance sheet" section of this report for more information

Return on attributed equity

Return on attributed equity (RoAE) for the first quarter was 21.5%, and 27.8% on an adjusted basis, consistent with our target of more than 15%. RoAE for the prior quarter was 15.2%, and 19.8% on an adjusted basis.

➔ Refer to the discussion of "Equity attribution and return on attributed equity" in the "Capital management" section of this report for more information

Operating income by business unit: 1Q14 vs 4Q13

Corporate Client Solutions

Corporate Client Solutions revenues increased 9% to CHF 770 million from CHF 706 million, with improved performance in debt capital markets and lower risk management charges, partly offset by lower revenues in advisory and equity capital markets. In US dollar terms, revenues increased 10%.

Advisory revenues decreased 23% to CHF 153 million from CHF 198 million, mainly reflecting lower revenues from private transactions. In addition, fees decreased as the market fee pool, which excludes revenues from private transactions, declined 18%.

Equity capital markets revenues decreased 19% to CHF 196 million from CHF 243 million, as the market fee pool decreased 22%.

Debt capital markets revenues increased 46% to CHF 303 million from CHF 208 million, due to higher revenues from both investment grade and leveraged finance as market activity levels improved.

Financing solutions revenues increased 7% to CHF 128 million compared with CHF 120 million. Revenues from the structured financing business increased, partly offset by a decline in real estate finance revenues.

Risk management revenues improved to negative CHF 10 million from negative CHF 63 million, mainly due to the positive effect of widening credit spreads during the quarter.

Investor Client Services

Investor Client Services revenues increased 23% to CHF 1,420 million from CHF 1,156 million, due to higher revenues in both the equities and foreign exchange, rates and credit businesses. In US dollar terms, revenues increased 24%.

Equities

Equities revenues increased to CHF 1,037 million from CHF 858 million, with stronger performance across all sectors mainly reflecting seasonally higher client activity levels.

Cash revenues increased to CHF 387 million compared with CHF 317 million, as a result of higher commission income and strong trading revenues across all regions.

Derivatives revenues increased to CHF 319 million from CHF 238 million. Revenues benefited from higher market activity levels and a stronger trading performance, particularly in Europe, Middle East and Africa as well as Asia Pacific.

Financing services revenues increased to CHF 335 million from CHF 299 million. Revenues improved across equity finance, prime brokerage and clearing and execution, mainly as a result of higher trading revenues and financing balances.

Other equities revenues were negative CHF 3 million in the first quarter compared with positive CHF 4 million in the fourth quarter.

Foreign exchange, rates and credit

Foreign exchange, rates and credit revenues increased to CHF 382 million from CHF 297 million, with improved performance in both the foreign exchange and rates and credit businesses.

Foreign exchange revenues increased, mainly due to higher revenues from our foreign exchange options and emerging market short-term interest rate businesses, stemming from improved market liquidity and higher client activity levels.

Rates and credit revenues increased, mainly due to improved trading revenues in both the solutions and flow businesses. The first quarter included negative debit valuation adjustments of CHF 5 million compared with negative debit valuation adjustments of CHF 11 million in the prior quarter.

Personnel: 1Q14 vs 4Q13

The Investment Bank employed 11,860 personnel as of 31 March 2014, an increase of 245 compared with 11,615 as of 31 December 2013, mainly due to increased front office personnel as well as an increase in personnel allocated from Corporate Center shared services units.

Results: 1Q14 vs 1Q13

Profit before tax was CHF 425 million compared with CHF 977 million in the first quarter of 2013, mainly as a result of lower revenues. The first quarter of 2013 included revenues from a large private transaction in Corporate Client Solutions, as well as gains from the sale of our remaining proprietary trading business and revenues on equity investments, prior to their transfer to Corporate Center – Non-core and Legacy Portfolio. Excluding the net gain on the sale of our remaining proprietary business in the first quarter of 2013 and restructuring charges in both quarters, adjusted profit before tax was CHF 549 million compared with CHF 928 million.

Revenues in Corporate Client Solutions decreased 23% to CHF 770 million from CHF 997 million, mainly as a result of lower equity capital markets revenues due to a large private transaction recorded in the first quarter of 2013, partly offset by lower risk management charges and higher debt capital markets and advisory revenues. In US dollar terms, revenues decreased 19%.

Investor Client Services revenues declined 21% to CHF 1,420 million from CHF 1,787 million. In US dollar terms, revenues declined 17%. Equities revenues decreased 11% to CHF 1,037 million from CHF 1,168 million, mainly due to lower revenues in other equities and derivatives, partly offset by improved revenues in cash and financing services. Cash revenues increased mainly due to higher trading revenues. Derivatives revenues in Europe, Middle East and Africa as well as Asia Pacific declined compared with the first quarter of 2013, which benefited from higher market liquidity. Within financing services, revenues rose across equity finance, prime brokerage and clearing and execution services. Other equities revenues decreased as the first quarter of 2013 included gains from the sale of our remaining proprietary trading business and revenues on equity investments, prior to their transfer to Corporate Center – Non-core and Legacy Portfolio. Foreign exchange, rates and credit revenues decreased 38% to CHF 382 million from CHF 619 million, with lower revenues across most products as client activity levels decreased significantly, reflecting the broader market climate.

Total operating expenses decreased 2% to CHF 1,765 million compared with CHF 1,806 million. Adjusted operating expenses were CHF 1,641 million compared with CHF 1,800 million. In US dollar terms, adjusted operating expenses decreased 5%. Personnel expenses decreased to CHF 1,191 million from CHF 1,265 million, mainly due to lower variable compensation expenses. General and administrative expenses increased to CHF 499 million from CHF 457 million, mainly due to higher professional fees, partly offset by the impact of our ongoing cost reduction programs.

Results

Operating income

Total operating income was CHF 51 million in the first quarter of 2014, which included an own credit gain on financial liabilities designated at fair value of CHF 88 million, partly offset by treasury income remaining in Corporate Center – Core Functions of negative CHF 46 million. Total operating income in the prior quarter was negative CHF 365 million.

➔ **Refer to "Note 10 Fair value measurement" in the "Financial information" section of this report for more information on own credit**

Treasury income remaining in Corporate Center – Core Functions, after allocations to the business divisions, was negative CHF 46 million. The first quarter of 2014 included central funding costs of CHF 165 million which were retained in Group Treasury. This was partly offset by a gain of CHF 49 million related to our macro cash flow hedges, trading gains of CHF 36 million on derivative instruments which are used to economically hedge our financial investments available-for-sale portfolio as well as CHF 33 million of interest income related to preferred securities.

Compared with the prior quarter, treasury income remaining in Corporate Center – Core Functions improved to negative CHF 46 million from negative CHF 343 million. This improvement was mainly due to CHF 104 million lower losses from cross-currency basis swaps which are held as economic hedges as well as the net loss of CHF 75 million related to the buyback of debt in a public tender offer recorded in the fourth quarter of 2013. In addition, the first quarter of 2014 included a gain of CHF 49 million related to our macro cash flow hedges compared with a loss of CHF 10 million in the prior quarter. Furthermore, in the fourth quarter of 2013 we realized losses of CHF 37 million on sales of financial investments held in the available-for-sale portfolio which was transferred from Wealth Management Americas to Group Treasury in 2013 and foreign currency translation losses of CHF 24 million.

➔ **Refer to the "Liquidity and funding management" section of this report for more information on funding costs**

The first quarter of 2014 included an own credit gain on financial liabilities designated at fair value of CHF 88 million, primarily as life-to-date own credit losses partially reversed due to time decay, partly offset by the impact of a marginal tightening of our funding spreads over the quarter. The prior quarter included an own credit loss on financial liabilities of CHF 94 million.

Operating income excluding own credit and treasury income was CHF 9 million in the first quarter of 2014 and included a gain on sale of real estate of CHF 23 million as well as CHF 23 million in net funding costs related to the goodwill and intangible assets that arose from the PaineWebber acquisition. Compared with the prior quarter, income related to other items decreased to CHF 9 million from CHF 72 million, mainly as gains on sales of real estate declined by CHF 38 million and as the prior quarter included a CHF 34 million credit related to the partial release of a provision for litigation, regulatory and similar matters.

Operating expenses before service allocations

On a gross basis before service allocations to the business divisions and Corporate Center – Non-core and Legacy Portfolio, total operating expenses decreased by CHF 160 million to CHF 2,180 million in the first quarter of 2014. Restructuring charges were CHF 93 million compared with CHF 177 million in the prior quarter, mainly reflecting reduced real estate-related restructuring charges partly offset by higher personnel-related restructuring charges. Excluding restructuring charges, adjusted operating expenses before service allocations decreased by CHF 76 million to CHF 2,087 million.

Personnel expenses decreased by CHF 24 million to CHF 1,020 million. On an adjusted basis, excluding net restructuring charges of CHF 60 million in the first quarter of 2014 and CHF 36 million in the fourth quarter of 2013, personnel expenses decreased by CHF 48 million, mainly due to lower variable compensation expenses, partly offset by expenses for untaken vacation accruals compared with a release of accruals in the prior quarter.

General and administrative expenses decreased by CHF 110 million to CHF 979 million. On an adjusted basis, excluding net restructuring charges of CHF 32 million in the first quarter of 2014 and CHF 119 million in the fourth quarter of 2013, general and administrative expenses decreased by CHF 23 million, mainly due to lower expenses for rent and maintenance of real estate, decreased marketing costs as well as reduced business outsourcing activities. These decreases were partly offset by higher professional fees.

Depreciation and impairment of property and equipment decreased to CHF 180 million from CHF 206 million, mainly as the fourth quarter of 2013 included real estate-related restructuring charges and an impairment of previously capitalized software.

The business divisions and Non-core and Legacy Portfolio were charged CHF 1,953 million for shared services, a decrease of CHF 187 million, primarily related to both lower restructuring charges and variable compensation expenses.

Operating expenses after service allocations

Total operating expenses remaining in Corporate Center – Core Functions after allocations to the business divisions and Non-core and Legacy Portfolio increased to CHF 227 million from CHF 200 million, mainly due to expenses for untaken vacation accruals compared with a release of accruals in the prior quarter.

Operating expenses remaining in Corporate Center – Core Functions related mainly to Group governance functions and other corporate activities.

➔ Refer to the "Regulatory and legal developments and financial reporting changes" section of this report for more information on the refinement to the allocation of operating costs for internal services

Risk-weighted assets

Fully applied Basel III risk-weighted assets increased to CHF 23 billion as of 31 March 2014 compared with CHF 21 billion as of 31 December 2013.

➔ Refer to the "Capital management" section of this report for more information on risk-weighted assets

Personnel

As of 31 March 2014, Corporate Center – Core Functions employed 23,790 personnel compared with 23,860 at the end of the prior quarter. The decrease of 70 personnel was mainly related to our ongoing cost reduction programs. As of 31 March 2014, 22,838 personnel were allocated to the business divisions as well as Non-core and Legacy Portfolio, based on services consumed. Personnel remaining in Corporate Center – Core Functions after allocations decreased to 951 from 1,055 and related to Group governance functions and other corporate activities.

Results: 1Q14 vs 1Q13

Corporate Center – Core Functions recorded a loss before tax of CHF 176 million in the first quarter of 2014 compared with a loss before tax of CHF 680 million in the first quarter of 2013.

Total operating income was CHF 51 million in the first quarter of 2014 compared with negative CHF 441 million in the first quarter of 2013.

Treasury income remaining in Corporate Center – Core Functions, after allocations to the business divisions, was negative CHF 46 million compared with negative CHF 217 million. This improvement was mainly due to the net loss of CHF 119 million related to the buyback of debt in a public tender offer in the first quarter of 2013. Furthermore, the first quarter of 2014 included a gain of CHF 49 million related to our macro cash flow hedges compared with a loss of CHF 66 million in the first quarter of 2013. The first quarter of 2013 also included realized gains of CHF 39 million on sales of financial investments held in the available-for-sale portfolio which was transferred from Wealth Management Americas to Group Treasury in 2013.

The first quarter of 2014 included an own credit gain on financial liabilities designated at fair value of CHF 88 million compared with a loss of CHF 181 million in the same quarter a year earlier. Operating income excluding own credit and treasury income increased to positive CHF 9 million from negative CHF 43 million, mainly due to CHF 23 million higher gains on sales of real estate.

On a gross basis before service allocations to the business divisions and Non-core and Legacy Portfolio, total operating expenses decreased by CHF 262 million to CHF 2,180 million. Restructuring charges were CHF 93 million compared with CHF 269 million, mainly reflecting reduced real estate-related restructuring charges partly offset by higher personnel-related restructuring charges. Excluding restructuring charges, adjusted operating expenses before service allocations were CHF 2,087 million compared with CHF 2,173 million. This decrease of CHF 86 million was mainly due to lower variable compensation expenses, the effect of further headcount reductions related to our ongoing cost reduction programs and CHF 25 million lower charges for provisions for litigation, regulatory and similar matters. These decreases were partly offset by increased outsourcing activities and professional fees.

Corporate Center – Non-core and Legacy Portfolio

Corporate Center – Non-core and Legacy Portfolio recorded a loss before tax of CHF 225 million in the first quarter of 2014 compared with a loss of CHF 446 million in the prior quarter, mainly due to an improvement of CHF 49 million in debit valuation adjustments, revaluation gains in our credit business and lower losses from unwind and novation activities. Furthermore, the fourth quarter of 2013 included a charge of CHF 68 million for the annual UK bank levy. The first quarter included total operating expenses of CHF 254 million compared with CHF 317 million in the prior quarter. Fully applied risk-weighted assets decreased by CHF 3 billion to CHF 60 billion.

1 Comparative figures in this table may differ from those originally published in quarterly and annual reports due to adjustments following organizational changes and restatements due to the retrospective adoption of new accounting standards. 2 Includes credit loss (expense) / recovery on reclassified and acquired securities. 3 Refer to "Note 16 Changes in organization" in the "Financial information" section of this report for information on restructuring charges. 4 Refer to the "Capital management" section of our Annual Report 2013 for more information on the equity attribution framework. 5 Based on third-party view, i.e., without intercompany balances. 6 Based on the Basel III framework as applicable for Swiss systemically relevant banks (SRB). Refer to the "Capital management" section of this report for more information. 7 The leverage ratio denominator is also referred to as "total adjusted exposure" and is calculated in accordance with Swiss SRB leverage ratio requirements. Data represent the average of the total adjusted exposure at the end of the three months preceding the end of the reporting period. Refer to the "Capital management" section of this report for more information.

Operating income by business unit

Non-core

Income was CHF 17 million compared with a loss of CHF 104 million in the prior quarter, mainly as debit valuation adjustments improved to negative CHF 19 million from negative CHF 68 million. Furthermore, the first quarter of 2014 included lower losses from unwind and novation activities.

Legacy Portfolio

Income was CHF 13 million compared with a loss of CHF 36 million in the prior quarter, mainly due to gains on reference-linked notes and real estate portfolios due to market movements, partly offset by the negative effect of increased credit valuation adjustment reserves. The prior quarter also included a charge of CHF 34 million relating to tax obligations of the SNB StabFund.

Credit loss expense / recovery

In the first quarter of 2014, credit losses were zero compared with net credit loss recoveries of CHF 11 million in the prior quarter, which mainly related to sales and redemptions of student loan auction rate securities impaired in prior periods.

Operating expenses

Total operating expenses decreased to CHF 254 million from CHF 317 million.

Personnel expenses decreased by CHF 8 million to CHF 104 million, mainly due to lower variable compensation expenses.

General and administrative expenses decreased by CHF 45 million to CHF 128 million, mainly due to a charge of CHF 68 million for the annual UK bank levy in the fourth quarter of 2013, partly offset by CHF 49 million higher charges for provisions for litigation, regulatory and similar matters in the first quarter of 2014. Furthermore, restructuring charges decreased to CHF 4 million from CHF 14 million in the prior quarter.

Charges for services from other business divisions decreased by CHF 8 million to CHF 15 million, mainly as a result of reduced consumption of shared services.

Risk-weighted assets

Fully applied risk-weighted assets (RWA) for Non-core and Legacy Portfolio decreased by CHF 3 billion to CHF 60 billion.

Non-core RWA decreased by CHF 4 billion to CHF 29 billion as a result of continued activity targeted at reducing over-the-counter derivative exposures by means of negotiated bilateral settlements with specific counterparties, third-party novations and trade compressions. Legacy Portfolio RWA were unchanged at CHF 31 billion.

➔ **Refer to the discussions of "Corporate Center – Non-core and Legacy Portfolio" and "Capital management" in the "Risk and treasury management" section of this report for more information on risk-weighted assets**

Balance sheet assets

Balance sheet assets decreased to CHF 190 billion as of 31 March 2014 from CHF 215 billion as of 31 December 2013. Positive replacement values fell by CHF 21 billion, largely due to a reduction in Non-core, mainly as a result of trade migrations, compressions and market movements. Funded assets decreased by CHF 3 billion, mainly due to the full exit of precious metal holdings held on behalf of clients and the maturing of the last remaining trade in the structured reverse repo portfolio, both in Non-core.

Personnel

As of 31 March 2014, a total of 1,546 personnel were employed within Non-core and Legacy Portfolio compared with 1,585 as of 31 December 2013. Front office personnel decreased to 195 from 222 and personnel allocated from Corporate Center shared services units decreased to 1,351 from 1,363.

Results: 1Q14 vs 1Q13

Non-core and Legacy Portfolio recorded a loss before tax of CHF 225 million in the first quarter of 2014 compared with a loss of CHF 245 million in the first quarter of 2013.

Total operating income was CHF 29 million compared with CHF 504 million.

Non-core income was CHF 17 million compared with CHF 231 million. This decrease related mainly to favorable market conditions in the first quarter of 2013 ahead of any material unwind activity resulting from the accelerated implementation of our strategy.

Legacy Portfolio income decreased to CHF 13 million from CHF 274 million, mainly as the first quarter of 2013 included a gain of CHF 240 million from the revaluation of our option to acquire the SNB StabFund's equity.

Total operating expenses decreased by CHF 495 million to CHF 254 million, largely due to CHF 292 million lower charges for provisions for litigation, regulatory and similar matters as well as CHF 180 million lower restructuring charges.

Risk and treasury management key developments

Risk management and control

We maintained our focus on managing down risks within Corporate Center – Non-core and Legacy Portfolio. On a Group level, market risks remained low and our credit risk profile was stable over the quarter, with an overall net credit loss recovery.

Effective 1 January 2014, our Compliance function merged with the Operational Risk Control unit, enhancing Risk Control's ability to control the Group's primary and consequential risks in a fully integrated way.

Balance sheet

As of 31 March 2014, our balance sheet assets stood at CHF 983 billion, a decrease of CHF 36 billion from 31 December 2013, primarily due to a continued reduction in positive replacement values in both Corporate Center – Non-core and Legacy Portfolio and the Investment Bank. Funded assets, which represent total assets excluding positive replacement values and collateral delivered against over-the-counter (OTC) derivatives, increased by CHF 3 billion to CHF 742 billion. This increase mainly reflected client-driven increases in trading portfolio assets in the Investment Bank and lending activity in Wealth Management, partly offset by reduced collateral trading assets in Corporate Center – Core Functions. Excluding currency effects, funded assets increased by approximately CHF 6 billion.

Liquidity and funding management

Our liquidity position remained strong during the quarter and we further optimized our funding profile through the issuance of EUR 2.0 billion of 12-year low-trigger, loss-absorbing, Basel III-compliant subordinated notes with a non-deferrable coupon at an initial rate of 4.75%. These notes qualify as progressive buffer capital in compliance with Swiss regulations for systemically important banks and contributed to the further strengthening of our Swiss systemically relevant banks (SRB) leverage ratio.

Capital management

Our fully applied common equity tier 1 (CET1) capital ratio improved 0.4 percentage points to 13.2% as of 31 March 2014 and we have exceeded our 2014 CET1 capital ratio target. Fully applied CET1 capital increased by CHF 1.0 billion to CHF 29.9 billion, mainly due to the first quarter net profit. Risk-weighted assets on a fully applied basis increased by CHF 2 billion to CHF 227 billion. On a phase-in basis, our CET1 capital ratio declined 0.6 percentage points to 17.9%, mainly due to the CHF 1.0 billion decrease in phase-in CET1 capital to CHF 41.2 billion, mostly arising from the effect of capital deductions related to transitional effects applicable from 1 January 2014, partly offset by the first quarter net profit. Our Swiss SRB leverage ratio improved 0.3 percentage points to 5.0% on a phase-in basis, mainly due to the reduction of the leverage ratio denominator as well as through the aforementioned issuance of low-trigger, loss-absorbing, Basel III-compliant subordinated notes.

Risk management and control

Risk profile of the Group

Overview of risks arising from our business activities

The table below presents the key drivers of tangible attributed equity by business division and Corporate Center, being risk-weighted assets (RWA), Swiss SRB leverage ratio denominator (LRD) and risk-based capital (RBC), as well as the average tangible attributed equity, total assets and adjusted operating profit before tax. Along with the description of key risks by business division and Corporate Center presented in our Annual Report 2013, this table provides an overview of how the activities in our business divisions and Corporate Center are reflected in our risk measures, along with their respective performance.

The table is followed by sections providing an update for the first quarter of 2014 on developments in credit risk (comprising banking products and traded products), market risk (including interest rate risk in the banking book), country risk and operational risk.

The "Capital management" section of this report provides an update on the development of RWA, LRD and attributed equity during the quarter. RBC remained broadly stable at CHF 33 billion for the Group as of 31 March 2014.

➔ Refer to the "Capital management" section of this report and our Annual Report 2013 for more information on RWA, LRD and our equity attribution framework

➔ Refer to "Statistical measures" in the "Risk, treasury and capital management" section of our Annual Report 2013 for more information on RBC

1 Based on the Basel III framework as applicable for Swiss systemically relevant banks (SRB). Refer to the "Capital management" section of this report for more information. 2 Negative market risk numbers are due to the diversification effect allocated to CC – Core Functions. 3 The leverage ratio denominator is also referred to as "total adjusted exposure" and is calculated in accordance with Swiss SRB leverage ratio requirements. Data represent the average of the total adjusted exposure at the end of the three months preceding the end of the reporting period. Refer to the "Capital management" section of this report for more information. 4 Refer to "Statistical measures" in the "Risk management and control" section of our Annual Report 2013 for more information on risk-based capital. 5 Adjusted results are non-GAAP financial measures as defined by SEC Regulations. Refer to the table "Adjusted results" in the "Group performance" section of this report for more information.

Credit risk – internal risk view

Except where stated otherwise, the exposures detailed in this section are based on our internal management view of credit risk which differs in certain respects from the measurement requirements of IFRS.

Banking products

Gross banking products exposures increased by CHF 14 billion to CHF 467 billion over the quarter, of which CHF 292 billion related to loans. The majority of these loan exposures were within our Retail & Corporate and wealth management businesses and were secured by residential and commercial properties or by securities.

➔ **Refer to the "Risk, treasury and capital management" section of our Annual Report 2013 for more information on credit risk, impairment and default**

In Wealth Management Americas, impairments related to securities-backed loan facilities collateralized by Puerto Rico municipal securities and related funds decreased to CHF 20 million from CHF 25 million. Our total lending exposure against Puerto Rico municipal securities and closed-end fund collateral as of 31 March 2014 was USD 0.8 billion, reduced from USD 1.0 billion at the end of the prior quarter, primarily due to share buybacks by some of the closed-end funds. The associated collateral had a market value of USD 2.2 billion as of 31 March 2014. For a significant number of these loans, UBS has recourse to the borrower. On 31 March 2014, UBS had less than USD 40 million of direct exposure to Puerto Rico municipal securities and related funds arising from secondary market activities.

➔ **Refer to the "Risk, treasury and capital management" section of our Annual Report 2013 for more information on our exposures to Puerto Rico municipal securities and associated closed-end funds**

Our Swiss mortgage portfolio in Retail & Corporate and Wealth Management grew marginally over the quarter. The overall composition of the portfolio and the distribution of exposures across loan-to-value (LTV) buckets remained consistent with the position as of 31 December 2013. Average LTV for newly originated loans was 59% compared with the average LTV for the portfolio as a whole of 54%. In the Swiss residential mortgage loan book, over 99.8% of the aggregate amount of loans would continue to be covered by the real estate collateral even if the value assigned to that collateral were to decrease by 20%, and 98.7% would remain covered if collateral values decreased by 30%, both of which were largely unchanged as of 31 March 2014 compared with year-end 2013.

Our Swiss corporate lending portfolio consists of loans to multinational and domestic counterparties. Although this portfolio is well-diversified across industries, these Swiss counterparties are, in general, highly reliant on the domestic economy and the economies to which they export, predominantly the European Union (EU). We continue to closely monitor developments in these economies.

Traded products

Credit exposure arising from traded products, after reflecting the effects of master netting agreements but before deduction of specific credit valuation adjustments and credit hedges, decreased by CHF 6 billion to CHF 44 billion. CHF 21 billion of this exposure arises from OTC derivatives, primarily within Corporate Center – Non-core and Legacy Portfolio and the Investment Bank, for which the exposure decreased by CHF 7 billion to CHF 16 billion over the quarter. As counterparty risk for traded products exposure is managed at a counterparty level, no split between exposures in the Investment Bank and those in Non-core and Legacy Portfolio is provided. A further CHF 15 billion of traded products credit risk relates to securities financing transactions, primarily within the Investment Bank, largely unchanged compared with year-end 2013.

1 Excludes CHF 3 million allowances for securities financing (31 December 2013: CHF 2 million). 2 The measurement requirements of IFRS differ in certain respects from our internal management view of credit risk. 3 Includes CHF 10 million (31 December 2013: CHF 20 million) in collective loan loss allowances for credit losses. 4 In 2014, we restated the impaired exposure and the estimated liquidation proceeds of collateral for loans in Wealth Management Americas for 31 December 2013. As a result, the impaired loan exposure in Wealth Management Americas was increased by CHF 42 million with a corresponding increase in the estimated liquidation proceeds of collateral and a 0.1 percentage point increase in the impairment ratio.

Market risk

The tables on the next page show minimum, maximum, average and period-end value-at-risk (VaR) by business division and Corporate Center and general market risk type. Market risk, measured as 1-day, 95% confidence level management VaR, increased by CHF 1 million to CHF 12 million over the quarter and remains at low levels by historical standards. There were no material changes to our VaR model in the first quarter of 2014 and there were no group backtesting exceptions in the first quarter or in the 12 months preceding the end of the quarter.

Also shown on the next pages are the statistics for regulatory VaR, stressed VaR and incremental risk charge (IRC) for the Group and by business division and Corporate Center, and the Group's comprehensive risk measure (CRM) used to calculate market risk Basel III RWA.

Following the continued run down of the Non-core portfolios, certain residual positions have been migrated to the correlation portfolio included within the CRM, taking them out of the IRC calculation. This is consistent with the risk management of these positions going forward. The migration of these positions resulted in a significant reduction in diversification benefits in the IRC calculation, which, along with increased single-name risk in the Investment Bank, drove the increase in the IRC to CHF 182 million in the first quarter from CHF 110 million. The consequential increase in the CRM charge was more than offset by negotiated bilateral settlements of OTC contracts.

The resulting RWA for each model, and for risks-not-in-VaR, are shown in the table "Basel III RWA by risk type, exposure and reporting segment" in the "Capital management" section of this report.

➔ **Refer to the "Risk, treasury and capital management" section of our Annual Report 2013 for more information on market risk measures and the derivation of market risk Basel III RWA from the results of the models**

Interest rate risk in the banking book

The interest rate sensitivity to a +1-basis-point parallel shift in yield curves decreased to CHF 1.0 million as of 31 March 2014 from CHF 2.4 million as of 31 December 2013. This was primarily due to a decrease of CHF 2.2 million in Wealth Management Americas' interest rate sensitivity, mainly resulting from a recalibration of the mortgage whole-loan prepayment model due to reductions in observed mortgage prepayment rates. This reduction was partly offset by an increase in the interest rate sensitivity in Corporate Center – Core Functions of CHF 0.7 million.

Due to the low level of interest rates, downward moves by 100/200 basis points are floored to ensure that the resulting interest rates are not negative. This effect results in nonlinear behavior of the sensitivity, in particular in US dollar when combined with prepayment risk on US mortgages and related products.

➔ **Refer to "Interest rate risk in the banking book" in the "Risk, treasury and capital management" section of our Annual Report 2013 for more information**

1 Statistics at individual levels may not be summed to deduce the corresponding aggregate figures. The minima and maxima for each level may well occur on different days, and likewise the VaR for each business line or risk type, being driven by the extreme loss tail of the corresponding distribution of simulated profits and losses for that business line or risk type, may well be driven by different days in the historical time-series, rendering invalid the simple summation of figures to arrive at the aggregate total. 2 Difference between the sum of the standalone VaRs for the business divisions and the "Corporate Center – Core Functions" shown and the VaR for the "Group, excluding CC – Non-core and Legacy Portfolio" as a whole. 3 As the minimum and maximum occur on different days for different business divisions, it is not meaningful to calculate a portfolio diversification effect.

1 Does not include interest rate sensitivities for credit valuation adjustments on monoline credit protection, US and non-US reference-linked notes. Also not included are the interest rate sensitivities of our inventory of student loan auction rate securities, as from an economic perspective these exposures are not materially affected by parallel shifts in US dollar interest rates, holding other factors constant.

Country risk

The situation in the Ukraine dominated the geopolitical arena throughout the quarter. Our direct exposure to Ukraine is near zero. We are, however, closely monitoring developments and the possibilities for broader economic contagion, including the potential effects of economic sanctions against Russian persons and entities. We have also considered potential operational implications and reviewed the effectiveness of our operational contingency plans.

Exposures to selected eurozone countries

We continue to monitor and manage closely our exposures to peripheral European countries. Our direct exposures to Greece, Italy, Ireland, Portugal and Spain (GIIPS) remain limited, but we nevertheless remain watchful regarding the potential broader implications of adverse developments in the eurozone.

➔ **Refer to “Country risk” in the “Risk, treasury and capital management” section of our Annual Report 2013 for information on our country risk framework and related exposure measures**

Operational risk

As of 1 January 2014, our Compliance function merged with the Operational Risk Control unit, enhancing Risk Control's ability to control the Group's primary and consequential risks in a fully integrated way. The new function reports to the Group Chief Risk Officer and will manage, implement and enhance the operational risk framework. In the first quarter of 2014, key design principles for the new operating model and organizational structures have been agreed and implemented.

The annual review of the parameters for our advanced measurement approach model, used for the calculation of operational risk regulatory capital, was completed in the fourth quarter of 2013 and submitted to FINMA for review in January 2014. FINMA has approved the changes which were implemented in the first quarter of 2014.

→ **Refer to "Swiss SRB Basel III capital information" in the "Capital management" section of this report for more information on the development of operational risk RWA during the quarter and on the incremental RWA resulting from the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA**

Corporate Center – Non-core and Legacy Portfolio

During the first quarter, Non-core and Legacy Portfolio balance sheet assets declined by CHF 25 billion to CHF 190 billion, mainly reflecting lower positive replacement values (PRV) in Non-core.

Risk-weighted assets (RWA) for Non-core and Legacy Portfolio declined by CHF 3 billion to CHF 60 billion, and the Swiss SRB leverage ratio denominator decreased by CHF 26 billion to CHF 134 billion.

Non-core

Non-core balance sheet assets decreased by CHF 23 billion to CHF 167 billion during the first quarter, mainly due to CHF 20 billion lower PRV from our over-the-counter (OTC) rates and credit derivative exposures that make up a large part of our remaining Non-core portfolios. The main PRV reduction occurred in our rates portfolio due to negotiated bilateral settlements with specific counterparties (i.e., unwinds), third-party novations, including transfers to central clearing houses (i.e., trade migrations), agreements to net down trades with other dealer counterparties (i.e., trade compressions), as well as, to a lesser extent, fair value changes due to currency movements, partly offset by interest rate movements. Rates reduction activity principally focused on large, RWA-intensive trades including uncollateralized exposures with certain counterparties and on reducing the number of outstanding OTC trades through net downs with other dealer counterparties. The reduction in credit PRV mainly resulted from unwinds and net downs with dealer counterparties.

Funded assets decreased by CHF 3 billion, mainly due to the maturing of the last remaining trade in the structured reverse repo portfolio and the full exit of precious metal holdings in Non-core. Remaining funded assets are largely driven by corporate loans and bonds held to hedge OTC positions. Funded assets and PRV classified as Level 3 in the fair value hierarchy totaled CHF 3 billion, or 2%, of total Non-core balance sheet assets.

Non-core RWA totaled CHF 29 billion as of 31 March 2014, a decrease of CHF 4 billion compared with 31 December 2013, due to reductions in credit risk, market risk and operational risk RWA. The Swiss SRB leverage ratio denominator decreased by CHF 22 billion to CHF 112 billion compared with 31 December 2013.

In May 2014, we concluded an agreement to exit a majority of the Non-core structured credit portfolio market risk. As a result of this transaction, subsequent novations and other planned reduction measures, we expect RWA for this portfolio, excluding operational risk, to total approximately CHF 1 billion and LRD to be up to CHF 15 billion below current levels by the end of 2014.

➔ Refer to "Corporate Center – Non-core and Legacy Portfolio" in the "Risk management and control" section of our Annual Report 2013 for more information on Corporate Center – Non-core

Legacy Portfolio

Legacy Portfolio balance sheet assets decreased by CHF 2 billion to CHF 24 billion during the first quarter. There were no individually significant trade reductions but rather a number of smaller position reductions across the real estate assets portfolio, with additional reductions in funded assets as well as reductions in PRV due to changes in currency rates. Funded assets and PRV classified as Level 3 in the fair value hierarchy totaled CHF 4 billion, or 16%, of total Legacy Portfolio balance sheet assets.

Legacy Portfolio RWA totaled CHF 31 billion as of 31 March 2014 and remained stable compared with 31 December 2013. The Swiss SRB leverage ratio denominator decreased by CHF 4 billion to CHF 23 billion compared with 31 December 2013.

➔ Refer to "Corporate Center – Non-core and Legacy Portfolio" in the "Risk management and control" section of our Annual Report 2013 for more information on Corporate Center – Legacy Portfolio

An overview of the composition of Non-core and Legacy Portfolio is presented on the following pages, including position and RWA information for the first quarter of 2014 and the prior quarter. The groupings of positions by category and the order in which these are listed are not necessarily representative of the magnitude of the risks associated with them, nor do the metrics shown in the tables necessarily represent the risk measures used to manage and control these positions. For example, OTC derivatives trading is largely conducted on a collateralized basis and under bilateral International Swaps and Derivatives Association (ISDA) or ISDA-equivalent master netting agreements, which allow for the close-out and netting of PRV with negative replacement values in the event of default. The funded assets and PRV measures presented are intended to provide additional transparency regarding progress in the execution of our strategy to exit these positions. All positions are affected by market factors outside the control of UBS, for example, by interest rate movements.

Composition of Non-core

CHF billion

Exposure category		Description	Changes in 1Q14	RWA [1]		Funded assets [2]		PRV [3]	
				31.3.14	31.12.13	**31.3.14**	31.12.13	**31.3.14**	31.12.13
Rates	**Linear OTC**	Primarily vanilla interest rate, inflation, basis, flow commodities and cross-currency swaps for all major currencies and some emerging markets. Over 95% of gross PRV is collateralized. Approximately 50% of the current gross PRV is due to mature by 2019.	Reduction in RWA due to a decrease in PRV, mainly as a result of trade unwinds, trade compressions, transfers to central clearing houses and currency movements, partly offset by interest rate movements.	**9.2**	11.8	**1.0**	1.1	**93.0**	110.1
	Non-linear OTC	Vanilla and structured options. Over 95% of gross PRV is collateralized. Non-linear exposures are typically longer dated than linear exposures.	Slight decrease in PRV mainly due to trade unwinds and transfers to central clearing houses, partly offset by interest rate movements.	**2.0**	2.0	**1.1**	1.0	**36.6**	36.9
Credit	**Structured credit**	Tranches of structured credit products, liquid index tranches, credit-linked notes, index and single-name credit default swaps, structured entities and bond-repackaged notes with granular risk characteristics and average remaining maturity of less than 4 years. This portfolio is managed under a correlation trading strategy.	Decrease in PRV from CDS and CDO trade unwinds, maturing trades and trade netting of selected positions with counterparties resulting in RWA reduction.	**5.6**	6.0	**0.4**	0.4	**12.1**	14.6
	Loans	Corporate lending, syndicated loans, asset-based lending and structured repo exposures.	Decrease in funded assets reflecting the maturing of the last remaining trade in the structured reverse repo portfolio. Decrease in RWA mainly driven by a reduction in undrawn loan commitments.	**0.9**	1.4	**1.1**	2.1	**0.0**	0.0
	Other	Primarily corporate bonds used for hedging OTC derivatives, residual distressed and equity positions.	Decrease in funded assets due to ongoing reduction of cash positions.	**0.6**	0.7	**0.5**	0.6	**0.1**	0.1
Other		Exposures to precious metal deposits, equities, CVA and related hedging activity.	Decrease in funded assets due to full exit of precious metal holdings held on behalf of clients. Decrease in PRV due to ongoing CVA hedging activity.	**1.2**	1.2	**0.4**	2.1	**2.8**	3.1
Operational risk		Operational risk RWA allocated to Non-core.	Decrease in RWA primarily due to a lower capital requirement based on the advanced measurement approach (AMA) model output.	**9.2**	9.5	–	–	–	–
Total				**28.7**	32.6	**4.6**	7.3	**144.6**	164.9

1 Fully applied and phase-in Basel III RWA. 2 Funded assets are defined as total IFRS balance sheet assets less positive replacement values (PRV) and collateral delivered against over-the-counter (OTC) derivatives (CHF 17.3 billion as of 31.3.14 and CHF 17.4 billion as of 31.12.13). 3 Positive replacement values (gross exposure excluding the impact of any counterparty netting).

Composition of Legacy Portfolio

CHF billion

Exposure category	Description	Changes in 1Q14	RWA[1]		Funded assets[2]		PRV[3]	
			31.3.14	31.12.13	31.3.14	31.12.13	31.3.14	31.12.13
Collateralized debt obligations (CDO)	Includes ABS, RMBS, CDO, CMBS and CLO bonds as well as single-name credit default swap (CDS) trades referencing these asset classes.	RWA reduction due to sales of certain CDO positions and hedges.	**4.6**	5.1	**2.4**	2.5	**0.4**	0.5
Reference-linked notes (RLN)[4]	RLN consist of a series of transactions, mainly issued in note form, whereby UBS purchased credit protection on a reference portfolio of fixed income assets, along with related cash bonds held for hedging purposes.	RWA remained stable compared with the prior quarter.	**3.1**	3.1	**1.7**	1.7	**0.5**	0.6
Monolines	Primarily CDS protection purchased from monoline insurers to hedge specific positions. The majority of this exposure is hedged via single-name credit default swaps.	RWA remained stable compared with the prior quarter. Total fair value of CDS protection reduced, as markets tightened for CMBS assets, to CHF 0.3 billion (of which CHF 0.1 billion from monolines rated BBB and above) after cumulative CVA of CHF 0.1 billion.	**2.0**	2.2	**–**	–	**0.3**	0.4
Real estate assets	Primarily CDS on ABS, ABX and CMBX[4] derivatives positions and CMBS cash bonds.	Increase in RWA due to changes in regulatory requirements for capitalizing trading book securitization exposures, largely offset by unwinds and novations of ABX trades which also drove the decrease in PRV.	**2.2**	2.0	**0.4**	0.5	**0.5**	0.9
Auction rate securities (ARS) and auction preferred stock (APS)	Portfolio of student loan and municipal ARS as well as APS. 100% of student loan ARS exposures were rated BB– and higher as of 31.3.14, with over 87% of the collateral backed by Federal Family Education Loan Program guaranteed collateral. All APS were rated A and higher as of 31.3.14.	No significant change in ARS and APS funded assets with student loan ARS exposure constant at CHF 0.9 billion. RWA remained stable.	**1.5**	1.6	**3.7**	3.8	**–**	–
Muni swaps and options	Swaps and options with US state and local governments.	Increase in PRV due to interest rate movements. RWA remained stable compared with the prior quarter.	**0.9**	1.0	**–**	–	**3.3**	3.1
Loan to BlackRock fund	Loan to structured entity managed by BlackRock Financial Management Inc. The loan's LTV ratio was below 55% as of 31.3.14.	Outstanding loan balance (including amounts held in escrow) decreased reflecting repayment of principal.	**0.3**	0.3	**2.2**	2.4	**–**	–
Other	Includes a number of smaller positions.	RWA increased due to an increase in VaR. Reduction in PRV due to the impact of JPY and AUD currency rate movements on dual currency note positions.	**2.5**	2.3	**3.5**	3.5	**3.7**	4.1
Operational risk	Operational risk RWA allocated to the Legacy Portfolio.	Increase in RWA primarily due to a higher capital requirement based on the AMA model output.	**14.2**	13.3	**–**	–	**–**	–
Total			**31.3**	30.9	**14.0**	14.4	**8.7**	9.6

1 Fully applied and phase-in Basel III RWA. 2 Funded assets are defined as total IFRS balance sheet assets less positive replacement values (PRV) and collateral delivered against over-the-counter (OTC) derivatives (CHF 1.0 billion as of 31.3.14 and CHF 1.5 billion as of 31.12.13). 3 Positive replacement values (gross exposure excluding the impact of any counterparty netting). 4 Index of CMBS.

Balance sheet

As of 31 March 2014, our balance sheet assets stood at CHF 983 billion, a decrease of CHF 36 billion from 31 December 2013, primarily due to a continued reduction in positive replacement values in both Corporate Center – Non-core and Legacy Portfolio and the Investment Bank. Funded assets, which represent total assets excluding positive replacement values and collateral delivered against over-the-counter derivatives, increased by CHF 3 billion to CHF 742 billion. This increase mainly reflected client-driven increases in trading portfolio assets in the Investment Bank and lending activity in Wealth Management, partly offset by reduced collateral trading assets in Corporate Center – Core Functions. Excluding currency effects, funded assets increased by approximately CHF 6 billion.

Assets

Product category view

Positive replacement values (PRV) decreased by CHF 39 billion, mainly reflecting a decline in Non-core and Legacy Portfolio which primarily resulted from a reduction in over-the-counter (OTC) rates and credit derivative exposures due to negotiated bilateral settlements with specific counterparties, third-party novations, including transfers to central clearing houses, agreements to net down trades with other dealer counterparties, as well as, to a lesser extent, fair value changes due to currency movements, partially offset by interest rate movements. In addition, PRV fell in the Investment Bank, mainly reflecting maturities of foreign exchange contracts. Collateral trading assets, which consist of reverse repurchase agreements and cash collateral on securities borrowed, were lower by CHF 8 billion, mainly within Group Treasury in Corporate Center – Core Functions. Financial investments available-for-sale decreased by CHF 6 billion, primarily resulting from a re-balancing of our multi-currency portfolio of unencumbered, high-quality, liquid assets managed centrally by Group Treasury from financial investments available-for-sale to cash and balances with central banks. Other assets decreased by CHF 1 billion as an increase in prime brokerage receivables was more than offset by a reduction in cash collateral receivables on derivative instruments. These decreases were partly offset by a CHF 9 billion increase in lending assets, which primarily resulted from increased Lombard and residential mortgage lending in Wealth Management. Cash and balances with central banks increased by CHF 7 billion, mainly due to the abovementioned re-balancing of the multi-currency portfolio of unencumbered, high-quality, liquid assets, a majority of which are short term. Trading portfolio assets increased by CHF 3 billion, primarily due to client-driven increases in both debt and equity instruments, partly offset by a reduction in precious metal positions.

Divisional view

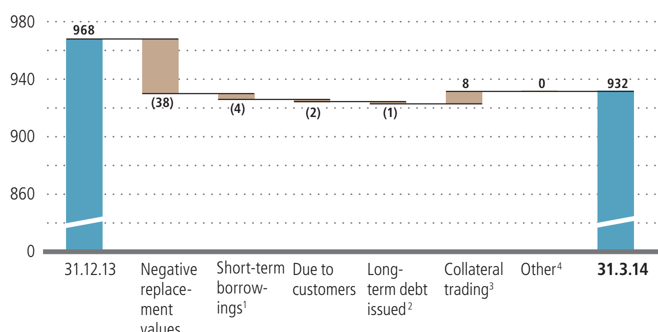
Non-core and Legacy Portfolio total assets decreased by CHF 25 billion to CHF 190 billion as a result of the aforementioned reduction in PRV, and funded assets decreased by CHF 3 billion to CHF 19 billion, mainly due to the maturity of the last remaining trade in the structured reverse repo portfolio and the full exit of precious metal holdings in Non-core. Corporate Center – Core Functions assets decreased by CHF 14 billion to CHF 233 billion, primarily within Group Treasury, mainly reflecting the abovementioned reduction in collateral trading assets. The overall size of our multi-currency portfolio of unencumbered, high-quality, liquid assets managed centrally by Group Treasury remained stable. Investment Bank total assets decreased by CHF 3 billion to CHF 242 billion, however, funded assets increased by CHF 14 billion to CHF 176 billion, mainly due to a client-driven increase in trading portfolio assets. Wealth Management total assets increased by CHF 6 billion to CHF 115 billion, primarily reflecting the abovementioned increase in lending activity. Wealth Management Americas, Global Asset Management and Retail & Corporate total assets were broadly unchanged at CHF 45 billion, CHF 13 billion and CHF 143 billion, respectively.

Liabilities

Total liabilities decreased by CHF 37 billion to CHF 932 billion, primarily as negative replacement values declined by CHF 38 billion, largely in line with the abovementioned reduction in PRV. Short-term borrowings, which include short-term debt issued and interbank borrowing, decreased by CHF 4 billion, primarily reflecting reduced funding requirements. Customer deposits decreased by CHF 2 billion, mainly in Wealth Management. Long-term debt outstanding, which consists of financial liabilities designated at fair value and long-term debt issued, decreased by CHF 1 billion as the issuance of EUR 2.0 billion of low-trigger, loss-absorbing, Basel III-compliant subordinated notes was more than offset by the redemption and maturity of several non-structured notes and OTC instruments. These decreases were partly offset by an in-

Liabilities: development during the first quarter of 2014

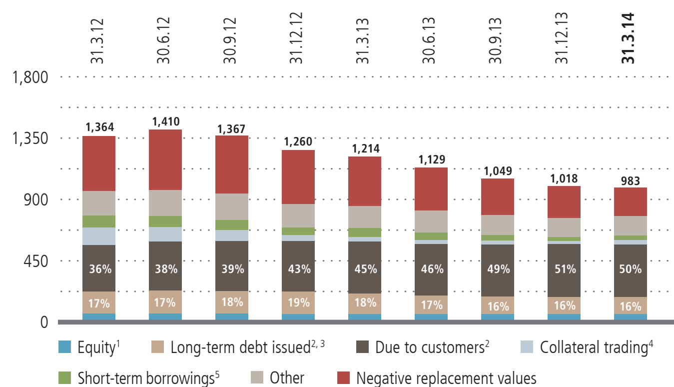
CHF billion



1 Consists of short-term debt issued and due to banks. 2 Consists of long-term debt issued and financial liabilities designated at fair value. 3 Consists of repurchase agreements and cash collateral on securities lent. 4 Includes trading portfolio liabilities and cash collateral payables on derivative instruments.

Balance sheet development – liabilities and equity

CHF billion, except where indicated



1 Consists of equity attributable to UBS shareholders, equity attributable to preferred noteholders and equity attributable to non-controlling interests. 2 Percentages based on total liabilities and equity excluding negative replacement values. 3 Consists of long-term debt issued and financial liabilities designated at fair value. 4 Consists of repurchase agreements and cash collateral on securities lent. 5 Consists of short-term debt issued and due to banks.

crease of CHF 8 billion in collateral trading liabilities, mainly reflecting a client-driven increase in repurchase activity. Other liabilities were unchanged as an increase in trading portfolio liabilities was offset by a reduction in cash collateral payables on derivative instruments.

➔ **Refer to the "Balance sheet" and Notes 10 through 14 in the "Financial information" section of this report for more information**

Equity

Equity attributable to UBS shareholders increased by CHF 1,022 million to CHF 49,023 million.

Total comprehensive income attributable to UBS shareholders was CHF 1,465 million, reflecting the net profit attributable to UBS shareholders of CHF 1,054 million and other comprehensive income (OCI) attributable to UBS shareholders of CHF 411 million (net of tax). First quarter OCI included net gains on defined benefit plans of CHF 344 million, positive OCI related to cash flow hedges and financial investments available-for-sale of CHF 210 million and CHF 31 million, respectively, partly offset by foreign currency translation losses of CHF 174 million.

Share premium decreased by CHF 33 million, mainly reflecting a decrease of CHF 52 million related to employee share plans. Net treasury share activity reduced equity attributable to UBS shareholders by CHF 434 million, mainly reflecting the net acquisition of treasury shares in relation to employee share-based compensation awards.

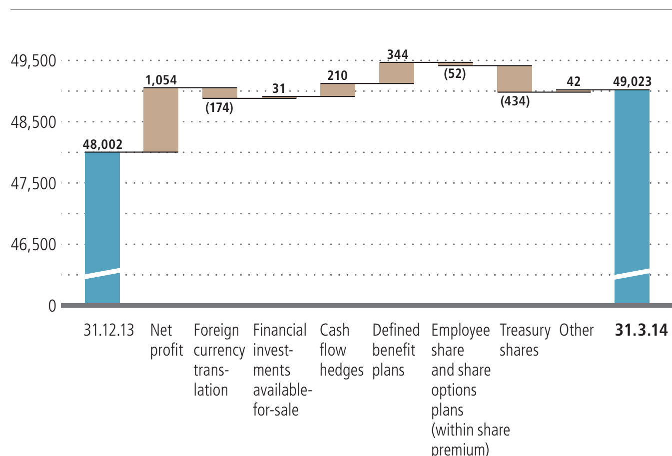
Intra-quarter balances

Balance sheet positions disclosed in this section represent quarter-end positions. Intra-quarter balance sheet positions fluctuate in the ordinary course of business and may differ from quarter-end positions.

Equity attributable to UBS shareholders: development during the first quarter of 2014

CHF million



Liquidity and funding management

Our liquidity position remained strong during the quarter and we further optimized our funding profile through our fourth issuance of low-trigger, loss-absorbing, Basel III-compliant subordinated notes. These notes qualify as progressive buffer capital in compliance with Swiss regulations for systemically important banks and contributed to the further strengthening of our Swiss systemically relevant banks (SRB) leverage ratio.

Strategy and objectives

We manage our liquidity and funding risk with the overall objective of optimizing the value of our business franchise across a broad range of temporal market conditions and in consideration of current and future regulatory constraints. In line with the implementation of our strategy, as our balance sheet assets are reduced, we generate capacity within our liquidity and funding positions. We employ a number of measures to monitor our liquidity and funding positions under normal and stressed conditions. In particular, we use stress scenarios to apply behavioral adjustments to our balance sheet and calibrate the results from these internal stress models with external measures, primarily the evolving regulatory requirements for the Liquidity Coverage Ratio (LCR) and the Net Stable Funding Ratio (NSFR).

Liquidity

Our funding diversification and global scope help protect our liquidity position in the event of a crisis. Our contingent funding sources include a large, multi-currency portfolio of unencumbered, high-quality, liquid assets, a majority of which are short term, managed centrally by Group Treasury, as well as available and unutilized liquidity facilities at several major central banks, and contingent reductions of liquid trading portfolio assets. We regularly assess and test all material, known and expected cash flows, as well as the level and availability of high-grade collateral that could be used to raise additional funding if required.

The LCR provides banks with a measurement that helps them to ensure that they hold enough highly liquid assets to survive short-term (30-day) severe general market and firm-specific stress. The NSFR assigns a required stable funding factor to assets (representing the illiquid part of the assets) and assigns all liabilities an available stable funding factor (representing the stability of a liability) in order to ensure that banks are not overly reliant on short-term funding and have sufficient long-term funding for illiquid assets. The future minimum regulatory requirement is 100% for both the LCR (as of 2019) and NSFR (as of 2018). LCR regulation for Switzerland is expected to be finalized in the second quarter of 2014, with minimum quantitative requirements to come into effect as of January 2015. Further, some components of the FINMA framework are not yet finalized. In the interim, our LCR and NSFR ratios are calculated on a pro-forma basis, using current supervisory guidance from FINMA. Our pro-forma ratio calculations will continue to evolve to incorporate any changes in the regulatory requirements as they become more defined and implementable. Furthermore, calculations will be refined as new models and the associated systems are enhanced.

As of 31 March 2014, our estimated pro-forma regulatory LCR was 110% and the liquidity asset buffer component was CHF 146 billion. In addition to the liquidity asset buffer component of the regulatory LCR, for our management LCR we include additional high-quality and unencumbered contingent funding sources not eligible under the regulatory liquidity framework, primarily local funding reserves and unutilized funding capacity. As of 31 March 2014, our management LCR was 152%. In aggregate, these sources of available liquidity represented 27% of our funded balance sheet assets. As of 31 March 2014, our estimated pro-forma NSFR was 107%. As of 31 March 2014, UBS was in compliance with FINMA liquidity requirements.

➔ **Refer to the "Regulatory and legal developments" section of our Annual Report 2013 for more information on recent Basel III guidance**

➔ **Refer to the "Treasury management" section of our Annual Report 2013 for more information on the liquidity asset buffer**

Funding

The composition of our funding sources shifted somewhat from unsecured to secured funding during the quarter, as the percentage contribution of repurchase agreements and securities lending increased to 4.7% from 3.5% (as shown in the "Funding by product and currency" table). The increase in secured funding was mainly related to higher business activity levels in our Investment Bank. Reliance on unsecured wholesale funding continued to decline in the quarter, while our overall customer deposits remained stable at 59% of our total funding sources. Our ratio of customer deposits to outstanding loan balances was 132% compared with 136% as of 31 December 2013.

Our outstanding long-term debt, including structured debt reported as financial liabilities at fair value, decreased by CHF 1 billion to CHF 123 billion as of 31 March 2014, remaining at 19% of our funding sources. Excluding structured debt, long-term debt – which comprises both senior and subordinated debt and is presented within Debt issued on the balance sheet – remained at

CHF 54 billion as of 31 March 2014. Senior debt comprises both publicly and privately placed notes and bonds, as well as covered bonds and Swiss Pfandbriefe.

During the first quarter of 2014, we continued to raise medium- and long-term funds through medium-term notes and private placements and through Swiss Pfandbriefe issuances. Additionally, we contributed to our targeted loss-absorbing capital through the issuance of EUR 2.0 billion of low-trigger, loss-absorbing, Basel III-compliant subordinated notes. These 12-year notes with an optional call at year seven will pay a non-deferrable coupon at an initial rate of 4.75%. We also had two redemptions during the quarter: a USD 0.8 billion 3-year 2.25% fixed rate and a USD 0.6 billion 3-year floating rate public senior unsecured bond. Additionally, CHF 0.6 billion of Swiss Pfandbriefe matured during the first quarter. In April 2014, we launched a EUR 1.0 billion 7-year 1.375% fixed rate covered bond.

Our short-term interbank deposits (presented as Due to banks on the balance sheet), together with our outstanding short-term debt, represented 5.5% of total funding sources compared with 6.1% as of 31 December 2013.

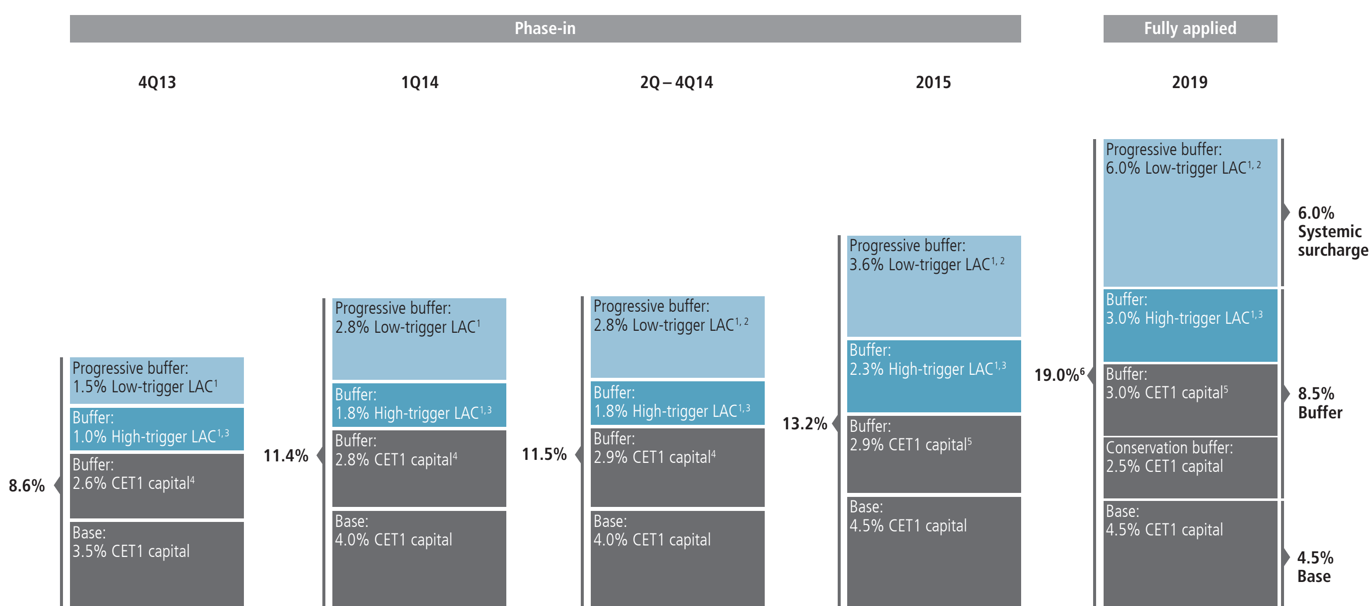
Capital management

Our fully applied common equity tier 1 (CET1) capital ratio[1] improved 0.4 percentage points to 13.2% as of 31 March 2014 and we have exceeded our 2014 CET1 capital ratio target. Fully applied CET1 capital increased by CHF 1.0 billion to CHF 29.9 billion, mainly due to the first quarter net profit. On a phase-in basis, our CET1 capital ratio declined 0.6 percentage points to 17.9%, mainly due to the CHF 1.0 billion decrease in phase-in CET1 capital to CHF 41.2 billion, mostly arising from the effect of capital deductions related to transitional effects applicable from 1 January 2014, partly offset by the first quarter net profit. Risk-weighted assets increased by CHF 2 billion to CHF 227 billion on a fully applied basis and by CHF 1 billion to CHF 230 billion on a phase-in basis. Our Swiss SRB leverage ratio improved 0.3 percentage points to 5.0% on a phase-in basis due to the reduction of the leverage ratio denominator as well as through the issuance of low-trigger, loss-absorbing, Basel III-compliant subordinated notes.

1 Unless otherwise indicated, all information in this section is based on the Basel III framework as applicable for Swiss systemically relevant banks (SRB).

Our capital requirements



1 Loss-absorbing capital. High-trigger loss-absorbing capital qualifies as progressive buffer capital until the end of 2017. 2 Numbers are based on latest information available and current supervisory guidance from FINMA. 3 Can be substituted by CET1 capital. 4 Includes the effect of the countercyclical buffer requirement. 5 Capital requirements for 2015 and 2019 do not include a countercyclical buffer requirement, as potential future developments cannot be accurately predicted and may vary from period to period. 6 The total capital ratio requirement for 2019 would be reduced to 17.5% if the progressive buffer capital requirement is reduced as expected.

Swiss SRB Basel III capital framework

As UBS is considered a systemically relevant bank (SRB) under Swiss banking law, we are required to comply on both a Group and UBS AG (Parent Bank) basis with regulations based on the Basel III framework as applicable for Swiss SRB. All our capital disclosures therefore focus on Swiss SRB Basel III capital information. Differences between the Swiss SRB and BIS Basel III capital regimes are outlined in the subsection "Differences between Swiss SRB and BIS Basel III capital."

Regulatory framework

The Basel III framework came into effect in Switzerland on 1 January 2013 and includes prudential filters for the calculation of capital. These prudential filters consist mainly of capital deductions for deferred tax assets recognized for tax loss carry-forwards and effects related to defined benefit pension plans. As these filters are being phased in between 2014 and 2018, their effects are gradually factored into our calculations of capital, risk-weighted assets (RWA) and capital ratios on a phase-in basis and are entirely reflected in our capital and capital ratios on a fully applied basis.

Effective January 2014, we have deducted from our phase-in CET1 capital 20% of deferred tax assets recognized for tax loss carry-forwards as well as 20% of the effects related to defined benefit pension plans. These consist of: (i) the cumulative difference between IAS 19 (revised) accounting applied under IFRS and fully applied Basel III CET1 calculations versus a pro-forma IAS 19 treatment applied for Basel III CET1 phase-in calculations and (ii) the Swiss defined benefit pension plan asset under IAS 19 (revised). In addition, the difference between fully applied and phase-in RWA, related to the adoption of IAS 19 (revised), has been reduced by 20% due to the abovementioned activation of prudential filters.

Furthermore, based on current Swiss Financial Market Supervisory Authority (FINMA) regulation, capital instruments which were treated as hybrid tier 1 capital and as tier 2 capital under the Basel 2.5 framework are being phased out under Basel III between 2013 and 2019. On a phase-in basis, our capital and capital ratios include the applicable portion of these capital instruments not yet phased out. Our capital and capital ratios on a fully applied basis do not include these capital instruments.

On 20 December 2013, FINMA issued a decree primarily concerning the regulatory capital requirements of UBS AG (Parent Bank) on a standalone basis. The decree makes changes effective 1 January 2014 to parent bank capital requirements designed to ensure that the fulfillment of the capital requirements at the UBS AG (Parent Bank) level does not result in a de facto overcapitalization of UBS Group.

➔ **Refer to "Supplemental information for UBS AG (Parent Bank) and UBS Limited" in the "Financial information" section of this report for more information**

Capital requirements

In Switzerland, all banks must comply with the Basel III capital framework, as required by the Swiss Capital Adequacy Ordinance and regulations issued by FINMA. UBS, Credit Suisse and Zürcher Kantonalbank are required to comply with specific Swiss SRB rules.

As of 31 March 2014, our total capital requirement was 11.4% of our RWA compared with 8.6% as of 31 December 2013. The requirement as of 31 March 2014 consisted of: (i) base capital of 4%, (ii) buffer capital of 4.6%, including a countercyclical buffer capital requirement that increased our effective capital requirement by 0.1%, and (iii) progressive buffer capital of 2.8%. We satisfied these base and buffer (including the countercyclical buffer) capital requirements through our CET1 capital. High- and low-trigger loss-absorbing capital exceeded the progressive buffer capital requirement.

National regulators can put in place a countercyclical buffer requirement of up to 2.5% of RWA for credit exposures in their jurisdiction. In September 2013, the Swiss Federal Council activated a countercyclical buffer of 1% of RWA for mortgage loans on residential property in Switzerland, resulting in an overall 0.1% additional capital requirement, which is reflected in the CET1 buffer capital requirements. In January 2014, the Swiss Federal Council approved the increase of the countercyclical buffer requirement from the aforementioned 1% to 2% effective 30 June 2014. This will increase our buffer capital requirement by a further 0.1% from the second quarter of 2014 onwards.

Our requirement for the progressive buffer is dynamic and depends on our leverage ratio denominator (LRD) and our market share in the loans and deposits business in Switzerland. Although this requirement for 2019 is presented as 6.0% in the graph "Our capital requirements," we expect this requirement on a fully applied basis to reduce to 4.5% due to our planned reduction of the leverage ratio denominator related to the accelerated implementation of our strategy. This would result in a total capital ratio requirement of 17.5% in 2019. Furthermore, banks governed under the Swiss SRB framework are eligible for an additional capital rebate on the progressive buffer if they take actions that facilitate recovery and resolvability beyond the minimum requirements to ensure the integrity of systemically important functions in the case of impending insolvency.

➔ **Refer to the "Regulatory and legal developments and financial reporting changes" section of this report for more information on the creation of a group holding company**

Swiss SRB Basel III available capital versus capital requirements

	Phase-in

1 Includes additional tier 1 capital in the form of hybrid instruments, which was entirely offset by the required deductions for goodwill.

Swiss SRB Basel III capital information

Capital information disclosures in this section focus on UBS Group. Capital information for UBS AG (Parent Bank) is included in the "Supplemental information for UBS AG (Parent Bank) and UBS Limited" in the "Financial information" section of this report.

Capital ratios

As of 31 March 2014, our fully applied CET1 capital ratio was 13.2%, an increase of 0.4 percentage points compared with 31 December 2013, and we have exceeded our 2014 CET1 capital ratio target. On a phase-in basis, our CET1 capital ratio decreased 0.6 percentage points to 17.9% during the quarter.

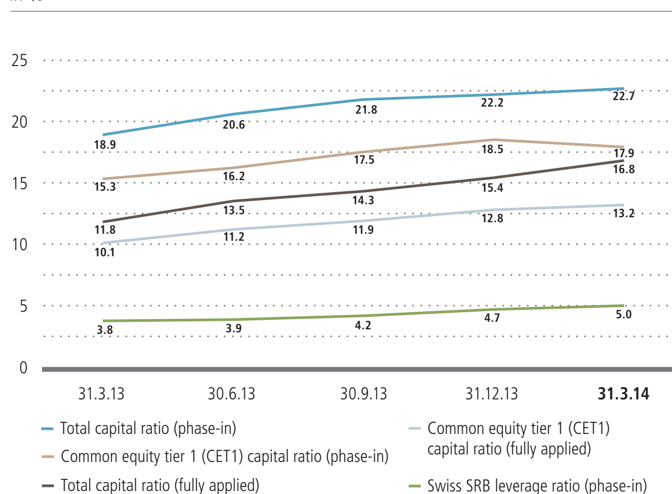
The increase in our fully applied CET1 capital ratio was attributable to a CHF 1.0 billion increase in our fully applied CET1 capital, which was mainly due to the first quarter net profit of CHF 1.1 billion. The reduction in our phase-in CET1 capital ratio was primarily due to a CHF 1.0 billion decrease in phase-in CET1 capital. The decrease in phase-in CET1 capital was mainly due to the negative effect of the aforementioned phase-in capital deductions, which became effective 1 January 2014, partly offset by the first quarter net profit.

Our fully applied total capital ratio increased 1.4 percentage points to 16.8% as of 31 March 2014. Our phase-in total capital ratio stood at 22.7% as of 31 March 2014 compared with 22.2% as of 31 December 2013. Both these improvements were primarily due to the issuance of EUR 2.0 billion of low-trigger, loss-absorbing, Basel III-compliant subordinated notes in February 2014, which qualify as tier 2 capital and progressive buffer capital in compliance with Swiss SRB Basel III rules.

➔ **Refer to the "Our strategy" section of our Annual Report 2013 for more information on our targets**

Swiss SRB capital ratios

In %



Eligible capital

Common equity tier 1 and tier 1 capital

Our CET1 capital mainly comprises share capital, share premium (which primarily consists of additional paid-in capital related to shares issued) and retained earnings. A detailed reconciliation of IFRS equity to CET1 capital is provided in the table "Reconciliation IFRS equity to Swiss SRB Basel III capital."

Our phase-in tier 1 capital was equal to our phase-in CET1 capital, as additional tier 1 capital in the form of hybrid capital instruments was entirely offset by required deductions for goodwill. These hybrid tier 1 capital instruments are not eligible as capital under Basel III and are therefore not included in our fully applied tier 1 capital.

During the first quarter of 2014, our fully applied CET1 capital increased by CHF 1.0 billion to CHF 29.9 billion, mainly due to the first quarter net profit. A further increase mainly relating to the reversal of amortization of deferred tax assets for tax loss carry-forwards and changes to deferred tax assets arising from net deductible temporary differences was offset by the effect of dividend accruals.

On a phase-in basis, our CET1 capital decreased by CHF 1.0 billion to CHF 41.2 billion. This decrease was mainly due to the negative effect of the aforementioned phase-in capital deductions, which became effective 1 January 2014, partly offset by the first quarter net profit.

A more granular analysis of our first quarter 2014 CET1 capital movement on both a fully applied and a phase-in basis is shown in the table "Swiss SRB Basel III capital movement."

Tier 2 capital

Low-trigger loss-absorbing capital accounted for CHF 7.1 billion of tier 2 capital as of 31 March 2014 and consisted of one euro-denominated and three US dollar-denominated subordinated notes with a write-down threshold set at a 5% phase-in CET1 capital ratio, after giving effect to the write-down of any high-trigger loss-absorbing capital. Furthermore, our tier 2 capital included high-trigger loss-absorbing capital of CHF 1.0 billion, in the form of awards under our deferred contingent capital plan (DCCP), with a write-down threshold set at a 7% phase-in CET1 capital ratio, or 10% with respect to awards granted to Group Executive Board members for the performance year 2013. Additionally, our loss-absorbing capital instruments would be written down if FINMA determines that a write-down is necessary to ensure UBS's viability, or if UBS receives a commitment of governmental support that FINMA determines to be necessary to ensure UBS's viability.

The remainder of tier 2 capital on a phase-in basis consisted of outstanding tier 2 instruments which will be phased out by 2019, based on current FINMA regulation.

During the first quarter of 2014, our fully applied tier 2 capital increased by CHF 2.4 billion to CHF 8.1 billion. On a phase-in basis, our tier 2 capital also increased by CHF 2.4 billion to CHF 11.0 billion. These increases were both due to the aforementioned issuance of EUR 2.0 billion of low-trigger, loss-absorbing, Basel III-compliant tier 2 subordinated notes.

1 Phase-in number net of tax, fully applied number pre-tax. 2 Includes the reversal of deferred tax assets recognized for tax loss carry-forwards (CHF 690 million) related to the cumulative IAS 19R retained earnings implementation effect. It also includes the reversal of CHF 317 million deferred tax liabilities related to the net defined benefit pension and post-employment assets of CHF 1.5 billion for the Swiss plan as of 31 March 2014 which do not count as Basel III capital. 3 Includes goodwill relating to significant investments in financial institutions of CHF 332 million. 4 Includes an accrual for the proposed distribution of capital contribution reserves, the net charge for compensation related high-trigger, loss-absorbing capital and other items.

Additional capital information

In order to improve the consistency and comparability of regulatory capital instruments disclosures across market participants, BIS and FINMA Basel III Pillar 3 rules require banks to disclose the main features of eligible capital instruments and their terms and conditions. This information is available in the "Bondholder information" section of our Investor Relations website.

➔ **Refer to "Bondholder information" at www.ubs.com/investors for more information on the capital instruments of UBS Group and UBS AG (Parent Bank)**

In order to fulfill BIS and FINMA Basel III Pillar 3 composition of capital disclosure requirements, a full reconciliation of all regulatory capital elements to the published IFRS balance sheet is disclosed in the "SEC filings and other disclosures" section of our Investor Relations website.

➔ **Refer to "SEC filings and other disclosures" at www.ubs.com/investors for more information**

We have estimated the loss in capital that we could incur as a result of the risks associated with the matters described in "Note 14 Provisions and contingent liabilities" to our consolidated financial statements. We have utilized for this purpose the advanced measurement approach (AMA) methodology that we use when determining the capital requirements associated with operational risks, based on a 99.9% confidence level over a 12-month horizon. The methodology takes into consideration UBS and industry experience for the AMA operational risk categories to which those matters correspond, as well as the external environment affecting risks of these types, in isolation from other areas. On this standalone basis, we estimate the loss in capital that we could incur over a 12-month period as a result of our risks associated with these operational risk categories at CHF 3.1 billion as of 31 March 2014. Because this estimate is based upon historical data for the relevant risk categories, it does not constitute a subjective assessment of UBS's actual exposures in those matters and does not take into account any provisions recognized for those matters. For this reason, and because some of those matters are not expected to be resolved within the next 12 months, any possible losses that we may incur with respect to these matters may be materially more or materially less than this estimated amount.

➔ **Refer to "Note 14 Provisions and contingent liabilities" in the "Financial information" section of this report for more information**

Differences between Swiss SRB and BIS Basel III capital

Our Swiss SRB Basel III and BIS Basel III capital have the same basis of calculation, on both a fully applied and phase-in basis, except for two specific items. Firstly, high-trigger loss-absorbing capital is amortized over five years under BIS Basel III, but is not amortized under Swiss SRB regulations, resulting in Swiss SRB Basel III high-trigger loss-absorbing capital being higher by CHF 280 million as of 31 March 2014. Secondly, a portion of unrealized gains on financial investments available-for-sale, totaling CHF 33 million as of 31 March 2014, is recognized as tier 2 capital under BIS Basel III, but not under Swiss SRB regulations.

Risk-weighted assets

Our risk-weighted assets (RWA) under BIS Basel III are the same as under Swiss SRB Basel III. RWA on a fully applied basis are the same as on a phase-in basis, except for differences related to the adoption of IAS 19 (revised) *Employee Benefits,* which are phased in between 2014 and 2018. On a fully applied basis, net defined benefit assets / liabilities are determined in accordance with IAS 19 (revised), and any net defined benefit asset that is recognized is deducted from CET1 capital rather than being risk-weighted. On a phase-in basis, defined benefit-related assets / liabilities are determined in accordance with the previous IAS 19 requirements ("corridor method"), and any defined benefit-related asset that is recognized is risk-weighted at 100%.

Phase-in RWA increased by CHF 1.3 billion to CHF 229.9 billion in the first quarter of 2014. This increase was mainly due to a CHF 3.5 billion increase in operational risk RWA and a CHF 1.8 billion increase in market risk RWA, partly offset by a CHF 4.3 billion reduction in credit risk RWA. On a fully applied basis, RWA increased by CHF 1.6 billion to CHF 226.8 billion, including the same effects as the phase-in RWA except for the aforementioned phase-in effect related to defined benefit pension plan-related assets.

➔ Refer to the discussions of "Corporate Center – Non-core and Legacy Portfolio" in the "Risk and treasury management" section of this report for more information on risk-weighted assets

Credit risk

Phase-in credit risk RWA decreased by CHF 4.3 billion to CHF 120.0 billion as of 31 March 2014 compared with CHF 124.3 billion as of 31 December 2013, mainly due to lower RWA related to Corporates and Other exposure segments, partly offset by higher RWA related to Retail exposures. RWA related to exposures treated under the advanced internal ratings-based (IRB) and the standardized approaches decreased by CHF 2.5 billion and CHF 1.8 billion, respectively.

Total credit risk RWA for exposures to Corporates reduced by CHF 3.4 billion, which was primarily related to exposures treated under the advanced IRB approach. This reduction was mainly due to a lower book size resulting from derivative trade unwinds and trade compressions in Corporate Center – Non-core and Legacy Portfolio and a methodology change relating to the implementation of the Basel III exposure model for equity over-the-counter (OTC) derivatives in the Investment Bank.

Total credit risk RWA related to Other exposure segments decreased by CHF 2.8 billion, largely related to exposures measured under the advanced IRB approach in Corporate Center – Non-core and Legacy Portfolio, primarily due to a lower book size as a result of the sale of securitization exposures and lower RWA for credit valuation adjustments (CVA). The implementation of the Basel III exposure model for equity OTC derivatives resulted in a reclassification of CHF 1.9 billion in CVA-related RWA from the standardized to the advanced IRB approach in the Investment Bank.

Credit risk RWA related to Retail exposures increased by CHF 2.0 billion, in line with expectations based on the previously announced methodology change relating to the FINMA requirement to apply a bank-specific multiplier on Swiss residential mortgages for banks using the IRB approach. The difference in the RWA calculation for Swiss residential mortgages between the advanced IRB and the standardized approaches will be further reduced annually until 2019.

➔ Refer to the "Capital management" section of our Annual Report 2013 for more information on expected RWA developments in the first quarter of 2014

Non-counterparty-related risk

Phase-in non-counterparty-related risk RWA slightly increased by CHF 0.4 billion to CHF 13.0 billion.

Market risk

Phase-in market risk RWA amounted to CHF 15.5 billion as of 31 March 2014 compared with CHF 13.7 billion as of 31 December 2013. Incremental risk charge-related RWA increased by CHF 0.9 billion due to an increase in single-name risk and the reversal of a natural hedge benefit in the calculation, as certain residual positions in Non-core were migrated to the correlation portfolio included within the comprehensive risk measure (CRM). The consequential increase in CRM-related RWA was offset by a reduction in book size due to negotiated bilateral settlements of OTC derivative contracts. RWA related to securitizations/re-securitizations in the trading book increased by CHF 1.2 billion, in line with expectations based on the previously announced change in methodology due to the expiry of the transition phase mandated under the Basel 2.5 framework, i.e., net long and net short securitization positions in the trading book require separate underpinning, rather than the higher of net long or net short positions underpinned until 31 December 2013.

➔ Refer to the "Risk management and control" section of this report for more information on market risk developments

➔ Refer to the "Risk management and control" section of our Annual Report 2013 for more information on the comprehensive risk measure and the incremental risk charge

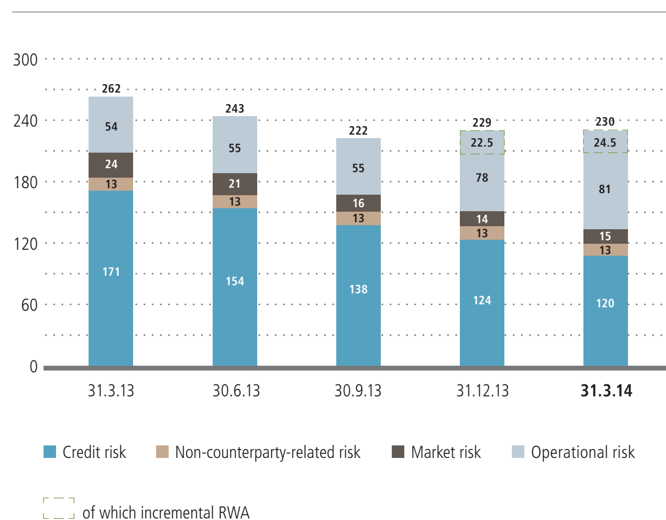
➔ Refer to the "Capital management" section of our Annual Report 2013 for more information on expected RWA developments in the first quarter of 2014

Operational risk

Phase-in operational risk RWA amounted to CHF 81.4 billion as of 31 March 2014, an increase of CHF 3.5 billion compared with the prior quarter. Incremental operational risk RWA calculated by FINMA based on the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA increased by CHF 2.0 billion to CHF 24.5 billion as of 31 March 2014. Additionally, RWA increased as a result of a higher capital requirement based on the advanced measurement approach (AMA) model output using the latest FINMA-approved model parameters.

Phase-in Basel III risk-weighted assets

CHF billion



➔ Refer to the "Regulatory and legal developments" section of our Annual Report 2013 for more information on the incremental RWA resulting from the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA

Sensitivity to currency movements

The majority of our capital and a significant portion of our RWA are denominated in Swiss francs, but we also hold RWA and some eligible capital in other currencies, primarily US dollars, euros and British pounds. A significant depreciation of the Swiss franc against these currencies can adversely affect our key ratios, and Group Treasury is mandated with the task of minimizing such effects. If the Swiss franc depreciates against other currencies, consolidated RWA increase relative to our capital, and vice versa. The Group Asset and Liability Management Committee, a committee of the UBS Group Executive Board, can adjust the currency mix in capital, within limits set by the Board of Directors, to balance the effect of foreign exchange movements on the fully applied CET1 capital and capital ratio. Limits are in place for the sensitivity of both CET1 capital and capital ratio to a ±10% change in the value of the Swiss franc against other currencies. As of 31 March 2014, we estimate that a 10% depreciation of the Swiss franc against other currencies would increase CET1 capital by CHF 990 million (31 December 2013: CHF 1,075 million) and would decrease the CET1 capital ratio by 19 basis points (31 December 2013: 15 basis points). Conversely, we estimate that a 10% appreciation of the Swiss franc against other currencies would decrease CET1 capital by CHF 896 million (31 December 2013: CHF 973 million) and would increase the CET1 capital ratio by 18 basis points (31 December 2013: 15 basis points).

Swiss SRB leverage ratio

Swiss SRB leverage ratio requirements

The Swiss SRB leverage ratio is calculated by dividing the relevant capital amount by the three-month average total IFRS on-balance sheet assets and off-balance sheet items, based on the regulatory scope of consolidation and adjusted for netting of securities financing transactions and derivatives and other items. The capital considered in the calculation of the phase-in leverage ratio includes CET1 capital and loss-absorbing capital, but excludes tier 2 phase-out capital.

The table "Swiss SRB leverage ratio requirements" shows our total leverage ratio requirement, as well as the requirements by capital components and our actual leverage ratio information. As of 31 March 2014, our CET1 capital covered the leverage ratio requirements for the base and buffer capital components, while our high- and low-trigger loss-absorbing capital satisfied our leverage ratio requirement for the progressive buffer component.

The Swiss SRB leverage ratio requirement is equal to 24% of the total capital ratio requirement (excluding the countercyclical buffer requirement). As of 31 March 2014, the effective total leverage ratio requirement was 2.7%, resulting from multiplying the total capital ratio requirement (excluding the countercyclical buffer requirement) of 11.3% by 24%.

In April 2014, the Swiss Federal Council announced revisions to the Capital Adequacy Ordinance which will result in changes to the definition of the leverage ratio denominator (LRD). Effective 1 January 2015, the revised definition of the Swiss LRD must follow Bank for International Settlements (BIS) requirements, with a one-year transition period under which the current Swiss SRB definition may still be used.

➔ **Refer to the "Regulatory and legal developments and financial reporting changes" section of this report for more information on changes to the Capital Adequacy Ordinance**

Swiss SRB leverage ratio requirements

			Phase-in				
	Requirements		Actual information				
	Swiss SRB leverage ratio (%)[1]	Swiss SRB leverage ratio capital	Swiss SRB leverage ratio (%)		Available Swiss SRB Basel III capital		Capital type
CHF million, except where indicated	**31.3.14**	**31.3.14**	**31.3.14**	31.12.13	**31.3.14**	31.12.13	
Base capital	1.0	**9,542**	**1.0**	0.8	**9,542**	8,634	CET1
Buffer capital	1.1	**10,735**	**3.2**	3.3	**31,645**[2]	33,545[2]	CET1
Progressive buffer	0.7	**6,751**	**0.8**	0.6	**8,078**[3]	5,665[3]	LAC
Total	2.7	**27,028**	**5.0**	4.7	**49,265**	47,844	

1 Requirements for base capital (24% of 4%), buffer capital (24% of 4.5%) and progressive buffer capital (24% of 2.8%). 2 Swiss SRB Basel III CET1 exceeding the base capital requirements is allocated to the buffer capital. 3 During the transition period until end of 2017, high-trigger loss-absorbing capital (LAC) can be included in the progressive buffer.

Developments during the first quarter of 2014

As of 31 March 2014, our phase-in total Swiss SRB leverage ratio was 5.0%, an increase of 0.3 percentage points compared with 31 December 2013. This increase was mainly due to a CHF 34 billion decrease in our total adjusted exposure, also known as LRD, which contributed 0.2 percentage points to the improvement in the leverage ratio on a phase-in basis. In addition, the aforementioned increase in low-trigger loss-absorbing capital contributed 0.1 percentage points to the improvement in the leverage ratio.

The exposure reduction of CHF 34 billion mainly reflected a CHF 29 billion reduction in average on-balance sheet asset items of which the main part related to positive replacement values, partly offset by increases in Cash and balances with central banks, Loans and Other assets. A CHF 2 billion combined net effect of reduced derivative and securities financing exposure netting and a lower current exposure add-on for derivative exposures also contributed to the exposure reduction. The decrease in our LRD was mainly attributable to exposure reductions of CHF 26 billion in Corporate Center – Non-core and Legacy Portfolio.

As of 31 March 2014, our fully applied total Swiss SRB leverage ratio was 3.8%, an increase of 0.5 percentage points compared with 31 December 2013.

➔ **Refer to the "Risk management and control" section of this report for more information on exposures held in Corporate Center – Non-core and Legacy Portfolio**

1 Represent assets recognized on the balance sheet in accordance with IFRS measurement principles, but based on the regulatory scope of consolidation. Refer to the "Supplemental disclosures required under Basel III Pillar 3 regulations" section of our Annual Report 2013 for more information on the regulatory scope of consolidation. 2 In accordance with current Swiss SRB leverage ratio requirements, the leverage ratio denominator excludes forward starting repos, securities lending indemnifications and CEM add-ons for exchange-traded derivatives (both proprietary and agency transactions) and for OTC derivatives with a qualifying central counterparty.

Equity attribution and return on attributed equity

The equity attribution framework reflects our objectives of maintaining a strong capital base and managing performance by guiding each business towards activities that appropriately balance profit potential, risk and capital usage. This framework, which includes some forward-looking elements, enables us to integrate Group-wide capital management activities with those at a business division level and to calculate and assess return on attributed equity (RoAE) in each of our business divisions.

Tangible equity is attributed to our business divisions by applying a weighted-driver approach that combines phase-in Basel III capital requirements with internal models to determine the amount of capital required to cover each business division's risk.

Risk-weighted assets (RWA) and leverage ratio denominator usage are converted to their common equity tier 1 (CET1) equivalents based on capital ratios as targeted by industry peers. Risk-based capital (RBC) is converted to its CET1 equivalent based on a conversion factor that considers the amount of RBC exposure covered by loss-absorbing capital. In addition to tangible equity, we allocate equity to support goodwill and intangible assets as well as certain Basel III capital deduction items. The amount of equity attributed to all business divisions and Corporate Center corresponds to the amount we believe is required to maintain a strong capital base and to support our businesses adequately, and can differ from the Group's actual equity during a given period.

➔ **Refer to the "Risk management and control" section of our Annual Report 2013 for more information on risk-based capital**

Average total equity attributed to the business divisions and Corporate Center was CHF 41.2 billion in the first quarter of 2014, an increase of CHF 0.4 billion compared with the prior quarter. This increase was largely due to higher attributed equity in Retail & Corporate, which increased to CHF 4.2 billion from CHF 3.8 billion mainly as a result of higher projected RWA related to the additional capital requirement for Swiss residential mortgage loans. Attributed equity in Group items within Corporate Center – Core Functions increased largely due to the first-time inclusion of equity required to underpin certain Basel III capital deduction items that are relevant from the beginning of the first quarter. Attributed equity in Corporate Center – Non-core and Legacy Portfolio decreased mainly due to the exercise of the SNB StabFund option in the fourth quarter of 2013 as well as lower projected resource consumption in the first quarter of 2014. Attributed equity for all business divisions was also affected by the use of a higher industry-standard capital ratio for the conversion of the leverage ratio denominator exposure to its CET1 equivalent.

Average equity attributable to UBS shareholders increased to CHF 48.5 billion in the first quarter of 2014 from CHF 47.7 billion in the fourth quarter of 2013. The difference between average equity attributable to UBS shareholders and average equity attributed to the business divisions and Corporate Center increased to CHF 7.3 billion in the first quarter of 2014 from CHF 6.9 billion in the prior quarter. This difference mainly results from holding higher levels of equity than required under the Basel III phase-in rules.

Annualized RoAE is a pre-tax profitability measure that is an indicator of efficiency in the usage of the firm's financial resources.

The return on equity (RoE) for the Group increased to 8.7% in the first quarter of 2014 from 7.7% in the fourth quarter of 2013 due to an increase in net profit attributable to UBS shareholders, partly offset by an increase in average equity attributable to UBS shareholders. The RoE of the Group was lower than the average of the RoAE of the business divisions as a result of the negative RoAE of the Corporate Center and due to the fact that more equity was attributable to UBS shareholders than the total equity attributed to the business divisions and Corporate Center.

UBS shares

Total UBS shares issued increased by 1,381,123 shares in the first quarter of 2014 due to the exercise of employee share options.

Treasury shares, which are primarily held to hedge employee share and option participation plans, increased by 18,441,454 shares on a net basis, mainly reflecting the acquisition of treasury shares in relation to employee share-based compensation awards.

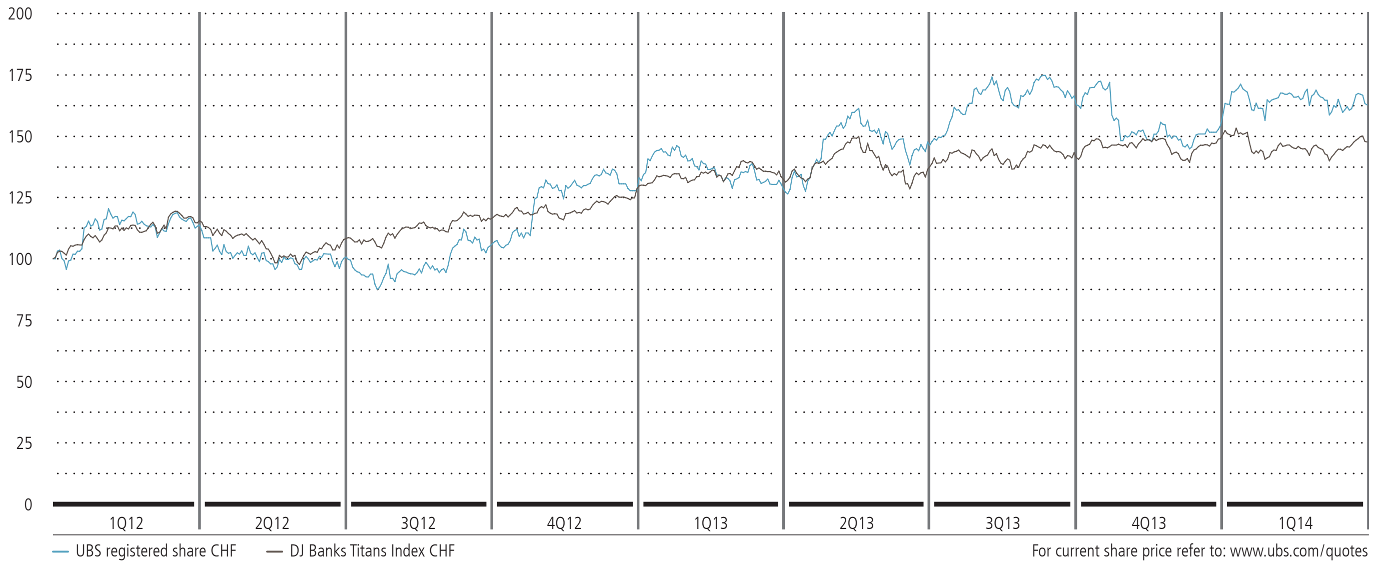
1 Refer to "Note 9 Earnings per share (EPS) and shares outstanding" in the "Financial information" section of this report for more information. 2 Market capitalization is calculated based on the total UBS shares issued multiplied by the UBS share price at period end.

UBS share price chart vs DJ Banks Titans Index

in % *1 January 2012–31 March 2014*



UBS shares are registered shares with a par value of CHF 0.10 per share. They are traded and settled as Global Registered Shares. Global Registered Shares provide direct and equal ownership for all shareholders, irrespective of the country and stock exchange on which they are traded. The shares are currently listed on the SIX Swiss Exchange and the New York Stock Exchange.

Notes to the interim consolidated financial statements

Note 1 Basis of accounting

The consolidated financial statements (the "Financial Statements") of UBS AG and its subsidiaries ("UBS" or the "Group") are prepared in accordance with International Financial Reporting Standards (IFRS), as issued by the International Accounting Standards Board (IASB), and are stated in Swiss francs (CHF), the currency of Switzerland where UBS AG is incorporated. These interim Financial Statements are presented in accordance with IAS 34, *Interim Financial Reporting.*

In preparing these interim Financial Statements, the same accounting policies and methods of computation have been applied as in the annual Financial Statements for the period ended 31 December 2013, except for the changes set out below. These interim Financial Statements are unaudited and should be read in conjunction with the audited Financial Statements included in our Annual Report 2013. In the opinion of management, all necessary adjustments have been made for a fair presentation of the Group's financial position, results of operations and cash flows.

In preparing these interim Financial Statements, management is required to make estimates and assumptions that affect reported income, expenses, assets, liabilities and the disclosure of contingent assets and liabilities. Assessing available information and the application of judgment are necessary elements in making such estimates. Actual results in the future could differ from such estimates, and such differences may be material to the Financial Statements. Estimates and their underlying assumptions are reviewed on an ongoing basis. Revisions to estimates resulting from these reviews are recognized in the period in which they occur. For more information on areas of estimation uncertainty considered to require critical judgment, refer to item 2) of "Note 1 a) Significant accounting policies" in our Annual Report 2013.

International Financial Reporting Standards and Interpretations adopted in the first quarter of 2014

Offsetting Financial Assets and Financial Liabilities
(Amendments to IAS 32, *Financial Instruments: Presentation)*
On 1 January 2014, the Group adopted *Offsetting Financial Assets and Financial Liabilities* (Amendments to IAS 32, *Financial Instruments: Presentation).* The amended IAS 32 restricts offsetting on the balance sheet to only those arrangements in which a right of set-off exists that is unconditional and legally enforceable, in the normal course of business and in the event of the default, bankruptcy or insolvency of the Group and its relevant counterparties and for which the Group intends to either settle on a net basis, or to realize the asset and settle the liability simultaneously. The amendments also provide incremental guidance for determining when gross settlement systems, e.g., a delivery versus payment (DVP) process used to settle repurchase agreements, result in the functional equivalent of net settlement.

In assessing whether the Group intends to either settle on a net basis, or to realize the asset and settle the liability simultaneously, emphasis is placed on the effectiveness of the operational mechanics in eliminating substantially all credit and liquidity exposure between the counterparties at the time of settlement. This condition precludes offsetting on the balance sheet for substantial amounts of the Group's financial assets and liabilities, even if

Amendments to IAS 32: Effect on the balance sheet

CHF million	Balance as of 31 December 2013 previously reported	Change in reported figures	Restated balance as of 31 December 2013
Total assets	**1,009,860**	**8,513**	**1,018,374**
of which: Positive replacement values	*245,835*	*8,249*	*254,084*
of which: Cash collateral receivables on derivative instruments	*28,007*	*264*	*28,271*
Total liabilities	**959,925**	**8,513**	**968,438**
of which: Negative replacement values	*239,953*	*8,125*	*248,079*
of which: Cash collateral payables on derivative instruments	*49,138*	*388*	*49,526*
Total equity	**49,936**	**0**	**49,936**
Total liabilities and equity	**1,009,860**	**8,513**	**1,018,374**

they may be subject to enforceable netting arrangements. For derivative contracts, balance sheet offsetting is generally only permitted in circumstances in which a market settlement mechanism exists via an exchange or clearing house which effectively accomplishes net settlement through a daily cash margining process. Bilateral over-the-counter derivatives and exchange-traded derivatives that are not margined on a daily basis are commonly precluded from offsetting on the balance sheet unless a mechanism exists to provide for net settlement of the cash flows arising from these contracts. For repurchase arrangements and securities financings, balance sheet offsetting may be permitted only to the extent that the settlement mechanism eliminates or results in insignificant credit and liquidity risk and processes the receivables and payables in a single settlement process or cycle.

Under the revised rules, the Group is no longer able to offset certain derivative arrangements, mainly credit derivative contracts and equity/index contracts, due to a combination of product and counterparty-specific considerations. The prior period balance sheet as of 31 December 2013 was restated to reflect the effects of adopting these amendments to IAS 32, as noted in the table on the previous page. There was no impact on total equity, net profit or earnings per share. In addition, there was no material impact on the Group's Basel III capital, capital ratios and Swiss SRB leverage ratio.

Novation of Derivatives and Continuation of Hedge Accounting (Amendments to IAS 39, *Financial Instruments: Recognition and Measurement)*

On 1 January 2014, the Group adopted *Novation of Derivatives and Continuation of Hedge Accounting* (Amendments to IAS 39, *Financial Instruments: Recognition and Measurement)* which provides relief from discontinuing hedge accounting when a derivative designated as a hedging instrument is novated to effect clearing with a central counterparty as a result of laws and regulations, provided certain criteria are met. Adoption of the amendments had no impact on the Financial Statements.

IFRIC Interpretation 21, *Levies*

On 1 January 2014, the Group adopted IFRIC Interpretation 21, *Levies.* IFRIC 21 sets out the accounting for an obligation to pay a government levy that is not within the scope of IAS 12, *Income Taxes.* The interpretation specifies that liabilities for levies should not be recognized prior to the occurrence of a specified triggering event, even when an entity has no realistic ability to avoid the triggering event. Adoption of the interpretation did not have a material impact on the Financial Statements.

Refinement to the allocation of operating costs for internal services

To further enhance cost discipline and strengthen our efforts to reduce our underlying cost base, beginning this quarter, the Group has refined the way that operating costs for internal services are allocated from Corporate Center – Core Functions to the business divisions and Corporate Center – Non-core and Legacy Portfolio. Under this refinement, each year, as part of the annual business planning cycle, Corporate Center – Core Functions agrees with the business divisions and Corporate Center – Non-core and Legacy Portfolio cost allocations for services at fixed amounts or at variable amounts based on formulas, depending on capital and service consumption levels as well as the nature of the services performed. These pre-agreed cost allocations are designed with the expectation that Corporate Center – Core Functions recovers its costs, without a mark-up. Because actual costs incurred may differ from those expected, however, Corporate Center – Core Functions may recognize significant under- or over-allocations depending on various factors, including Corporate Center – Core Functions' ability to manage the delivery of its services and achieve cost savings. Each year these cost allocations will be reset, taking account of the prior year's experience and plans for the forthcoming period. We expect the refined approach to strengthen the effectiveness and efficiency of the services performed by Corporate Center – Core Functions, and in particular to facilitate the achievement of cost savings, by better aligning cost accountability with the management of these services. Prior periods have not been adjusted for this refinement.

Changes in presentation

Trading portfolio, Financial investments available-for-sale and Reclassification of financial assets

Starting with the first quarter 2014, Trading portfolio and Financial investments available-for-sale are no longer disclosed as separate Notes in the interim Financial Statements, as this information is already presented in Note 10e. In addition, the information on reclassification of financial assets is no longer disclosed in the interim Financial Statements due to the reduced relevance of remaining balances.

Net fee and commission income

Starting in the first quarter of 2014, the Group revised its presentation of certain line items within Net fee and commission income in order to provide more relevant information. Prior period information was adjusted accordingly. Refer to Note 4 for more information.

Other income

Starting in the first quarter of 2014, the Group introduced several new reporting lines in order to enhance transparency on the composition of Other within Other income. Prior period information was adjusted accordingly. Refer to Note 5 for more information.

Note 2 Segment reporting

UBS's internal accounting policies, which include management accounting policies and service level agreements, determine the revenues and expenses directly attributable to each reportable segment. Internal charges and transfer pricing adjustments are reflected in operating results of the reportable segments. Transactions between the reportable segments are carried out at internally agreed rates or at arm's length and are also reflected in the operating results of the reportable segments.

Revenue-sharing agreements are used to allocate external client revenues to reportable segments where several reportable segments are involved in the value-creation chain. Commissions are credited to the reportable segments based on the corresponding client relationship. Net interest income is generally allocated to the reportable segments based on their balance sheet positions. Assets and liabilities of the reportable segments are funded through and invested with Group Treasury within Corporate Center – Core Functions, and the net interest margin is reflected in the results of each reportable segment. Interest income earned from managing UBS's consolidated equity is allocated to the reportable segments based on average attributed equity. Total intersegment revenues for the Group are immaterial as the majority of the revenues are allocated across the segments by means of revenue-sharing agreements.

Effective from 2014 onwards, each year, as part of the annual business planning cycle, Corporate Center – Core Functions agrees with the business divisions and Corporate Center – Non-core and Legacy Portfolio cost allocations for services at fixed amounts or at variable amounts based on formulas, depending on capital and service consumption levels as well as the nature of the services performed. Because actual costs incurred may differ from those expected, however, Corporate Center – Core Functions may recognize significant under- or over-allocations depending on various factors. Each year these cost allocations will be reset, taking account of the prior years' experience and plans for the forthcoming period. Refer to "Note 1 Basis of accounting" for more information. Until December 2013, the operating expenses of Corporate Center – Core Functions were allocated to the reportable segments based on internally determined allocation bases. These allocations were adjusted on a periodic basis and differences may have arisen between actual costs incurred and amounts recharged.

Segment balance sheets assets are based on a third-party view, i.e., the amounts do not include intercompany balances. This view is in line with internal reporting to management. Certain assets managed centrally by Corporate Center – Core Functions (including property and equipment and certain financial assets) are allocated to the segments on a basis different to which the corresponding costs and/or revenues are allocated. Specifically, certain assets are reported in Corporate Center – Core Functions, whereas the corresponding costs and/or revenues are entirely or partially allocated to the segments based on various internally determined allocations. Similarly, certain assets are reported in the business divisions, whereas the corresponding costs and/or revenues are entirely or partially allocated to Corporate Center – Core Functions.

Other[5]	**67**	(38)	(177)		
Total other income	**189**	75	(37)	152	

1 In 2014, changes in the presentation of this Note were made. Net gains / (losses) from disposals of properties held for sale and Net gains / (losses) from disposals of loans and receivables are now presented as separate line items. Previously, these were included in the line item Other. Prior period information was adjusted accordingly. 2 Includes foreign exchange gains / losses reclassified from other comprehensive income related to disposed or dormant subsidiaries. 3 Includes net rent received from third parties and net operating expenses. 4 Includes unrealized and realized gains / losses from investment properties at fair value and foreclosed assets. 5 The fourth and first quarters of 2013 included losses of CHF 75 million and CHF 119 million, respectively, related to the buyback of debt in public tender offers.

Note 6 Personnel expenses

	For the quarter ended			% change from	
CHF million	**31.3.14**	31.12.13	31.3.13	4Q13	1Q13
Salaries and variable compensation	**2,520**	2,272	2,689	11	(6)
Contractors	**54**	57	43	(5)	26
Social security	**259**	176	218	47	19
Pension and other post-employment benefit plans	**193**	211	216	(9)	(11)
Wealth Management Americas: Financial advisor compensation[1]	**790**	778	776	2	2
Other personnel expenses	**152**	166	159	(8)	(4)
Total personnel expenses[2]	**3,967**	3,660	4,100	8	(3)

1 Financial advisor compensation consists of grid-based compensation based directly on compensable revenues generated by financial advisors and supplemental compensation calculated based on financial advisor productivity, firm tenure, assets and other variables. It also includes costs related to compensation commitments with financial advisors entered into at the time of recruitment, which are subject to vesting requirements. 2 Includes restructuring charges. Refer to "Note 16 Changes in organization" for more information.

Note 7 General and administrative expenses

	For the quarter ended			% change from	
CHF million	**31.3.14**	31.12.13	31.3.13	4Q13	1Q13
Occupancy	**251**	268	261	(6)	(4)
Rent and maintenance of IT and other equipment	**117**	117	115	0	2
Communication and market data services	**150**	145	152	3	(1)
Administration	**106**	262[4]	128	(60)	(17)
Marketing and public relations	**94**	155	112	(39)	(16)
Travel and entertainment	**107**	136	101	(21)	6
Professional fees	**256**	328	206	(22)	24
Outsourcing of IT and other services	**357**	382	302	(7)	18
Provisions for litigation, regulatory and similar matters[1, 2]	**193**	79	378	144	(49)
Other	**49**	84	243	(42)	(80)
Total general and administrative expenses[3]	**1,679**	1,956	1,999	(14)	(16)

1 Reflects the net increase / release of provisions for litigation, regulatory and similar matters recognized in the income statement. In addition, the first quarter of 2014 included recoveries from third parties of CHF 1 million (fourth quarter 2013: CHF 8 million, first quarter 2013: CHF 3 million). A portion (CHF 6 million release) of the net increase / release recognized in the income statement for provisions for certain litigation, regulatory and similar matters for the first quarter of 2014 as presented in "Note 14a Provisions" was recorded as other income rather than as general and administrative expenses. 2 Refer to "Note 14 Provisions and contingent liabilities" for more information. 3 Includes restructuring charges. Refer to "Note 16 Changes in organization" for more information. 4 The fourth quarter of 2013 included a net charge of CHF 128 million for the annual UK bank levy.

Note 8 Income taxes

The Group recognized a net income tax expense of CHF 339 million for the first quarter of 2014, compared with a net tax benefit of CHF 470 million in the prior quarter. The first quarter net expense included a deferred tax expense of CHF 234 million in respect of the amortization of deferred tax assets previously recognized in relation to tax losses carried forward to reflect their offset against Swiss taxable profits for the quarter. In addition, it included net tax expenses of CHF 146 million in respect of taxable profits primarily relating to branches and subsidiaries outside of Switzerland. This was partially offset by a decrease in provisions of CHF 41 million in respect of tax matters which are now resolved.

Note 9 Earnings per share (EPS) and shares outstanding

	As of or for the quarter ended			% change from	
	31.3.14	31.12.13	31.3.13	4Q13	1Q13
Basic earnings (CHF million)

Shares outstanding					
Shares issued	3,843,383,192	3,842,002,069	3,836,939,178	0	0
Treasury shares	92,241,706	73,800,252	79,083,158	25	17
Shares outstanding	3,751,141,486	3,768,201,817	3,757,856,020	0	0
Exchangeable shares	0	246,042	418,526	(100)	(100)
Shares outstanding for EPS	3,751,141,486	3,768,447,859	3,758,274,546	0	0

The table below outlines the potential shares which could dilute basic earnings per share in the future, but were not dilutive for the periods presented.

				% change from	
Number of shares	31.3.14	31.12.13	31.3.13	4Q13	1Q13
Potentially dilutive instruments					
Employee share-based compensation awards	106,001,462	117,623,624	134,285,814	(10)	(21)
Other equity derivative contracts	13,408,690	13,670,778	11,004,435	(2)	22
SNB warrants[1]	0	0	100,000,000		(100)
Total	119,410,152	131,294,402	245,290,249	(9)	(51)

1 These warrants related to the SNB transaction. The SNB provided a loan to a fund owned and controlled by the SNB (the SNB StabFund), to which UBS transferred certain illiquid securities and other positions in 2008 and 2009. As part of this arrangement, UBS granted warrants on shares to the SNB, which would have been exercisable if the SNB incurred a loss on its loan to the SNB StabFund. In the fourth quarter of 2013, these warrants were terminated by the SNB following the full repayment of the loan in the third quarter of 2013.

Note 10 Fair value measurement

This note provides fair value measurement information for both financial and non-financial instruments and is structured as follows:
a) Valuation principles
b) Valuation governance
c) Valuation techniques
d) Valuation adjustments
e) Fair value measurements and classification within the fair value hierarchy
f) Transfers between Level 1 and Level 2 in the fair value hierarchy
g) Movements of Level 3 instruments
h) Valuation of assets and liabilities classified as Level 3
i) Sensitivity of fair value measurements to changes in unobservable input assumptions
j) Deferred day-1 profit or loss
k) Financial instruments not measured at fair value

a) Valuation principles

Fair value is defined as the price that would be received for the sale of an asset or paid to transfer a liability in an orderly transaction between market participants in the principal market (or most advantageous market, in the absence of a principal market) as of the measurement date. In measuring fair value, the Group utilizes various valuation approaches and applies a hierarchy for prices and inputs that maximizes the use of observable market data, if available.

All financial and non-financial assets and liabilities measured or disclosed at fair value are categorized into one of three fair value hierarchy levels. In certain cases, the inputs used to measure fair value may fall within different levels of the fair value hierarchy. For disclosure purposes, the level in the hierarchy within which the instrument is classified in its entirety is based on the lowest level input that is significant to the position's fair value measurement:
- Level 1 – quoted prices (unadjusted) in active markets for identical assets and liabilities;
- Level 2 – valuation techniques for which all significant inputs are, or are based on, observable market data or
- Level 3 – valuation techniques for which significant inputs are not based on observable market data

If available, fair values are determined using quoted prices in active markets for identical assets or liabilities. An active market is one in which transactions for the asset or liability take place with sufficient frequency and volume to provide pricing data on an ongoing basis. Assets and liabilities that are quoted and traded in an active market are valued at the currently quoted price multiplied by the number of units of the instrument held.

Where the market for a financial instrument or non-financial asset or liability is not active, fair value is established using a valuation technique, including pricing models. Valuation techniques involve the use of estimates, the extent of which depends on the complexity of the instrument and the availability of market-based data. Valuation adjustments may be made to allow for additional factors including model, liquidity and credit risks, which are not explicitly captured within the valuation technique, but which would nevertheless be considered by market participants when forming a price. The limitations inherent in a particular valuation technique are considered in the determination of an asset or liability's classification within the fair value hierarchy.

Many cash instruments and over-the-counter (OTC) derivative contracts have bid and offer prices that can be observed in the marketplace. Bid prices reflect the highest price that a party is willing to pay for an asset. Offer prices represent the lowest price that a party is willing to accept for an asset. In general, long positions are measured at a bid price and short positions at an offer price, reflecting the prices at which the instruments could be transferred under normal market conditions. Offsetting positions in the same financial instrument are marked at the mid-price within the bid-offer spread.

Generally, the unit of account for a financial instrument is the individual instrument, and UBS applies valuation adjustments at an individual instrument level, consistent with that unit of account. However, if certain conditions are met, UBS may estimate the fair value of a portfolio of financial assets and liabilities with substantially similar and offsetting risk exposures on the basis of the net open risks.

For transactions where the valuation technique used to measure fair value requires significant inputs that are not based on observable market data, the financial instrument is initially recognized at the transaction price. This initial recognition amount may differ from the fair value obtained using the valuation technique. Any such difference is deferred and not recognized in the income statement and referred to as deferred day-1 profit or loss. Refer to "Note 10j Deferred day-1 profit or loss" for more information.

Note 10 Fair value measurement (continued)

b) Valuation governance

UBS's fair value measurement and model governance framework includes numerous controls and other procedural safeguards that are intended to maximize the quality of fair value measurements reported in the financial statements. New products and valuation techniques must be reviewed and approved by key stakeholders from risk and finance control functions. Responsibility for the ongoing measurement of financial and non-financial instruments at fair value resides with the business divisions, but is validated by risk and finance control functions, which are independent of the business divisions. In carrying out their valuation responsibilities, the businesses are required to consider the availability and quality of external market data and to provide justification and rationale for their fair value estimates.

Independent price verification is performed by the finance function to evaluate the business divisions' pricing input assumptions and modeling approaches. By benchmarking the business divisions' fair value estimates with observable market prices and other independent sources, the degree of valuation uncertainty embedded in these measurements is assessed and managed as required in the governance framework. Fair value measurement models are assessed for their ability to value specific products in the principal market of the product itself, as well as the principal market for the main valuation input parameters to the model.

An independent model review group evaluates UBS's valuation models on a regular basis, or when established triggers occur, and approves them for valuation of specific products. As a result of the valuation controls employed, valuation adjustments may be made to the business divisions' estimates of fair value to align with independent market data and accounting standards (refer to "Note 10d Valuation adjustments" for more information).

c) Valuation techniques

Valuation techniques are used to value positions for which a market price is not available from market sources. This includes certain less liquid debt and equity instruments, certain exchange-traded derivatives and all derivatives transacted in the OTC market. UBS uses widely recognized valuation techniques for determining the fair value of financial and non-financial instruments that are not actively traded and quoted. The most frequently applied valuation techniques include discounted value of expected cash flows, relative value and option pricing methodologies.

Discounted value of expected cash flows is a valuation technique that measures fair value using estimated expected future cash flows from assets or liabilities and then discounts these cash flows using a discount rate or discount margin that reflects the credit and/or funding spreads required by the market for instruments with similar risk and liquidity profiles to produce a present value. When using such valuation techniques, expected future cash flows are estimated using an observed or implied market price for the future cash flows or by using industry standard cash flow projection models. The discount factors within the calculation are generated using industry standard yield curve modeling techniques and models.

Relative value models measure fair value based on the market prices of equivalent or comparable assets or liabilities, making adjustments for differences between the characteristics of the observed instrument and the instrument being valued.

Option pricing models incorporate assumptions regarding the behavior of future price movements of an underlying referenced asset or assets to generate a probability-weighted future expected payoff for the option. The resulting probability-weighted expected payoff is then discounted using discount factors generated from industry standard yield curve modeling techniques and models. The option pricing model may be implemented using a closed-form analytical formula or other mathematical techniques (e.g., binomial tree or Monte Carlo simulation).

Where available, valuation techniques use market-observable assumptions and inputs. If such data is not available, inputs may be derived by reference to similar assets in active markets, from recent prices for comparable transactions or from other observable market data. When measuring fair value, UBS selects the non-market-observable inputs to be used in its valuation techniques, based on a combination of historical experience, derivation of input levels based on similar products with observable price levels and knowledge of current market conditions and valuation approaches.

For more complex instruments and instruments not traded in an active market, fair values may be estimated using a combination of observed transaction prices, consensus pricing services and relevant quotes. Consideration is given to the nature of the quotes (e.g., indicative or firm) and the relationship of recently evidenced market activity to the prices provided by consensus pricing services. UBS also uses internally developed models, which are typically based on valuation methods and techniques recognized as standard within the industry.

Assumptions and inputs used in valuation techniques include benchmark interest rate curves, credit and funding spreads used in estimating discount rates, bond and equity prices, equity index prices, foreign exchange rates, levels of market volatility and correlation, (refer to "Note 10h Valuation of assets and liabilities classified as Level 3"). The discount curves used by the Group incorporate the funding and credit characteristics of the instruments to which they are applied.

Note 10 Fair value measurement (continued)

d) Valuation adjustments

The output of a valuation technique is always an estimate or approximation of a fair value that cannot be measured with complete certainty. As a result, valuations are adjusted, where appropriate, to reflect close-out costs, credit exposure, model-driven valuation uncertainty, trading restrictions and other factors, when such factors would be considered by market participants in measuring fair value. Valuation adjustments are an important component of fair value for assets and liabilities that are measured using valuation techniques. Such adjustments are applied to reflect uncertainties within the fair value measurement process, to adjust for an identified model simplification or to incorporate an aspect of fair value that requires an overall portfolio assessment rather than an evaluation based on an individual instrument level characteristic.

The major classes of valuation adjustments are discussed in further detail below.

Reflection of market bid-offer levels

Instruments that are measured as part of a portfolio of combined long and short positions are valued at mid-market levels to ensure consistent valuation of the long and short component risks. A valuation adjustment is then made to the overall net long or short exposure to move the fair value to bid or offer as appropriate, reflecting current levels of market liquidity. The bid-offer spreads used in the calculation of the valuation adjustment are obtained from market transactions and other relevant sources and are updated periodically.

Reflection of model uncertainty

Uncertainties associated with the use of model-based valuations are incorporated into the measurement of fair value through the use of model reserves. These reserves reflect the amounts that the Group estimates should be deducted from valuations produced directly by models to incorporate uncertainties in the relevant modeling assumptions, in the model and market inputs used, or in the calibration of the model output to adjust for known model deficiencies. In arriving at these estimates, the Group considers a range of market practices, including how it believes market participants would assess these uncertainties. Model reserves are reassessed periodically in light of data from market transactions, consensus pricing services and other relevant sources.

Day-1 reserves

Day-1 profit or loss reserves are reflected, where appropriate, as valuation adjustments. Refer to “Note 10j Deferred day-1 profit or loss” for more information.

Counterparty credit risk in the valuation of derivatives

In order to measure fair value, credit valuation adjustments (CVA) are necessary to reflect the credit risk of the counterparty inherent in OTC derivative instruments. This amount represents the estimated fair value of protection required to hedge the counterparty credit risk of such instruments. The CVA is determined for each counterparty considering all exposures to that counterparty and is dependent on the expected future value of exposures, default probabilities and recovery rates, applicable collateral or netting arrangements, break clauses and other contractual factors.

Own credit risk in the valuations of OTC derivative instruments

The Group estimates debit valuation adjustments (DVA) to incorporate own credit in the valuation of derivatives, effectively consistent with the CVA methodology. DVA represents the theoretical cost to counterparties of hedging, or the credit risk reserve that a counterparty could reasonably be expected to hold, against their credit risk exposure to UBS. DVA is determined for each counter-

Note 10 Fair value measurement (continued)

party considering all exposures with that counterparty and taking into account collateral netting agreements, expected future mark-to-market movements and UBS's credit default spreads.

UBS's own credit risk in the valuations of financial liabilities designated at fair value

In addition to considering the valuation of the derivative risk component, the valuation of fair value option liabilities also requires consideration of the funded component and specifically the own credit component of fair value. Own credit risk is reflected if this component would be considered for valuation purposes by market participants. Consequently, own credit risk is not reflected for those contracts that are fully collateralized and for other contracts for which it is established market practice not to include an own credit component. The own credit component is estimated using a funds transfer price (FTP) curve to derive a single, market-based level of discounting for uncollateralized funded instruments. UBS senior debt curve spreads are discounted in order to arrive at the FTP curve, with the discount primarily reflecting the differences between the spreads in the senior unsecured debt market for UBS debt and the levels at which UBS medium-term notes are currently issued. The FTP curve is generally a Level 2 pricing input. However, certain long-dated exposures that are beyond the tenors that are actively traded are classified as Level 3.

The effects of own credit adjustments related to financial liabilities designated at fair value (predominantly issued structured products) as of 31 March 2014, 31 December 2013 and 31 March 2013, respectively, are summarized in the table below.

Year-to-date amounts represent the change during the year, and life-to-date amounts reflect the cumulative change since initial recognition. The change in own credit for the period consists of changes in fair value that are attributable to the change in UBS's credit spreads as well as the effect of changes in fair values attributable to factors other than credit spreads, such as redemptions, effects from time decay and changes in interest and other market rates.

Own credit on financial liabilities designated at fair value

	As of or for the quarter ended		
CHF million	**31.3.14**	31.12.13	31.3.13
Gain / (loss) for the period ended	**88**	(94)	(181)
Life-to-date gain / (loss)	**(485)**	(577)	(482)

Note 10 Fair value measurement (continued)

e) Fair value measurements and classification within the fair value hierarchy

The classification in the fair value hierarchy of the Group's financial and non-financial assets and liabilities measured at fair value is summarized in the table below. The narrative that follows describes the significant valuation inputs and assumptions for each class of assets and liabilities measured at fair value, the valuation techniques, where applicable, used in measuring their fair value, and the factors determining their classification within the fair value hierarchy.

Determination of fair values from quoted market prices or valuation techniques[1]

	31.3.14				31.12.13[4]

1 Bifurcated embedded derivatives are presented on the same balance sheet lines as their host contracts and are excluded from this table. As of 31 March 2014, net bifurcated embedded derivative liabilities held at fair value, totaling CHF 0.1 billion (of which CHF 0.2 billion were net Level 2 assets and CHF 0.3 billion net Level 2 liabilities) were recognized on the balance sheet within Debt issued. As of 31 December 2013, net bifurcated embedded derivative liabilities held at fair value, totaling CHF 0.2 billion (of which CHF 0.2 billion were net Level 2 assets and CHF 0.4 billion net Level 2 liabilities) were recognized on the balance sheet within Debt issued. 2 Financial assets held for trading do not include precious metals and commodities. 3 Other assets primarily consist of assets held for sale, which are measured at the lower of their net carrying amount or fair value less costs to sell. 4 In 2014, certain figures for 31 December 2013 were restated upon the adoption of the amendments to IAS 32. Both PRV and NRV for Level 2 Interest rate contracts, Credit derivative contracts and Equity / index contracts were increased by approximately CHF 1 billion, CHF 5 billion and CHF 3 billion, respectively. Refer to Note 1 "Basis of accounting" for more information on the adoption of the amendments to IAS 32. 5 In 2014, the Group has reclassified listed equity option contracts, with all now classified in Level 2. The prior period fair value hierarchy was restated for this change, reducing Level 1 equity / index contracts in both PRV and NRV by approximately CHF 2 billion, with corresponding increases to Level 2. 6 Includes a life-to-date debit valuation adjustment gain on derivatives of CHF 229 million as of 31 March 2014 (31 December 2013: CHF 256 million).

Financial assets and liabilities held for trading, financial assets designated at fair value and financial investments available-for-sale

Government bills and bonds

Government bills and bonds include fixed-rate, floating-rate and inflation-linked bills and bonds issued by sovereign governments, as well as interest and principal strips based on these bonds. Such instruments are generally traded in active markets and prices can be obtained directly from these markets, resulting in classification as Level 1, while the majority of the remaining positions are classified as Level 2. Instruments that cannot be priced directly using active market data are valued using discounted cash flow valuation techniques that incorporate market data for similar government instruments converted into yield curves. These yield curves are used to project future index levels, and to discount expected future cash flows. The main inputs to valuation techniques for these instruments are bond prices and inputs to estimate the future index levels for floating or inflation index-linked instruments. Instruments classified as Level 3 are limited and are generally classified as such due to the requirement to extrapolate yield curve inputs outside the range of active market trading.

Corporate and municipal bonds

Corporate bonds include senior, junior and subordinated debt issued by corporate entities. Municipal bonds are issued by state and local governments. While most instruments are standard fixed or floating-rate securities, some may have more complex

Note 10 Fair value measurement (continued)

coupon or embedded option features. Corporate and municipal bonds are generally valued using prices obtained directly from the market. In cases where no directly comparable price is available, instruments may be valued using yields derived from other securities by the same issuer or benchmarked against similar securities, adjusted for seniority, maturity and liquidity. Instruments that cannot be priced directly using active market data are valued using discounted cash flow valuation techniques incorporating the credit spread of the issuer, which may be derived from other issuances or CDS data for the issuer, estimated with reference to other equivalent issuer price observations or from credit modeling techniques. Corporate bonds are typically classified as Level 2 because, although market data is readily available, there is often insufficient third-party trading transaction data to justify an active market and corresponding Level 1 classification. Municipal bonds are generally classified as Level 1 or Level 2 depending on the depth of trading activity behind price sources. Level 3 instruments have no suitable price available for the security held or by reference to other securities issued by the same issuer. Therefore, these instruments are measured based on price levels for similar issuers adjusted for relative tenor and issuer quality.

Convertible bonds are generally valued using prices obtained directly from market sources. In cases where no directly comparable price is available, issuances may be priced using a convertible bond model, which values the embedded equity option and debt components and discounts these amounts using a curve that incorporates the credit spread of the issuer. Although market data is readily available, convertible bonds are typically classified as Level 2 because there is insufficient third-party trading transaction data to justify a Level 1 classification.

Traded loans and loans designated at fair value

Traded loans and loans designated at fair value are valued directly using market prices that reflect recent transactions or quoted dealer prices where available. For illiquid loans where no market price data is available, alternative valuation techniques are used, which include relative value benchmarking using pricing derived from debt instruments in comparable entities or different products in the same entity. The corporate lending portfolio is valued using either directly observed market prices typically from consensus providers or by using a credit default swap valuation technique, which requires inputs for credit spreads, credit recovery rates and interest rates. The market for these instruments is not actively traded and even though price data is available it may not be directly observable, and therefore corporate loans typically do not meet Level 1 classification. Instruments with suitably deep and liquid price data available will be classified as Level 2, while any positions requiring the use of valuation techniques or for which the price sources have insufficient trading depth are classified as Level 3. Recently originated commercial real estate loans which are classified as Level 3 are measured using a securitization approach based on rating agency guidelines. Future profit and loss from the securitization is not recognized, but overall spread moves are captured in the loan valuation.

Included within loans are various contingent lending transactions, for which valuations are dependent on actuarial mortality levels and actuarial life insurance policy lapse rates. Mortality and lapse rate assumptions are based on external actuarial estimations for large homogeneous pools, and contingencies are derived from a range relative to the actuarially expected amount. In addition, the pricing technique uses volatility of mortality as an input.

Investment fund units

Investment fund units are predominantly exchange traded, with readily available quoted prices in liquid markets. Where market prices are not available, fair value may be measured using net asset values (NAV), taking into account any restrictions imposed upon redemption. Listed units are classified as Level 1, provided there is sufficient trading to justify active market classification, while other positions are classified as Level 2. Positions where NAV is not available or which are not redeemable at the measurement date or in the near future are classified as Level 3.

Asset-backed securities

Residential mortgage-backed securities (RMBS), commercial mortgage-backed securities (CMBS), other asset-backed securities (ABS) and collateralized debt obligations (CDO)

RMBS, CMBS, ABS and CDO are instruments generally issued through the process of securitization of underlying interest bearing assets. The underlying collateral for RMBS is residential mortgages, for CMBS, commercial mortgages, for ABS, other assets such as credit card, car or student loans and leases and for CDO, other securitized positions of RMBS, CMBS or ABS. The market for these securities is not active, and therefore a variety of valuation techniques are used to measure fair value. For more liquid securities, trade data or quoted prices may be obtained periodically for the instrument held, and the valuation process will use this trade and price data, updated for movements in market levels between the time of trading and the time of valuation. Less liquid instruments are measured using discounted expected cash flows incorporating price data for instruments or indices with similar risk profiles. Expected cash flow estimation involves the modeling of the expected collateral cash flows using input assumptions derived from proprietary models, fundamental analysis and/or market research based on management's quantitative and qualitative assessment of current and future economic conditions. The expected collateral cash flows thus estimated are then converted into the securities' projected performance under such conditions based on the credit enhancement and subordination terms of the securitization. Expected cash flow schedules are discounted using a rate or discount margin that reflects the discount levels required by the market for instruments with similar risk and liquidity profiles. Inputs to discounted expected cash flow techniques include

Note 10 Fair value measurement (continued)

asset prepayment rates, discount margin or discount yields, asset default rates and asset loss on default severity, which may in turn be estimated using more fundamental loan and economic drivers such as, but not limited to, loan-to-value data, house price appreciation, foreclosure costs, rental income levels, void periods and employment rates. RMBS, CMBS and ABS are generally classified as Level 2. However, if significant inputs are unobservable, or if market or fundamental data is not available for instruments or collateral with a sufficiently similar risk profile to the positions held, they are classified as Level 3.

Equity instruments

The majority of equity securities are actively traded on public stock exchanges where quoted prices are readily and regularly available, resulting in their classification as Level 1. Units held in hedge funds are also classified as equity instruments. Fair value for these units is measured based on their published NAV, taking into account any restrictions imposed upon the redemption. These units are classified as Level 2, except for positions where published NAV is not available or which are not redeemable at the measurement date or in the near future, which are classified as Level 3.

Unlisted equity holdings, including private equity positions, are initially marked at their transaction price and are periodically revalued to the extent reliable evidence of price movements becomes available or the position is deemed to be impaired.

Financial assets underlying unit-linked investments

Unit-linked investment contracts allow investors to invest in a pool of assets through issued investment units. The unit holders are exposed to all risks and rewards associated with the reference asset pool. Assets held under unit-linked investment contracts are presented as Trading portfolio assets. The majority of assets are listed on exchanges and are classified as Level 1 if actively traded, or Level 2 if trading is not active. However, instruments for which prices are not readily available are classified as Level 3.

Structured repurchase agreements and structured reverse repurchase agreements

Structured repurchase agreements and structured reverse repurchase agreements designated at fair value are measured using discounted expected cash flow techniques. The discount rate applied is based on funding curves that are specific to the collateral eligibility terms for the contract in question. Collateral terms for these positions are not standard and therefore funding spread levels used for valuation purposes cannot be observed in the market. As a result, these positions are mostly classified as Level 3.

Replacement values

Collateralized and uncollateralized instruments

The curves used for discounting expected cash flows in the valuation of collateralized derivatives reflect the funding terms associated with the relevant collateral arrangement for the instrument being valued. These collateral arrangements differ across counterparties with respect to the eligible currency and interest terms of the collateral. The majority of collateralized derivatives are measured using a discount curve that is based on funding rates derived from overnight interest in the cheapest eligible currency for the respective counterparty collateral agreement.

Uncollateralized derivatives are discounted using the LIBOR (or equivalent) curve for the currency of the instrument. As described in "Note 10d Valuation adjustments," the fair value of uncollateralized derivatives is adjusted using CVA or DVA processes to reflect an estimation of the impact of counterparty credit and UBS own credit risk on the fair value of assets and liabilities.

Interest rate contracts

Interest rate swap contracts include interest rate swaps, basis swaps, cross-currency swaps, inflation swaps and interest rate forwards, often referred to as forward rate agreements (FRA). These products are valued by estimating future interest cash flows and discounting those cash flows using a rate that reflects the appropriate funding rate for the position being measured. The yield curves used to estimate future index levels and discount rates are generated using market standard yield curve models using interest rates associated with current market activity. The key inputs to the models are interest rate swap rates, FRA rates, short-term interest rate futures prices, basis swap spreads and inflation swap rates. In most cases, the standard market contracts that form the inputs for yield curve models are traded in active and observable markets, resulting in the majority of these financial instruments being classified as Level 2.

Interest rate option contracts include caps and floors, swaptions, swaps with complex payoff profiles and other more complex interest rate options. These contracts are valued using various market standard option models, using inputs that include interest rate yield curves, inflation curves, volatilities and correlations. The volatility and correlation inputs within the models are implied from market data based on market observed prices for standard option instruments trading within the market. Option models used to value more exotic products have a number of model parameter inputs that require calibration to enable the exotic model to price standard option instruments to the price levels observed in the market. Although these inputs cannot be directly observed, they are generally treated as Level 2, as the calibration process enables the model output to be validated to active market levels. Models calibrated in this way are then used to revalue the portfolio of both standard options as well as more exotic products. In most cases, there are active and observable markets for the standard market instruments that form the inputs for yield curve models as well as the financial instruments from which volatility and correlation inputs are derived, resulting in the majority of these products being classified as Level 2. Within interest rate option contracts, exotic options for which appro-

priate volatility or correlation input levels cannot be implied from observable market data are classified as Level 3. These options are valued using volatility and correlation levels derived from non-market sources.

Interest rate swap and option contracts are classified as Level 3 when the maturity of the contract exceeds the term for which standard market quotes are observable for a significant input parameter. Such positions are valued by extrapolation from the last observable point using standard assumptions or by reference to another observable comparable input parameter to represent a suitable proxy for that portion of the term.

Balance guaranteed swaps (BGS) are interest rate or currency swaps that have a notional schedule based on a securitization vehicle, requiring the valuation to incorporate an adjustment for the unknown future variability of the notional schedule. Inputs to value BGS are those used to value the standard market risk on the swap and those used to estimate the notional schedule of the underlying securitization pool (i.e., prepayment, default and interest rates). BGS are classified as Level 3, as the correlation between unscheduled notional changes and the underlying market risk of the BGS does not have an active market and cannot be observed.

Credit derivative contracts

Credit derivative contracts based on a single credit name include credit default swaps (CDS) based on corporate and sovereign single names, CDS on loans and certain total return swaps (TRS). These contracts are valued by estimating future default probabilities using industry standard models based on market credit spreads, upfront pricing points and implied recovery rates. These default and recovery assumptions are used to generate future expected cash flows that are then discounted using market standard discounted cash flow models and a discount rate that reflects the appropriate funding rate for that portion of the portfolio. TRS and certain single-name CDS contracts for which a derivative-based credit spread is not directly available are valued using a credit spread derived from the price of the cash bond that is referenced in the credit derivative, adjusted for any funding differences between the cash and synthetic product. Loan CDS for which a credit spread cannot be observed directly may be valued, where possible, using the corporate debt curve for the entity, adjusted for differences between loan and debt default definitions and recovery rate assumptions. Inputs to the valuation models used to value single-name and loan CDS include single-name credit spreads and upfront pricing points, recovery rates and funding curves. In addition, corporate bond prices are used as inputs to the valuation model for TRS and certain single-name or loan CDS as described. Many single-name credit default swaps are classified as Level 2 because the credit spreads and recovery rates used to value these contracts are actively traded and observable market data is available. Where the underlying reference name is not actively traded, these contracts are classified as Level 3.

Credit derivative contracts based on a portfolio of credit names include credit default swaps on a credit index, credit default swaps based on a bespoke portfolio or first to default swaps (FTD). The valuation of these contracts is similar to that described above for single-name CDS and includes an estimation of future default probabilities using industry standard models based on market credit spreads, upfront pricing points and implied recovery rates. These default and recovery assumptions are used to generate future expected cash flows that are then discounted using market standard discounted cash flow models based on an estimation of the funding rate for that portion of the portfolio. Tranche products and FTD are valued using industry standard models that, in addition to default and recovery assumptions as above, incorporate implied correlations to be applied to the credits within the portfolio in order to apportion the expected credit loss at a portfolio level across the different tranches or names within the overall structure. These correlation assumptions are derived from prices of actively traded index tranches or other FTD baskets. Inputs to the valuation models used for all portfolio credit default swaps include single-name or index credit spreads and upfront pricing points, recovery rates and funding curves. In addition, models used for tranche and FTD products have implied credit correlations as inputs. Credit derivative contracts based on a portfolio of credit names are classified as Level 2 when credit spreads and recovery rates are determined from actively traded observable market data, and when the correlation data used to value bespoke and index tranches is based on actively traded index tranche instruments. This correlation data undergoes a mapping process that takes into account both the relative tranche attachment / detachment points in the overall capital structure of the portfolio and portfolio composition. Where the mapping process requires extrapolation beyond the range of available and active market data, the position is classified as Level 3. This relates to a small number of index and all bespoke tranche contracts. FTD are classified as Level 3, as the correlations between specific names in the FTD portfolio are not actively traded. Also classified as Level 3 are several older credit index positions, referred to as "off the run" indices, due to the lack of any active market for the index credit spread.

Credit derivative contracts on securitized products have an underlying reference asset that is a securitized product (RMBS, CMBS, ABS or CDO) and include credit default swaps and certain TRS. These credit default swaps (typically referred to as "pay-as-you-go" or "PAYG CDS") and TRS are valued using a similar valuation technique to the underlying security (by reference to equivalent securities trading in the market, or through cash flow estimation and discounted cash flow techniques as described in the Asset-backed securities section above), with an adjustment made to reflect the funding differences between cash and synthetic form. Inputs to the PAYG CDS and TRS are those used to value the underlying security (prepayment rates, default rates, loss severity, discount margin / rate and other inputs) and those used

Note 10 Fair value measurement (continued)

to capture the funding basis differential between cash and synthetic form. The classification of PAYG CDS and these TRS follow the characteristics of the underlying security and are therefore distributed across Level 2 and Level 3.

Foreign exchange (FX) contracts

Open spot FX contracts are valued using the FX spot rate observed in the market. Forward FX contracts are valued using the FX spot rate adjusted for forward pricing points observed from standard market-based sources. As the markets for both FX spot and FX forward pricing points are both actively traded and observable, FX contracts are generally classified as Level 2.

OTC FX option contracts include standard call and put options, options with multiple exercise dates, path-dependent options, options with averaging features, options with discontinuous pay-off characteristics and options on a number of underlying FX rates. OTC FX option contracts are valued using market standard option valuation models. The models used for shorter-dated options (i.e., maturities of five years or less) tend to be different than those used for longer-dated options because the models needed for longer-dated OTC FX contracts require additional consideration of interest rate and FX rate interdependency. Inputs to the option valuation models include spot FX rates, FX forward points, FX volatilities, interest rate yield curves, interest rate volatilities and correlations. The inputs for volatility and correlation are implied through the calibration of observed prices for standard option contracts trading within the market.

As inputs are derived mostly from standard market contracts traded in active and observable markets, a significant proportion of OTC FX option contracts are classified as Level 2. OTC FX option contracts classified as Level 3 include long-dated FX exotic option contracts for which there is no active market from which to derive volatility or correlation inputs. The inputs used to value these OTC FX option contracts are calculated using consensus pricing services without an underlying principal market, historical asset prices or by extrapolation.

Cross-currency balance guaranteed swaps (BGS) are classified as foreign exchange contracts. Details of the fair value classification can be found under the interest rate contracts section above.

Equity / index contracts

Equity / index contracts include equity forward contracts and equity option contracts. Equity forward contracts have a single stock or index underlying and are valued using market standard models. The key inputs to the models are stock prices, estimated dividend rates and equity funding rates (which are implied from prices of forward contracts observed in the market). Estimated cash flows are then discounted using market standard discounted cash flow models using a rate that reflects the appropriate funding rate for that portion of the portfolio. As inputs are derived mostly from standard market contracts traded in active and observable markets, a significant proportion of equity forward contracts are classified as Level 2. Positions classified as Level 3 have no market data available for the instrument maturity and are valued by some form of extrapolation of available data, use of historical dividend data, or use of data for a related equity.

Equity option contracts include market standard single or basket stock or index call and put options as well as equity option contracts with more complex features including option contracts with multiple or continuous exercise dates, option contracts for which the payoff is based on the relative or average performance of components of a basket, option contracts with discontinuous payoff profiles, path-dependent options and option contracts with a payoff calculated directly upon equity features other than price (i.e., dividend rates, volatility or correlation). Equity option contracts are valued using market standard models that estimate the equity forward level as described above for equity forward contracts and incorporate inputs for stock volatility and for correlation between stocks within a basket. The probability-weighted expected option payoff generated is then discounted using market standard discounted cash flow models using a rate that reflects the appropriate funding rate for that portion of the portfolio. Positions for which inputs are derived from standard market contracts traded in active and observable markets are classified as Level 2. Level 3 positions are those for which volatility, forward or correlation inputs are not observable and are therefore valued using extrapolation of available data, historical dividend, correlation or volatility data, or the equivalent data for a related equity.

During the quarter, the Group has reclassified listed equity option contracts, with all now classified in Level 2. The prior period fair value hierarchy was restated for this change, reducing Level 1 equity / index contracts in both PRV and NRV by approximately CHF 2 billion, with corresponding increases to Level 2.

Commodity derivative contracts

Commodity derivative contracts include forward, swap and option contracts on individual commodities and on commodity indices. Commodity forward and swap contracts are measured using market standard models that use market forward levels on standard instruments. Commodity option contracts are measured using market standard option models that estimate the commodity forward level as described above for commodity forward and swap contracts, incorporating inputs for the volatility of the underlying index or commodity. The option model produces a probability-weighted expected option payoff that is then discounted using market standard discounted cash flow models using a rate that reflects the appropriate funding rate for that portion of the portfolio. For commodity options on baskets of commodities or bespoke commodity indices, the valuation technique also incorporates inputs for the correlation between different commodities or commodity indices. Individual commodity contracts are typically classified as Level 2 because active forward and volatility market data is available.

Note 10 Fair value measurement (continued)

Financial liabilities designated at fair value

Structured and OTC debt instruments issued
Structured debt instruments issued are comprised of medium-term notes (MTN), which are held at fair value under the fair value option. These MTN are tailored specifically to the holder's risk or investment appetite with structured coupons or payoffs. The risk management and the valuation approaches for these MTN are closely aligned to the equivalent derivatives business and the underlying risk, and the valuation techniques used for this component are the same as the relevant valuation techniques described above. For example, equity-linked notes should be referenced to equity/index contracts in the replacement value section and credit-linked notes should be referenced to credit derivative contacts.

Other liabilities – amounts due under unit-linked contracts
Unit-linked investment contracts allow investors to invest in a pool of assets through issued investment units. The unit holders receive all rewards and bear all risks associated with the reference asset pool. The financial liability represents the amounts due to unit holders and is equal to the fair value of the reference asset pool. The fair values of investment contract liabilities are determined by reference to the fair value of the corresponding assets. The liabilities themselves are not actively traded, but are mainly referenced to instruments which are and are therefore classified as Level 2.

f) Transfers between Level 1 and Level 2 in the fair value hierarchy

The amounts disclosed reflect transfers between Level 1 and Level 2 for instruments which were held for the entire reporting period.

Assets totaling approximately CHF 1.3 billion, which were mainly comprised of financial investments available-for-sale and financial assets held for trading, were transferred from Level 2 to Level 1 during the first quarter of 2014, generally due to increased levels of trading activity observed within the market. Transfers of financial liabilities from Level 2 to Level 1 during the first quarter of 2014 were not significant.

Assets totaling approximately CHF 0.7 billion, which were mainly comprised of financial investments available-for-sale and financial assets held for trading, and liabilities totaling approximately CHF 0.2 billion were transferred from Level 1 to Level 2 during the first quarter of 2014, generally due to diminished levels of trading activity observed within the market.

g) Movements of Level 3 instruments

Significant changes in Level 3 instruments

The table on the following pages presents additional information about Level 3 assets and liabilities measured at fair value on a recurring basis. Level 3 assets and liabilities may be hedged with instruments classified as Level 1 or Level 2 in the fair value hierarchy and, as a result, realized and unrealized gains and losses included in the table may not include the effect of related hedging activity. Further, the realized and unrealized gains and losses presented within the table are not limited solely to those arising from Level 3 inputs, as valuations are generally derived from both observable and unobservable parameters.

Assets and liabilities transferred into or out of Level 3 are presented as if those assets or liabilities had been transferred at the beginning of the year.

As of 31 March 2014, financial instruments measured with valuation techniques using significant non-market-observable inputs (Level 3) mainly comprised the following:
– structured debt instruments issued (equity- and credit-linked);
– structured reverse repurchase and securities borrowing agreements;
– credit derivative contracts and
– equity/index contracts

Significant movements in Level 3 instruments during the quarter ended 31 March 2014 were as follows.

Financial assets held for trading

Financial assets held for trading decreased to CHF 3.9 billion from CHF 4.3 billion during the quarter. Sales of CHF 0.9 billion, primarily comprised of loans, were mostly offset by issuances of CHF 0.6 billion and purchases of CHF 0.2 billion, which were mainly comprised of loans and corporate bonds. Transfers out of Level 3 during the period amounted to CHF 0.4 billion and were mainly comprised of corporate bonds and mortgage-backed securities due to increased observability of credit spread inputs. Transfers into Level 3 amounted to CHF 0.3 billion and were primarily comprised of corporate bonds and mortgage-backed securities.

Financial assets designated at fair value

Financial assets designated at fair value decreased to CHF 4.1 billion from CHF 4.4 billion during the quarter, mainly reflecting settlements of CHF 0.3 billion, which were primarily comprised of structured reverse repurchase and securities borrowing agreements.

Note 10 Fair value measurement (continued)

Financial investments available-for-sale
Financial investments available-for-sale were unchanged at CHF 0.8 billion with no significant movements during the quarter.

Positive replacement values
Positive replacement values increased to CHF 5.6 billion from CHF 5.5 billion during the quarter. Settlements and issuances amounted to CHF 0.7 billion and CHF 0.6 billion, respectively, and were primarily comprised of credit derivative contracts and equity/index contracts. Transfers into and out of Level 3 amounted to CHF 0.8 billion and CHF 0.3 billion, respectively, and were mainly comprised of credit derivative contracts and interest rate contracts resulting from both changes in the availability of observable inputs for credit spread and changes in correlation between the portfolio held and the representative market portfolio used to independently verify market data.

Negative replacement values
Negative replacement values increased to CHF 5.3 billion from CHF 4.4 billion during the quarter. Issuances and settlements amounted to CHF 0.8 billion and CHF 0.6 billion, respectively, and were primarily comprised of credit derivative contracts and equity/index contracts. Transfers into and out of Level 3 amounted to CHF 0.7 billion and CHF 0.2 billion, respectively, and were mainly comprised of credit derivative contracts and interest rate contracts resulting from both changes in the availability of observable inputs for credit spread and changes in correlation between the portfolio held and the representative market portfolio used to independently verify market data.

Financial liabilities designated at fair value
Financial liabilities designated at fair value increased to CHF 12.3 billion from CHF 12.1 billion during the quarter. Settlements of CHF 2.1 billion, mainly comprised of structured over-the-counter debt instruments and equity-linked structured debt instruments issued, were more than offset by issuances of CHF 1.7 billion, primarily comprised of equity-linked structured debt instruments issued and structured over-the-counter debt instruments, and net losses of CHF 0.6 billion included in comprehensive income. Financial liabilities designated at fair value transferred into and out of Level 3 each totaled CHF 1.2 billion. Transfers out of Level 3 were mainly comprised of equity- and rates-linked structured debt instruments issued and resulted from changes in the availability of observable equity volatility inputs and changes in rates correlation used to determine the fair value of the embedded options in these structures. Transfers into Level 3 were primarily comprised of equity- and credit-linked structured debt instruments issued as a reduction in observable equity volatility inputs and credit spread affected the embedded options in these structures.

h) Valuation of assets and liabilities classified as Level 3

The table on the following pages presents the Group's assets and liabilities recognized at fair value and classified as Level 3, together with the valuation techniques used to measure fair value, the significant inputs used in the valuation technique that are considered unobservable and a range of values for those unobservable inputs.

The range of values represents the highest and lowest level input used in the valuation techniques. Therefore, the range does not reflect the level of uncertainty regarding a particular input, but rather the different underlying characteristics of the relevant assets and liabilities. The ranges will therefore vary from period to period and parameter to parameter based on characteristics of the instruments held at each balance sheet date. Further, the ranges of unobservable inputs may differ across other financial institutions due to the diversity of the products in each firm's inventory.

Significant unobservable inputs in Level 3 positions
This section discusses the significant unobservable inputs identified in the table on the following pages and assesses the potential effect that a change in each unobservable input in isolation may have on a fair value measurement, including information to facilitate an understanding of factors that give rise to the input ranges shown. Relationships between observable and unobservable inputs have not been included in the summary below.

Bond price equivalent: Where market prices are not available for a bond, fair value is measured by comparison with observable pricing data from similar instruments. Factors considered when selecting comparable instruments include credit quality, maturity and industry of the issuer. Fair value may be measured either by a direct price comparison or by conversion of an instrument price into a yield (either as an outright yield or as a spread to LIBOR). Bond prices are expressed as points of the nominal, where 100 represents a fair value equal to the nominal value (i.e., par).

For corporate and municipal bonds, the range of 0–132 represents the range of prices from reference issuances used in determining fair value. Bonds priced at 0 are distressed to the point that no recovery is expected, while prices significantly in excess of 100 or "par" relate to inflation-linked or structured issuances that pay a coupon in excess of the market benchmark as of the measurement date. The weighted average price is approximately 93 points, with a majority of positions concentrated around this price.

For asset-backed securities, the bond price range of 0–102 points represents the range of prices for reference securities used

Note 10 Fair value measurement (continued)

in determining fair value. An instrument priced at 0 is not expected to pay any principal or interest, while an instrument priced close to 100 points is expected to be repaid in full as well as pay a yield close to the market yield. More than 85% of the portfolio is priced at 80 points or higher, and the weighted average price for Level 3 assets within this portion of the Level 3 portfolio is 85 points.

For credit derivatives, the bond price range of 0–100 points disclosed within credit derivatives represents the range of prices used for reference instruments that are typically converted to an equivalent yield or credit spread as part of the valuation process. The range is comparable to that for corporate and asset-backed issuances described above.

Loan price equivalent: Where market prices are not available for a traded loan, fair value is measured by comparison with observable pricing data for similar instruments. Factors considered when selecting comparable instruments include industry segment, collateral quality, maturity and issuer-specific covenants. Fair value may be measured either by a direct price comparison or by conversion of an instrument price into a yield. The range of 0–101 points represents the range of prices derived from reference issuances of a similar credit quality used in measuring fair value for loans classified as Level 3. Loans priced at 0 are distressed to the point that no recovery is expected, while a current price of 101 represents a loan that is expected to be repaid in full, and also pays a yield marginally higher than market yield. The portfolio is distributed at both the very low end and the very high end of the disclosed range with a weighted average of approximately 96 points.

Credit spread: Valuation models for many credit derivatives require an input for the credit spread, which is a reflection of the credit quality of the associated referenced underlying. The credit spread of a particular security is quoted in relation to the yield on a benchmark security or reference rate, typically either US Treasury or LIBOR, and is generally expressed in terms of basis points. An increase/(decrease) in credit spread will increase/(decrease) the value of credit protection offered by CDS and other credit derivative products. The impact on the results of the Group of such changes depend on the nature and direction of the positions held. Credit spreads may be negative where the asset is more creditworthy than the benchmark against which the spread is calculated. A wider credit spread represents decreasing creditworthiness. The ranges of 25–268 basis points in loans and 1–1,666 basis points in credit derivatives represents a diverse set of underlyings, with the lower end of the range representing credits of the highest quality (e.g., approximating the risk of LIBOR) and the upper end of the range representing greater levels of credit risk.

Constant prepayment rate: A prepayment rate represents the amount of unscheduled principal repayment for a pool of loans. The prepayment estimate is based on a number of factors, such as historical prepayment rates for previous loans that are similar pool loans and the future economic outlook, considering factors including, but not limited to, future interest rates. In general, a significant increase (decrease) in this unobservable input in isolation would result in a significantly higher (lower) fair value for bonds trading at a discount. For bonds trading at a premium the reverse would apply, with a decrease in fair value when the constant prepayment rate increases. However, in certain cases the effect of a change in prepayment speed upon instrument price is more complicated and is dependent upon both the precise terms of the securitization and the position of the instrument within the securitization capital structure.

For asset-backed securities, the range of 0–18% represents inputs across various classes of asset-backed securities. Securities with an input of 0% typically reflect no current prepayment behavior within their underlying collateral with no expectation of this changing in the immediate future, while the high range of 18% relates to securities that are currently experiencing high prepayments. Different classes of asset-backed securities typically show different ranges of prepayment characteristics depending on a combination of factors, including the borrowers' ability to refinance, prevailing refinancing rates, and the quality or characteristics of the underlying loan collateral pools. The weighted average constant prepayment rate for the portfolio is 5%.

For credit derivatives, the range of 0–15% represents the input assumption for credit derivatives on asset-backed securities. The range is driven in a similar manner to that for asset-backed securities.

For FX contracts and interest rate contracts, the ranges of 0–13% and 0–3%, respectively, represent the prepayment assumptions on securitizations underlying the BGS portfolio. This portfolio is less diverse than other asset-backed securities portfolios and the range of prepayment speed is therefore narrower.

Constant default rate (CDR): The CDR represents the percentage of outstanding principal balances in the pool that are projected to default and liquidate and is the annualized rate of default for a group of mortgages or loans. The CDR estimate is based on a number of factors, such as collateral delinquency rates in the pool and the future economic outlook. In general, a significant increase (decrease) in this unobservable input in isolation would result in significantly lower (higher) cash flows for the deal (and thus lower (higher) valuations). However, different instruments within the capital structure can react differently to changes in the CDR rate. Generally, subordinated bonds will decrease in value as CDR increases, but for well-protected senior bonds an increase in CDR may cause an increase in price. In addition, the presence of a guarantor wrap on the collateral pool of a security may result in notes at the junior end of the capital structure experiencing a price increase with an increase in the default rate.

The ranges of 0–10% for asset-backed securities and 0–8% for credit derivatives represent the expected default percentage

1 The ranges of significant unobservable inputs are represented in points, percentages and basis points. Points are a percentage of par. For example, 100 points would be 100% of par. 2 The range of inputs is not disclosed due to the dispersion of possible values given the diverse nature of the investments. 3 Valuation techniques, significant unobservable inputs and the respective input ranges for structured debt instruments and non-structured fixed-rate bonds are the same as the equivalent derivative or structured financing instruments presented elsewhere in this table. 4 Non-financial assets include investment properties at fair value and other assets which primarily consist of assets held for sale.

Note 10 Fair value measurement (continued)

across the individual instruments' underlying collateral pools. For asset-backed securities, the weighted average CDR is 6%.

Loss severity/recovery rate: The projected loss severity/recovery rate reflects the estimated loss that will be realized given expected defaults. Loss severity is generally applied to collateral within asset-backed securities while the recovery rate is the analogous pricing input for corporate or sovereign credits. Recovery is the reverse of loss severity, so a 100% recovery rate is the equivalent of a 0% loss severity. Increases in loss severity levels/decreases in recovery rates will result in lower expected cash flows into the structure upon the default of the instruments. In general, a significant decrease (increase) in the loss severity in isolation would result in significantly higher (lower) fair value for the respective asset-backed securities. The impact of a change in recovery rate on a credit derivative position will depend upon whether credit protection has been bought or sold.

Loss severity is ultimately driven by the value recoverable from collateral held after foreclosure occurs relative to the loan principal and possibly unpaid interest accrued at that point. The range of 0–100% for asset-backed securities represents the different quality and nature of collateral within the asset-backed securities portfolio. The weighted average loss severity is 75%. For credit derivatives, the loss severity range of 0–100% applies to derivatives on asset-backed securities and is broadly similar to the range for cash positions held. The recovery rate range of 0–95% represents a wide range of expected recovery levels on credit derivative contracts within the Level 3 portfolio.

Discount margin (DM) spread: The DM spread represents the discount rates used to present value cash flows of an asset to reflect the market return required for uncertainty in the estimated cash flows. DM spreads are a rate or rates applied on top of a floating index (e.g., LIBOR) to discount expected cash flows. Generally, a decrease (increase) in the unobservable input in isolation would result in a significantly higher (lower) fair value.

The different ranges represent the different discount rates across loans (1–15%), asset-backed securities (1–37%) and credit derivatives (0–37%). The high end of the range relates to securities that are priced very low within the market relative to the expected cash flow schedule and there is significant discounting relative to the expected cash flow schedule. This indicates that the market is pricing an increased risk of credit loss into the security that is greater than what is being captured by the expected cash flow generation process. The low ends of the ranges are typical of funding rates on better quality instruments. For asset-backed securities, the weighted average DM is 7%. For loans, the average effective DM is 1.70% compared with the disclosed range of 1–15%.

Equity dividend yields: The derivation of a forward price for an individual stock or index is important both for measuring fair value for forward or swap contracts and for measuring fair value using option pricing models. The relationship between the current stock price and the forward price, is based on a combination of expected future dividend levels and payment timings, and, to a lesser extent, the relevant funding rates applicable to the stock in question. Dividend yields are generally expressed as an annualized percentage of share price with the lowest limit of 0% representing a stock that is not expected to pay any dividend. The dividend yield and timing represents the most significant parameter in determining fair value for instruments that are sensitive to an equity forward price. The range of 0–11% reflects the expected range of dividend rates for the portfolio.

Volatility: Volatility measures the variability of future prices for a particular instrument and is generally expressed as a percentage, where a higher number reflects a more volatile instrument for which future price movements are more likely to occur. The minimum level of volatility is 0% and there is no theoretical maximum. Volatility is a key input into option models, where it is used to derive a probability-based distribution of future prices for the underlying instrument. The effect of volatility on individual positions within the portfolio is driven primarily by whether the option contract is a long or short position. In most cases, the fair value of an option increases as a result of an increase in volatility and is reduced by a decrease in volatility. Generally, volatility used in the measurement of fair value is derived from active market option prices (referred to as "implied" volatility). A key feature of implied volatility is the volatility "smile" or "skew," which represents the effect of pricing options of different option strikes at different implied volatility levels.

- Volatility of interest rates – the range of 11–68% reflects the range of unobservable volatilities across different currencies and related underlying interest rate levels. Volatilities of low interest rates tend to be much higher than volatilities of high interest rates. In addition, different currencies may have significantly different implied volatilities.
- Volatility of foreign exchange – the range of 5–18% reflects differences across various FX rates.
- Volatility of equity stocks, equity and other indices – the range of 2–83% is reflective of the range of underlying stock volatilities.
- Volatility of mortality – the range of 21–158% represents mortality volatility assumptions for different components of the mortality contingent loan portfolio. The range in volatility inputs is driven by different characteristics of contracts within the portfolio. An increase in volatility will cause an increase in loan value as the notional drawn will tend to increase.

Note 10 Fair value measurement (continued)

Correlation: Correlation measures the inter-relationship between the movements of two variables. It is expressed as a percentage between –100% and +100% where +100% are perfectly correlated variables (meaning a movement of one variable is associated with a movement of the other variable in the same direction), and –100% are inversely correlated variables (meaning a movement of one variable is associated with a movement of the other variable in the opposite direction). The effect of correlation on the measurement of fair value is dependent on the specific terms of the instruments being valued, due to the range of different payoff features within such instruments.

- Rate-to-rate correlation – the correlation between interest rates of two separate currencies. The range of 84–94% results from the different pairs of currency involved.
- Intra-curve correlation – the correlation between different tenor points of the same yield curve. Correlations are typically fairly high, as reflected by the range of 50–94%.
- Credit index correlation of 10–90% reflects the implied correlation derived from different indices across different parts of the benchmark index capital structure. The input is particularly important for bespoke and Level 3 index tranches.
- Credit pair correlation is particularly important for FTD credit structures. The range of 42–92% reflects the difference between credits with low correlation and similar highly correlated credits.
- Rate-to-FX correlation – captures the correlation between interest rates and FX rates. The range for the portfolio is (71)–60%, which represents the relationship between interest rates and foreign exchange levels. The signage on such correlations is dependent on the quotation basis of the underlying FX rate (e.g., EUR/USD and USD/EUR correlations to the same interest rate will have opposite signs).
- FX-to-FX correlation is particularly important for complex options that incorporate different FX rates in the projected payoff. The range of (83)–80% reflects the underlying characteristics across the main FX pairs to which the Group has exposures.
- Equity-to-equity correlation is particularly important for complex options that incorporate, in some manner, different equities in the projected payoff. The closer the correlation is to 100%, the more related one equity is to another. For example, equities with a very high correlation could be from different parts of the same corporate structure. The range of 12–98% is reflective of this.
- Equity-to-FX correlation is important for equity options based on a currency different to the currency of the underlying stock. The range of (42)–79% represents the range of the relationship between underlying stock and foreign exchange volatilities.

Funding spread: Structured financing transactions are valued using synthetic funding curves that best represent the assets that are pledged as collateral to the transactions. They are not representative of where the Group can fund itself on an unsecured basis, but provide an estimate of where the Group can source and deploy secured funding with counterparties for a given type of collateral. The funding spreads are expressed in terms of basis points over or under LIBOR and if funding spreads widen this increases the impact of discounting. The range of 10–163 basis points for both structured repurchase agreements and structured reverse repurchase agreements represents the range of asset funding curves, where wider spreads are due to a reduction in liquidity of underlying collateral for funding purposes.

A small proportion of structured debt instruments and non-structured fixed-rate bonds within financial liabilities designated at fair value has an exposure to funding spreads that is longer in duration than the actively traded market. Such positions are within the range of 10–163 basis points reported above.

Upfront price points: A component in the price quotation of credit derivative contracts, whereby the overall fair value price level is split between the credit spread (basis points running over the life of the contract as described above) and a component that is quoted and settled upfront on transacting a new contract. This latter component is referred to as upfront price points and represents the difference between the credit spread paid as protection premium on a current contract versus a small number of standard contracts defined by the market. Distressed credit names frequently trade and quote CDS protection only in upfront points rather than as a running credit spread. An increase/(decrease) in upfront points will increase/(decrease) the value of credit protection offered by CDS and other credit derivative products. The effect on the results of the Group of increases or decreases in upfront price points depends on the nature and direction of the positions held. Upfront pricing points may be negative where a contract is quoting for a narrower premium than the market standard, but are generally positive, reflecting an increase in credit premium required by the market as creditworthiness deteriorates. The range of (12)–93% within the table above represents the variety of current market credit spread levels relative to the benchmarks used as a quotation basis. Upfront points of (12)% reflect an instrument that is trading with a tighter credit spread than the underlying quotation instrument, while upfront points of 93% represent a distressed credit.

Note 10 Fair value measurement (continued)

i) Sensitivity of fair value measurements to changes in unobservable input assumptions

The table below summarizes those financial assets and liabilities classified as Level 3 for which a change in one or more of the unobservable inputs to reflect reasonably possible alternative assumptions would change fair value significantly, and the estimated effect thereof. As of 31 March 2014, the total favorable and unfavorable effects of changing one or more of the unobservable inputs to reflect reasonably possible alternative assumptions for financial instruments classified as Level 3 were CHF 1.3 billion and CHF 1.1 billion, respectively (31 December 2013: CHF 1.2 billion and CHF 1.1 billion, respectively).

The table shown presents the favorable and unfavorable effects for each class of financial assets and liabilities for which the potential change in fair value is considered significant. The sensitivity data presented represents an estimation of valuation uncertainty based on reasonably possible alternative values for Level 3 inputs at the balance sheet date and does not represent the estimated effect of stress scenarios. Typically, these financial assets and liabilities are sensitive to a combination of inputs from Levels 1–3. Although well-defined interdependencies may exist between Levels 1–2 and Level 3 parameters (e.g., between interest rates, which are generally Level 1 or Level 2, and prepayments, which are generally Level 3), these have not been incorporated in the table. Further, direct inter-relationships between the Level 3 parameters discussed below are not a significant element of the valuation uncertainty.

Sensitivity data is estimated using a number of techniques including the estimation of price dispersion among different market participants, variation in modeling approaches and reasonably possible changes to assumptions used within the fair value measurement process. The sensitivity ranges are not always symmetrical around the fair values as the inputs used in valuations are not always precisely in the middle of the favorable and unfavorable range.

Sensitivity data is determined at a product or parameter level and then aggregated assuming no diversification benefit. The calculated sensitivity is applied to both the outright position and any related Level 3 hedges. The main interdependencies across different Level 3 products to a single unobservable input parameter have been included in the basis of netting exposures within the calculation. Aggregation without allowing for diversification involves the simple summation of individual results with, the total sensitivity therefore representing the impact of all unobservable inputs which, if moved to a reasonably possible favorable or unfavorable level at the same time, would result in a significant change in the valuation. Diversification would incorporate estimated correlations across different sensitivity results and, as such, would result in an overall sensitivity that would be less than the sum of the individual component sensitivities. The Group believes that, while there are diversification benefits within the portfolios representing these sensitivity numbers, they are not significant to this analysis.

Sensitivity of fair value measurements to changes in unobservable input assumptions

	31.3.14		31.12.13	
CHF million	**Favorable changes[1]**	**Unfavorable changes[1]**	Favorable changes[1]	Unfavorable changes[1]

Total	**1,275**	**(1,060)**	1,229	(1,094)

1 Of the total favorable change, CHF 144 million as of 31 March 2014 (31 December 2013: CHF 154 million) related to financial investments available-for-sale. Of the total unfavorable change, CHF 149 million as of 31 March 2014 (31 December 2013: CHF 159 million) related to financial investments available-for-sale.

Note 10 Fair value measurement (continued)

j) Deferred day-1 profit or loss

As explained above, for new transactions resulting in a financial instrument classified as Level 3, the financial instrument is initially recognized at the transaction price. The transaction price may differ from the fair value obtained using a valuation technique, and any such difference is deferred and not recognized in the income statement and referred to as deferred day-1 profit or loss. The table below reflects the activity in deferred day-1 profit or loss for these financial instruments, including the aggregate difference yet to be recognized in the income statement at the beginning and end of the reporting period and a reconciliation of changes during the reporting period. Amounts deferred are released and gains or losses are recorded in Net trading income when pricing of equivalent products or the underlying parameters become observable or when the transaction is closed out.

Deferred day-1 profit or loss

	For the quarter ended		
CHF million	31.3.14	31.12.13	31.3.13
Balance at the beginning of the period	**486**	494	474
Profit / (loss) deferred on new transactions	103	60	424
(Profit) / loss recognized in the income statement	(70)	(57)	(433)
Foreign currency translation	(5)	(11)	19
Balance at the end of the period	**514**	486	483

k) Financial instruments not measured at fair value

The following table reflects the estimated fair values and the fair value hierarchy for UBS's financial instruments not measured at fair value.

Financial instruments not measured at fair value

	31.3.14		31.12.13	
CHF billion	Carrying value	Fair value	Carrying value	Fair value
Assets				
Cash and balances with central banks	87.5	87.5	80.9	80.9
Due from banks	19.7	19.7	17.2	17.2
Cash collateral on securities borrowed	30.1	30.1	27.5	27.5
Reverse repurchase agreements	80.6	80.6	91.6	91.6
Cash collateral receivables on derivative instruments	25.8	25.8	28.3	28.3
Loans	294.8	297.4	287.0	289.3
Other assets	19.3	19.1	17.6	17.4
Liabilities				
Due to banks	14.1	14.1	12.9	12.9
Cash collateral on securities lent	13.4	13.4	9.5	9.5
Repurchase agreements	17.7	17.7	13.8	13.8
Cash collateral payables on derivative instruments	46.7	46.7	49.5	49.5
Due to customers	388.8	388.8	390.8	390.8
Debt issued	76.7	79.6	81.4	84.0
Other liabilities	41.7	41.7	39.5	39.5
Guarantees / Loan commitments				
Guarantees[1]	0.1	(0.1)	0.1	(0.1)
Loan commitments[2]	0.0	0.1	0.0	0.1

1 The carrying value of guarantees represented a liability of CHF 0.1 billion as of 31 March 2014 (31 December 2013: CHF 0.1 billion). The estimated fair value of guarantees represented an asset of CHF 0.1 billion as of 31 March 2014 (31 December 2013: CHF 0.1 billion). 2 The carrying value of loan commitments represented a liability of CHF 0.0 billion as of 31 March 2014 (31 December 2013: CHF 0.0 billion). The estimated fair value of loan commitments represented a liability of CHF 0.1 billion as of 31 March 2014 (31 December 2013: CHF 0.1 billion).

Note 10 Fair value measurement (continued)

The fair values included in the table on the previous page were calculated for disclosure purposes only. The fair value valuation techniques and assumptions described below relate only to the fair value of UBS's financial instruments not measured at fair value. Other institutions may use different methods and assumptions for their fair value estimation, and therefore such fair value disclosures cannot necessarily be compared from one financial institution to another. UBS applies significant judgments and assumptions to arrive at these fair values, which are more holistic and less sophisticated than UBS's established fair value and model governance policies and processes applied to financial instruments accounted for at fair value whose fair values impact UBS's balance sheet and net profit. The following principles were applied when determining fair value estimates for financial instruments not measured at fair value:

- For financial instruments with remaining maturities greater than three months, the fair value was determined from quoted market prices, if available.
- Where quoted market prices were not available, the fair values were estimated by discounting contractual cash flows using current market interest rates or appropriate yield curves for instruments with similar credit risk and maturity. These estimates generally include adjustments for counterparty credit or UBS's own credit.
- For short-term financial instruments with remaining maturities of three months or less, the carrying amount, which is net of credit loss allowances, is generally considered a reasonable estimate of fair value. The following financial instruments not measured at fair value have remaining maturities of three months or less as of 31 March 2014: 100% of cash and balances with central banks, 91% of amounts due from banks, 100% of cash collateral on securities borrowed, 89% of reverse repurchase agreements, 100% of cash collateral receivables on derivatives, 55% of loans, 92% of amounts due to banks, 96% of cash collateral on securities lent, 93% of repurchase agreements, 100% of cash collateral payable on derivatives, 99% of amount due to customers and 21% of debt issued.
- The fair value estimates for repurchase and reverse repurchase agreements with variable and fixed interest rates, for all maturities, include the valuation of the interest rate component of these instruments. Credit and debit valuation adjustments have not been included in the valuation due to the short-term nature of these instruments.
- The estimated fair values of off-balance sheet financial instruments are based on market prices for similar facilities and guarantees. Where this information is not available, fair value is estimated using discounted cash flow analysis.

Note 11 Derivative instruments[1]

1 Bifurcated embedded derivatives are presented on the same balance sheet line as the host contract and are excluded from the table. As of 31 March 2014, these derivatives amounted to a PRV of CHF 0.2 billion (related notional values of CHF 7.1 billion) and an NRV of CHF 0.3 billion (related notional values of CHF 13.0 billion). As of 31 December 2013, bifurcated embedded derivatives amounted to a PRV of CHF 0.2 billion (related notional values of CHF 6.7 billion) and an NRV of CHF 0.4 billion (related notional values of CHF 12.8 billion). 2 In cases where replacement values are presented on a net basis on the balance sheet, the respective notional values of the netted replacement values are still presented on a gross basis. 3 Other notional values relate to derivatives which are cleared through either a central clearing counterparty or an exchange. The fair value of these derivatives is presented on the balance sheet net of the corresponding cash margin under Cash collateral receivables on derivative instruments and Cash collateral payables on derivatives instruments and were not material for all periods presented. 4 Changes in the fair value of purchased and sold non-derivative financial assets between trade date and settlement date are recognized as replacement values. 5 Includes agency transactions and OTC derivatives cleared for clients with a central counterparty with a combined PRV of CHF 6.1 billion as of 31 March 2014 (31 December 2013: CHF 5.7 billion) and a combined NRV of CHF 6.4 billion as of 31 March 2014 (31 December 2013: CHF 5.9 billion) for which notional values were not included in the table above due to their significantly different risk profile. 6 Includes the impact of netting agreements (including cash collateral) in accordance with Swiss Federal Banking law. 7 In 2014, certain figures for 31 December 2013 were restated upon the adoption of the amendments to IAS 32. Both PRV and NRV for Interest rate contracts, Credit derivative contracts and Equity / index contracts were increased by approximately CHF 1 billion, CHF 5 billion and CHF 3 billion, respectively. There was no impact on the line "Total derivative instruments, based on capital adequacy netting." Refer to Note 1 "Basis of accounting" for more information on the adoption of the amendments to IAS 32.

Note 12 Offsetting financial assets and financial liabilities

UBS enters into netting agreements with counterparties to manage the credit risks associated primarily with repurchase and reverse repurchase transactions, securities borrowing and lending and over-the-counter and exchange-traded derivatives. These netting agreements and similar arrangements generally enable the counterparties to set-off liabilities against available assets received – in the ordinary course of business and/or in the event that the counterparty to the transaction is unable to fulfill its contractual obligations. The right of set-off is a legal right to settle or otherwise eliminate all or a portion of an amount due by applying an amount receivable from the same counterparty against it, thus reducing credit exposure.

On 1 January 2014, the Group adopted *Offsetting Financial Assets and Financial Liabilities* (Amendments to IAS 32, *Financial Instruments: Presentation).* Under the revised rules, the Group is no longer able to offset certain derivative arrangements. Refer to Note 1 for more information. The prior period offsetting disclosure as of 31 December 2013 presented on the following page was restated to reflect the effects of adopting these amendments.

The table on the following page provides a summary of financial assets subject to offsetting, enforceable master netting arrangements and similar agreements, as well as financial collateral received to mitigate credit exposures for these financial assets. The gross financial assets of the Group that are subject to offsetting, enforceable netting arrangements and similar agreements are reconciled to the net amounts presented within the associated balance sheet line, after giving effect to financial liabilities with the same counterparties that have been offset on the balance sheet and other financial assets not subject to an enforceable netting arrangement or similar agreement. Further, related amounts for financial liabilities and collateral received that are not offset on the balance sheet are shown to arrive at financial assets after consideration of netting potential.

The Group engages in a variety of counterparty credit mitigation strategies in addition to netting and collateral arrangements. Therefore, the net amounts presented in the tables on the next pages do not purport to represent the Group's actual credit exposure.

Note 12 Offsetting financial assets and financial liabilities (continued)

Financial assets subject to offsetting, enforceable master netting arrangements and similar agreements

Financial assets designated at fair value	3.9	0.0	**3.9**	0.0	(3.9)	0.1	**3.4**	**7.4**
Total assets	**606.4**	**(224.3)**	**382.0**	**(213.9)**	**(146.4)**	**21.8**	**26.7**	**408.8**

1 The net amount of Cash collateral receivables on derivative instruments recognized on the balance sheet includes certain OTC derivatives which are in substance net settled on a daily basis under IAS 32 and ETD derivatives which are economically settled on a daily basis. In addition, this balance includes OTC and ETD cash collateral balances which correspond with the cash portion of collateral pledged, reflected on the Negative replacement values line in the table presented on the following page. 2 The logic of the table results in amounts presented in the "Balance sheet netting with gross liabilities" column corresponding directly to the amounts presented in the "Balance sheet netting with gross assets" column in the liabilities table presented on the following page. 3 For the purpose of this disclosure, the amounts of financial instruments and cash collateral not set off in the balance sheet have been capped by relevant netting agreement so as not to exceed the net amount of financial assets presented on the balance sheet, i.e., over-collateralization, where it exists, is not reflected in the table. 4 In 2014, certain figures for 31 December 2013 were restated upon the adoption of the amendments to IAS 32. This restatement resulted primarily in an increase in total "Assets recognized on the balance sheet, net" by approximately CHF 8 billion and a corresponding increase in "Netting potential not recognized in the balance sheet", within "Financial liabilities." Accordingly, there was no impact on total ''Assets after consideration of netting potential". Refer to Note 1 "Basis of accounting" for more information on the adoption of the amendments to IAS 32.

Note 12 Offsetting financial assets and financial liabilities (continued)

Financial liabilities subject to offsetting, enforceable master netting arrangements and similar agreements

1 Prime brokerage services include clearance, settlement, custody, financing and portfolio reporting services for corporate clients trading across multiple asset classes. Prime brokerage receivables are mainly comprised of margin lending receivables. Prime brokerage payables are mainly comprised of client securities financing and deposits.

Note 14 Provisions and contingent liabilities

a) Provisions

CHF million	Operational risks[1]	Litigation, regulatory and similar matters[2]	Restructuring	Loan commitments and guarantees	Real estate	Employee benefits	Other	Total provisions
Balance as of 31 December 2013	45	1,622	658	61	157	222	205	**2,971**
Increase in provisions recognized in the income statement	6	203	135	0	2	2	16	**364**
Release of provisions recognized in the income statement	0	(15)	(10)	(1)	0	(1)	(4)	**(32)**
Provisions used in conformity with designated purpose	(6)	(24)	(52)	0	(6)	(2)	(5)	**(94)**
Capitalized reinstatement costs	0	0	0	0	(1)	0	0	**(1)**
Reclassifications	0	0	0	(2)	0	0	0	**(2)**
Foreign currency translation / unwind of discount	1	(7)	(2)	0	1	1	1	**(6)**
Balance as of 31 March 2014	47	1,778	729[3]	58	153[4]	222[5]	213	**3,200**

1 Comprises provisions for losses resulting from security risks and transaction processing risks. 2 Comprises provisions for losses resulting from legal, liability and compliance risks. 3 Includes personnel-related restructuring provisions of CHF 178 million as of 31 March 2014 (31 December 2013: CHF 104 million) and provisions for onerous lease contracts of CHF 550 million as of 31 March 2014 (31 December 2013: CHF 554 million). 4 Includes reinstatement costs for leasehold improvements of CHF 94 million as of 31 March 2014 (31 December 2013: CHF 95 million), provisions for onerous lease contracts of CHF 59 million as of 31 March 2014 (31 December 2013: CHF 62 million). 5 Includes provisions for sabbatical and anniversary awards as well as provisions for severance which are not part of restructuring provisions.

Restructuring provisions primarily relate to onerous lease contracts and severance amounts. The utilization of onerous lease provisions is driven by the maturities of the underlying lease contracts, which cover a period of up to 11 years. Severance related provisions are utilized within a short time period, usually within six months, but potential changes in amount may be triggered when natural staff attrition reduces the number of people affected by a restructuring and therefore the estimated costs.

Information on provisions and contingent liabilities in respect of Litigation, regulatory and similar matters, as a class, is included in Note 14b. There are no material contingent liabilities associated with the other classes of provisions.

b) Litigation, regulatory and similar matters

The Group operates in a legal and regulatory environment that exposes it to significant litigation and similar risks arising from disputes and regulatory proceedings. As a result, UBS (which for purposes of this note may refer to UBS AG and/or one or more of its subsidiaries, as applicable) is involved in various disputes and legal proceedings, including litigation, arbitration, and regulatory and criminal investigations.

Such matters are subject to many uncertainties and the outcome is often difficult to predict, particularly in the earlier stages of a case. There are also situations where the Group may enter into a settlement agreement. This may occur in order to avoid the expense, management distraction or reputational implications of continuing to contest liability, even for those matters for which the Group believes it should be exonerated. The uncertainties inherent in all such matters affect the amount and timing of any potential outflows for both matters with respect to which provisions have been established and other contingent liabilities. The Group makes provisions for such matters brought against it when, in the opinion of management after seeking legal advice, it is more likely than not that the Group has a present legal or constructive obligation as a result of past events, it is probable that an outflow of resources will be required, and the amount can be reliably estimated. If any of those conditions is not met, such matters result in contingent liabilities.

Specific litigation, regulatory and other matters are described below, including all such matters that management considers to be material and others that management believes to be of significance due to potential financial, reputational and other effects. The amount of damages claimed, the size of a transaction or other information is provided where available and appropriate in order to assist users in considering the magnitude of potential exposures.

In the case of certain matters below, we state that we have established a provision, and for the other matters we make no such statement. When we make this statement and we expect disclosure of the amount of a provision to prejudice seriously our position with other parties in the matter, because it would reveal what UBS believes to be the probable and reliably estimable outflow, we do not disclose that amount. In some cases we are subject to confidentiality obligations that preclude such disclosure. With respect to the matters for which we do not state whether we have established a provision, either (a) we have not established a provision, in which case the matter is treated as a contingent liability under the applicable accounting standard or (b) we have established a provision but expect disclosure of that fact to prejudice seriously our position with other parties in the matter because it would reveal the fact that UBS believes an outflow of resources to be probable and reliably estimable.

Note 14 Provisions and contingent liabilities (continued)

With respect to certain litigation, regulatory and similar matters as to which we have established provisions, we are able to estimate the expected timing of outflows. However, the aggregate amount of the expected outflows for those matters for which we are able to estimate expected timing is immaterial relative to our current and expected levels of liquidity over the relevant time periods.

The aggregate amount provisioned for litigation, regulatory and similar matters as a class is disclosed in Note 14a above. It is not practicable to provide an aggregate estimate of liability for our litigation, regulatory and similar matters as a class of contingent liabilities. Doing so would require us to provide speculative legal assessments as to claims and proceedings that involve unique fact patterns or novel legal theories, which have not yet been initiated or are at early stages of adjudication, or as to which alleged damages have not been quantified by the claimants. Although we therefore cannot provide a numerical estimate of the future losses that could arise from the class of litigation, regulatory and similar matters, we can confirm that we believe that the aggregate amount of possible future losses from this class that are more than remote substantially exceeds the level of current provisions.

The risk of loss associated with litigation, regulatory and similar matters is a component of operational risk for purposes of determining our capital requirements. Information concerning our capital requirements and the calculation of operational risk for this purpose is included in the "Capital management" and "Risk management and control" sections of this report.

Provisions for litigation, regulatory and similar matters by segment[1]

CHF million	Wealth Management	Wealth Management Americas	Retail & Corporate	Global Asset Management	Investment Bank	CC – Core Functions	CC – Non-core and Legacy Portfolio	UBS

1 Provisions, if any, for the matters described in (a) item 4 of this Note 14b are recorded in Wealth Management, (b) item 7 of this Note 14b are recorded in Wealth Management Americas, (c) item 11 of this Note 14b are recorded in the Investment Bank, (d) items 3 and 10 of this Note 14b are recorded in Corporate Center – Core Functions and (e) items 2 and 6 of this Note 14b are recorded in Corporate Center – Non-core and Legacy Portfolio. Provisions for the matters described in items 1 and 9 of this Note 14b are allocated between Wealth Management and Retail & Corporate, provisions for the matter described in item 5 of this Note 14b are allocated between the Investment Bank and Corporate Center – Non-core and Legacy Portfolio, and provisions for the matter described in item 8 of this Note 14b are allocated between the Investment Bank and Corporate Center – Core Functions.

1. Inquiries regarding cross-border wealth management businesses

Following the disclosure and the settlement of the US cross-border matter, tax and regulatory authorities in a number of countries have made inquiries and served requests for information located in their respective jurisdictions relating to the cross-border wealth management services provided by UBS and other financial institutions. As a result of investigations in France, in May and June 2013, respectively, UBS (France) S.A. and UBS AG were put under formal examination *("mise en examen")* for complicity in having illicitly solicited clients on French territory, and were declared witness with legal assistance *("témoin assisté")* regarding the laundering of proceeds of tax fraud and of banking and financial solicitation by unauthorized persons. Separately, in June 2013, the French banking supervisory authority's disciplinary commission reprimanded UBS (France) S.A. for having had insufficiencies in its control and compliance framework around its cross-border activities and "know your customer" obligations. It imposed a penalty of EUR 10 million, and a provision in that amount is reflected on our balance sheet at 31 March 2014. In Germany, several authorities have been conducting investigations against UBS Deutschland AG, UBS AG, and against certain employees of these entities concerning certain matters relating to our cross-border business. UBS is cooperating with these authorities within the limits of financial privacy obligations under Swiss and other applicable laws. Settlement discussions are ongoing with respect to the German investigations.

2. Claims related to sales of residential mortgage-backed securities and mortgages

From 2002 through 2007, prior to the crisis in the US residential loan market, UBS was a substantial issuer and underwriter of US residential mortgage-backed securities (RMBS) and was a purchaser and seller of US residential mortgages. A subsidiary of UBS, UBS Real Estate Securities Inc. (UBS RESI), acquired pools of residential mortgage loans from originators and (through an affiliate) deposited them into securitization trusts. In this manner, from 2004 through 2007, UBS RESI sponsored approximately USD 80 billion in RMBS, based on the original principal balances of the securities issued.

Note 14 Provisions and contingent liabilities (continued)

UBS RESI also sold pools of loans acquired from originators to third-party purchasers. These whole loan sales during the period 2004 through 2007 totaled approximately USD 19 billion in original principal balance.

We were not a significant originator of US residential loans. A subsidiary of UBS originated approximately USD 1.5 billion in US residential mortgage loans during the period in which it was active from 2006 to 2008, and securitized less than half of these loans.

Securities lawsuits concerning disclosures in RMBS offering documents: UBS is named as a defendant relating to its role as underwriter and issuer of RMBS in a large number of lawsuits related to approximately USD 13 billion in original face amount of RMBS underwritten or issued by UBS. Some of the lawsuits are in their early stages and have not advanced beyond the motion to dismiss phase; others are in varying stages of discovery. Of the USD 13 billion in original face amount of RMBS that remains at issue in these cases, approximately USD 3 billion was issued in offerings in which a UBS subsidiary transferred underlying loans (the majority of which were purchased from third-party originators) into a securitization trust and made representations and warranties about those loans (UBS-sponsored RMBS). The remaining USD 10 billion of RMBS to which these cases relate was issued by third parties in securitizations in which UBS acted as underwriter (third-party RMBS).

In connection with certain of these lawsuits, UBS has indemnification rights against surviving third-party issuers or originators for losses or liabilities incurred by UBS, but UBS cannot predict the extent to which it will succeed in enforcing those rights. A class action settlement by a third-party issuer received final approval by the district court in 2013. The settlement reduced the original face amount of RMBS at issue in these cases from USD 37 billion to USD 13 billion, and the original face amount of RMBS at issue in cases involving third-party issuers from USD 34 billion to USD 10 billion, as noted above. The third-party issuer will fund the settlement at no cost to UBS. In January 2014, certain objectors to the settlement filed a notice of appeal from the district court's approval of the settlement.

Loan repurchase demands related to sales of mortgages and RMBS: When UBS acted as an RMBS sponsor or mortgage seller, we generally made certain representations relating to the characteristics of the underlying loans. In the event of a material breach of these representations, we were in certain circumstances contractually obligated to repurchase the loans to which they related or to indemnify certain parties against losses. UBS has received demands to repurchase US residential mortgage loans as to which UBS made certain representations at the time the loans were transferred to the securitization trust. We have been notified by certain institutional purchasers and insurers of mortgage loans and RMBS of their contention that possible breaches of representations may entitle the purchasers to require that UBS repurchase the loans or to other relief. The table "Loan repurchase demands by year received – original principal balance of loans" summarizes repurchase demands received by UBS and UBS's repurchase activity from 2006 through 29 April 2014. In the table, repurchase demands characterized as Demands resolved in litigation and Demands rescinded by counterparty are considered to be finally resolved. Repurchase demands in all other categories are not finally resolved.

Loan repurchase demands by year received – original principal balance of loans[1]

USD million	2006–2008	2009	2010	2011	2012	2013	2014, through 29 April	**Total**
Resolved demands								
Actual or agreed loan repurchases / make whole payments by UBS	12	1						**13**
Demands rescinded by counterparty	110	104	19	303	237			**773**
Demands resolved in litigation	1	21						**21**
Demands expected to be resolved by third parties								
Demands resolved or expected to be resolved through enforcement of indemnification rights against third-party originators		77	2	45	124	99	30	**377**
Demands in dispute								
Demands in litigation			346	732	1,041			**2,118**
Demands in review by UBS				2	2	3		**8**
Demands rebutted by UBS but not yet rescinded by counterparty		1	2	1	17	515	115	**651**
Total	122	205	368	1,084	1,421	618	145	**3,962**

1 Loans submitted by multiple counterparties are counted only once.

Note 14 Provisions and contingent liabilities (continued)

Payments that UBS has made or agreed to make to date to resolve repurchase demands equate to approximately 62% of the original principal balance of the related loans. Most of the payments that UBS has made or agreed to make to date have related to so-called "Option ARM" loans; severity rates may vary for other types of loans or for Option ARMs with different characteristics. Actual losses upon repurchase will reflect the estimated value of the loans in question at the time of repurchase as well as, in some cases, partial repayment by the borrowers or advances by servicers prior to repurchase. It is not possible to predict future losses upon repurchase for reasons including timing and market uncertainties.

In most instances in which we would be required to repurchase loans due to misrepresentations, we would be able to assert demands against third-party loan originators who provided representations when selling the related loans to UBS. However, many of these third parties are insolvent or no longer exist. We estimate that, of the total original principal balance of loans sold or securitized by UBS from 2004 through 2007, less than 50% was purchased from surviving third-party originators. In connection with approximately 60% of the loans (by original principal balance) for which UBS has made payment or agreed to make payment in response to demands received in 2010, UBS has asserted indemnity or repurchase demands against originators. Since 2011, UBS has advised certain surviving originators of repurchase demands made against UBS for which UBS would be entitled to indemnity, and has asserted that such demands should be resolved directly by the originator and the party making the demand.

We cannot reliably estimate the level of future repurchase demands, and do not know whether our rebuttals of such demands will be a good predictor of future rates of rebuttal. We also cannot reliably estimate the timing of any such demands.

Lawsuits related to contractual representations and warranties concerning mortgages and RMBS: In 2012, certain RMBS trusts filed an action in the Southern District of New York (Trustee Suit) seeking to enforce UBS RESI's obligation to repurchase loans in the collateral pools for three RMBS securitizations (Transactions) with an original principal balance of approximately USD 2 billion for which Assured Guaranty Municipal Corp. (Assured Guaranty), a financial guaranty insurance company, had previously demanded repurchase. Plaintiffs in the Trustee Suit have recently indicated that they intend to seek damages beyond the loan repurchase demands identified in the complaint, specifically for all loans purportedly in breach of any of the three Transactions. Discovery is ongoing. With respect to the loans subject to the Trustee Suit that were originated by institutions still in existence, UBS intends to enforce its indemnity rights against those institutions. Related litigation brought by Assured Guaranty was resolved in 2013.

In 2012, the FHFA, on behalf of Freddie Mac, filed a notice and summons in New York Supreme Court initiating suit against UBS RESI for breach of contract and declaratory relief arising from alleged breaches of representations and warranties in connection with certain mortgage loans and UBS RESI's alleged failure to repurchase such mortgage loans. The lawsuit seeks, among other relief, specific performance of UBS RESI's alleged loan repurchase obligations for at least USD 94 million in original principal balance of loans for which Freddie Mac had previously demanded repurchase; no damages are specified. In 2013, the Court dismissed the complaint for lack of standing, on the basis that only the RMBS trustee could assert the claims in the complaint, and the complaint was unclear as to whether the trustee was the plaintiff and had proper authority to bring suit. The trustee subsequently filed an amended complaint, which UBS moved to dismiss. The motion remains pending.

In 2013, Residential Funding Company LLC (RFC) filed a complaint in New York Supreme Court against UBS RESI asserting claims for breach of contract and indemnification in connection with loans purchased from UBS RESI with an original principal balance of at least USD 460 million that were securitized by an RFC affiliate. This is the first case filed against UBS seeking damages allegedly arising from the securitization of whole loans purchased from UBS. Damages are unspecified.

We also have tolling agreements with certain institutional purchasers of RMBS concerning their potential claims related to substantial purchases of UBS-sponsored or third-party RMBS.

As reflected in the table "Provisions for claims related to sales of residential mortgage-backed securities and mortgages", our balance sheet at 31 March 2014 reflected a provision of USD 819 million with respect to matters described in this item 2. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of this matter cannot be determined with certainty based on currently available information, and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

UBS has received requests from both the Special Inspector General for the Troubled Asset Relief Program (SIGTARP) (who is working in conjunction with the US Attorney's Office for Connecticut and the US Department of Justice, Criminal Division, Fraud Section) and the SEC for information relating to its practices in connection with purchases and sales of mortgage-backed securities. We are cooperating with the authorities in these matters,

Note 14 Provisions and contingent liabilities (continued)

which are in an early stage. Numerous other banks reportedly have received similar requests.

3. Claims related to UBS disclosure

A putative consolidated class action has been filed in the United States District Court for the Southern District of New York against UBS, a number of current and former directors and senior officers and certain banks that underwrote UBS's May 2008 Rights Offering (including UBS Securities LLC) alleging violation of the US securities laws in connection with UBS's disclosures relating to UBS's positions and losses in mortgage-related securities, UBS's positions and losses in auction rate securities, and UBS's US cross-border business. In 2011, the court dismissed all claims based on purchases or sales of UBS ordinary shares made outside the US, and, in 2012, the court dismissed with prejudice the remaining claims based on purchases or sales of UBS ordinary shares made in the US for failure to state a claim. Plaintiffs have appealed the court's decision. UBS, a number of senior officers and employees and various UBS committees have also been sued in a putative consolidated class action for breach of fiduciary duties brought on behalf of current and former participants in two UBS Employee Retirement Income Security Act (ERISA) retirement plans in which there were purchases of UBS stock. In 2011, the court dismissed the ERISA complaint. In 2012, the court denied plaintiffs' motion for leave to file an amended complaint. On appeal, the Second Circuit upheld the dismissal of all counts relating to one of the retirement plans. With respect to the second retirement plan, the Court upheld the dismissal of some of the counts, and vacated and remanded for further proceedings with regard to the counts alleging that defendants had violated their fiduciary duty to prudently manage the plan's investment options, as well as the claims derivative of that duty.

In 2012, a consolidated complaint was filed in a putative securities fraud class action pending in federal court in Manhattan against UBS AG and certain of its current and former officers relating to the unauthorized trading incident that occurred in the Investment Bank and was announced in September 2011. The lawsuit was filed on behalf of parties who purchased publicly traded UBS securities on any US exchange, or where title passed within the US, during the period 17 November 2009 through 15 September 2011. In 2013, the district court granted UBS's motion to dismiss the complaint in its entirety. Plaintiffs have filed a notice of appeal.

4. Madoff

In relation to the Bernard L. Madoff Investment Securities LLC (BMIS) investment fraud, UBS AG, UBS (Luxembourg) SA and certain other UBS subsidiaries have been subject to inquiries by a number of regulators, including the Swiss Financial Market Supervisory Authority (FINMA) and the Luxembourg Commission de Surveillance du Secteur Financier (CSSF). Those inquiries concerned two third-party funds established under Luxembourg law, substantially all assets of which were with BMIS, as well as certain funds established in offshore jurisdictions with either direct or indirect exposure to BMIS. These funds now face severe losses, and the Luxembourg funds are in liquidation. The last reported net asset value of the two Luxembourg funds before revelation of the Madoff scheme was approximately USD 1.7 billion in the aggregate, although that figure likely includes fictitious profit reported by BMIS. The documentation establishing both funds identifies UBS entities in various roles including custodian, administrator, manager, distributor and promoter, and indicates that UBS employees serve as board members. UBS (Luxembourg) SA and certain other UBS subsidiaries are responding to inquiries by Luxembourg investigating authorities, without however being named as parties in those investigations. In 2009 and 2010, the liquidators of the two Luxembourg funds filed claims on behalf of the funds against UBS entities, non-UBS entities and certain individuals including current and former UBS employees. The amounts claimed are approximately EUR 890 million and EUR 305 million, respectively. The liquidators have filed supplementary claims for amounts that the funds may possibly be held liable to pay the BMIS Trustee. These amounts claimed by the liquidator are approximately EUR 564 million and EUR 370 million, respectively. In addition, a large number of alleged beneficiaries have filed claims against UBS entities (and non-UBS entities) for purported losses relating to the Madoff scheme. The majority of these cases are pending in Luxembourg, where appeals have been filed by the claimants against the 2010 decisions of the court in which the claims in a number of test cases were held to be inadmissible. In the US, the BMIS Trustee has filed claims against UBS entities, among others, in relation to the two Luxembourg funds and one of the offshore funds. A claim was filed in 2010 against 23 defendants, including UBS entities, the Luxembourg and offshore funds concerned and various individuals, including current and former UBS employees. The total amount claimed against all defendants in this action was not less than USD 2 billion. A second claim was filed in 2010

Note 14 Provisions and contingent liabilities (continued)

against 16 defendants including UBS entities and the Luxembourg fund concerned. The total amount claimed against all defendants was not less than USD 555 million. Following a motion by UBS, in 2011, the District Court dismissed all of the BMIS Trustee's claims other than claims for recovery of fraudulent conveyances and preference payments that were allegedly transferred to UBS on the ground that the BMIS Trustee lacks standing to bring such claims. In 2013, the Second Circuit Court of Appeals rejected the BMIS Trustee's appeal against that ruling and upheld the District Court's decision. The BMIS Trustee has sought leave to appeal to the US Supreme Court, which has invited the Solicitor General of the United States to file a brief expressing the views of the United States as to whether review should be granted. In Germany, certain clients of UBS are exposed to Madoff-managed positions through third-party funds and funds administered by UBS entities in Germany. A small number of claims have been filed with respect to such funds.

5. Transactions with Italian public sector entities

A number of transactions that UBS Limited and UBS AG respectively entered into with public sector entity counterparties in Italy have been called into question or become the subject of legal proceedings and claims for damages and other awards. In Milan, in 2012, civil claims brought by the City of Milan against UBS Limited, UBS Italia SIM Spa and three other international banks in relation to a 2005 bond issue and associated derivatives transactions entered into with Milan between 2005 and 2007 were settled without admission of liability. In 2012, the criminal court in Milan issued a judgment convicting two current UBS employees and one former employee, together with employees from the three other banks, of fraud against a public entity in relation to the same bond issue and the execution, and subsequent restructuring, of the related derivative transactions. In the same proceedings, the Milan criminal court also found UBS Limited and three other banks liable for the administrative offense of failing to have in place a business organizational model capable of preventing the criminal offenses of which its employees were convicted. The sanctions against UBS Limited, which are not effective until appeals are exhausted, are confiscation of the alleged level of profit flowing from the criminal findings (EUR 16.6 million), a fine in respect of the finding of the administrative offense (EUR 1 million) and payment of legal fees. Our balance sheet at 31 March 2014 reflected a provision in the amount of EUR 17.7 million for this potential exposure. UBS Limited and the individuals appealed that judgment, and in March 2014, the Milan Court of Appeal handed down its judgment in short form. It overturned all findings of liability against UBS Limited and the convictions of the UBS individuals and acquitted them, stating that the conduct did not occur. The court indicated that it would issue a full judgment including the reasons for its rulings within 90 days. The appellate prosecutor has until July 21, 2014 to decide whether to pursue a further appeal to the Court of Cassation in Rome.

Derivative transactions with the Regions of Calabria, Tuscany, Lombardy, Lazio and Campania, and the City of Florence have also been called into question or become the subject of legal proceedings and claims for damages and other awards. In 2012, UBS AG and UBS Limited settled all civil disputes with the Regions of Tuscany, Lombardy and Lazio without any admission of liability. In 2013, a settlement of all civil and administrative disputes was reached with the City of Florence. An oral agreement in principle was reached with the Region of Calabria subject to conditions which have not yet occurred. Our balance sheet at 31 March 2014 reflected a provision in connection with that oral agreement.

6. Kommunale Wasserwerke Leipzig GmbH (KWL)

In 2006 and 2007, KWL entered into a series of Credit Default Swap (CDS) transactions with bank swap counterparties, including UBS. UBS also entered into back-to-back CDS transactions with the other counterparties, Depfa Bank plc (Depfa) and Landesbank Baden-Württemberg (LBBW), in relation to their respective swaps with KWL. As a result of the KWL CDS transactions and the back-to-back CDS transactions with Depfa and LBBW, UBS is owed a total amount of approximately USD 319.8 million, plus interest, which remains unpaid. Specifically, under the CDS contracts between KWL and UBS , the last of which were terminated by UBS in 2010, a net sum of approximately USD 137.6 million, plus interest, has fallen due from KWL but not been paid.

In 2010, UBS issued proceedings in the English High Court against KWL seeking various declarations from the English court, in order to establish that the swap transactions between KWL and UBS are valid, binding and enforceable as against KWL and in respect of UBS's role as portfolio manager. UBS issued separate proceedings in the English High Court against Depfa and LBBW seeking declarations as to the parties' obligations under the back-to-back CDS transactions and monetary claims. UBS contends that it is owed USD 83.3 million, plus interest, by Depfa. UBS contends that it is owed EUR 75.5 million, plus interest, by LBBW. Depfa and LBBW are defending against the claims and have also issued counterclaims. Additionally, Depfa added a claim against KWL to the proceedings against it and KWL served a defense. The English court ruled in 2010 that it had jurisdiction and would hear the proceedings. UBS issued a further claim in the English proceeding seeking declarations concerning the validity of its early termination of the remaining CDS transactions with KWL and later added a monetary claim. Also, in 2010, KWL issued proceedings in Leipzig, Germany against UBS, Depfa and LBBW. The Leipzig court has also ruled that it is for the London court and not the Leipzig court to determine the validity and effect of a third party notice served by LBBW on UBS in the Leipzig proceedings.

In the English proceedings, KWL is defending against UBS's claims and has served a counterclaim which also joins UBS Limited and Depfa to the proceedings. As part of its assertions, KWL claims damages of at least USD 68 million in respect of UBS AG's

Note 14 Provisions and contingent liabilities (continued)

termination of some of the CDS contracts, whilst disputing that any monies are owed to UBS AG pursuant to another CDS contract. UBS, UBS Limited and Depfa are defending against KWL's counterclaims, and Depfa has asserted additional claims against UBS and UBS Limited. Both KWL and Depfa have mutually exclusive claims for payment of USD 32.6 million which has previously been paid by Depfa to UBS. Trial in the English proceedings began in April 2014 and is expected to run through July 2014.

In the proceedings brought by KWL against LBBW in Leipzig, in June 2013, the court ruled in LBBW's favor. KWL appealed against that ruling and the court is expected to make its first decision on the appeal by 30 May 2014.

Our balance sheet at 31 March 2014 reflected provisions with respect to matters described in this item 6 in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information, and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

In 2011, the former managing director of KWL and two financial advisers were convicted in Leipzig, Germany, on criminal charges related to certain KWL transactions, including swap transactions with UBS and other banks. Following further criminal proceedings brought against them in Dresden, Germany, relating to the same transactions, they were each convicted of embezzlement in 2013 and given longer sentences. All three have lodged appeals.

Since 2011, the SEC has been conducting an investigation focused on, among other things, the suitability of the KWL transactions, and information provided by UBS to KWL. UBS has provided documents and testimony to the SEC and is continuing to cooperate with the SEC.

7. Puerto Rico

Declines in Puerto Rico municipal bond and closed-end fund prices since August 2013 have led to multiple regulatory inquiries, as well as customer complaints and arbitrations with aggregate claimed damages exceeding USD 300 million filed by clients in Puerto Rico who own those securities. A shareholder derivative action also was filed in February 2014 against various UBS entities and current and certain former directors of the closed-end funds, alleging hundreds of millions in losses in the funds. An internal review also disclosed that certain clients, many of whom acted at the recommendation of one financial advisor, invested proceeds of non-purpose loans in closed-end fund securities in contravention of their loan agreements.

In 2011, a purported derivative action was filed on behalf of the Employee Retirement System of the Commonwealth of Puerto Rico (System) against over 40 defendants, including UBS Financial Services Inc. of Puerto Rico (UBS PR) and other consultants and underwriters, trustees of the System, and the President and Board of the Government Development Bank of Puerto Rico. The plaintiffs alleged that defendants violated their purported fiduciary duties and contractual obligations in connection with the issuance and underwriting of approximately USD 3 billion of bonds by the System in 2008 and sought damages of over USD 800 million. UBS is named in connection with its underwriting and consulting services. In 2013, the case was dismissed by the Puerto Rico Court of First Instance on the grounds that plaintiffs did not have standing to bring the claim. That dismissal was subsequently overturned by the Puerto Rico Court of Appeals. In February 2014, UBS's petition for appeal was denied by the Supreme Court of Puerto Rico, and UBS filed motions for reconsideration. Also, in 2013, an SEC Administrative Law Judge dismissed a case brought by the SEC against two UBS executives, finding no violations. The charges had stemmed from the SEC's investigation of UBS's sale of closed-end funds in 2008 and 2009, which UBS settled in 2012.

Our balance sheet at 31 March 2014 reflected provisions with respect to matters described in this item 7 in amounts that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information, and accordingly may ultimately prove to be substantially greater (or may be less) than the provisions that we have recognized.

8. Foreign exchange, LIBOR, and benchmark rates

Foreign exchange-related regulatory matters: Following an initial media report in 2013 of widespread irregularities in the foreign exchange markets, UBS immediately commenced an internal review of its foreign exchange business, which includes our precious metals business. Since then, various authorities reportedly have commenced investigations concerning possible manipulation of foreign exchange markets, including FINMA, the Swiss Competition Commission (WEKO), the US Department of Justice (DOJ), the US Commodity Futures Trading Commission (CFTC), the UK Financial Conduct Authority (FCA) (to which certain responsibilities of the UK Financial Services Authority (FSA) have passed) and the Hong Kong Monetary Authority (HKMA). WEKO stated in March 2014 that it had reason to believe that certain banks may have colluded to manipulate foreign exchange rates. A number of authorities also reportedly are investigating potential manipulation of precious metals prices. UBS and other financial institutions have received requests from various authorities relating to their foreign exchange businesses, and UBS is cooperating with the authorities. UBS has taken and will take appropriate action with respect to certain personnel as a result of its ongoing review.

Foreign exchange-related civil litigation: Several putative class actions have been filed since November 2013 in US federal courts against UBS and other banks. These actions are on behalf of puta-

Note 14 Provisions and contingent liabilities (continued)

tive classes of persons who engaged in foreign currency transactions. They allege collusion by the defendants and assert claims under the antitrust laws and for unjust enrichment. The defendants (including UBS) have not yet filed responsive pleadings.

LIBOR and other benchmark-related regulatory matters: Numerous government agencies, including the SEC, the CFTC, the DOJ, the FCA, the UK Serious Fraud Office (SFO), the Monetary Authority of Singapore (MAS), the HKMA, FINMA, the various state attorneys general in the US, and competition authorities in various jurisdictions have conducted or are continuing to conduct investigations regarding submissions with respect to British Bankers' Association LIBOR (London Interbank Offered Rate) and other benchmark rates, including HIBOR (Hong Kong Interbank Offered Rate) and ISDAFIX. These investigations focus on whether there were improper attempts by UBS (among others), either acting on our own or together with others, to manipulate LIBOR and other benchmark rates at certain times.

In 2012, UBS reached settlements with the FSA, the CFTC and the Criminal Division of the DOJ in connection with their investigations of benchmark interest rates. At the same time FINMA issued an order concluding its formal proceedings with respect to UBS relating to benchmark interest rates. UBS has paid a total of approximately CHF 1.4 billion in fines and disgorgement – including GBP 160 million in fines to the FSA, USD 700 million in fines to the CFTC, and CHF 59 million in disgorgement to FINMA. Under a non-prosecution agreement (NPA) that UBS entered into with the DOJ, UBS agreed to pay a fine of USD 500 million. Pursuant to a separate plea agreement between the DOJ and UBS Securities Japan Co. Ltd. (UBSSJ), UBSSJ entered a plea to one count of wire fraud relating to the manipulation of certain benchmark interest rates, including Yen LIBOR. The NPA, which (along with the plea agreement) covered conduct beyond the scope of the conditional leniency / immunity grants described below, required UBS to pay the USD 500 million fine to DOJ after the sentencing of UBSSJ, and provided that any criminal penalties imposed on UBSSJ at sentencing be deducted from the USD 500 million fine. At the sentencing hearing held in 2013, the court approved the proposed plea agreement and imposed a USD 100 million fine against UBSSJ, as agreed to by the DOJ and UBSSJ under the plea agreement. Since the sentencing, UBS has paid a fine of USD 400 million to the DOJ, and UBSSJ has paid the USD 100 million fine imposed by the sentencing court. The conduct described in the various settlements and the FINMA order includes certain UBS personnel: engaging in efforts to manipulate submissions for certain benchmark rates to benefit trading positions; colluding with employees at other banks and cash brokers to influence certain benchmark rates to benefit their trading positions; and giving inappropriate directions to UBS submitters that were in part motivated by a desire to avoid unfair and negative market and media perceptions during the financial crisis. The benchmark interest rates encompassed by one or more of these resolutions include Yen LIBOR, GBP LIBOR, CHF LIBOR, Euro LIBOR, USD LIBOR, EURIBOR (Euro Interbank Offered Rate) and Euroyen TIBOR (Tokyo Interbank Offered Rate). We have ongoing obligations to cooperate with authorities with which we have reached resolutions and to undertake certain remediation with respect to benchmark interest rate submissions. In addition, under the NPA, we have agreed, among other things, that for two years from 18 December 2012 UBS will not commit any US crime, and we will advise DOJ of any potentially criminal conduct by UBS or any of its employees relating to violations of US laws concerning fraud or securities or commodities markets. Any failure to comply with these obligations could result in termination of the NPA and potential criminal prosecution in relation to the matters covered by the NPA. Investigations by the CFTC and other government authorities remain ongoing notwithstanding these resolutions.

UBS has been granted conditional leniency or conditional immunity from authorities in certain jurisdictions, including the Antitrust Division of the DOJ, and the Swiss Competition Commission (WEKO), in connection with potential antitrust or competition law violations related to submissions for Yen LIBOR and Euroyen TIBOR. WEKO has also granted UBS conditional immunity in connection with potential competition law violations related to submissions for Swiss franc LIBOR and certain transactions related to Swiss franc LIBOR. The Canadian Competition Bureau (Bureau) had granted UBS conditional immunity in connection with potential competition law violations related to submissions for Yen LIBOR, but in January 2014, the Bureau announced the discontinuation of its investigation into Yen LIBOR for lack of sufficient evidence to justify prosecution under applicable laws. As a result of these conditional grants, we will not be subject to prosecutions, fines or other sanctions for antitrust or competition law violations in the jurisdictions where we have conditional immunity or leniency in connection with the matters covered by the conditional grants, subject to our continuing cooperation. However, the conditional leniency and conditional immunity grants we have received do not bar government agencies from asserting other claims and imposing sanctions against us, as evidenced by the settlements and ongoing investigations referred to above. In addition, as a result of the conditional leniency agreement with the DOJ, we are eligible for a limit on liability to actual rather than treble damages were damages to be awarded in any civil antitrust action under US law based on conduct covered by the agreement and for relief from potential joint and several liability in connection with such civil antitrust action, subject to our satisfying the DOJ and the court presiding over the civil litigation of our cooperation. The conditional leniency and conditional immunity grants do not otherwise affect the ability of private parties to assert civil claims against us.

In 2013, the European Commission (EC) announced a decision adopted in the Commission's Yen Interest Rate Derivatives (YIRD) investigation, under which UBS has received full immunity from fines for disclosing to the Commission the existence of infringements relating to YIRD.

Note 14 Provisions and contingent liabilities (continued)

In 2013, the MAS announced the results of its investigation of benchmark submissions by 20 banks, including UBS. The investigation related to various benchmark submissions, including the Singapore Interbank Offered Rates and the Swap Offered Rates, and covered the period from 2007 to 2011. The MAS found deficiencies in the governance, risk management, internal controls and surveillance systems for the banks' benchmark submission processes and directed the banks to correct the deficiencies and set aside additional statutory reserves with MAS at zero interest for one year. The MAS also announced proposed changes to its regulatory framework for financial benchmarks that are designed to enhance the integrity of the process for setting benchmarks.

In 2013, UBS entered into an enforceable undertaking in relation to an investigation by the Australian Securities and Investments Commission (ASIC) into conduct relating to Australian Bank Bill Swap Rate (BBSW) submissions. An independent expert engaged by UBS at ASIC's request concluded that, to the extent there may have been any impact of such conduct on the market as a whole, it would have been insignificant. The enforceable undertaking requires UBS to ensure that its participation in relation to the setting of Australian interest rate benchmarks upholds the integrity and reliability of those benchmarks and is in accordance with its obligations under the CFTC order. UBS also agreed to make a voluntary contribution of AUD 1 million to fund independent financial literacy projects in Australia. ASIC has the power to investigate, conduct further surveillance or pursue criminal prosecution of UBS or its representatives in relation to any contravention. ASIC acknowledged UBS's cooperation and the fact that it was the first bank to report this conduct to it. ASIC's inquiries in relation to the BBSW rate set are ongoing.

In March 2014, the HKMA announced the conclusion of its investigations into the fixing of HIBOR. The HKMA found that some UBS traders made change requests to the UBS HIBOR submitter between September 2006 and June 2009, but said they had "negligible impact" on the actual outcome of the HIBOR fixing. The HKMA found no evidence of collusion among the banks to rig the rate. The HKMA also found that UBS failed to report to the HKMA the misconduct of its staff in relation to HIBOR submissions and further found material weaknesses in UBS's internal controls and governance in managing the HIBOR submission process and in other areas. UBS ceased to be a HIBOR panel bank in 2010. The HKMA has required that UBS make improvements in its processes.

In 2011, the Japan Financial Services Agency (JFSA) commenced administrative actions and issued orders against UBS Securities Japan Ltd (UBS Securities Japan) and UBS AG, Tokyo Branch in connection with their investigation of Yen LIBOR and Euroyen TIBOR. These actions were based on findings by the Japan Securities and Exchange Surveillance Commission (SESC), and, in the case of UBS AG, Tokyo Branch, the JFSA, that a former UBS Securities Japan trader engaged in inappropriate conduct relating to Euroyen TIBOR and Yen LIBOR, including approaching UBS AG, Tokyo Branch, and other banks to ask them to submit TIBOR rates taking into account requests from the trader for the purpose of benefiting trading positions.

LIBOR and other benchmark-related civil litigation: A number of putative class actions and other actions are pending in, or expected to be transferred to, the federal courts in New York against UBS and numerous other banks on behalf of parties who transacted in certain interest rate benchmark-based derivatives linked directly or indirectly to US dollar LIBOR, Yen LIBOR, Euroyen TIBOR and EURIBOR. Also pending are actions asserting losses related to various products whose interest rate was linked to US dollar LIBOR, including adjustable rate mortgages, preferred and debt securities, bonds pledged as collateral, loans, depository accounts, investments and other interest bearing instruments. All of the complaints allege manipulation, through various means, of various benchmark interest rates, including LIBOR, Euroyen TIBOR or EURIBOR rates and seek unspecified compensatory and other damages, including treble and punitive damages, under varying legal theories that include violations of the US Commodity Exchange Act, the federal racketeering statute, federal and state antitrust and securities laws and other state laws. In 2013, a federal court in New York dismissed the federal antitrust and racketeering claims of certain US dollar LIBOR plaintiffs and a portion of their claims brought under the Commodity Exchange Act (CEA) and state common law. The same court subsequently denied the parties' requests for reconsideration and plaintiffs' motion for interlocutory appeal and to amend the complaints to include additional antitrust and CEA allegations. It granted certain plaintiffs permission to assert claims for unjust enrichment and breach of contract. Motions to dismiss these unjust enrichment and breach of contract claims are pending, as is a renewed motion to dismiss by UBS and other defendants that seeks dismissal of further CEA claims. Certain plaintiffs have also appealed the dismissal of their antitrust claims, but the appellate court denied these appeals as premature, without prejudice to bringing the appeals again after final disposition of the LIBOR actions. UBS and other defendants in other lawsuits including the one related to Euroyen TIBOR have filed motions to dismiss. In March 2014, the court in the Euroyen TIBOR lawsuit dismissed the plaintiff's federal antitrust and state unfair enrichment claims, and dismissed a portion of the plaintiff's CEA claims.

With respect to additional matters and jurisdictions not encompassed by the settlements and order referred to above, our balance sheet at 31 March 2014 reflected a provision of an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information, and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

Note 14 Provisions and contingent liabilities (continued)

9. Swiss retrocessions

The Swiss Supreme Court ruled in 2012, in a test case against UBS, that distribution fees paid to a bank for distributing third party and intra-group investment funds and structured products must be disclosed and surrendered to clients who have entered into a discretionary mandate agreement with the bank, absent a valid waiver.

FINMA has issued a supervisory note to all Swiss banks in response to the Supreme Court decision. The note sets forth the measures Swiss banks are to adopt, which include informing all affected clients about the Supreme Court decision and directing them to an internal bank contact for further details. UBS has met the FINMA requirements and has notified all potentially affected clients.

It is expected that the Supreme Court decision will result in a significant number of client requests for UBS to disclose and potentially surrender retrocessions. Client requests are being assessed on a case-by-case basis. Considerations to be taken into account when assessing these cases include, among others, the existence of a discretionary mandate and whether or not the client documentation contained a valid waiver with respect to distribution fees.

Our balance sheet at 31 March 2014 reflected a provision with respect to matters described in this item 9 in an amount that UBS believes to be appropriate under the applicable accounting standard. The ultimate exposure will depend on client requests and the resolution thereof, factors that are difficult to predict and assess. Hence as in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information, and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

10. Banco UBS Pactual tax indemnity

Pursuant to the 2009 sale of Banco UBS Pactual S.A. (Pactual) by UBS to BTG Investments, LP (BTG), BTG has submitted contractual indemnification claims that UBS estimates amount to approximately BRL 2.5 billion, including interest and penalties, which is net of liabilities retained by BTG. The claims pertain principally to several tax assessments issued by the Brazilian tax authorities against Pactual relating to the period from December 2006 through March 2009, when UBS owned Pactual. These assessments are being or will be challenged in administrative proceedings. BTG has also provided notice to UBS of several additional Pactual-related inquiries by the Brazilian tax authorities that relate to the period of UBS's ownership of Pactual, but involving substantially smaller amounts. In 2013, approximately BRL 128 million in tax claims relating to the period for which UBS has indemnification obligations were submitted for settlement through amnesty programs announced by the Brazilian government in 2013.

Our balance sheet at 31 March 2014 reflected a provision with respect to matters described in this item 10 in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of this matter cannot be determined with certainty based on currently available information, and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

11. Matters relating to the CDS market

In 2013, the EC issued a Statement of Objections against thirteen credit default swap (CDS) dealers including UBS, as well as data service provider Markit and the International Swaps and Derivatives Association (ISDA). The Statement of Objections broadly alleges that the dealers infringed EU antitrust rules by colluding to prevent exchanges from entering the credit derivatives market between 2006 and 2009. We have submitted our response to the Statement of Objections. Since mid-2009, the Antitrust Division of the DOJ has also been investigating whether multiple dealers, including UBS, conspired with each other and with Markit to restrain competition in the markets for CDS trading, clearing and other services. In January and April 2014, putative class action plaintiffs filed consolidated amended complaints in the Southern District of New York against twelve dealers, including UBS, as well as Markit and ISDA, alleging violations of the US Sherman Antitrust Act and common law. Plaintiffs allege that the defendants unlawfully conspired to restrain competition in and/or monopolize the market for CDS trading in the US in order to protect the dealers' profits from trading CDS in the over-the-counter market. Plaintiffs assert claims on behalf of all purchasers and sellers of CDS that transacted directly with any of the dealer defendants since 1 January 2008, and seek unspecified trebled compensatory damages and other relief.

Note 15 Financial instruments not recognized on the balance sheet

1 Cash to be paid in the future by either UBS or the counterparty.

Note 16 Changes in organization

Restructuring charges arise from programs that materially change either the scope of business undertaken by the Group or the manner in which such business is conducted. Restructuring charges are non-recurring, temporary costs that are necessary to effect such programs and include items such as severance and other personnel-related charges, duplicate headcount costs, impairment and accelerated depreciation of assets, contract termination costs, consulting fees, and related infrastructure and system costs. These costs are presented in the income statement according to the underlying nature of the expense. As the costs associated with restructuring programs are temporary in nature, and in order to provide a more thorough understanding of business performance, such costs are separately presented below.

Basis of accounting UBS AG (Parent Bank)

The Parent Bank financial statements are prepared in accordance with Swiss GAAP (FINMA Circular 2008/2 and the Banking Ordinance). The accounting policies are principally the same as the IFRS-based accounting policies for the Group, which are described more fully in "Note 1 Summary of significant accounting policies" to the consolidated financial statements in our Annual Report 2013. Principal differences between the accounting policies for the Group and for the Parent Bank are described in "Note 38 Swiss GAAP requirements" to the consolidated financial statements in our Annual Report 2013. Further information on the accounting policies applied for the statutory accounts of our Parent Bank can be found in "Note 2 Accounting policies" to the Parent Bank financial statements in our Annual Report 2013.

In preparing the interim financial information for the Parent Bank, the same accounting policies and methods of computation have been applied as in the annual financial statements as of 31 December 2013. This interim financial information is unaudited and should be read in conjunction with the audited financial statements included in our Annual Report 2013.

Parent bank capital requirements under Swiss SRB regulations

Pursuant to Swiss SRB regulations, article 125 of the Swiss Capital Ordinance (CAO), under the section "Reliefs for financial groups and individual institutions," stipulates that the Swiss Financial Market Supervisory Authority (FINMA) may grant, under certain conditions, capital reliefs on the level of individual institutions, to ensure that the fulfillment of the capital requirements at the UBS AG (Parent Bank) level does not result in a de facto overcapitalization at Group level. The issue of de facto overcapitalization at Group level as a result of capital requirements at UBS AG (Parent Bank) level is unavoidable even after the implementation of reasonable measures by the bank.

FINMA had previously already granted UBS AG (Parent Bank) a capital relief with regard to intercompany exposures of UBS AG (Parent Bank), which resulted in lower risk-weighted assets (RWA) and lower deductions at UBS AG (Parent Bank) level.

Revised UBS AG (Parent Bank) capital requirements due to FINMA decree, dated 20 December 2013

1. Revised FINMA capital requirement framework at UBS AG (Parent Bank) level

The previous FINMA reliefs relating to certain intercompany exposures were revoked at the end of 2013. This measure has led to an increase in RWA at UBS AG (Parent Bank) level.

2. Reduction of the total capital requirement to 14%, of which 10% must be satisfied with common equity tier 1 (CET1) capital

This represents a relief at UBS AG (Parent Bank) level compared with the capital requirements set by FINMA for UBS Group. However, this capital requirement must be met with immediate effect.

3. Consistent treatment of direct and indirect investments of UBS AG (Parent Bank) in the equity of its subsidiaries

The aggregate amount of direct and indirect investments of UBS AG (Parent Bank) in the equity of its subsidiaries is risk-weighted at 200% up to a threshold determined by FINMA. The total amount exceeding that threshold must be deducted from capital, 50% from CET1 and 50% from other capital. This revised approach may change RWA and/or eligible capital, depending on the FINMA-defined threshold. If all investments are below the threshold, the resulting total capital requirement is 28%. If the threshold is set to zero, all investments would be deducted from capital.

The replacement of the previous FINMA reliefs with this new framework has resulted in a significant reduction of the total capital ratio of UBS AG (Parent Bank) per 1 January 2014.

Reconciliation of Swiss federal banking law equity to Swiss SRB Basel III capital UBS AG (Parent Bank)

1 Compared with the figures presented in the Fourth Quarter 2013 Report, total assets, primarily cash collateral on securities borrowed and reverse repurchase agreements, and total liabilities, primarily cash collateral on securities lent and repurchase agreements, as of 31 December 2013 were both restated downwards by GBP 404 million.

Basis of accounting UBS Limited

The financial statements of UBS Limited are prepared in accordance with International Financial Reporting Standards (IFRS), as endorsed by the European Union (EU), and are stated in British pounds (GBP), the functional currency of the entity. The ultimate parent of UBS Limited is UBS AG (Switzerland).

In preparing this interim financial information, the same accounting policies and methods of computation have been applied as in the audited financial statements included in the Report and Financial Statements for the year ended 31 December 2013 of UBS Limited, except for the changes set out below. Copies of the Report and Financial Statements of UBS Limited can be obtained from UBS AG, Investor Relations. This interim financial information is unaudited and should be read in conjunction with the audited financial statements of UBS Limited.

This interim financial information does not comply with IAS 34, *Interim Financial Reporting*, as it includes only the Income statement, the Statement of comprehensive income and the Balance sheet of UBS Limited.

International Financial Reporting Standards and Interpretations adopted in the first quarter of 2014

Offsetting Financial Assets and Financial Liabilities (Amendments to IAS 32, *Financial Instruments: Presentation)*

On 1 January 2014, UBS Limited adopted *Offsetting Financial Assets and Financial Liabilities* (Amendments to IAS 32, *Financial Instruments: Presentation).* Adoption of the amendments did not have a material impact on the financial statements of UBS Limited.

IFRIC Interpretation 21, *Levies*

On 1 January 2014, UBS Limited adopted IFRIC Interpretation 21, *Levies.* Adoption of the interpretation had no impact on the financial statements of UBS Limited.

Reporting publications

Annual publications: *Annual report (SAP no. 80531):* Published in both English and German, this single volume report provides a description of our Group strategy and performance, the strategy and performance of the business divisions and the Corporate Center, risk, treasury and capital management, corporate governance, responsibility and senior management compensation, including compensation to the Board of Directors and the Group Executive Board members, and financial information, including the financial statements. *Review (SAP no. 80530):* The booklet contains key information on our strategy and financials. It is published in English, German, French and Italian. *Compensation Report (SAP no. 82307):* The report discusses our compensation framework and provides information on compensation to the Board of Directors and the Group Executive Board members. It is published in English and German.

Quarterly publications: *Letter to shareholders:* The letter provides a quarterly update from executive management on our strategy and performance. The letter is published in English, German, French and Italian. *Financial report (SAP no. 80834):* The quarterly financial report provides an update on our strategy and performance for the respective quarter. It is published in English.

How to order reports: The annual and quarterly publications are available in PDF format on the internet at *www.ubs.com/investors* in the "Financial information" section. Printed copies can be ordered from the same website in the "Investor services" section, which can be accessed via the link on the left-hand side of the screen. Alternatively, they can be ordered by quoting the SAP number and the language preference where applicable, from UBS AG, F4UK–AUL, P.O. Box, CH-8098 Zurich, Switzerland.

Other information

Website: The "Investor Relations" website at *www.ubs.com/investors* provides the following information on UBS: news releases, financial information, including results-related filings with the US Securities and Exchange Commission, corporate information, including UBS share price charts and data and dividend information, the UBS corporate calendar and presentations by management for investors and financial analysts. Information on the internet is available in English and German.

Result presentations: Our quarterly results presentations are webcast live. A playback of most presentations is downloadable at *www.ubs.com/presentations*.

Messaging service / UBS news alert: On the *www.ubs.com/newsalerts* website, it is possible to subscribe to receive news alerts about UBS via SMS or e-mail. Messages are sent in English, German, French or Italian and it is possible to state theme preferences for the alerts received.

Form 20-F and other submissions to the US Securities and Exchange Commission: We file periodic reports and submit other information about UBS to the US Securities and Exchange Commission (SEC). Principal among these filings is the annual report on Form 20-F, filed pursuant to the US Securities Exchange Act of 1934. The filing of Form 20-F is structured as a "wrap-around" document. Most sections of the filing can be satisfied by referring to parts of the annual report. However, there is a small amount of additional information in Form 20-F which is not presented elsewhere, and is particularly targeted at readers in the US. Readers are encouraged to refer to this additional disclosure. Any document that we file with the SEC is available to read and copy on the SEC's website, *www.sec.gov,* or at the SEC's public reference room at 100 F Street, N.E., Room 1580, Washington, DC, 20549. Please call the SEC by dialing +1-800-SEC-0330 for further information on the operation of its public reference room. Please visit *www.ubs.com/investors* for more information.

Cautionary Statement Regarding Forward-Looking Statements | This report contains statements that constitute "forward-looking statements," including but not limited to management's outlook for UBS's financial performance and statements relating to the anticipated effect of transactions and strategic initiatives on UBS's business and future development. While these forward-looking statements represent UBS's judgments and expectations concerning the matters described, a number of risks, uncertainties and other important factors could cause actual developments and results to differ materially from UBS's expectations. These factors include, but are not limited to: (i) the degree to which UBS is successful in executing its announced strategic plans, including its efficiency initiatives and its planned further reduction in its Basel III risk-weighted assets (RWA) and leverage ratio denominator; (ii) developments in the markets in which UBS operates or to which it is exposed, including movements in securities prices or liquidity, credit spreads, currency exchange rates and interest rates and the effect of economic conditions and market developments on the financial position or creditworthiness of UBS's clients and counterparties; (iii) changes in the availability of capital and funding, including any changes in UBS's credit spreads and ratings, or arising from requirements for bail-in debt or loss-absorbing capital; (iv) changes in or the implementation of financial legislation and regulation in Switzerland, the US, the UK and other financial centers that may impose more stringent capital (including leverage ratio), liquidity and funding requirements, incremental tax requirements, additional levies, limitations on permitted activities, constraints on remuneration or other measures; (v) uncertainty as to when and to what degree the Swiss Financial Market Supervisory Authority (FINMA) will approve reductions to the incremental RWA resulting from the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA effective 31 December 2013, or will approve a limited reduction of capital requirements due to measures to reduce resolvability risk; (vi) the degree to which UBS is successful in executing the announced creation of a new Swiss banking subsidiary, a holding company for the UBS Group, a US intermediate holding company, changes in the operating model of UBS Limited and other changes which UBS may make in its legal entity structure and operating model, including the possible consequences of such changes, and the potential need to make other changes to the legal structure or booking model of UBS Group in response to legal and regulatory requirements, including capital requirements, resolvability requirements and the pending Swiss parliamentary proposals and proposals in other countries for mandatory structural reform of banks; (vii) changes in UBS's competitive position, including whether differences in regulatory capital and other requirements among the major financial centers will adversely affect UBS's ability to compete in certain lines of business; (viii) the liability to which UBS may be exposed, or possible constraints or sanctions that regulatory authorities might impose on UBS, due to litigation, contractual claims and regulatory investigations; (ix) the effects on UBS's cross-border banking business of tax or regulatory developments and of possible changes in UBS's policies and practices relating to this business; (x) UBS's ability to retain and attract the employees necessary to generate revenues and to manage, support and control its businesses, which may be affected by competitive factors including differences in compensation practices; (xi) changes in accounting or tax standards or policies, and determinations or interpretations affecting the recognition of gain or loss, the valuation of goodwill, the recognition of deferred tax assets and other matters; (xii) limitations on the effectiveness of UBS's internal processes for risk management, risk control, measurement and modeling, and of financial models generally; (xiii) whether UBS will be successful in keeping pace with competitors in updating its technology, particularly in trading businesses; (xiv) the occurrence of operational failures, such as fraud, unauthorized trading and systems failures; and (xv) the effect that these or other factors or unanticipated events may have on our reputation and the additional consequences that this may have on our business and performance. The sequence in which the factors above are presented is not indicative of their likelihood of occurrence or the potential magnitude of their consequences. Our business and financial performance could be affected by other factors identified in our past and future filings and reports, including those filed with the SEC. More detailed information about those factors is set forth in documents furnished by UBS and filings made by UBS with the SEC, including UBS's Annual Report on Form 20-F for the year ended 31 December 2013. UBS is not under any obligation to (and expressly disclaims any obligation to) update or alter its forward-looking statements, whether as a result of new information, future events, or otherwise.

Rounding | Numbers presented throughout this report may not add up precisely to the totals provided in the tables and text. Percentages, percent changes and absolute variances are calculated based on rounded figures displayed in the tables and text and may not precisely reflect the percentages, percent changes and absolute variances that would be derived based on figures that are not rounded.

Tables | Within tables, blank fields generally indicate that the field is not applicable or not meaningful, or that information is not available as of the relevant date or for the relevant period. Zero values generally indicate that the respective figure is zero on an actual or rounded basis.

609 Cautionary statement

Dear shareholders,

2013 was the first full year of execution following our announcement of the accelerated implementation of our strategy. We made excellent progress thanks to the dedication of our employees, the trust and confidence of our clients, and the support of our shareholders. We accomplished our goals of further adapting our business to better serve clients, reducing risk, delivering more sustainable performance and enhancing shareholder returns. All our businesses were profitable in every quarter, demonstrating that the firm's model has the flexibility to adapt and perform well in a variety of market conditions. This enabled us to finish a transformational year ahead of the majority of our strategic and financial targets.

The financial strength we have created as a firm is the foundation of our success as it gives us the flexibility to execute our strategy effectively in the new operating environment. Additionally, it reinforces client confidence while allowing us to address the challenges of the past and to absorb unexpected events. During the year, we increased adjusted[1] profit before tax 44% to CHF 4.1 billion. Most importantly, our progress was recognized by our clients, who again entrusted us with more of their assets and business than in the prior year, with our wealth management businesses attracting a combined CHF 54 billion of net new money in 2013 alone, 14% more than in the prior year.

We operate in an environment still characterized by increased and shifting regulation and with markets affected by the turbulence of macroeconomic, geopolitical and unresolved fiscal issues. As a Swiss bank, we are subject to some of the most stringent regulatory requirements in the world. We acted early and decisively to prepare our business for the future with a clear strategy that focused on building and maintaining our industry-leading capital position. During 2013, we enhanced this position, exceeding our own ambitious year-end capital targets. Since we announced our strategy in the second half of 2011, we have more than doubled our fully applied Basel III common equity tier 1 (CET1) ratio from around 6% to 12.8%. We achieved this improvement primarily through steady reductions in fully applied risk-weighted assets (RWA) from around CHF 400 billion to CHF 225 billion at the end of 2013, already meeting our 2015 target. We set a target of a fully applied Basel III CET1 ratio of 13% by the end of 2014, comfortably above the regulatory minimum of 10% by 2019.

We finished 2013 well ahead of our plan to manage down RWA in our Non-core and Legacy Portfolio in Corporate Center, and achieved this in a manner that protected shareholder value. Most of the decline in Group RWA resulted from disposals and other exposure reduction measures in these units. We also continued to successfully deleverage our balance sheet, reducing total assets by over CHF 400 billion since we announced our strategy. Our Basel III funding and liquidity ratios and our Swiss SRB leverage ratio remain comfortably above our regulatory requirements. We implemented firm-wide programs to enhance operational excellence and efficiency, taking gross cost savings measured against the first half of 2011 to CHF 2.2 billion.

Our success enables us to continue delivering on our stated objective of progressive capital returns to shareholders with a recommendation for a 67% increase in dividend to CHF 0.25 per share for 2013. We are confident that we will achieve our target of a fully applied Basel III CET1 ratio of 13% in 2014. After reaching this, we aim for a total payout ratio of at least 50% of our profits.

Our wealth management businesses generated CHF 3.3 billion in adjusted[1] profit before tax in 2013, 25% higher than in the prior year. As the largest and fastest growing large-scale wealth manager in the world[2], we are well positioned to gain from improving macroeconomic conditions, a gradual recovery in interest rates and any consequent improvement in client risk appetite. We were awarded "Best Global Wealth Manager" by Euromoney for the second consecutive year and Private Banker International named us "Outstanding Global Private Bank 2013." In **Wealth Management,** growth and profitability were led by Asia Pacific, where, in particular, the partnership between Wealth Management and the Investment Bank is a key competitive advantage for us, delivering holistic solutions and attracting new clients. Europe also recorded positive net new money despite cross-border outflows. **Wealth Management Americas** concluded a record year with the achievement of our ambition of USD 1 billion in adjusted[1] profit before tax for the year. With financial advisors who generate on average USD 1 million in annual revenue, our Wealth Management Americas team has built a business with USD 1 trillion in invested assets. Our **Retail & Corporate** business in Switzerland delivered stable adjusted[1] profit before tax despite ongoing pressure on net interest margins. The business maintained its mar-

1 Please refer to "Group performance" in the "Financial and operating performance" section for more information on adjusted results. 2 Scorpio Partnership Global Private Banking Benchmark 2013, based on 2012 data for banks with assets under management of over USD 500 billion.

Axel A. Weber Chairman of the Board of Directors **Sergio P. Ermotti** Group Chief Executive Officer

ket-leading position as average client deposits grew faster than the Swiss economy. Retail & Corporate remains an important source of new business for Wealth Management, Global Asset Management and the Investment Bank. The strong performance of our Retail & Corporate business in our home market was a key factor in Euromoney naming UBS "Best Bank in Switzerland" for the second consecutive year. **Global Asset Management** delivered an 8% increase in adjusted[1] profit before tax and an adjusted[1] return on attributed equity of 33%, despite negative net new money. We transformed our **Investment Bank,** enabling it to deliver an excellent performance while operating efficiently with reduced RWA and funded assets. In 2013, the business significantly outperformed its target of an adjusted[1] pre-tax return on attributed equity of greater than 15%. We maintained strong positions globally in the key areas where we have decided to compete and serve our clients with best-in-class capabilities. In addition to being recognized as number one in cash equity globally in a leading private survey, our Investment Bank was awarded numerous accolades including Derivatives Intelligence's "Structured Products House of the Year" and Euroweek's "ECM Bank of the Year." In **Corporate Center – Core Functions,** we reduced total operating expenses before cost allocations despite recording net restructuring charges that were considerably higher than in 2012 as we pushed ahead with measures to reduce costs for the longer term. In **Corporate Center – Non-core and Legacy Portfolio,** fully applied RWA decreased by CHF 39 billion to CHF 64 billion, significantly better than our year-end 2013 target of CHF 85 billion.

Our clients increasingly want to use their wealth to drive positive change in society. For a long time, we have been helping them to invest according to sustainable and responsible criteria. Building on this capability, in 2013 we made a significant commitment to maximize these efforts through a dedicated, industry-leading platform. This will deliver comprehensive research, advisory and product capabilities in the areas of sustainable investments and philanthropy. We also initiated and co-launched the Thun Group of Banks' discussion paper on banking and human rights based on the United Nations' Guiding Principles on Business and Human Rights in the financial industry. In addition, UBS was named in the Dow Jones Sustainability Indices, which track leading sustainability-driven companies worldwide. As a firm, we remained focused on educational and entrepreneurship projects globally, including through our employee and community affairs programs. Our clients and employees mobilized to contribute to the Typhoon Haiyan relief efforts in the Philippines. We also maintained our support of the arts through culturally enriching programs for our clients, employees and the public. Highlights included becoming the global partner of Art Basel and the inaugural exhibition in New York of the Guggenheim UBS MAP project, which showcases art from emerging markets. In Switzerland's capital, UBS spon-

1 Please refer to "Group performance" in the "Financial and operating performance" section for more information on adjusted results.

sored the Bernisches Historisches Museum's most-visited exhibition ever, featuring the well-known terracotta army of Qin, the first Chinese emperor.

The firm's success ultimately rests on the achievements of all our employees and the trust placed in us by our clients and shareholders. We would like to thank them for their continued support. We will continue to execute our strategy in a disciplined manner in order to ensure the firm's long-term success and deliver sustainable returns to our shareholders.

14 March 2014

Yours sincerely,

UBS

Axel A. Weber
Chairman of the
Board of Directors

UBS and its businesses

We draw on our over 150-year heritage to serve private, institutional and corporate clients worldwide, as well as retail clients in Switzerland. Our business strategy is centered on our pre-eminent global wealth management businesses and our leading universal bank in Switzerland, complemented by our Global Asset Management business and our Investment Bank, with a focus on capital efficiency and businesses that offer a superior structural growth and profitability outlook. Headquartered in Zurich and Basel, Switzerland, we have offices in more than 50 countries, including all major financial centers, and approximately 60,000 employees. UBS AG is the parent company of the UBS Group (Group). Under Swiss company law, UBS AG is organized as an Aktiengesellschaft, a corporation that has issued shares of common stock to investors. The operational structure of the Group comprises the Corporate Center and five business divisions: Wealth Management, Wealth Management Americas, Retail & Corporate, Global Asset Management and the Investment Bank.

Wealth Management provides comprehensive financial services to wealthy private clients around the world – except those served by Wealth Management Americas. Its clients benefit from the entire spectrum of UBS resources, ranging from investment management to estate planning and corporate finance advice, in addition to specific wealth management products and services.

Wealth Management Americas provides advice-based solutions and banking services through financial advisors who deliver a fully integrated set of products and services specifically designed to address the needs of ultra high net worth and high net worth individuals and families. It includes the domestic US business, the domestic Canadian business and international business booked in the US.

Retail & Corporate maintains a leading position across retail, corporate and institutional client segments in Switzerland and constitutes a central building block of UBS Switzerland's pre-eminent universal bank model. It provides comprehensive financial products and services embedded in a true multi-channel experience, offering clients convenient access. It continues to enhance the range of life-cycle products and services offered to clients, while pursuing additional growth in advisory and execution services.

Global Asset Management is a large-scale asset manager with diversified businesses across investment capabilities, regions and distribution channels. It offers investment capabilities and styles across all major traditional and alternative asset classes including equities, fixed income, currencies, hedge funds, real estate, infrastructure and private equity that can also be combined into multi-asset strategies. The fund services unit provides professional services including fund set-up, accounting and reporting for both traditional investment funds and alternative funds.

The *Investment Bank* provides corporate, institutional and wealth management clients with expert advice, innovative financial solutions, outstanding execution and comprehensive access to the world's capital markets. It offers financial advisory and capital markets, research, equities, foreign exchange, precious metals and tailored fixed income services in rates and credit through its two business units, Corporate Client Solutions and Investor Client Services. The Investment Bank is an active participant in capital markets flow activities, including sales, trading and market-making across a range of securities.

The *Corporate Center* comprises Corporate Center – Core Functions and Corporate Center – Non-core and Legacy Portfolio. Corporate Center – Core Functions provides Group-wide control functions including finance, risk control (including compliance) and legal. In addition, it provides all logistics and support functions, including operations, information technology, human resources, corporate development, regulatory relations and strategic initiatives, communications and branding, corporate real estate and administrative services, procurement, physical security, information security, offshoring and treasury services such as funding, balance sheet and capital management. Corporate Center – Core Functions allocates most of its treasury income, operating expenses and personnel associated with the abovementioned activities to the businesses based on capital and service consumption levels. Corporate Center – Non-core and Legacy Portfolio comprises the non-core businesses and legacy positions previously part of the Investment Bank.

Our Board of Directors

The Board of Directors (BoD), under the leadership of the Chairman, decides on the strategy of the UBS Group upon recommendation of the Group Chief Executive Officer (Group CEO), exercises ultimate supervision over senior management, and appoints Group Executive Board (GEB) members. The BoD also approves all financial statements for issue. Shareholders elect each member of the BoD, which in turn appoints its Chairman, Vice Chairmen, Senior Independent Director, members of BoD committees, their respective Chairpersons and the Company Secretary. In 2013, our BoD met the standards of the Organization Regulations for the percentage of directors that are considered independent.

Our Group Executive Board

The management of the business is delegated by the Board of Directors to the Group Executive Board. Under the leadership of the Group Chief Executive Officer, the Group Executive Board has executive management responsibility for the UBS Group and its businesses. It assumes overall responsibility for the development of the Group and business division strategies and the implementation of approved strategies.

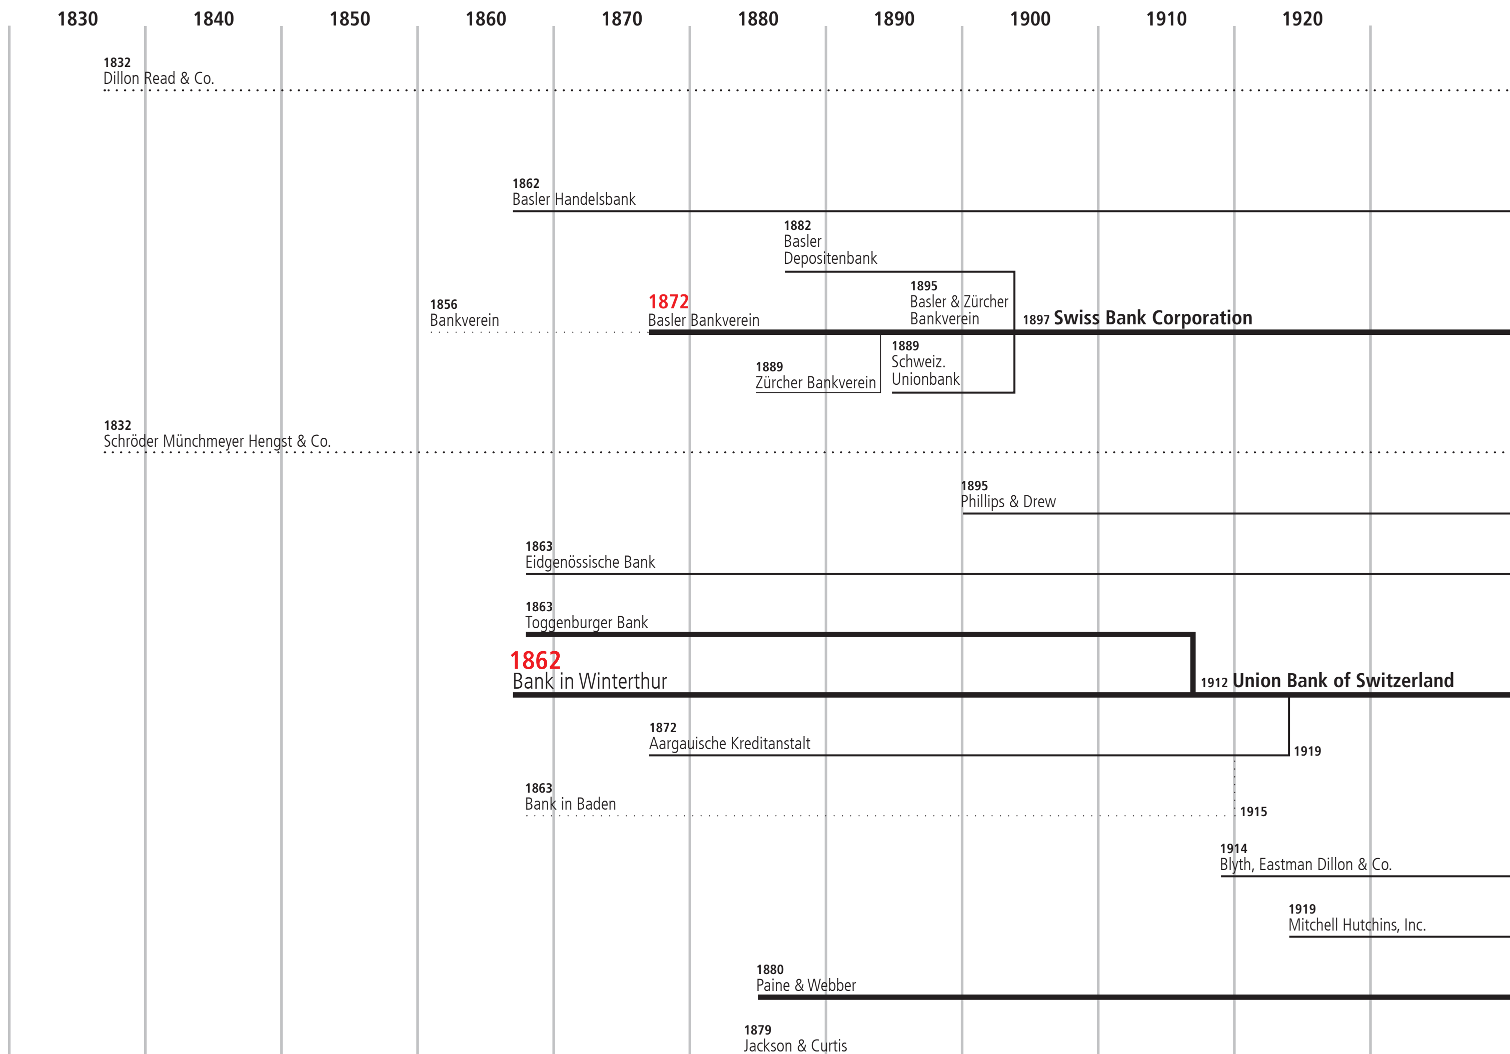
The making of UBS

UBS has played a pivotal role in the development and growth of Switzerland's banking tradition since the firm's origins in the mid-19th century. In 2012, the year of our 150th anniversary, we accelerated our strategic transformation of the firm to create a business model that is better adapted to the new regulatory and market circumstances and that we believe will result in more consistent and high-quality returns. In 2013, we made substantial progress in transforming our firm, further reinforcing its foundations while focusing on our traditional strengths.

The origins of the banking industry in Switzerland can be traced back to medieval times. This long history may help explain the widespread impression, reinforced in popular fiction, that Switzerland has always possessed a strong financial sector. In reality, the size and international reach of the Swiss banking sector we know today is largely a product of the second half of the 20th century, strongly influenced by two banks: Union Bank of Switzerland and Swiss Bank Corporation (SBC), which merged to form UBS in 1998.

At the time of the merger, both banks were already well-established and successful in their own right. Union Bank of Switzerland celebrated its 100th anniversary in 1962, tracing its origins back to the Bank in Winterthur. SBC marked its centenary in 1972 with celebrations in honor of its founding forebear, the Basler Bankverein. The historical roots of PaineWebber, acquired by UBS in



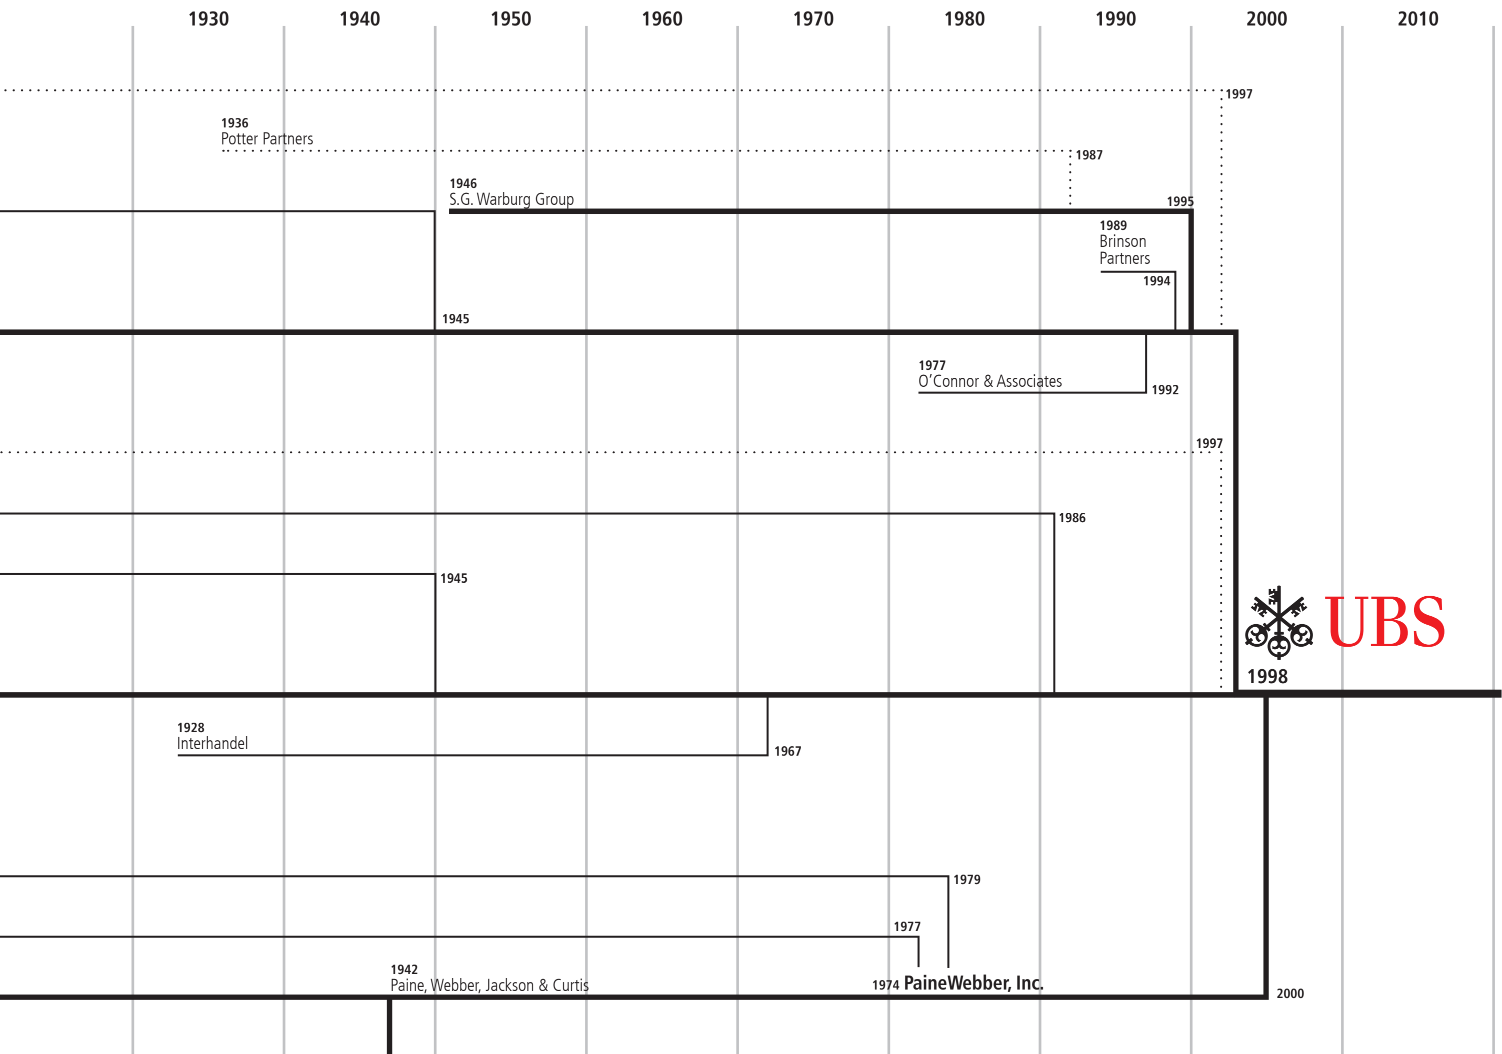
2000, go back to 1879, while S.G. Warburg, the central pillar upon which UBS's Investment Bank was built, commenced operations in 1946.

In the early 1990s, SBC and Union Bank of Switzerland were both commercial banks operating mainly out of Switzerland. The banks shared a similar vision: to become a world leader in wealth management, a successful global investment bank and a top-tier global asset manager, while remaining an important commercial and retail bank in their home market of Switzerland.

Union Bank of Switzerland, the largest and best-capitalized Swiss bank of its time, pursued these goals primarily through a strategy of organic growth. In contrast, SBC, then the third-largest Swiss bank, grew through a combination of partnership and acquisition. In 1989, SBC started a joint venture with O'Connor, a leading US derivatives firm noted for its dynamic and innovative culture, its meritocracy and its team-oriented approach. O'Connor brought state-of-the-art risk management and derivatives technology to SBC, and in 1992 SBC moved to fully acquire O'Connor. In 1994, SBC added to its capabilities when it acquired Brinson Partners, a leading US-based institutional asset management firm.

The next major milestone was in 1995, when SBC acquired S.G. Warburg, the British merchant bank. The deal helped SBC fill a strategic gap in its corporate finance, brokerage, and research capabilities and, most importantly, brought with it an institutional client franchise that remains crucial to our equities business to this day.

The 1998 merger of SBC and Union Bank of Switzerland into the firm we know today created a world-class wealth manager and the largest universal bank in Switzerland, complemented by a strong investment bank and a leading global institutional asset manager. In 2000, UBS grew further with the acquisition of PaineWebber, establishing the firm as a significant player in the US. UBS has established a strong footprint in the Asia Pacific



region and emerging markets based on a presence in many of these countries going back decades.

In 2007, the effects of the global financial crisis started to be felt across the financial industry. This crisis had its origins in the securitized financial product business linked to the US residential real estate market. Between the third quarter of 2007 and the fourth quarter of 2009, we incurred significant losses on these assets. We responded with decisive action designed to reduce risk exposures and stabilize our businesses, including raising capital on multiple occasions.

More recently, we continued to improve the firm's capital strength to meet new and enhanced industry-wide regulatory requirements. Our position as one of the world's best-capitalized banks, together with our stable funding and sound liquidity positions, provides us with a solid foundation for our success. In 2012, we announced a significant acceleration in the implementation of our strategy communicated a year earlier. In 2013, we continued to focus our activities on a set of highly synergistic, less capital- and balance sheet-intensive businesses dedicated to serving clients and well-positioned to maximize value for shareholders.

Operating environment and strategy

Current market climate and industry drivers

While the overall global economic climate improved in 2013, the operating environment for the financial services industry remained difficult. Profitability was affected by continued regulatory pressure, the ongoing low interest rate environment and muted client activity levels.

Global economic and market climate

The global economic climate improved in 2013, although the pace of recovery diverged across regions. Of the major economies, recovery was most advanced in the US. Growth momentum in the euro area remained lackluster, despite the region's exit from recession in the second quarter of 2013. In Japan, significant monetary policy stimulus and the government's so-called "three-arrow" strategy boosted confidence in the country's economic prospects. The gradual improvement in advanced economies was, however, counterbalanced by a slowdown in emerging economies.

Central banks in advanced countries kept monetary policy conditions highly accommodative as their economies continued to struggle with headwinds from fiscal consolidation and fragile financial sectors. However, concerns about the timing and speed of the exit by the Federal Reserve System (Fed) from its highly accommodative monetary policy led to a sharp rise in US bond yields and heightened market volatility during the summer months. Against the backdrop of strong correlations between European and US bond yields, European long-term interest rates also moved higher. Increases in long-term rates prompted the European Central Bank (ECB) and the Bank of England to announce "forward guidance" as an additional means of maintaining accommodative policy stances. Improving fundamentals in the US and expectations of the Fed "tapering" its quantitative easing led to financial outflows and currency depreciation in various emerging economies. Market concerns were further exacerbated by worries about a potential slowdown in China. Global markets subsequently stabilized after the Fed postponed its "taper" decision in September. Even so, currencies and fixed income markets in emerging countries with weak fundamentals remained under pressure.

The US economic recovery, supported by the Fed's accommodative policy, became more broad-based, reflected by better data on the housing market, credit standards, labor markets and consumer confidence. Improved market sentiment resulted in a rebalancing of portfolios towards riskier assets. US equity market indices recorded substantial gains during the year, spreads between corporate bonds and government bonds narrowed, and corporate debt issuance reached record levels. Disruptions related to another fiscal policy impasse in the autumn were a cause of market volatility, but the bi-partisan budget agreed in December reduced fiscal uncertainty for 2014. Based on broadly improving fundamentals, in December the Fed announced a "tapering" of quantitative easing starting in January 2014.

Euro area financial stress continued to recede during 2013 against the backdrop of the ECB's Outright Monetary Transactions (OMT) program and the establishment of the European Stability Mechanism. Debt markets in vulnerable euro area countries continued their post-OMT improvements despite a temporary disruption during the summer. Ireland successfully exited the adjustment program of the Troika (made up of the European Commission (EC), the ECB and the International Monetary Fund) as of year-end and re-established full market access. Portugal appeared more vulnerable throughout the year, but its situation stabilized towards year-end. The economic environment in Greece, while still much more challenging than elsewhere, also showed tentative signs of improvement during the year.

Although the euro area exited recession in the second quarter of 2013, recovery remained lackluster. Unemployment levels in distressed countries remained close to record highs, albeit with lower unit labor costs leading to improvements in competitiveness. Fiscal targets became more flexible as the EC agreed to extend the deadlines for correcting excessive deficits in some countries. A subdued inflation outlook led the ECB to announce historically unprecedented "forward guidance" and to reduce key ECB interest rates to all-time lows. Housing market conditions varied significantly between countries, and prices continued to decline in some distressed economies. However, the ongoing low interest rate environment and rising disposable income provided a boost to property prices in Germany. The Swiss economy continued to outperform most European peers, but highly accommodative monetary policy caused concerns about the country's ongoing property boom.

Growth in emerging economies disappointed throughout the year as credit-led expansions slowed and capital inflows receded or reversed. China recorded its slowest pace of growth since the turn of the millennium as authorities attempted to rein in rapid credit growth and rebalance the country's economic growth model. A spike in interbank lending rates in June led to fears of a sharper slowdown in growth, although intervention from the People's Bank of China ensured major financial distress was avoided. Among the other major emerging market economies, Brazil, India, Indonesia, South Africa and Turkey were all beset by currency weakness following capital outflows stemming from expectations of tighter Fed policy. The associated higher funding costs

and uncertainty impeded growth in more vulnerable emerging economies.

Economic and market outlook for 2014

Our economists currently expect global economic growth to accelerate to 3.4% in 2014 from 2.5% in 2013. The pick-up in growth during 2014 is expected to be driven by acceleration in advanced economies, supported by still-accommodative monetary policy and reduced fiscal drag. The US economy is expected to grow more strongly at about 3%, while the euro area should recover at a moderate pace, with growth forecasted at 1.1%. The Swiss economy will benefit from the recovery in the euro area and is expected to grow at about 2.1%.

For emerging economies, improved global growth should support external demand, but domestic demand is expected to be restrained by the lack of fresh reforms, credit overhangs and ongoing structural rebalancing. Emerging economies with weaker fundamentals, including a heavy reliance on short-term foreign capital inflows, remain vulnerable to changing Fed policy and rising global interest rates.

Potential sources of economic or market risks include a normalization of the Fed's monetary policy, geopolitical risks in the Ukraine, the Middle East and Far East, and a deceleration of growth in China. While sovereign financial pressures in the eurozone have receded, a slowing of reform momentum, political opposition to euro area integration and uncertainty over the ECB's comprehensive bank assessment remain further potential sources of risk.

Industry drivers

Despite strong stock market performance throughout the year, the operating environment for the financial services industry remained difficult, reflecting a combination of regulatory framework adjustments requiring further structural changes, and a challenging market environment putting pressure on revenues.

Regulatory developments remain a key driver of structural change in the industry

Regulators and legislators continued to exert pressure on the financial services industry to become simpler, more transparent and more resilient. In this context, regulators and legislators in Europe further advanced far-reaching reform proposals – for example, agreements were reached on the Markets in Financial Instruments Directive (MiFID) II and the Bank Recovery and Resolution Directive – while in the US the Commodity Futures Trading Commission approved cross-border guidance, defining the extraterritorial application of its swaps regulations, and the five US financial regulators approved the Volcker Rule.

The year was also characterized by regulatory authorities' focus on reforming banks' structures. In Germany, France, the UK and the US, progress was made on legislation requiring, under certain conditions, a structural separation or prohibition of certain trading or wholesale activities from certain deposit-taking operations. While it is unclear how these individual measures in the European Union (EU) would ultimately interact with the recent EC proposed regulation on "Structural measures improving the resilience of EU credit institutions," these national regulatory initiatives highlight the lack of international coordination with regard to structural developments in the banking sector.

Last but not least, reflecting their concerns about the adequacy of banks' risk-based exposures, regulatory authorities weighed the introduction of more stringent leverage ratio requirements as a credible supplementary measure to risk-based capital requirements.

As a consequence of the evolving regulatory environment, some facets of which have been outlined above, financial institutions are expected to (i) rethink their strategies and focus even more on their core business and markets, in which they are able to leverage their competitive advantages on a sustainable basis, on both a local and to a certain extent a global level, (ii) focus even more on fee-generating businesses that require less capital and funding and (iii) reduce their "buy-and-hold" activities, leading to a further increase in assets held outside the banking system, in turn giving rise to a call to further strengthen regulatory oversight of these sectors.

Bank capital and balance sheets stay in the spotlight

In the course of 2013, the financial services industry succeeded in further improving its capital position with a view to complying with capital requirements defined by regulators and policy makers. For example, the EU-wide Transparency Exercise led by the European Banking Authority showed a continued improvement of the capital position within the EU banking sector in 2013. Similar trends were also observable in Switzerland for the largest banks, as well as in the US. Despite such positive developments, banks' capitalization levels remained a key concern for the public as well as regulators, as evidenced by the intense debate about leverage ratios as a supplementary measure to risk-based capital requirements.

As a step to further increase trust in the European banking sector, the ECB initiated a comprehensive review of European banks' balance sheets and risk profiles. The assessment will consist of three elements: (i) a supervisory risk assessment which reviews on a quantitative and qualitative basis key risks, including liquidity, leverage and funding, (ii) an asset quality review to enhance transparency of banks' exposures by reviewing their asset quality, including the adequacy of asset and collateral valuation and related provisions and (iii) a stress test to examine the resilience of banks' balance sheets to stress scenarios. In such a review, banks will be judged against a capital threshold of 8% based on Capital Requirements Directive IV definitions as of 1 January 2014. If results are unsatisfactory, corrective measures, such as recapitalization, deleveraging or improving funding resilience, may be taken.

Increased focus on costs to compensate for subdued revenues

2013 remained a challenging year for the financial services industry to grow its income levels. Aside from growth constraints due to stricter regulatory requirements – especially related to capital and liquidity standards – the macroeconomic environment, characterized by the ongoing low interest rate environment and a flat yield curve as well as muted client activity levels in the face of continued macroeconomic uncertainty (in particular around monetary stimulus reduction in the US), put pressure on net interest margins and revenues.

As a result of this subdued revenue environment, banks intensified their efforts to increase operational efficiency, either by enhancing targets of existing cost reduction programs or by launching new initiatives in order to realign cost structures with subdued revenue levels.

Technological innovation opening new opportunities

While new technologies have already significantly affected various sectors, pressure on the financial services industry to adapt to a new digital reality continued to increase, reflecting inter alia evolving client expectations, the need for increased efficiencies, accelerating technological innovation and the emergence of new competitors.

Changing client expectations (in particular related to personalization, convenience and transparency), based on levels of service and flexibility experienced in other sectors, presented a significant challenge to the traditional business model of the financial services industry. Although investments will be required to fully address these expectations, technology is also expected to be a key enabler in offering new, innovative banking services, satisfying new customer expectations on one hand and supporting branches and client advisors on the other. Digital capabilities are therefore expected not only to deepen individual customer relationships, but also to facilitate a reduction of operating expenses and complexity through automating systems and processes.

Regulatory and legal developments

In 2013 and early 2014, several important international regulatory and legal initiatives advanced, with key developments including political agreement in the European Union on the Markets in Financial Instruments Directive (MiFID) II and the Bank Recovery and Resolution Directive, as well as the publication of final regulations implementing the Volcker Rule and enhanced prudential standards for banking organizations in the US.

Developments in Switzerland

During the fourth quarter of 2013 and January of 2014, UBS and the Swiss Financial Market Supervisory Authority (FINMA) reviewed the temporary operational risk-related risk-weighted assets (RWA) add-on that became effective on 1 October 2013. Following a review of the advanced measurement approach (AMA) model, the litigation exposures and contingent liabilities of UBS, provisioning movements and methodologies, and progress on managing other operational risks, UBS and FINMA mutually agreed that, effective on 31 December 2013, a supplemental analysis will be used to calculate the incremental operational risk capital required to be held for litigation, regulatory and similar matters and other contingent liabilities. The incremental RWA calculated based upon this supplemental analysis has replaced the temporary operational RWA add-on discussed in our report for the third quarter of 2013, and is reflected in the 31 December 2013 RWA and capital ratio information in this report. The incremental RWA calculated based upon this supplemental analysis as of 31 December 2013 was CHF 22.5 billion.

On 20 December 2013, FINMA issued a decree primarily concerning the regulatory capital requirements of UBS AG (Parent Bank) on a standalone basis. The decree makes changes effective 1 January 2014 to parent bank capital requirements designed to ensure that the capital underpinning of the parent's investments in subsidiaries does not cause a de facto increase in the total capital requirements of UBS Group. The decree also requires certain additional disclosures concerning parent bank capital standards that will be included in our report for the first quarter of 2014.

On 22 January 2014, following a proposal by the Swiss National Bank (SNB), the Swiss Federal Council decided to increase the countercyclical capital buffer in the form of common equity tier 1 (CET1) capital from 1% to 2% of risk-weighted positions secured by residential property located in Switzerland. Banks are obliged to comply as of 30 June 2014. Other loans, in particular those provided to corporates, are not affected by this measure. The effect of the increase of the countercyclical buffer on our capital requirements is not material.

In a referendum in March 2013, the Swiss cantons and voters accepted an initiative to give shareholders of Swiss listed companies more influence over board and management compensation (Minder Initiative). In November 2013, the Swiss Federal Council issued the final transitional ordinance implementing the constitutional amendments of this initiative, which came into force on 1 January 2014. The ordinance requires public companies to specify in their articles of association (AoA) the mechanism of a "say-on-pay" vote, setting out three requirements: (i) the vote on compensation must be held annually, (ii) the vote on compensation must be binding rather than advisory and (iii) the vote on compensation must be held separately for the board of directors and members of the executive board. In addition, shareholders will need to determine the details of the "say-on-pay" vote in the AoA, in particular the nature of the vote, timing aspects and the consequences of a "no" vote. Each company affected by the Minder Initiative must undertake a first binding vote on management compensation and remuneration of the board of directors at its 2015 annual general meeting (AGM), in accordance with the "say-on-pay" regime provided for in the AoA. In addition, the first compensation report pursuant to the ordinance must be prepared for financial year 2014 and made available to shareholders at the 2015 AGM. UBS is currently in the process of implementing these requirements.

The Federal Department of Finance took further steps towards establishing a new Financial Services Act (FIDLEG). FIDLEG's main objectives include improving client protection, establishing a level playing field and eliminating competitive distortions between service providers. In this context, FIDLEG is expected to address a number of regulations such as information obligations, requirements regarding conduct and organization of financial service providers and the expansion of supervision, for example, to independent asset managers. In addition, FIDLEG also seeks to harmonize Swiss financial market law with the applicable international standards, such as the Markets in Financial Instruments Directive (MiFID) II, in order to facilitate European Union (EU) market access for Swiss financial institutions. The proposed financial services regulation will affect almost all financial market participants, including UBS. However, given the early stages of the discussion, a definite assessment is currently not possible.

The Financial Market Infrastructure Act, which was published for consultation in December 2013 by the Swiss Federal Government, governs the organization and operation of financial market infrastructure, including implementation of over-the-counter derivatives regulation in Switzerland and additional regulation of multilateral trading facilities and other non-regulated exchange trading venues. Another important development was the implementation of the Foreign Account Tax Compliance Act (FATCA) in Switzerland. FATCA was introduced by the US government in

2010 in order to increase the transparency of investments by US taxpayers outside the US, and requires financial institutions worldwide to report US tax persons' account information to the US Internal Revenue Service (IRS). Switzerland and the US signed an intergovernmental agreement in February 2013 concerning the implementation of FATCA in Switzerland. This agreement and the implementation of the corresponding FATCA law were subsequently approved by the two chambers of the Swiss Parliament in June and September 2013, respectively. Both the FATCA agreement and the implementing act are scheduled to come into force in the first half of 2014. As the FATCA legislation adopted in the US strongly affects UBS, we are closely monitoring any further refinements made by the IRS as well as developments relating to FATCA in the jurisdictions relevant to UBS and making the necessary preparations for possible implementation.

Further, in Switzerland, the political discussion continued on the structural reform of banks and leverage ratio requirements. In September 2013, the Swiss National Council approved two motions from the year 2011 asking for a mandatory structural reform of banks. After a hearing in January 2014, the Committee for Economic Affairs and Taxation of the Swiss Council of States recommended that these motions be rejected. On 12 March 2014, the Council of States rejected the two motions. Subsequently, they were automatically discarded. Also in September 2013, two new motions were put forward that not only require structural measures but also suggest increasing leverage ratio requirements in Switzerland to 6% and 10%, respectively. However, it is currently unclear if and when the two motions are to be submitted to the parliamentary committee in charge.

Swiss "too-big-to-fail" (TBTF) requirements require systemically important banks, including UBS, to put in place viable emergency plans to continue providing systemically important functions despite a failure, to the extent that such activities are not sufficiently separated in advance. The Swiss TBTF law provides for the possibility of a limited reduction of capital requirements for systemically important institutions that adopt measures to reduce resolvability risk beyond what is legally required. In view of these factors, UBS intends to establish a new banking subsidiary of UBS AG in Switzerland. The scope of this potential future subsidiary's business is still being determined, but we would currently expect it to include our Retail & Corporate business division and likely the Swiss-booked business within our Wealth Management business division. We expect to implement this change in a phased approach starting in mid-2015. This structural change is being discussed on an ongoing basis with FINMA, and remains subject to a number of uncertainties that may affect its feasibility, scope or timing.

Finally, the Swiss-UK tax agreement, which came into effect on 1 January 2013, included a clause stipulating that, should gross tax receipts under the agreement be lower than CHF 1.3 billion, Swiss banks would cover the difference up to a maximum of CHF 500 million. Based on monitoring by the Swiss Bankers Association, it is considered unlikely that CHF 1.3 billion in tax receipts will be received. As a result, we expect to be required to pay CHF 110 million, and have established a provision in that amount in 2013, which has been allocated predominantly to Wealth Management.

Developments in a number of key initiatives in the European Union

In the course of 2013 and early 2014, agreement was reached on a number of far-reaching regulatory reform initiatives in the EU. One of the most important developments was the agreement on the review of the Markets in Financial Instruments Directive and Regulation package (MiFID II/MiFIR). This package introduces a wide set of reforms, including in respect of third-country access to European Economic Area (EEA) markets, new rules regarding market infrastructure and a sharpened set of investor protection rules.

A further political compromise reached by the European Parliament and the Council of the EU related to the Bank Recovery and Resolution Directive (BRRD). This Directive seeks to achieve a harmonized approach to the recovery and resolution of banks in the EU and broadly covers measures relating to recovery and resolution planning, early intervention powers for authorities and resolution tools should a bank fail or be deemed likely to fail. Final approval of the BRRD is expected in the first quarter of 2014, with the majority of the Directive expected to become applicable from 1 January 2015. UBS's EU subsidiaries will be subject to the requirements of the Directive, while EU member states have the right to apply the provisions of the Directive to UBS's EU-based branches in certain circumstances. The overall impact is difficult to assess at this stage, as the EU resolution authorities have a material degree of discretion in setting some of the key requirements of the Directive.

In response to regulatory developments, the business and operating model of UBS Limited, our UK bank subsidiary, and its relationship with UBS AG, are currently being reviewed. Once this review has been finalized, we expect to commence implementation of a revised business and operating model, including changes to its risk profile, which will involve the subsidiary retaining credit risk, and some market risk which currently is transferred to UBS AG under the existing model.

Eleven member states of the EU committed to the implementation of the financial transaction tax via an "enhanced cooperation" procedure. In February 2013, the European Commission (EC) issued a proposal, which is currently being discussed in the EU Council of Ministers. While only the participating countries – namely France, Germany, Austria, Belgium, Greece, Portugal, Slovenia, Italy, Spain, Slovakia and Estonia – are entitled to vote on and would themselves adopt the tax, its extraterritorial scope would affect financial institutions and transactions in all 27 EU member states and beyond. Under the initial EC proposal, the tax would apply to a wide range of financial transactions and minimum rates of 0.1% (securities) and 0.01% (derivatives) would be applicable to both parties of a transaction. The final rates implemented in each of the participating countries could, however, differ. Based on the initial proposal, UBS would be affected by the

tax when transacting with, or on behalf of, clients from participating countries or when performing transactions in financial instruments issued in such countries. The proposal requires operational implementation on a global level and could negatively affect the profitability of certain products. However, ongoing negotiations may alter the territorial application, scope and collection mechanism of the tax and it remains unclear when a political agreement can be expected.

Progress was also made in 2013 towards establishing automatic information exchange in taxation as a new standard, both at European level and internationally. Most notably, global automatic information exchange was endorsed as a global standard by the G20 Summit in September 2013. At EU level, the EC proposed in June 2013 to extend the automatic information exchange within the EU to cover all forms of financial income and account balances. Under the proposal, dividends, capital gains, all other forms of financial income and account balances would be added to the list of categories which are subject to automatic information exchange within the EU from 1 January 2015. However, member states reached no agreement in 2013 on the final text of the second piece of EU legislation on automatic information exchange, the revised EU Savings Tax Directive. In parallel, negotiations started with third countries and the EC on the revision of the existing taxation agreements (including Switzerland).

With regard to the establishment of the Banking Union, agreement was reached on the Single Supervisory Mechanism (SSM), which sets out the supervisory arrangements for affected banks and the respective responsibilities of the European Central Bank (ECB) and competent national authorities. Under the SSM, banks deemed systemically important will from November 2014 be subject to direct ECB supervision in relation to capital and liquidity, while less significant banks will continue to be supervised by their current national supervisors. A further element of the Banking Union is the Single Resolution Mechanism (SRM), which will apply the substantive provisions of the BRRD to banks within the Banking Union. Both the European Parliament and the Council of the EU have agreed their negotiating positions and discussions between them are ongoing.

Separately, additional EU-wide remuneration rules became effective at the beginning of 2014 under the Capital Requirements Directive IV (CRD IV). The rules include provisions on the amount and form of variable remuneration that can be paid to employees identified as material risk takers, as defined by the European Banking Authority. A key element of the rules is the introduction of a maximum ratio of 1:1 for variable to fixed remuneration ("bonus cap"). The cap may be increased to 2:1 with shareholders' consent. These restrictions apply to material risk takers at all banks active in the EU, including UBS. However, as a non-EU headquartered firm, UBS need only apply these restrictions to material risk takers employed by EU subsidiaries or branches. We continue to closely assess EU developments and industry-wide best practices.

In January 2014, the EC issued a proposed regulation on "Structural measures improving the resilience of EU credit institutions," which is its response to the recommendations of its High-level Expert Group on reforming the structure of the EU banking sector ("Liikanen report"). The proposals include two main measures: (i) a ban on proprietary trading and investments in hedge funds and (ii) an additional potential separation of certain trading activities (including market-making, risky securitization and complex derivatives) which will not be mandatory, but rather based on supervisory discretion. The proposal will now enter the EU political process and will likely be subject to changes. Political agreement is not expected until 2015 at the earliest.

In the US, significant steps were taken in implementing the Dodd-Frank Act

Developments in US regulatory initiatives in 2013 related primarily to rulemaking stemming from the Dodd-Frank Act passed in July 2010.

In July 2013, the Commodity Futures Trading Commission (CFTC) approved final cross-border guidance that defines the extraterritorial application of its swaps regulations. This guidance may allow non-US swap dealers, such as UBS AG, "substituted compliance," under which they may comply with home country legal requirements that are determined by the CFTC to be "comprehensive and comparable" instead of the corresponding CFTC requirements. In December 2013, the CFTC issued comparability determinations for Switzerland (and the home countries of other non-US swap dealers) that will allow UBS to comply with relevant Swiss regulations instead of CFTC requirements for many, but not all, of the CFTC regulations for which substituted compliance is available. While the CFTC deferred a comparability determination on swap data reporting requirements, as it continues to review the issue, it granted reporting no-action relief that allows UBS AG (and other non-US swap dealers) to delay reporting transactions with non-US persons for several months. In January 2014, the CFTC delayed the applicability of US regulations to swaps between non-US persons and non-US swap dealers when US personnel are involved until 15 September 2014, giving additional time for foreign swap dealers to comply with US requirements regarding transactions with non-US persons conducted from the US.

Separately, in December 2013, three financial services industry associations filed a lawsuit challenging the CFTC's interpretive guidance and policy statement regarding compliance with certain swap regulations. Relief sought includes invalidating the cross-border guidance and preventing the CFTC from bringing an enforcement action for not complying with US rules extraterritorially. If the guidance is struck down, portions of it that call for substituted compliance and limit the application of transaction regulation to non-US swap dealers would likely also be struck down and may create more uncertainty for non-US swap dealers such as UBS.

In May 2013, the US Securities and Exchange Commission (SEC) proposed rules for the extraterritorial application of its regulation of securities-based swap dealers in the US. The SEC pro-

posal contemplates application of regulations similar to the CFTC rules to non-US swap dealers, including swap transaction reporting requirements and information and inspection requirements that present potential conflicts with non-US law or necessitate privacy waivers from clients. Like the CFTC, the SEC envisions a substituted compliance regime that would allow foreign swap dealers to comply with comparable home country regulation rather than SEC rules under certain circumstances.

US regulators published final regulations implementing the Volcker Rule in December 2013 and generally extended the time to conform to this rule and regulations until July 2015. In general, the Volcker Rule prohibits any banking entity from engaging in proprietary trading and from owning an interest in hedge funds and other private fund vehicles. Our earlier strategy decision to exit our equity proprietary trading businesses, together with certain business lines, will assist us in complying with the regulatory requirements. In addition, the Volcker Rule permits UBS and other non-US banking entities to engage in certain activities that would otherwise be prohibited, to the extent that they are conducted outside the US and certain other conditions are met. We continue to evaluate the final rules and their impact on our activities. One impact will be the need to establish an extensive global compliance framework designed to ensure compliance with the Volcker Rule and the terms of the available exemptions. Moreover, the Volcker Rule could have an impact on the way in which we organize and conduct certain business lines.

In February 2014, the Federal Reserve Board issued final rules for foreign banking organizations (FBO) operating in the US (under section 165 of the Dodd-Frank Act) that include the following: (i) a requirement for FBO with more than USD 50 billion of US non-branch assets to establish an intermediate holding company (IHC) to hold all US subsidiary operations, (ii) risk-based capital and leverage requirements for the IHC, (iii) liquidity requirements, including a 30-day onshore liquidity requirement for the IHC, (iv) risk management requirements including the establishment of a risk committee and the appointment of a US chief risk officer, (v) stress test and capital planning requirements and (vi) a debt-to-equity limit for institutions that pose "a grave threat" to US financial stability. Requirements differ based on the overall size of the foreign banking organization and the amount of its US-based assets. We expect that we will be subject to the most stringent requirements based on our current operations. We will have until 1 July 2016 to establish an IHC and meet many of the new requirements. We must submit an implementation plan by 1 January 2015 and the IHC will not need to comply with the US leverage ratio until 1 January 2018.

Basel Committee on Banking Supervision provided further Basel III guidance

Following the start of Basel III implementation on 1 January 2013, according to the Basel Committee on Banking Supervision's (BCBS) timeline, a number of regulatory discussions over the last year focused on further enhancing and simplifying the capital framework, for example by potentially increasing the role of standardized approaches or of leverage ratios, as well as on achieving better comparability of risk-weighted assets (RWA).

In July 2013, the BCBS issued a discussion paper on "The regulatory framework: balancing risk sensitivity, simplicity and comparability," which proposed a number of reforms to the Basel framework with the objective of evaluating whether the balance between risk sensitivity, simplicity and comparability was still appropriate. The proposals, part of a longer-term discussion, covered a wide range of possibilities, including a stronger role for the standardized approach in calculating RWA, tightening the leverage ratio, and utilizing added floors and benchmarks for model-based calculations.

With regard to the leverage ratio specifically, the BCBS issued a consultation on "Revised Basel III leverage ratio framework and disclosure requirements" in June 2013, followed by final rules in January 2014. The changes to the Basel III leverage ratio framework relate mostly to the leverage ratio's exposure measure and include the following: (i) specifications of the scope of consolidation for the inclusion of exposures, (ii) changes to the general treatment of derivatives and related collateral, (iii) specifications of the treatment of written credit derivatives and (iv) specifications of the treatment of securities financing transactions. The tier 1 capital requirement under the revised Basel III leverage ratio remains at 3% of the exposure measure. However, the BCBS will continue to monitor banks' leverage ratio data on a semi-annual basis in order to assess whether the design and calibration of a minimum tier 1 leverage ratio of 3% is appropriate over a full credit cycle and for different types of business models. The final calibration, and any final adjustments to the definition, will be completed by 2017. Based on an initial review of the proposals, we expect a slight increase in our leverage ratio denominator. The ratio is expected to be incorporated within Pillar 1 minimum capital requirements on 1 January 2018. According to the BCBS's timetable, the disclosure requirements are effective 1 January 2015 subject to implementation by national regulators.

Discussions about the leverage ratio also took place in Switzerland, with a review report on the Swiss TBTF law expected to be published by the Federal Council in early 2015.

In addition, there were further developments regarding liquidity requirements under Basel III. Following the publication on 12 January 2014 by the BCBS of additional guidance on the Liquidity Coverage Ratio (LCR), on 17 January 2014, the Swiss Federal Department of Finance opened a consultation on the revision of the Liquidity Ordinance and at the same time FINMA issued the revised Circular "Liquidity Banks" in Switzerland for comment. Both consultations end on 28 March 2014. Based on an initial review of the proposals, we do not expect a material impact on our pro-forma LCR.

Also on 12 January 2014, the BCBS issued a consultative paper on the proposed revision of the Basel III framework's Net Stable Funding Ratio (NSFR). The consultation period ends on 11 April 2014. The main changes proposed are increased deposit stability, a reduction of cliff effects within the measurement of funding stability and larger stable funding requirements for certain trading assets. Based on an initial review of the proposals, we expect a positive net effect on our pro-forma NSFR. Final NSFR rules are expected to be released by 2016, after which they will undergo a period of consultation and review by Swiss authorities, potentially leading to further changes before implementation.

Our strategy

We are committed to providing our clients with superior financial advice and solutions while generating attractive and sustainable returns for shareholders. Our strategy centers on our Wealth Management and Wealth Management Americas businesses and our leading universal bank in Switzerland, complemented by our Global Asset Management business and our Investment Bank. These businesses share three key characteristics: they benefit from a strong competitive position in their targeted markets, are capital-efficient, and offer a superior structural growth and profitability outlook. Our strategy therefore builds on the strengths of all of our businesses and focuses our efforts on areas in which we excel, while seeking to capitalize on the compelling growth prospects in the businesses and regions in which we operate. Capital strength is the foundation of our success.

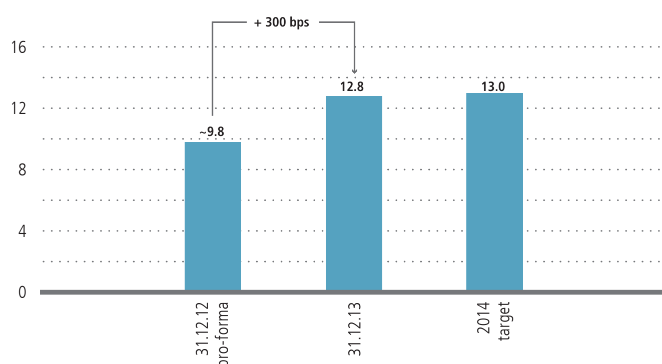
Successfully executing our strategic transformation

In October 2012, we announced a significant acceleration in the implementation of our strategy communicated a year earlier. This announcement underlined our commitment to focus our activities on a set of highly synergistic, less capital- and balance sheet-intensive businesses dedicated to serving clients and well-positioned to maximize value for shareholders. Since then, demonstrating the strength of our business model, we have made substantial progress in improving our already strong capital position and reducing risk-weighted assets (RWA) and costs, while simultaneously growing our business and enhancing our competitive positioning. We have also successfully transformed our Investment Bank, focusing it on its traditional strengths in advisory, research, equities, foreign exchange and precious metals.

Our fully applied common equity tier 1 (CET1) capital ratio increased 300 basis points in 2013 to 12.8%, the highest in our peer group. This increase was driven by a reduction of fully applied RWA to CHF 225 billion, ahead of our 2013 target of CHF 250 billion and CHF 33 billion below year-end 2012 RWA. We achieved this by further active reduction of RWA, mainly through the disposal of positions or other risk reductions in our Non-core and Legacy Portfolio, and despite incremental RWA of CHF 22.5 billion resulting from the supplemental operational risk capital analysis mutually agreed with FINMA and effective 31 December 2013. Future developments in, and the ultimate elimination of, the incremental RWA attributable to the supplemental analysis will depend on provisions charged to earnings for litigation, regulatory and similar matters and other contingent liabilities and on developments in these matters. Our ability to absorb this event while simultaneously increasing our capital ratios and reducing RWA is a testament to our early decision to maintain and build on our strong capital position and to focus on sustainable, more capital-efficient business activities. We continue to target a fully applied CET1 ratio of 13% in 2014, and intend to build further Basel III-compliant capital.

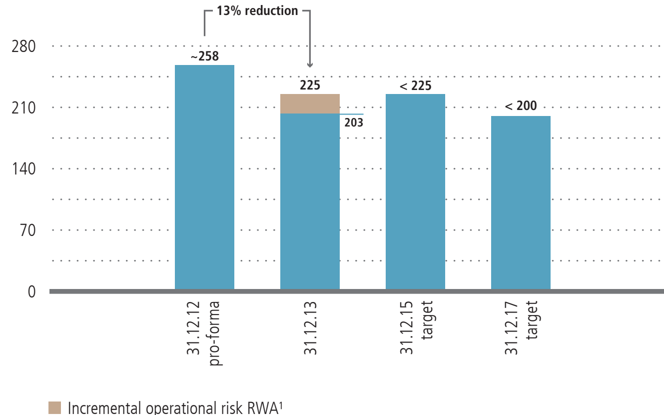
Basel III – Common equity tier 1 capital ratio

fully applied, %



Basel III – Risk-weighted assets

fully applied, CHF billion



1 Represents incremental RWA arising from the supplemental analysis mutually agreed with FINMA that will be used to calculate the incremental operational risk capital required to be held for litigation, regulatory and similar matters and other contingent liabilities, effective on 31 December 2013.

As part of the transformation of the Investment Bank, we transferred certain of its businesses to the Corporate Center in the first quarter of 2013. These were primarily fixed income businesses rendered less attractive by changes in regulation and market developments. As a result, our Investment Bank retains only very focused credit and rates activities, along with structured financing capabilities, in order to support its solutions-focused businesses. Our leading equities and foreign exchange businesses remain cornerstones of our Investment Bank. We did not significantly alter our advisory and capital markets businesses, but reorganized our existing business functions to better leverage our capabilities and therefore better serve our clients. Our Investment Bank has achieved its target of an adjusted pre-tax return on attributed equity of greater than 15% throughout 2013, demonstrating its success in a variety of market conditions. Non-core assets, previously part of the Investment Bank, are reported within our Non-core and Legacy Portfolio unit in the Corporate Center, which is tasked with managing and exiting these assets in a manner that protects shareholder value. RWA associated with these positions were reduced by close to 40% in 2013 to CHF 64 billion, significantly ahead of our target.

➔ **Refer to the "Capital management" section of this report for more information**

Maintaining cost discipline is critical to our long-term success. In 2013, we achieved our CHF 2 billion gross cost reduction plan announced in July 2011. We also made further progress in the implementation of the additional cost reduction program we announced in 2012, targeting incremental annual gross cost savings of CHF 3.4 billion, which we expect to yield tangible results through 2016. These targeted reductions include the benefits from the abovementioned transformation of our Investment Bank, reducing complexity and size, as well as improving organizational effectiveness, primarily in our Corporate Center, and introducing lean front-to-back processes across our Group. Our investment in these initiatives is reflected in restructuring charges of CHF 0.8 billion in 2013 and expectations of further incremental charges of CHF 0.9 billion and CHF 0.8 billion in 2014 and 2015, respectively. Our efficiency programs will free up resources to make investments over the next two years to support growth across our businesses and enable us to service our clients with greater agility and effectiveness, improving quality and speed.

2014 will be another key year of transition for the Group as we continue to work through our plans to further enhance our businesses, reduce our cost base and further improve collaboration across our various businesses. For 2014, we do not expect our unadjusted return on equity to deviate significantly from 2013, primarily due to anticipated charges associated with litigation, regulatory and other matters, restructuring charges, and the impact of Non-core and Legacy Portfolio exits and capital requirements. While we continue to target an adjusted Group return on equity of greater than 15% in 2015, given elevated operational risk RWA, we may not achieve that until 2016. We continue to target an adjusted Group cost/income ratio of 60% to 70% from 2015 onwards.

Delivering attractive shareholder returns

We have a clear strategy and a solid financial foundation, which we believe prepares us well for the future. We are firmly committed to returning capital to our shareholders, and plan to continue our program of progressive returns to shareholders with a proposed 67% increase in dividend to CHF 0.25 per share for the financial year 2013. In this context, we reaffirm our commitment to a total payout ratio of at least 50%, consisting of a

baseline dividend and supplementary returns, after reaching our capital ratio targets of a fully applied CET1 ratio of 13% and a 10% post-stress CET1 ratio, based on our internal stress tests. We intend to set a baseline dividend at a sustainable level, taking into account normal economic fluctuations. The supplementary capital returns will be balanced with our need for investment and any buffer we choose to maintain for a more challenging economic environment or other stress scenarios. Through the further successful implementation of our strategy, we believe we can sustain and grow our business and maintain a prudent capital position.

Our annual performance targets

The table on the right provides our annual performance targets on a Group and business division level as well as for Non-core and Legacy Portfolio. These performance targets exclude, where applicable, items considered non-recurring and certain other items that management believes are not representative of the underlying performance of our businesses, such as own credit gains and losses, restructuring-related charges and gains and losses on sales of businesses and real estate. The performance targets assume constant foreign currency translation rates.

Annual performance targets

Group targets:

Target	Value
Basel III CET1 ratio fully applied	13.0% in 2014
Cost / income ratio	60–70% from 2015
Return on equity[1]	> 15% from 2015

Business division targets:

Division	Target	Value
Wealth Management	Net new money growth rate	3–5%
	Gross margin	95–105 bps
	Cost / income ratio	60–70%
Wealth Management Americas	Net new money growth rate	2–4%
	Gross margin	75–85 bps
	Cost / income ratio	80–90%
Retail & Corporate	Net new business volume growth	1–4%
	Net interest margin	140–180 bps
	Cost / income ratio	50–60%
Global Asset Management	Net new money growth rate	3–5%
	Gross margin	32–38 bps
	Cost / income ratio	60–70%
Investment Bank	Pre-tax RoAE[2]	> 15%
	Basel III RWA	< CHF 70 billion
	Cost / income ratio	65–85%

Non-core and Legacy Portfolio targets:

Target	Date	Value
Basel III RWA	31.12.15	~CHF 55 billion
	31.12.17	~CHF 25 billion

1 While we continue to target a Group return on equity of greater than 15% in 2015, given elevated operational risk RWA, we may not achieve that until 2016. 2 RoAE = return on attributed equity.

UBS Switzerland

UBS is the pre-eminent universal bank in Switzerland, the only country where we operate and maintain leading positions in all five of our business areas of retail, wealth management, corporate and institutional banking, asset management and investment banking. We are fully committed to our home market as our leading position in Switzerland is crucial in terms of profit stability, sustaining our global brand and growing our global core business. Drawing on our network of around 300 branches and our 4,700 client-facing staff, complemented by modern digital banking services and customer service centers open to our clients around the clock seven days a week, we are able to reach approximately 80% of Swiss wealth and service one in three households, one in three high net worth individuals, over 40% of Swiss companies, one in three pension funds and 85% of banks domiciled in Switzerland. In July, Euromoney acknowledged our pre-eminent position in Switzerland with its prestigious "Best Bank in Switzerland" award for the second consecutive year.

Our unique universal bank model is central to our success. Our dedicated Swiss management team includes representatives from all five business areas and ensures we apply a consistent approach to the market when offering our full range of banking products, expertise and services. Our cross-divisional management approach allows us to utilize our existing resources efficiently, promotes cross-divisional thinking and enables seamless collaboration across all business areas. As a result, we are in a unique position to serve our clients efficiently with a comprehensive range of banking products and services to fit their needs. We are able to differentiate ourselves by leveraging our strengths across all segments while ensuring stability and continuity throughout each client's life cycle. Our universal bank model has proven itself to be highly effective in Switzerland and consistently provides a substantial part of the Group's revenues.

Our distribution is based on a clear multi-channel strategy as we strive to offer a unique client experience, giving clients the full flexibility to choose by which channel to interact with us – be it through our branches, customer service centers or digital channels. Our continuous expansion of our electronic and mobile banking proposition is very well-regarded by our clients and translates into a steadily rising number of users and client interactions. With the launch of the new version of our mobile banking application, downloads have increased 77% year on year and client feedback has been excellent, with 88% of Apple App Store ratings awarding the maximum five stars. Premium functionality was recognized externally, among others with the international "Best Bank Mobile Application" award at the MobileWebAwards 2013 and the national Best Swiss Apps 2013 Bronze Award. Our e-banking service currently has around 1.3 million clients, a 7% increase in each of the past two years, and now includes a market-leading personal financial management tool. Around 50 million electronic and mobile banking touch points per year provide a distinctive brand experience, helping us to strengthen client loyalty and attract new clients. We will continue to build on our long tradition as a leader and innovator in digital services to capture market share and increase efficiency.

Given the strength of the economy and the stable political environment in Switzerland, the country remains an attractive financial market. This inherent stability and growth has been the basis for UBS Switzerland's success and its contribution to the Group's financial performance. Thanks to our universal bank model, broad client base and seamless multi-channel offering, we are well-positioned to capture future market growth and to strengthen our leading position in our home market.

Measurement of performance

Performance measures

Key performance indicators

Our key performance indicators (KPI) framework focuses on key drivers of total shareholder return, measured by the dividend yield and price appreciation of a UBS share. Our senior management reviews the KPI framework on a regular basis by considering prevailing strategy, business conditions and the environment in which we operate. The KPI are disclosed consistently in our quarterly and annual reporting to facilitate comparison of our performance over the reporting periods.

The Group and business divisions are managed based on this KPI framework, which emphasizes risk awareness, effective risk and capital management, sustainable profitability and client focus. Both Group and business division KPI are taken into account in determining variable compensation of executives and personnel.

➔ Refer to the "Compensation" section of this report for more information on performance criteria for compensation

In addition to the KPI, we disclose performance targets. These performance targets include certain of the KPI as well as additional balance sheet and capital management performance measures to track the achievement of our strategic plan.

➔ Refer to the "Our strategy" section of this report for more information on performance targets

The Group and business division KPI are explained in the "Group/business division key performance indicators" table.

We made the following key changes to our KPI framework in 2013 to align it to the new Basel III requirements which became effective at the beginning of the year:

- We replaced "BIS tier 1 ratio (%)" with "Swiss systemically relevant banks (SRB) Basel III common equity tier 1 capital ratio (%)."
- We replaced "FINMA leverage ratio (%)" with "Swiss SRB leverage ratio (%)" (formerly also referred to as "FINMA Basel III leverage ratio (%)").

We show our "Swiss SRB Basel III common equity tier 1 capital ratio (%)" on a phase-in and a fully applied basis. The information provided on a fully applied basis entirely reflects the effects of the new capital deductions and the phase-out of ineligible capital instruments. The information provided on a phase-in basis gradually reflects those effects during the transition period, which runs from 2014 to 2018 for the new capital deductions, and from 2013 to 2019 for the phase-out of ineligible capital instruments. "Swiss SRB leverage ratio (%)" considers Swiss SRB Basel III common equity tier 1 (CET1) capital and loss-absorbing capital, divided by total adjusted exposure, which is equal to IFRS assets, based on a capital adequacy scope of consolidation, adjusted for replacement value netting and other adjustments, including off-balance sheet items. Our KPI for "Swiss SRB leverage ratio (%)" is calculated on a phase-in basis.

➔ Refer to the "Capital management" section of this report for more information

In addition, we changed the definition of our Wealth Management Americas KPI "Recurring income as a percentage of total operating income (%)" to "Recurring income as a percentage of income (%)" to exclude credit loss (expense) or recovery. The change of the denominator to "income" from "total operating income" makes this KPI more consistent with the KPI "Gross margin on invested assets (bps)," "Return on assets, gross (%)," "Return on risk-weighted assets, gross (%)" and "Cost/income ratio (%)" which are already based on "income" as opposed to "operating income," thereby also excluding credit loss (expense) or recovery. The effect on our figures of this new basis of calculation was immaterial, but prior periods were restated to reflect the change in definition. In addition, we now also include both "Recurring income" and "Recurring income as a percentage of total income (%)" in our Wealth Management disclosure. However, for Wealth Management these metrics are considered "Additional information" and not KPI.

Client/invested assets reporting

We report two distinct metrics for client funds:

- The measure "client assets" encompasses all client assets managed by or deposited with us, including custody-only assets.
- The measure "invested assets" is more restrictive and includes only client assets managed by or deposited with us for investment purposes.

Of the two, invested assets is our more central measure and includes, for example, discretionary and advisory wealth management portfolios, managed institutional assets, managed fund assets and wealth management securities or brokerage accounts. It excludes all assets held for custody-only purposes, as we only administer the assets and do not offer advice on how these assets should be invested. Non-bankable assets (for example, art collections) and deposits from third-party banks for funding or trading purposes are excluded from both measures.

Net new money in a reported period is the amount of invested assets that are entrusted to us by new or existing clients less those withdrawn by existing clients or clients who terminated their relationship with us. Negative net new money means that there are more outflows than inflows. Interest and dividend income from invested assets is not counted as net new money inflow. However, in Wealth Management Americas we also show net new money

Group / business division key performance indicators

Key performance indicators	Definition	Group	Wealth Management	Wealth Management Americas	Retail & Corporate	Global Asset Management	Investment Bank
Net profit growth (%)	Change in net profit attributable to UBS shareholders from continuing operations between current and comparison periods / net profit attributable to UBS shareholders from continuing operations of comparison period	●					
Pre-tax profit growth (%)	Change in business division performance before tax between current and comparison periods / business division performance before tax of comparison period		●	●	●	●	●
Cost / income ratio (%)	Operating expenses / operating income before credit loss (expense) or recovery	●	●	●	●	●	●
Return on equity (RoE) (%)	Net profit attributable to UBS shareholders (annualized as applicable) / average equity attributable to UBS shareholders	●					
Return on attributed equity (RoAE) (%)	Business division performance before tax (annualized as applicable) / average attributed equity						●
Return on assets, gross (%)	Operating income before credit loss (expense) or recovery (annualized as applicable) / average total assets	●					●
Return on risk-weighted assets, gross (%)	Operating income before credit loss (expense) or recovery (annualized as applicable) / average risk-weighted assets	●					
Swiss SRB leverage ratio (%) (phase-in)	Swiss SRB Basel III common equity tier 1 capital and loss-absorbing capital / total adjusted exposure (leverage ratio denominator)	●					
Swiss SRB Basel III common equity tier 1 capital ratio (%)	Swiss SRB Basel III common equity tier 1 capital / Swiss SRB Basel III risk-weighted assets	●					
Net new money growth (%)	Net new money for the period (annualized as applicable) / invested assets at the beginning of the period	●	●	●		●	
Gross margin on invested assets (bps)	Operating income before credit loss (expense) or recovery (annualized as applicable) / average invested assets		●	●		●	
Net new business volume growth (%)	Net new business volume (i.e., total net inflows and outflows of client assets and loans) for the period (annualized as applicable) / business volume (i.e., total of client assets and loans) at the beginning of the period				●		
Net interest margin (%)	Net interest income (annualized as applicable) / average loans				●		
Recurring income as a % of income (%)	Total recurring fees and net interest income / income			●			
Impaired loans portfolio as a % of total loans portfolio, gross (%)	Impaired loans portfolio, gross / total loans portfolio, gross				●		
Average VaR (1-day, 95% confidence, 5 years of historical data)	Value-at-risk (VaR) expresses maximum potential loss measured to a 95% confidence level, over a one-day time horizon and based on five years of historical data						●

including interest and dividend income in line with historical reporting practice in the US market. Market and currency movements, as well as fees, commissions and interest on loans charged, are excluded from net new money, as are the effects of any acquisition or divestment of a UBS subsidiary or business. Reclassifications between invested assets and custody-only assets as a result of a change in the service level delivered are generally treated as net new money flows. However, where such a change in service level directly results from a new, externally imposed regulation, the one-time net effect of the implementation is reported as an asset reclassification without net new money impact. The Investment Bank does not track invested assets or net new money. Accordingly, when a client is transferred from the Investment Bank to another business division, this produces net new money even though the client assets were already with UBS.

When products are managed in one business division and sold by another, they are counted in both the investment management unit and the distribution unit. This results in double-counting within our total invested assets, as both units provide an independent service to their client, add value and generate revenues. Most double-counting arises when mutual funds are managed by Global Asset Management and sold by Wealth Management and Wealth Management Americas. The business divisions involved count these funds as invested assets. This approach is in line with both finance industry practices and our open architecture strategy, and allows us to accurately reflect the performance of each individual business. Overall, CHF 156 billion of invested assets were double-counted as of 31 December 2013 (CHF 172 billion as of 31 December 2012).

➔ **Refer to "Note 35 Invested assets and net new money" in the "Financial information" section of this report for more information**

Seasonal characteristics

Our main businesses may show seasonal patterns. The Investment Bank's revenues have been affected in some years by the seasonal characteristics of general financial market activity and deal flows in investment banking. Other business divisions may also be impacted by seasonal components, such as lower client activity levels related to the summer and end-of-year holiday seasons, annual income tax payments, for example, which are concentrated in the second quarter in the US, and asset withdrawals that tend to occur in the fourth quarter.

Changes to key performance indicators in 2014

From the beginning of 2014, we will make the following changes to our KPI framework to further enhance its relevance by reclassifying certain KPI to "Additional information," or defining certain KPI to focus on our specific wealth management or retail businesses.

Changes to key performance indicators in 2014

Existing key performance indicators	Changes in 2014	Group	Wealth Management Americas	Retail & Corporate
Return on risk-weighted assets, gross (%)	This metric will no longer be a KPI, but will instead be reported as "Additional information," as it is considered to be less meaningful and relevant compared with the other existing KPI to measure the performance of the Group.	●		
Swiss SRB Basel III common equity tier 1 capital ratio (%) (phase-in)	This metric will no longer be a KPI, but will instead be reported as "Additional information." The Swiss SRB Basel III CET1 capital ratio on a fully applied basis will continue to be a KPI.	●		
Net new money growth (%)	This KPI will be renamed to "Net new money growth for combined wealth management businesses (%)" and focus on net new money generated by our wealth management businesses only by excluding net new money from Global Asset Management and Retail & Corporate from this measure.	●		
Recurring income as a % of income (%)	This metric will no longer be a KPI, but will instead be reported as "Additional information," to be consistent with the way this metric is reported in Wealth Management.		●	
Net new business volume growth (%)	This KPI will be renamed "Net new business volume growth for retail business (%)" and focus on net new business volume from our retail business only by excluding our corporate business from this measure.			●
Impaired loans portfolio as a % of total loans portfolio, gross (%)	This measure will no longer be a KPI, as it is considered to be less meaningful and relevant compared with the other existing KPI to measure the performance of our Retail & Corporate business.			●

Wealth Management

Wealth Management provides wealthy private clients with investment advice and solutions tailored to their individual needs. At the end of 2013, we had a presence in over 40 countries and invested assets of more than CHF 880 billion.

Business

We provide comprehensive financial services to wealthy private clients around the world, with the exception of those served by our colleagues in Wealth Management Americas. UBS is a global firm with global capabilities, and our clients benefit from a full spectrum of resources, ranging from investment management solutions to wealth planning and corporate finance advice, as well as the specific offerings outlined below. Our guided architecture model gives clients access to a wide range of products from third-party providers that complement our own product lines.

Strategy and clients

We are one of the pre-eminent wealth managers globally and aim to provide our clients with superior investment advice and solutions.

We are building on our leading position by focusing on our clients' individual goals. We provide them with access to the infrastructure we offer to our institutional clients: for example, direct access to the Investment Bank's trading platforms, the offering of our Institutional Solutions Group and professional portfolio management capabilities, including strategic asset allocation and holistic portfolio monitoring to ensure clients' portfolios remain aligned with their investment strategy. In addition, through our Global Family Office Group, clients benefit from tailored institutional coverage and global execution provided by dedicated specialist teams from both Wealth Management and the Investment Bank. We also provide solutions, products and services to financial intermediaries.

The global wealth management business has attractive long-term growth prospects and we expect its growth to outpace that of gross domestic product in all regions. From a client segment perspective, the global ultra high net worth market, including family offices, has the highest growth potential, followed by the high net worth market. Our broad client base and strong global footprint put us in an excellent position to capture the opportunities this presents.

Our integrated client service model enables us to bundle capabilities from across the Group to identify investment opportunities in all market conditions and tailor solutions to meet individual client needs. Our booking centers across the globe give us a strong local presence which allows us to book client assets in multiple locations. The strength and scope of our franchise also enable us to adapt to the changing legal and regulatory environment.

Collaboration is also crucial to our continued expansion in key onshore locations, and we continue to benefit from the established business relationships of our local Investment Bank and Global Asset Management teams.

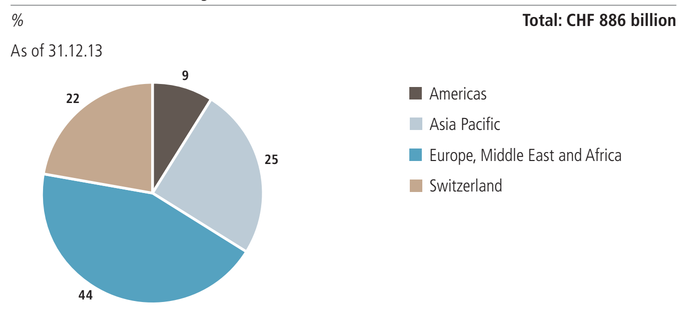
In Asia Pacific, we are accelerating our growth with a focus on Hong Kong and Singapore, the leading financial centers in the region. We are also developing a targeted presence in major onshore markets such as Japan and Taiwan and investing in our local presence in China to help capture long-term growth opportunities.

In the emerging markets, we are focused on key growth markets such as Brazil, Mexico, Israel, Turkey, Russia and Saudi Arabia. We continually enhance our market-specific products and services

Invested assets by client domicile

% Total: CHF 886 billion

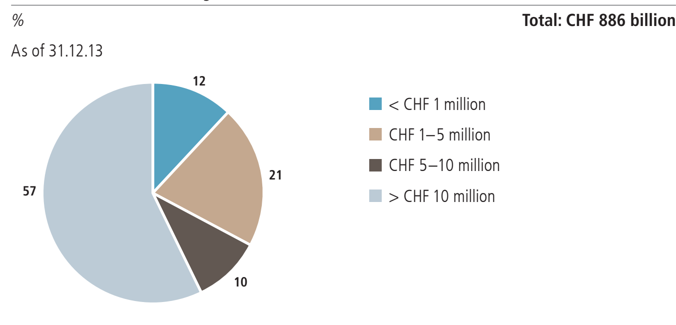
As of 31.12.13



Invested assets by client wealth

% Total: CHF 886 billion

As of 31.12.13



to ensure we meet the needs of our clients. Many emerging market clients prefer to book their assets in established financial centers and, to that end, we are strengthening our coverage for such clients through our booking centers in the US, the UK and Switzerland.

In Europe, our long-established footprint in all major booking centers underpins our growth ambition. We recognized early the converging needs of clients and combined our offshore and onshore businesses. This gives clients across the region access to our extensive Swiss product offering, creates economies of scale and enables us to deal more efficiently with increased regulatory and fiscal requirements.

In Switzerland, we collaborate closely with our colleagues in retail, corporate, asset management and investment banking. This generates opportunities to expand our business and gives our clients access to our investment insight and research, advisory and portfolio management capabilities, products and capital markets, as well as execution know-how. We generate significant referrals from Swiss corporate and retail clients through UBS's extensive branch network, which includes over 100 wealth management offices. As their wealth increases, retail clients can progress seamlessly to our wealth management operations.

Our Global Financial Intermediaries business acts as a strategic business partner for more than 2,400 financial intermediaries in all major financial centers. It offers them professional investment advisory services, a global banking infrastructure and tailored solutions, helping financial intermediaries to advise their end-clients more effectively.

Organizational structure

Headquartered in Switzerland, we have a presence in over 40 countries with approximately 200 wealth management and representative offices, half of which are outside Switzerland. As of the end of 2013, we employed approximately 16,400 people worldwide. Of these, approximately 4,100 were client advisors. We are governed by executive, operating and risk committees and are primarily organized along regional lines with our business areas being Asia Pacific, Europe, Global Emerging Markets, Switzerland and Global Ultra High Net Worth. Our business is supported by the Chief Investment Office and a global Investment Products and Services unit, as well as central functions.

Competitors

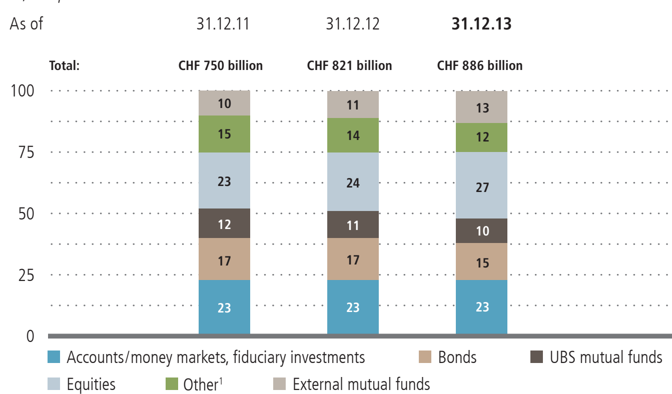
Our major global competitors include the private banking operations of Credit Suisse, Julius Bär, HSBC, Deutsche Bank, BNP Paribas, JP Morgan and Citigroup, along with leading investment managers such as PIMCO. In the European domestic markets, we primarily compete with the private banking operations of large local banks such as Barclays in the UK, Deutsche Bank in Germany and Unicredit in Italy. In Asia Pacific, the private banking franchises of HSBC, Citigroup and Credit Suisse are our main competitors.

Investment advice and solutions

As part of a global, integrated firm, we are a dynamic wealth manager with investment management capabilities at our core.

Invested assets by asset class

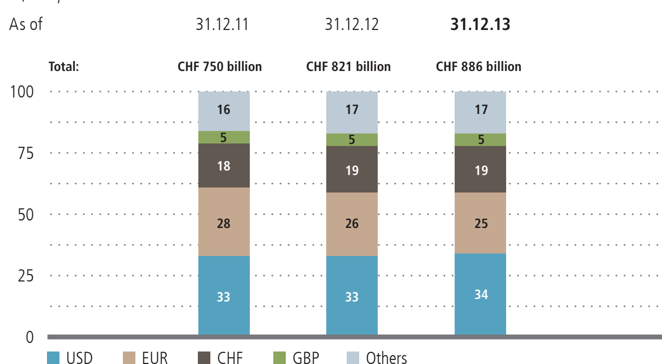
%, except where indicated



1 Including structured products and alternative investments.

Invested assets by currency

%, except where indicated



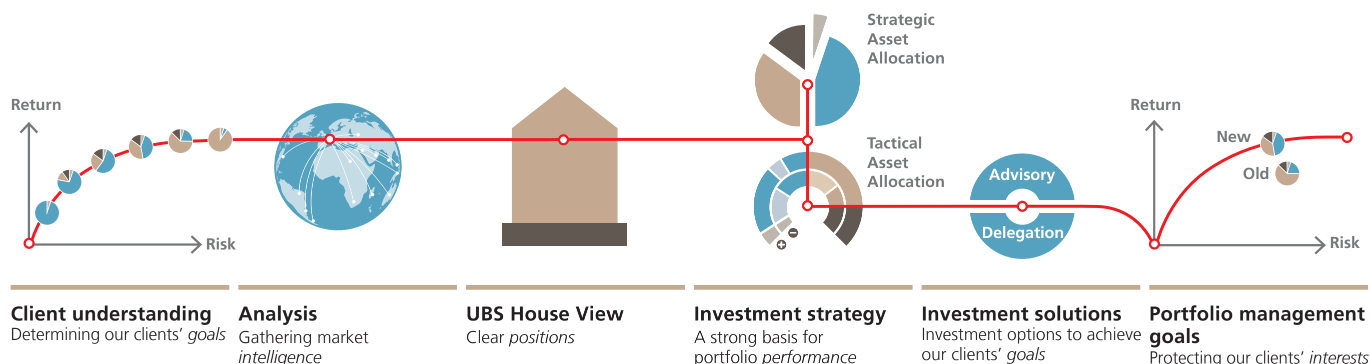
Our client advisors are proactive in their relationships with clients, and we have a systematic process for developing a thorough understanding of our clients' financial objectives and risk appetite. In addition, our wealth planners – part of our specialist product team – often support client advisors as they guide their clients in making financial decisions based on their life-cycle needs. With this comprehensive overview, we offer them wealth planning advice and products, and we ascertain their investment strategy, which serves as the foundation for the investment solutions we offer them. Client advisors regularly review their clients' investor profiles to make sure they correspond to their evolving priorities and changing tolerance for risk. Our bespoke training programs and the ongoing support the firm provides to our client advisors enable them to deliver superior advice and solutions to our clients. For example, we require all of our client advisors to obtain the Wealth Management Diploma, a program accredited by Switzerland's State Secretariat For Economic Affairs (SECO) that ensures a high level of knowledge and expertise. For our most senior client advisors, we offer extensive training through the Wealth Management Master program.

Our global Chief Investment Office synthesizes the research and expertise of our global network of economists, strategists, analysts and investment specialists from across all business divisions. These specialists are present in all major markets around the globe, closely monitoring financial developments. This allows us to deliver real-time insights and to embed local knowledge into our global investment process. Using these analyses, and in consultation with our external partner network, which includes many of the world's most successful money managers, the Chief Investment Office establishes a clear, concise and consistent investment view – the UBS House View. The UBS House View includes both our strategic and our tactical asset allocation across all relevant asset classes in major markets. The strategic asset allocation represents the long-term asset allocation for a defined risk level and is crucial for investment performance. Our strategic asset allocation is complemented by our tactical asset allocation, which allows us to capitalize on short-term market opportunities.

Our Investment Products and Services unit ensures our solutions are in step with market conditions by aligning our discretionary and advisory offerings with our UBS House View. Clients who opt for an investment mandate delegate the management of their assets to a team of professional portfolio managers. Those who prefer to be actively involved can choose an advisory mandate. Their entire portfolio is monitored and analyzed closely, and they receive tailored proposals to help them make informed investment decisions. They can also invest in the full range of financial instruments from single securities such as equities and bonds, to various investment funds, structured products and alternative investments. Additionally, we offer clients advice on structured lending and corporate finance.

Our products are aimed at achieving performance in various market scenarios. They are developed from a wide range of sources, including Investment Products and Services, Global Asset Management, the Investment Bank and third parties, as we operate within a guided architecture model. By aggregating private investment flows into institutional-size flows, we can offer our clients access to investments normally only available to institutional clients.

Superior investment advice and solutions for our clients' wealth



Wealth Management Americas

Wealth Management Americas develops advice-based relationships through its financial advisors, who deliver a fully integrated set of wealth management solutions designed to address the needs of high net worth and ultra high net worth individuals and families.

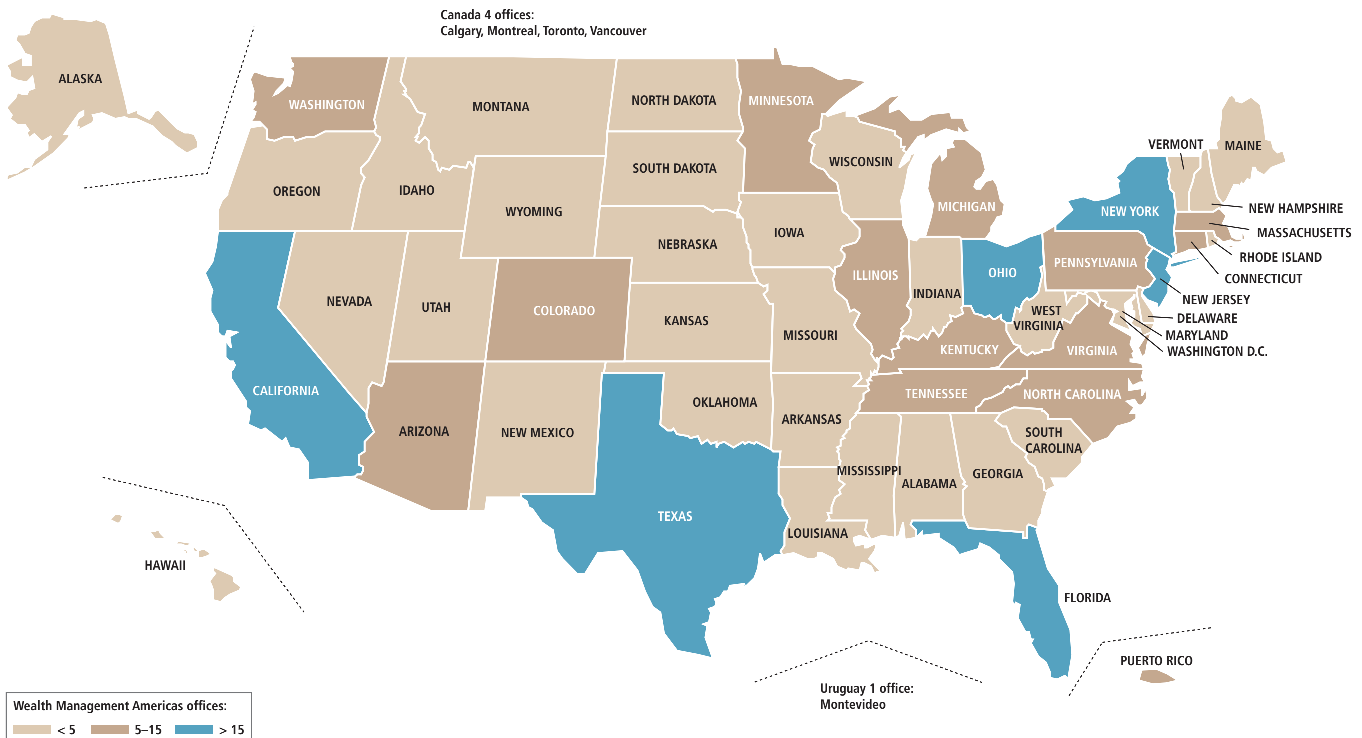
Business

We are one of the leading wealth managers in the Americas in terms of financial advisor productivity and invested assets. Our business includes the domestic US and Canadian business as well as international business booked in the US. We have attractive growth opportunities and a clear strategy focused on serving our target client segments. As of 31 December 2013, invested assets totaled USD 970 billion.

Strategy and clients

Our goal is to be the best wealth management business in the Americas. With our client-focused, advisor-centric strategy, we deliver advice-based wealth management solutions and banking services through our financial advisors in key metropolitan markets, providing a fully integrated set of products and services to meet the needs of our target client segments, high net worth clients and ultra high net worth clients, while also serving the needs of core affluent clients. We define high net worth clients as those with investable assets of between USD 1 million and USD 10 million, and ultra high net worth clients as those with investable assets of more than USD 10 million. Core affluent clients are defined as those with investable assets of between USD 250,000 and USD 1 million. The Global Family Office – Americas, a joint venture between Wealth Management Americas and the Investment Bank, was launched in 2013 with the objective of seamlessly offering the global resources and reach of the entire firm by providing integrated, comprehensive wealth management and institutional-type services to selected Family Office clients. Our Wealth Advice Center serves emerging affluent clients with investable assets of less than USD 250,000. We are committed to providing high-quality advice to our clients across all their financial needs by employing the best professionals in the industry, delivering the

Geographical presence in key markets



highest standard of execution, and running a streamlined and efficient business.

We believe we are uniquely positioned to serve high net worth and ultra high net worth investors in the world's largest wealth market. With a network of over 7,000 financial advisors and USD 970 billion in invested assets, we are large enough to be relevant, but focused enough to be nimble, enabling us to combine the advantages of large and boutique wealth managers. We aim to differentiate ourselves from competitors and be a trusted and leading provider of financial advice and solutions to our clients by enabling our financial advisors to leverage the full resources of UBS, including unique access to wealth management research, a global Chief Investment Office, and solutions from our asset-gathering businesses and the Investment Bank. These resources are augmented by our commitment to an open architecture platform and are supported by our partnerships with many of the world's leading third-party institutions. Moreover, our wealth management offerings are complemented by banking, mortgage and financing solutions that enable us to provide advice on both the asset and liability sides of our clients' financial balance sheets.

We believe the long-term growth prospects of the wealth management business are attractive in the Americas, with high net worth and ultra high net worth expected to be the fastest growing segments in terms of invested assets in the region. In 2013, our strategy and focus led to a continued improvement in financial results, retention of high-quality financial advisors and net new money growth. Building on this progress, we aim for continued growth in our business by developing our financial advisors' focus towards advice-based solutions, leveraging the global capabilities of UBS to clients by continuing to partner with the Investment Bank and Global Asset Management, and delivering banking and lending services that complement our wealth management solutions. We also plan to continue investing in improved platforms and technology, while remaining disciplined on cost. We expect these efforts to enable us to achieve higher levels of client satisfaction, strengthen our client relationships, and lead to greater revenue productivity among our financial advisors.

Organizational structure

Wealth Management Americas consists of branch networks in the US, Puerto Rico, Canada and Uruguay, with 7,137 financial advisors as of 31 December 2013. Most corporate and operational functions are located in the Wealth Management Americas home office in Weehawken, New Jersey.

In the US and Puerto Rico, we operate primarily through direct and indirect subsidiaries of UBS AG. Securities and operations activities are conducted primarily through two registered broker-dealers, UBS Financial Services Inc. and UBS Financial Services Incorporated of Puerto Rico. Our banking services in the US include those conducted through the UBS AG branches and UBS Bank USA, a federally regulated bank in Utah, which provides Federal Deposit Insurance Corporation (FDIC)-insured deposit accounts, collateralized lending services, mortgages and credit cards.

Canadian wealth management and banking operations are conducted through UBS Bank (Canada), and Uruguayan wealth management operations are conducted through UBS Financial Services Montevideo.

Competitors

We compete with national full-service brokerage firms, domestic and global private banks, regional broker-dealers, independent broker-dealers, registered investment advisors, trust companies and other financial services firms offering wealth management services to US and Canadian private clients, as well as foreign non-resident clients seeking wealth management services within the US. Our main competitors include the wealth management businesses of Bank of America, Morgan Stanley and Wells Fargo.

Products and services

We offer clients a full array of solutions that focus on their individual financial needs. Comprehensive planning supports clients through the various stages of their lives, including education funding, charitable giving, estate strategies, insurance, retirement and trusts and foundations, with corresponding product offerings for each stage. Our advisors work closely with internal consultants in areas such as wealth planning, portfolio strategy, retirement and annuities, alternative investments, managed accounts, structured products, banking and lending, equities and fixed income. Clients also benefit from our dedicated Wealth Management Research team, which provides research guidance to help support our clients' investment decisions.

Our offerings are designed to meet a wide variety of investment objectives, including wealth accumulation and preservation, income generation and portfolio diversification. To address the full range of our clients' financial needs, we also offer competitive lending and cash management services such as securities-backed lending, resource management accounts, FDIC-insured deposits, mortgages and credit cards.

Additionally, our UBS Equity Plan Advisory Services is a leading provider of equity compensation plan services and advice to more than 130 US corporations, representing one million participants worldwide. For corporate and institutional clients, we offer a robust suite of solutions, including equity compensation, administration, investment consulting, defined benefit and contribution programs and cash management services.

Our clients can choose asset-based pricing, transaction-based pricing or a combination of both. Asset-based accounts have access to both discretionary and non-discretionary investment advisory programs. Non-discretionary advisory programs enable the client to maintain control over all account transactions, while clients with discretionary advisory programs direct investment professionals to manage a portfolio on their behalf. Depending on the type of discretionary program, the client can give investment discretion to a qualified financial advisor, a team of our investment professionals or a third-party investment manager. Separately, we also offer mutual fund advisory programs, whereby a financial advisor works with the client to create a diversified portfolio of mutual funds guided by a research-driven asset allocation framework.

For clients who favor individual securities, we offer a broad range of equity and fixed income instruments. In addition, qualified clients may take advantage of structured products and alternative investment offerings to complement their portfolio strategies.

All of these solutions are supported by a dedicated capital markets group. This group partners with the Investment Bank and Global Asset Management in order to access the resources of the entire firm, as well as third-party investment banks and asset management firms.

Retail & Corporate

As the leading retail and corporate banking business in Switzerland, our goal is to deliver comprehensive financial products and services to our retail, corporate and institutional clients, provide stable and substantial profits for the Group and create revenue opportunities for other businesses within the Group.

Business

We provide comprehensive financial products and services to our retail, corporate and institutional clients in Switzerland, maintaining a leading position in these client segments and embedding our offering in a multi-channel approach. As shown in the "Business mix" chart below, our retail and corporate business generates stable profits which contribute substantially to the overall financial performance of the Group. We are among the leading players in the retail and corporate loan market in Switzerland, with a highly collateralized lending portfolio of CHF 137 billion as of 31 December 2013, as shown in the "Loans, gross" chart below. This portfolio is managed conservatively, focusing on profitability and credit quality rather than market share.

Our retail and corporate business constitutes a central building block of UBS Switzerland's universal bank model, supporting other business divisions by referring clients to them and assisting retail clients to build their wealth to a level at which we can transfer them to our Wealth Management unit. Furthermore, we leverage the cross-selling potential of products and services provided by our asset-gathering and investment banking businesses. In addition, we manage a substantial part of UBS's Swiss infrastructure and Swiss banking products platform, which are both leveraged across the Group.

Strategy and clients

We aspire to be the bank of choice for retail clients in Switzerland by delivering value-added services. Currently, we serve one in three Swiss households. Our distribution network comprises around 300 branches, 1,250 automated teller machines including self-service terminals, and four customer service centers as well as state-of-the-art digital banking services. Technology is fundamentally transforming the way we deliver our products and services. We are therefore continuously expanding and enhancing our multi-channel offering and will continue to build on our long tradition as a leader and innovator in digital services to deliver superior client experience, capture market share and increase efficiency. Moreover, we follow a life-cycle-based product approach to provide our clients with tailored solutions to meet their particular needs in their different stages of life. With regard to execution, we ensure a client-focused and efficient sales process.

Our size in Switzerland and the diversity of businesses we operate put us in an advantageous position to serve all our clients' complex financial needs in an integrated and efficient way. We aim to be the main bank of corporate and institutional clients ranging from small and medium-sized enterprises to multinationals, and from pension funds and commodity traders to banks and insurers. We serve over 40% of Swiss companies, including more

than 85% of the 1,000 largest Swiss corporations, as well as one in three pension funds in Switzerland, including 75 of the largest 100, and 85% of banks domiciled in Switzerland. We strive to further expand and leverage our transaction banking capabilities (for example, payment and cash management services, custody solutions, trade and export finance). In addition, we plan to increase our presence and grow in the commodities trade finance business. Combining the universal bank approach with our local market expertise across all Swiss regions enables us to optimize our client service by providing access to all UBS capabilities.

As the leading retail and corporate banking business in Switzerland, we understand the importance of our role in supporting the needs of our clients. We have successfully implemented structures and processes to simplify our service commitments across the business, including streamlining our processes, reducing the administrative burden on our client advisors and enhancing their long-term productivity without compromising our risk standards.

Continuous development, particularly of our client-facing staff, is a crucial element of our strategy, as this is our key to ensuring superior client service. We are the only bank in Switzerland with a mandatory certification scheme for our client advisors acknowledged by an independent third party.

Organizational structure

We are a core element of UBS Switzerland's universal bank delivery model, which allows us to extend the expertise of the entire bank to our Swiss retail, corporate and institutional clients. Switzerland is the only country where we operate in retail, corporate and institutional banking, wealth and asset management as well as investment banking.

To ensure consistent delivery throughout Switzerland, the Swiss network is organized into 10 geographical regions. Dedicated management teams in the regions and in the branches derived from all business areas are responsible for executing the universal bank model, fostering cross-divisional collaboration and ensuring that the public and clients have a uniform experience based on a single corporate image and shared standards of service.

Competitors

In the Swiss retail banking business, our competitors are Raiffeisen, Credit Suisse, the cantonal banks, Postfinance, and other regional and local Swiss banks.

In the Swiss corporate and institutional business, our main competitors are Credit Suisse, the cantonal banks and foreign banks in Switzerland.

Products and services

Our retail clients have access to a comprehensive life-cycle-based offering, comprising easy-to-understand products including cash accounts, payments, savings and retirement solutions, investment fund products, residential mortgages, a loyalty program and advisory services. We provide financing solutions to our corporate clients, offering access to equity and debt capital markets, syndicated and structured credit, private placements, leasing and traditional financing. Our transaction banking offers solutions for payments and cash management services, trade and export finance, receivable finance, as well as global custody solutions to institutional clients. Close collaboration with our client-centric Investment Bank is a key building block in our universal bank strategy that enables us to offer capital market products, foreign exchange products, hedging strategies (currency, interest rates, and commodities) and trading (equities and fixed income, currencies and commodities), as well as to provide corporate finance advice in fields such as mid-market mergers and acquisitions, corporate succession planning and real estate. We also cater to the asset management needs of institutional clients by offering portfolio management mandates, strategy execution and fund distribution.

Global Asset Management

Global Asset Management is a large-scale asset manager with diversified businesses across investment capabilities, regions and distribution channels. We offer third-party institutional and wholesale clients and clients of UBS's wealth management businesses a broad range of investment capabilities and styles across all major traditional and alternative asset classes.

Business

Our investment capabilities encompass equities, fixed income, currency, hedge funds, real estate, infrastructure and private equity. We also enable clients to invest in a combination of different asset classes through multi-asset strategies. Our fund services unit is a global fund administration business. Invested assets totaled CHF 583 billion and assets under administration were CHF 432 billion as of 31 December 2013. We are a leading fund house in Europe, the largest mutual fund manager in Switzerland and one of the leading fund of hedge funds and real estate investment managers in the world.

Strategy

We work closely with our clients in pursuit of their investment goals with long-term performance as our focus. We seek to expand our strong third-party institutional business and grow third-party wholesale distribution. We also remain committed to delivering distinctive products and solutions to clients of UBS's wealth management businesses.

We offer a broad range of investment capabilities and styles across all major traditional – including indexed – and alternative asset classes.

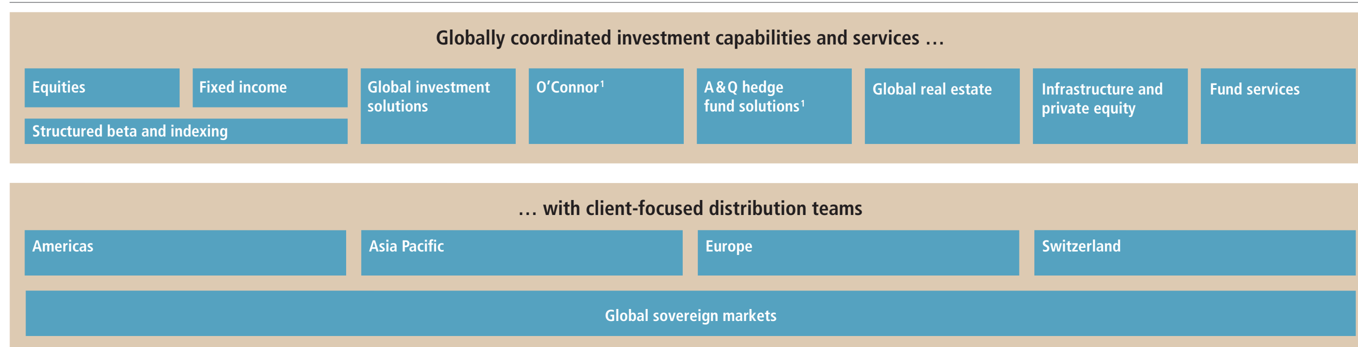
Over the past few years, we have significantly developed our indexed capabilities, including exchange-traded funds (ETF), to meet growing demand for these strategies from both institutional and individual investors. Over a quarter of our invested assets now fall into this category. During 2013, we brought together our indexing capabilities under a unified business structure – structured beta and indexing – to fulfill the beta needs of clients across all asset classes.

We also continue to expand our successful alternatives platform, building on our established positions in real estate and fund of hedge funds. During 2013, we split the management of our former alternative and quantitative investments business line into its two constituent parts: O'Connor, the single-manager hedge funds business, and A&Q hedge fund solutions (A&Q), the multi-manager hedge funds business. This split provides clear and focused leadership to accelerate growth in each business. These two businesses continue to be reported together as O'Connor and A&Q.

Overall, our diversified business model has proven resilient to challenging market conditions, has put us in a good position to benefit from shifting market dynamics and provided a solid foundation to capture industry growth opportunities.

Although the asset management industry has experienced a challenging period, the long-term outlook is positive. Three main drivers indicate asset inflows into the industry: (i) demographic shifts resulting in population aging in developed countries that will increase future savings requirements, (ii) governments are continuing to reduce support for pensions and benefits, leading to a greater need for private pension savings and (iii) emerging markets are becoming an ever more important asset pool.

Business structure



1 O'Connor and A&Q hedge fund solutions were formerly known as alternative and quantitative investments.

Organizational structure

We employ around 3,700 personnel in 24 countries, and have our principal offices in London, Chicago, Frankfurt, Hartford, Hong Kong, New York, Paris, Singapore, Sydney, Tokyo and Zurich. The "Business structure" chart shows our investment and distribution structure.

Significant recent acquisitions, joint ventures and business transfers

- In December 2013, we announced the creation of UBS Grocon, a joint venture with Grocon, Australia's largest private development and construction firm, to provide investment opportunities in Australian real estate.
- In December 2012, we announced the sale of our book of Canadian domestic business to Fiera Capital Corporation. The transaction was completed in January 2013.
- In January 2012, the firm's Jersey fund services business was transferred to Global Asset Management from Wealth Management.
- In October 2011, we completed the acquisition of the ING Investment Management Limited business in Australia. This business initially operated as a subsidiary of UBS Global Asset Management (Australia) Ltd and, following the sale of parts of the business, was fully integrated during 2012.

Competitors

Our competitors include global firms with wide-ranging capabilities and distribution channels, such as JP Morgan Asset Management, BlackRock, Goldman Sachs Asset Management, Morgan Stanley Investment Management, AllianceBernstein Investments and Schroders. Most of our other competitors are regional or local players or firms with a specific asset class focus.

Clients and markets

We serve third-party institutional and wholesale clients, and clients of UBS's wealth management businesses. As shown in the "Invested assets by channel" chart, as of 31 December 2013 approximately 70% of invested assets originated from third-party clients. These comprised institutional clients, such as corporate and public pension plans, governments and their central banks, and wholesale clients, such as financial intermediaries and distribution partners. UBS's wealth management businesses represented 30% of invested assets and constituted our largest client relationship.

Products and services

We offer our clients products and services in traditional investments, single- and multi-manager hedge funds, global real estate, infrastructure, private equity, and fund services. The "Investment capabilities and services" chart illustrates the distinct offerings of each investment area. These can be delivered in the form of segregated, pooled and advisory mandates, as well as a broad range of registered investment funds, ETF and other investment vehicles in a wide variety of jurisdictions and across all major asset classes.

- *Equities* offers a wide spectrum of active investment strategies with varying risk and return objectives. These strategies are delivered by distinct investment teams, each with dedicated research and portfolio construction resources. Our teams are organized around regional capabilities and styles: global, US, Europe, Asia Pacific and emerging markets, and growth. Strategies include core, unconstrained, long/short, small cap, sector, thematic, and other specialized strategies.
- *Fixed income* offers a diverse range of active global, regional and local market-based investment strategies. Its capabilities include single-sector strategies such as government and corporate bond portfolios, multi-sector strategies such as core and core

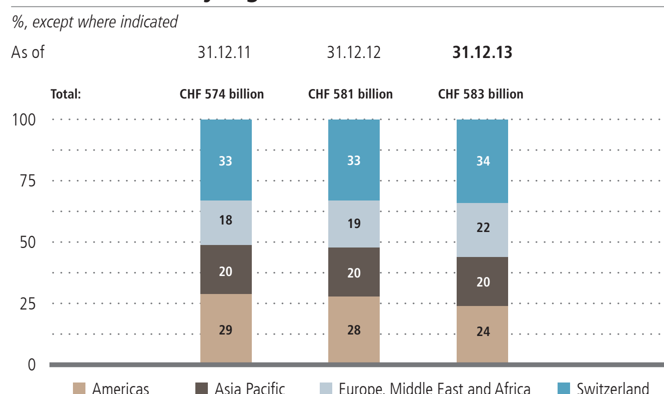
plus bond, and extended sector strategies such as high yield and emerging market debt. In addition to this suite of traditional fixed income offerings, the team also manages unconstrained fixed income, currency strategies and customized solutions.

- *Structured beta and indexing* offers indexed, alternative beta and rules-based strategies across all major asset classes on a global and regional basis. Its capabilities include indexed equities, fixed income, commodities, real estate and alternatives with benchmarks ranging from mainstream to highly customized indices and rules-driven solutions. Products are offered in a variety of structures including ETF, pooled funds, structured funds and mandates.
- *Global investment solutions* offers active asset allocation, currency, multi-manager, structured solutions, risk advisory and strategic investment advisory services. It manages a wide array of regional and global multi-asset investment strategies across the full investment universe and risk/return spectrum, structured portfolios, convertible bonds and absolute return strategies. Through its risk management and strategic investment advisory services, it supports clients in a wide range of investment-related functions.
- *O'Connor* is a global, relative value-focused, single-manager hedge fund platform. It is dedicated to providing investors with strong absolute and risk-adjusted returns, differentiated from those available from long-only investment in traditional asset classes.
- *A&Q hedge fund solutions (A&Q)* offers a full spectrum of multi-manager hedge fund solutions and advisory services including a wide range of strategies that provide professionally managed exposure to hedge fund investments with tailored risk and return profiles.
- *Global real estate* actively manages real estate investments globally and regionally within Asia Pacific, Europe and the US across the major real estate sectors. Its capabilities are focused on core and value-added strategies but also include other strategies across the risk/return spectrum. These are offered

through open- and closed-end private funds, REITs, customized investment structures, multi-manager funds, individually managed accounts and real estate securities.
- *Infrastructure and private equity* manages direct infrastructure investment and multi-manager infrastructure and private equity strategies for both institutional and private banking clients. Infrastructure asset management manages direct investments in core infrastructure assets globally. Alternative Funds Advisory (AFA) infrastructure and AFA private equity construct broadly diversified fund of funds portfolios across the infrastructure and private equity asset classes, respectively.
- *Fund services,* our global fund administration business, offers a comprehensive range of flexible solutions, including fund setup, reporting and accounting for traditional investment funds, managed accounts, hedge funds, real estate funds, private equity funds and other alternative structures.

Invested assets by region[1]



1 Assets represented are totals for the Global Asset Management business division worldwide. The regional split is primarily based on the client servicing location.

Distribution

As detailed in the "Business structure" chart, our capabilities and services are distributed through our regional business structure in the Americas, Asia Pacific, Europe and Switzerland. This enables clients to access the full resources of our global investment platforms and functions, while providing them at a local level with the investment management products and services they need. In addition, our dedicated global sovereign markets group delivers an integrated approach to ensure sovereign institutions receive the focused advisory, investment and training solutions they require.

A breakdown of invested assets by client servicing location is shown in the "Invested assets by region" chart.

In Asia Pacific, we have expanded our business through strategic joint ventures. In addition to the abovementioned UBS Grocon joint venture, in Japan, Mitsubishi Corp. – UBS Realty, a real estate investment joint venture with Mitsubishi Corporation, has been in operation since 2001. In China, UBS SDIC Fund Management Co., a joint venture with SDIC Trust & Investment Co., is now in the top third of the onshore asset management market. In South Korea, UBS Hana Asset Management, a joint venture with Hana Bank, is among the top 10 domestic asset management firms.

Investment Bank

The Investment Bank provides corporate, institutional and wealth management clients with expert advice, innovative solutions, outstanding execution and comprehensive access to the world's capital markets. We offer financial advisory and capital markets, research, equities, foreign exchange, precious metals and tailored fixed income services in rates and credit through our two business units, Corporate Client Solutions and Investor Client Services.

Business

The Investment Bank is organized as two distinct but aligned business units:

Corporate Client Solutions includes all advisory and financing solutions businesses, origination, structuring and execution, including equity and debt capital markets in service of corporate, financial institution, sponsor clients and Wealth Management.

Investor Client Services includes execution, distribution and trading for institutional investors and provides support to Corporate Client Solutions and UBS's wealth management businesses. It comprises our equities businesses, including cash, derivatives and financing services, cross-asset class research capabilities and our foreign exchange franchise, precious metals, rates and credit businesses. The Investor Client Services unit also provides distribution and risk management capabilities required to support all of our businesses.

Strategy

In the first quarter of 2013, we re-shaped our strategy and organizational model to capitalize on our traditional strengths in advisory, capital markets, equities and foreign exchange businesses, while re-focusing our rates and credit platform on areas that offer the most attractive opportunities. Following this, and consistent with our October 2012 announcement to significantly accelerate the implementation of our strategy, we exited products and services which were capital- and balance sheet-intensive, exhibited higher operational complexity and were not required for serving our wealth management or Corporate Client Solutions clients. In addition, foreign exchange, rates and credit businesses were brought under one unit within Investor Client Services to leverage their combined client base, technology, risk and operational control management, as well as expertise in different areas.

We believe the strategic transformation of our business differentiates us by capitalizing on our traditional strengths. Our clients continue to benefit from our expertise, intellectual capital and global execution. Our client-centric business model makes us an ideal partner to our wealth management businesses, Retail & Corporate and Global Asset Management, and positions us to provide our clients with an integrated, solutions-led approach, combined with deep market insight, intellectual capital and global coverage and execution.

Our Corporate Client Solutions business unit is comprised of our advisory and capital markets businesses and financing solutions, which target industries and geographies that offer the best opportunities to meet our long-term strategy. We have a presence in all major financial markets, with coverage based on a comprehensive matrix of country, sector and product banking professionals.

Within our Investor Client Services business unit, our equities business continues to leverage its global distribution platform and product expertise while seeking further operational efficiencies. Foreign exchange and precious metals businesses, underpinned by a world-class platform, continue to be a cornerstone of our services. Consistent with our strategy, our rates and credit platform is focused on client flow and solutions businesses. It serves our capital markets business through an intermediation model, much like in our equities and foreign exchange platforms.

To ensure the successful execution of our strategy, we will continue to invest in technology and selectively recruit talent in key areas across the business. Furthermore, we will remain focused on our ongoing cost reduction programs and on strengthening our operational risk framework. In 2013, we made a number of key strategic hires to strengthen our leadership team further and enhance our ability to execute our strategy in 2014 and beyond. We continued to optimize internal efficiencies through the implementation of a targeted technology plan, which is based on a long-term portfolio

approach across businesses aimed at enhancing the effectiveness of our platform for clients. These structural changes are expected to contribute to the Group-wide effort to increase efficiency. In addition, and on a selective basis, we will continue to undertake specific initiatives to simplify our production processes, achieve leaner front-to-back processes, and operate with a reduced real-estate footprint.

To support our goal of earning attractive returns on allocated capital resources, we operate within a tightly controlled matrix of balance sheet, risk-weighted assets, leverage ratio denominator and other risk metrics (e.g., value-at-risk and liquidity adjusted stress). Consistent with this, we assess both the Investor Client Services and Corporate Client Solutions business units based on the returns they generate.

Organizational structure

As of the end of 2013, we employed approximately 11,615 personnel in over 35 countries. We operate through branches and subsidiaries of UBS AG. Securities activities in the US are conducted through UBS Securities LLC, a registered broker-dealer.

Significant recent acquisitions

In February 2013, after receiving the required regulatory approvals from the Brazilian government, UBS finalized its acquisition of Link Investimentos, a Brazilian financial services firm. UBS had entered into the agreement to acquire Link Investimentos in 2010. The acquisition demonstrates our commitment to the emerging markets and allows us to provide wealth management and investment banking services to private and institutional clients in Brazil, one of the world's fastest growing economies.

Competitors

Our Investment Bank's strategy and scope is unique, but other competing firms are active in many of the businesses and markets in which we still participate. For our leading equities, foreign exchange and corporate advisory businesses, our main competitors remain the major global investment banks, including Bank of America Merrill Lynch, Barclays Capital, Citigroup, Credit Suisse, Deutsche Bank, Goldman Sachs, JP Morgan Chase and Morgan Stanley.

Products and services

Corporate Client Solutions

This includes client coverage, advisory, debt and equity capital market solutions and financing solutions for corporate, financial institution and sponsor clients. Corporate Client Solutions works closely with Investor Client Services in the distribution and risk management of capital markets products and financing solutions. With a presence in all major financial markets, it is managed by region and is organized on a matrix of country, industry sector and product banking professionals. Its main business lines are as follows:

- *Advisory* provides bespoke solutions to our clients' most complex strategic problems. This includes mergers and acquisitions advice and execution, as well as refinancing, spin-offs, exchange offers, leveraged buyouts, joint ventures, takeover defense, corporate broking and other advisory services.
- *Equity capital markets* offers equity capital-raising services, as well as related derivative products and risk management solutions. Its services include managing initial public offerings, follow-ons including rights issues and block trades, equity-linked transactions and other strategic equities solutions.
- *Debt capital markets* helps corporate and financial institution clients in raising debt capital including investment grade and emerging market bonds, high-yield bonds, subordinated debt and hybrid capital. It also provides leveraged capital services, which include event-driven (acquisition, leveraged buy-out) loans, bonds and mezzanine financing. All debt products are provided alongside risk management solutions, including derivatives in close collaboration with our foreign exchange, rates and credit businesses.
- *Financing solutions* serves corporate and investor clients across the globe by providing customized solutions across asset classes via a wide range of financing capabilities including structured financing, real estate finance and special situations.
- *Risk management* includes corporate lending and associated hedging activities.

Investor Client Services

Investor Client Services, which includes our equities business and our foreign exchange, rates and credit business, provides a comprehensive distribution platform with enhanced cross-asset delivery as well as specialist skills to our corporate, institutional and wealth management clients.

Equities

We are one of the world's largest equities houses and a leading participant in the primary and secondary markets for cash equities and equity derivatives. We provide a full front-to-back product suite globally, including financing, execution, clearing and custody services. Our franchise employs a client-centric approach to serve hedge funds, asset managers, wealth management advisors, financial institutions and sponsors, pension funds, sovereign wealth funds and corporations globally. We distribute, structure, execute, finance and clear cash equity and equity derivative products. Our research franchise provides in-depth investment analysis on companies, sectors, regions, macroeconomic trends, public policy and asset-allocation strategies. The main business lines of the equities unit are as follows:

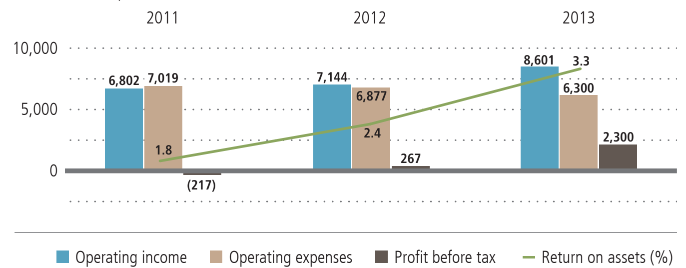
- *Cash* provides clients with liquidity, investment advisory, trade execution and consultancy services, together with comprehensive access to primary and secondary markets, corporate management and subject matter experts. We offer full-service trade execution for single stocks and portfolios, including capital commitment, block trading, small cap execution and commission management services. In addition, we provide clients with a full suite of advanced electronic trading products, direct market access to over 150 venues worldwide, including low-latency exe-

cution, innovative algorithms and pre-, post- and real-time analytical tools. Our broker and intermediary services franchise offers execution and price improvement to retail wholesalers.

– *Derivatives* provides a full range of flow and structured products, convertible bonds and strategic equity solutions with global access to primary and secondary markets. It enables clients to manage risk and meet funding requirements through a wide range of listed, over-the-counter, securitized and fund-wrapped products. We create and distribute structured products and notes for institutional and retail investors with investment returns linked to companies, sectors and indices across multiple asset classes, including commodities.
– *Financing services* provides a fully integrated platform for our hedge fund clients, including prime brokerage, capital introduction, clearing and custody, synthetic financing and securities lending. In addition, we execute and clear exchange-traded derivatives across equities, fixed income and commodities in more than 60 markets globally.

Efficient utilization of resources and improved profitability

CHF million, except where indicated



Foreign exchange, rates and credit

This unit consists of our leading foreign exchange franchise and our market-leading precious metals business, as well as our repositioned rates and credit businesses. These businesses support the execution, distribution and risk management related to corporate and institutional client businesses, and also meet the needs of private wealth management clients via targeted intermediaries. The main business lines are as follows:

– *Foreign exchange* provides a full range of G10 and emerging markets currency and precious metals services globally. We are a leading foreign exchange market-maker in the professional spot, forwards and options markets. We provide clients worldwide with first-class execution facilities (voice, electronic, algorithmic) coupled with premier advisory and structuring capabilities when tailored solutions best fit our clients' positioning, hedging or liquidity management. Our presence in physical and non-physical precious metals markets has endured for almost a century. Our award-winning teams provide quality, security and competitive pricing supported by a client-centric, one-stop-shop approach that offers trading, investing and hedging across the spectrum of gold-, silver-, platinum- and palladium-related offerings.
– *Rates and credit* encompasses sales and trading in a selected number of credit and rates products, such as standardized rates-driven products, interest rate swaps, medium-term notes, government and corporate bonds as well as bank notes and bespoke solutions for clients. Our offering includes market-making capabilities in areas required to support our businesses in foreign exchange and equities, as well as our corporate and investor client base.

Corporate Center

The Corporate Center comprises Corporate Center – Core Functions and Corporate Center – Non-core and Legacy Portfolio. Corporate Center – Core Functions enables the firm to operate cohesively and effectively by providing and managing support and control functions to the Group and business divisions. Corporate Center – Non-core and Legacy Portfolio manages the exit and wind-down of the non-core businesses and legacy positions previously part of the Investment Bank.

Our objectives

Corporate Center – Core Functions provides our business divisions with Group-level control in the areas of finance, risk, legal, compliance and Group-wide shared services functions, comprising support and logistics functions. We strive to maintain effective corporate governance processes, including compliance with relevant regulations and ensuring an appropriate balance between risk and return. The Corporate Center also encompasses our Non-core and Legacy Portfolio unit, which comprises the non-core businesses and legacy positions previously part of the Investment Bank.

At the end of 2013, there were 24,082 employees working across all Corporate Center functions including Non-core and Legacy Portfolio. Corporate Center – Core Functions allocates the majority of its treasury income, operating expenses and personnel associated with control and shared services functions to the businesses for which the respective services are performed based on service consumption and financial resource usage.

Corporate Center – Core Functions provides Group-wide control functions, including finance, risk control (including compliance) and legal, and shared services functions. The shared services and other central functions comprise information technology, operations, human resources, corporate development, regulatory relations and strategic initiatives, communications and branding, corporate real estate and administrative services, procurement, physical security as well as information security, offshoring and treasury services such as funding, balance sheet and capital management.

To further enhance cost discipline and strengthen our efforts to reduce our underlying cost base, starting in 2014 we will refine the way that operating costs for internal services are allocated from Corporate Center – Core Functions to the business divisions and Corporate Center – Non-core and Legacy Portfolio. Under this refinement, each year, as part of the annual business planning cycle, Corporate Center – Core Functions will agree with the business divisions and Non-core and Legacy Portfolio cost allocations for services at fixed amounts or at variable amounts based on formulas, depending on capital and service consumption levels as well as the nature of the services to be performed. Corporate Center – Core Functions will be responsible for any differences between actual costs and the pre-agreed amounts.

➔ Refer to the “Significant accounting and financial reporting changes” section of this report for more information on this refinement to our cost allocation approach

Corporate Center – Non-core and Legacy Portfolio comprises the non-core businesses and legacy positions previously part of the Investment Bank, and is overseen by a committee consisting of the Group Chief Executive Officer, the Group Chief Financial Officer and the Group Chief Risk Officer. Its businesses and positions are being managed and exited over time with the objective of maximizing shareholder value, in line with our strategic plan.

We established clear priorities for regions, counterparties and product lines and have developed detailed wind-down plans with the objective of achieving capital benefits at optimized cost. Corporate Center – Non-core and Legacy Portfolio works closely with sales managers and bankers in the Investment Bank as well as with trading market contacts in attempting to execute the most appropriate strategy for each situation, and has built strong management information systems to track the progress of risk-weighted assets (RWA) and leverage ratio denominator reductions and exit costs.

The wind-down and exit strategies include negotiated bilateral settlements with specific counterparties, third-party novations, including transfers to central clearing houses, agreements to net down trades with other dealer counterparties and portfolio sales. Significant simplification of books and trades also contributed to our strong progress, and dynamic risk management and hedging of positions effectively mitigated profit and loss volatility in the portfolio.

During 2013, we exercised our option to acquire the SNB StabFund's equity, which was part of the Legacy Portfolio. This resulted in a CHF 2.1 billion increase in our common equity tier 1 capital as the capital deduction related to the fair value of the option is no longer applicable. Fully applied RWA for Corporate Center – Non-core and Legacy Portfolio of CHF 64 billion as of 31 December 2013 were significantly ahead of our target of CHF 85 billion by year-end 2013. As of 31 December 2013, a total of 1,585 personnel were employed within Corporate Center – Non-core and Legacy Portfolio including the SNB StabFund investment management team, compared with 2,304 as of 31 December 2012.

Structure of Corporate Center – Core Functions

Group Chief Financial Officer

Our Group Chief Financial Officer (Group CFO) is responsible for ensuring transparency in, and the assessment of, the financial performance of our Group and business divisions and for the

Group's financial reporting, forecasting, planning and controlling processes. He also provides advice on financial aspects of strategic projects and transactions. The Group CFO has management responsibility over divisional and Group financial control functions. The Group CFO is responsible for management and control of the Group's tax affairs and for treasury and capital management, including management and control of funding and liquidity risk and UBS's regulatory capital ratios. After consultation with the Audit Committee of the Board of Directors (BoD), our Group CFO makes proposals to the BoD regarding the standards for accounting adopted by UBS and defines the standards for financial reporting and disclosure. Together with the Group Chief Executive Officer (Group CEO), the Group CFO provides external certifications under sections 302 and 404 of the Sarbanes-Oxley Act of 2002, and, in coordination with the Group CEO, manages relations with analysts and investors. Effective January 2014, the Corporate Development function, previously within the Group Chief Operating Officer area, is part of the Group CFO area.

Group Chief Operating Officer

Our Group Chief Operating Officer (Group COO) manages the shared services functions of our Group, which in 2013 included the management and control of Group-wide operations, information technology, human resources, corporate development, Group regulatory relations and strategic initiatives, communications and branding, corporate real estate and administrative services, procurement, physical and information security, and offshoring. In addition, the Group COO supports the Group CEO in developing our strategy and addressing regulatory and strategic issues. Effective January 2014, the Group COO area consists of Group Technology, Group Operations, Group Corporate Services and the Group's Industrialization program. Group Human Resources, Communications & Branding and Group Regulatory Relations & Strategic Initiatives report directly to the Group CEO. Corporate Development is integrated in the Group CFO area.

Group Chief Risk Officer

Our Group Chief Risk Officer (Group CRO) develops and implements principles and appropriate independent control frameworks for credit, market, country and operational risks within the Group. In particular, the Group CRO formulates and implements the frameworks for risk capacity and appetite, risk measurement, portfolio controls and risk reporting, and has management responsibility over the divisional and Group risk control functions. He implements the risk control mechanisms as determined by the BoD, the BoD Risk Committee or the Group CEO. In addition, the Group CRO approves transactions, positions, exposures, portfolio limits and certain provisions in accordance with the delegated risk control authorities, and monitors and challenges the firm's risk-taking activities. In January 2014, the compliance and operational risk organizations were brought together to form a single function focused on the control of our regulatory, conduct and operational risks across all business divisions. This integrated unit reports to the Group CRO. Also effective January 2014, our Group Security Services function became part of the Group CRO area.

Group General Counsel

Our Group General Counsel (Group GC) is responsible for legal matters, policies and processes, and for managing the legal function of our Group. The Group GC is responsible for reporting legal risks and material litigation, and for managing litigation, internal, special and regulatory investigations. The Group GC assumes responsibility for legal oversight in respect of the Group's key regulatory interactions and for maintaining relationships with our key regulators with respect to legal matters. Until the end of 2013, the Group GC was also responsible for compliance matters and for managing the compliance organization. Effective January 2014, the compliance organization is integrated into the Group CRO area.

Regulation and supervision

The Swiss Financial Market Supervisory Authority (FINMA) is UBS's home country regulator and consolidated supervisor. As a financial services provider with a global footprint, we are also regulated and supervised by the relevant authorities in each of the jurisdictions in which we conduct business. The following sections summarize the key regulatory requirements and supervision of our business in Switzerland as well as in the US and the UK, our next two largest areas of operation.

Regulation and supervision in Switzerland

The Swiss Federal Law on Banks and Savings Banks of 8 November 1934, as amended (Banking Act), and the related Swiss Federal Ordinance on Banks and Savings Banks of 17 May 1972, as amended (Banking Ordinance), provide the legal basis for banking in Switzerland. Based on the license obtained under this framework, we may engage in a full range of financial services activities, including retail banking, commercial banking, investment banking and asset management in Switzerland. The Banking Act, Banking Ordinance and the Financial Market Supervision Act of 22 June 2007, as amended, establish a framework for supervision by FINMA, empowering it to issue its own ordinances and circulars, which contribute to shaping the Swiss legal and regulatory framework for banks.

In 2010, the Swiss Federal Council and FINMA incorporated the enhancements to the Basel Capital Accord issued by the Basel Committee on Banking Supervision on 13 July 2009 (so-called Basel 2.5) into the Capital Adequacy Ordinance of 29 September 2006 (and related circulars). The enhanced capital adequacy rules became effective on 1 January 2011. In autumn 2011, the Swiss Parliament amended the legal framework for banks to address the lessons learned from the financial crisis and, in particular, the "too-big-to-fail" issue. The amended sections are applicable to the largest Swiss banks, including UBS, and contain specific capital requirements and provisions to ensure that systemically relevant functions can be maintained in case of insolvency. In addition, and in line with global requirements, we are required to produce and update recovery plans and resolution planning materials aimed at increasing the firm's resilience further in the case of a crisis, and provide FINMA and other regulators with information on how the firm could be resolved in the event of an unsuccessful recovery. These new sections entered into force on 1 March 2012. Switzerland implemented the Basel III Accord by means of a complete review of the Capital Adequacy Ordinance and related FINMA rules. In addition, a number of other amendments have been made to the Banking Ordinance and the Capital Adequacy Ordinance, which came into effect on 1 January 2013.

➔ **Refer to the "Capital management" section of this report for more information on capital requirements**

The Federal Act of 10 October 1997 on the Prevention of Money Laundering in the Financial Sector defines a common standard for due diligence obligations to prevent money laundering for the whole financial sector.

The legal basis for the investment funds business in Switzerland is the Swiss Federal Act on Collective Investment Schemes (Collective Investment Schemes Act) of 23 June 2006, which came into force on 1 January 2007. FINMA, as supervisory authority for investment funds in Switzerland, is responsible for the authorization and supervision of the institutions and investment funds subject to its control.

In our capacity as a securities broker and as an issuer of shares listed in Switzerland, we are governed by the Federal Act on Stock Exchanges and Securities Trading of 24 March 1995. FINMA is the competent supervisory authority with respect to securities broking.

FINMA fulfills its statutory supervisory responsibilities through licensing, regulation, monitoring and enforcement. Generally, prudential supervision in Switzerland is based on a division of tasks between FINMA and authorized audit firms. Under this two-tier supervisory system, FINMA has responsibility for overall supervision and enforcement measures while the authorized audit firms carry out official duties on behalf of FINMA. The responsibilities of external auditors encompass the audit of financial statements, the risk-based assessment of banks' compliance with prudential requirements and on-site audits.

We are classified as a Swiss systemically relevant bank (SRB) due to our size, complexity, organization and business activities, as well as our importance to the financial system. As a Swiss SRB, we are subject to more rigorous supervision than most other banks. We are directly supervised by the FINMA group "Supervision of UBS," which is supported by teams specifically monitoring investment banking activities, risk management and legal matters as well as solvency and capital aspects. FINMA's supervisory tools include meetings with management at group and divisional level, reporting requirements encompassing control and business areas, on-site reviews in Switzerland and abroad, and exchanges with internal audit and host supervisors in other jurisdictions. In recent years, FINMA has implemented the recommendations issued by the Financial Stability Board and the Basel Committee on Banking Supervision, and complemented the Supervisory College with the

UK Financial Services Authority (FSA) and the Federal Reserve Bank of New York (FRBNY), established in 1998 to promote supervisory cooperation and coordination, with a General Supervisory College – including more than a dozen of UBS host regulatory agencies – and a Crisis Management College, which is also attended by representatives from the Swiss National Bank (SNB) and the Bank of England.

The SNB contributes to the stability of the financial system through macro-prudential measures and monetary policy, also providing liquidity to the banking system. It does not exercise any banking supervision authority and is not responsible for enforcing banking legislation, but works together with FINMA in the following areas: (i) assessment of the soundness of Swiss SRB, (ii) regulations that have a major impact on the soundness of banks, including liquidity, capital adequacy and risk distribution provisions, where they are of relevance for financial stability and (iii) contingency planning and crisis management. FINMA and the SNB exchange information and share opinions about the soundness of the banking sector and Swiss SRB, and are authorized to exchange information and documents that are not publicly accessible if they require these in order to fulfill their tasks. With regard to Swiss SRB, the SNB may also carry out its own enquiries and request information directly from the banks. In addition, the SNB has been tasked by Parliament with the designation of Swiss SRB and their systemically relevant functions in Switzerland. Currently, UBS, Credit Suisse and, since 1 November 2013, Zürcher Kantonalbank are required to comply with specific Swiss SRB rules.

Regulation and supervision in the US

Our operations in the US are subject to a variety of regulatory regimes. UBS maintains branches and representative offices in several states, including Connecticut, Illinois, New York, California and Florida. These branches are licensed either by the Office of the Comptroller of the Currency (OCC) or the state banking authority of the state in which the branch is located. The representative offices are licensed by the OCC. Each US branch and representative office is subject to regulation and supervision, including on-site examination, and to licensing and supervision by the Board of Governors of the Federal Reserve System (FRS). We also maintain state- and federally-chartered trust companies and a Federal Deposit Insurance Corporation (FDIC)-insured depository institution (IDI) subsidiary, which are licensed and regulated by state regulators or the OCC. Only the deposits of our IDI, headquartered in the state of Utah, are insured by the FDIC. The regulation of our US branches and subsidiaries imposes activity and prudential restrictions on the business and operations of those branches and subsidiaries, including limits on extensions of credit to a single borrower and on transactions with affiliates.

The licensing authority of each state-licensed US branch of UBS may, in certain circumstances, take possession of the business and property of UBS located in the state of the UBS offices it licenses. Such circumstances generally include violations of law, unsafe business practices and insolvency. As long as we maintain one or more federal branches licensed by the OCC, the OCC also has the authority to take possession of all the US operations of UBS under broadly similar circumstances, as well as in the event that a judgment against a federally licensed branch remains unsatisfied. This federal power may pre-empt the state insolvency regimes that would otherwise be applicable to our state-licensed branches. As a result, if the OCC exercised its authority over the US branches of UBS pursuant to federal law in the event of a UBS insolvency, all US assets of UBS would generally be applied first to satisfy creditors of these US branches as a group, and then made available for application pursuant to any Swiss insolvency proceeding.

Because we maintain branches in the US, we are subject to oversight regulation and supervision by the FRS under various laws (including the International Banking Act of 1978, the Federal Reserve Act of 1913 and the Bank Holding Company Act of 1956 (BHCA), each as amended, and related regulations). On 10 April 2000, UBS was designated a "financial holding company" under the BHCA, as amended by the Gramm-Leach-Bliley Act of 1999. Financial holding companies may engage in a broader spectrum of activities than holding companies of US banks or foreign banking organizations that are not financial holding companies. These activities include expanded authority to underwrite and deal in securities and commodities and to make merchant banking investments in commercial and real estate entities. To maintain our financial holding company status, (i) the Group, our US subsidiary federally-chartered trust company (Federal Trust Company) and our IDI are required to meet certain capital ratios, (ii) our US branches, our Federal Trust Company, and our IDI are required to maintain certain examination ratings, and (iii) our IDI is required to maintain a rating of at least "satisfactory" under the Community Reinvestment Act of 1977.

A major focus of US governmental policy relating to financial institutions in recent years has been combating money laundering and terrorist financing. Regulations applicable to UBS and our subsidiaries require the maintenance of effective policies, procedures and controls to detect, prevent and report money laundering and terrorist financing, and to verify the identity of our clients. As a result, failure to maintain and implement adequate programs to prevent money laundering and terrorist financing could result in significant legal and reputational risk.

In the US, UBS Securities LLC and UBS Financial Services Inc., as well as our other US-registered broker-dealer subsidiaries, are subject to laws and regulations that cover all aspects of the securities and futures business, including: sales and trading practices, use and safekeeping of clients' funds and securities, capital requirements, record-keeping, financing of clients' purchases of securities and other assets, and the conduct of directors, officers and employees.

These entities are regulated by a number of different government agencies and self-regulatory organizations, including the Securities and Exchange Commission (SEC) and the Financial Industry Regulatory Authority (FINRA). Each entity is also regulated

by some or all of the following: the New York Stock Exchange (NYSE), the Municipal Securities Rulemaking Board, the US Department of the Treasury, the Commodities Futures Trading Commission (CFTC) and other exchanges of which it may be a member, depending on the specific nature of the respective broker-dealer's business. In addition, the US states and territories have local securities commissions that regulate and monitor activities in the interest of investor protection. These regulators have a variety of sanctions available, including the authority to conduct administrative proceedings that can result in censure, fines, the issuance of cease-and-desist orders or the suspension or expulsion of the broker-dealer or its directors, officers or employees.

FINRA is dedicated to investor protection and market integrity through effective regulation and complementary compliance and technology-based services. FINRA covers a broad spectrum of securities matters, including: registering and educating industry participants, examining securities firms, writing rules, enforcing those rules and the federal securities laws, informing and educating the investing public, providing trade reporting and other industry utilities, and administering a dispute resolution forum for investors and registered firms. It also performs market regulation under contract for the NASDAQ Stock Market and the NYSE. The SEC's mission is to protect investors, maintain fair, orderly, and efficient markets, and facilitate capital formation. The SEC oversees the key participants in the securities world, including securities exchanges, securities brokers and dealers, investment advisors, and mutual funds. UBS Global Asset Management (Americas) Inc., and our other US-registered investment adviser entities, are subject to regulations that cover all aspects of the investment advisory business and are regulated primarily by the SEC. Some of these entities are also registered as commodity trading advisers (CTA) and/or commodity pool operators (CPO) and in connection with their activities as CTA and/or CPO are regulated by the CFTC. To the extent these entities manage plan assets of employee benefit plans subject to the Employee Retirement Income Security Act of 1974, their activities are subject to regulation by the US Department of Labor.

The Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (Dodd-Frank Act) impacts the financial services industry by addressing, among other issues, the following: (i) systemic risk oversight, (ii) bank, bank holding company, and other systemically important financial institution (SIFI) capital and prudential standards, (iii) resolution and liquidation of failing SIFIs, (iv) over-the-counter derivatives, (v) the ability of deposit-taking banks and their affiliates to engage in proprietary trading activities and invest in hedge funds and private equity (the Volcker Rule), (vi) consumer and investor protection, (vii) hedge fund registration, (viii) securitization, (ix) investment advisors, (x) shareholder "say on pay" and (xi) the role of credit-rating agencies. Many of the provisions of the Dodd-Frank Act affect the operation of UBS's US banking and non-banking entities and have extraterritorial reach. The details of the legislation and its impact on UBS's operations will depend on the final regulations being adopted by various agencies and oversight boards.

➔ **Refer to the "Regulatory and legal developments" and "Risk factors" sections of this report for more information**

Regulation and supervision in the UK

With the UK government having separated responsibility for prudential regulation and conduct of business regulation in early 2013, our operations in the UK are mainly regulated by two bodies: the Prudential Regulation Authority (PRA), newly established as an affiliated authority of the Bank of England, and the Financial Conduct Authority (FCA). The PRA's main objective towards the banking sector is to promote the safety and soundness of UK-regulated financial firms. The FCA is responsible for securing an appropriate degree of consumer protection, protecting the integrity of the UK financial system and promoting effective competition in the interest of consumers.

The PRA and FCA operate a risk-based approach to supervision and have a wide variety of supervisory tools available to them, including regular risk assessments, on-site inspections (which may relate to an industry-wide theme or be firm-specific) and the ability to commission reports by skilled persons (who may be the firm's auditors, information technology specialists, lawyers or other consultants as appropriate). The UK regulators also have an extremely wide set of sanctions at their disposal, which may be imposed under the Financial Services and Markets Act (FSMA).

Some of our subsidiaries and affiliates are also regulated by the London Stock Exchange and other UK securities and commodities exchanges of which they are a member. We are also subject to the requirements of the UK Panel on Takeovers and Mergers, where relevant.

Financial services regulation in the UK is conducted in accordance with EU directives which require, among other things, compliance with certain capital adequacy standards, client protection requirements and conduct of business rules (such as the Markets in Financial Instruments Directive I). These directives apply throughout the EU and are reflected in the regulatory regimes of the various member states.

➔ **Refer to the "Regulatory and legal developments" and "Risk factors" sections of this report for more information**

Risk factors

Certain risks, including those described below, may impact our ability to execute our strategy and affect our business activities, financial condition, results of operations and prospects. Because the business of a broad-based international financial services firm such as UBS is inherently exposed to risks that become apparent only with the benefit of hindsight, risks of which we are not presently aware or which we currently do not consider to be material could also impact our ability to execute our strategy and affect our business activities, financial condition, results of operations and prospects. The sequence in which the risk factors are presented below is not indicative of their likelihood of occurrence or the potential magnitude of their consequences.

Regulatory and legislative changes may adversely affect our business and ability to execute our strategic plans

Fundamental changes in the laws and regulations affecting financial institutions can have a material and adverse effect on our business. In the wake of the 2007–2009 financial crisis and the following instability in global financial markets, regulators and legislators have proposed, have adopted, or are actively considering, a wide range of changes to these laws and regulations. These measures are generally designed to address the perceived causes of the crisis and to limit the systemic risks posed by major financial institutions. They include the following:

- significantly higher regulatory capital requirements;
- changes in the definition and calculation of regulatory capital;
- changes in the calculation of risk-weighted assets (RWA);
- the introduction of a more demanding leverage ratio;
- new or significantly enhanced liquidity requirements;
- requirements to maintain liquidity and capital in jurisdictions in which activities are conducted and booked;
- limitations on principal trading and other activities;
- new licensing, registration and compliance regimes;
- limitations on risk concentrations and maximum levels of risk;
- taxes and government levies that would effectively limit balance sheet growth or reduce the profitability of trading and other activities;
- cross-border market access restrictions;
- a variety of measures constraining, taxing or imposing additional requirements relating to compensation;
- adoption of new liquidation regimes intended to prioritize the preservation of systemically significant functions;
- requirements to adopt structural and other changes designed to reduce systemic risk and to make major financial institutions easier to manage, restructure, disassemble or liquidate, including ring-fencing certain activities and operations within separate legal entities; and
- requirements to adopt risk governance structures at a local jurisdiction level.

Many of these measures have been adopted and their implementation had a material effect on our business. Others will be implemented over the next several years; some are subject to legislative action or to further rulemaking by regulatory authorities before final implementation. As a result, there remains a high level of uncertainty regarding a number of the measures referred to above, including whether (or the form in which) they will be adopted, the timing and content of implementing regulations and interpretations and/or the dates of their effectiveness. The implementation of such measures and further, more restrictive changes may materially affect our business and ability to execute our strategic plans.

Notwithstanding attempts by regulators to coordinate their efforts, the measures adopted or proposed differ significantly across the major jurisdictions, making it increasingly difficult to manage a global institution. The absence of a coordinated approach, moreover, disadvantages institutions headquartered in jurisdictions that impose relatively more stringent standards. Switzerland has adopted capital and liquidity requirements for its major international banks that are the strictest among the major financial centers. This could disadvantage Swiss banks such as UBS when they compete with peer financial institutions subject to more lenient regulation or with unregulated non-bank competitors.

Regulatory and legislative changes in Switzerland

In September 2011, the Swiss Parliament adopted the "too-big-to-fail" (TBTF) law to address the issues posed by large banks. The law became effective on 1 March 2012. Accordingly, Swiss regulatory changes have generally proceeded more quickly than those in other major jurisdictions, and the Swiss Financial Market Supervisory Authority (FINMA), the Swiss National Bank (SNB) and the Swiss Federal Council are implementing requirements that are significantly more onerous and restrictive for major Swiss banks, such as UBS, than those adopted or proposed by regulatory authorities in other major global financial centers.

Capital regulation: The provisions of the revised banking ordinance and capital adequacy ordinance implementing the Basel III capital standards and the Swiss TBTF law became effective on 1 January 2013. As a systemically relevant Swiss bank, we are subject to base capital requirements, as well as a "progressive buffer" that scales with our total exposure (a metric that is based on our balance sheet size) and market share in Switzerland. In addition, the Swiss governmental authorities have the authority to impose an additional countercyclical buffer capital requirement of up to 2.5% of RWA. This authority has been exercised to impose an additional capital charge of 1% in respect of RWA arising

from Swiss residential mortgage loans (increasing to 2% effective from the end of June 2014). In addition, UBS and FINMA have mutually agreed to an incremental operational capital requirement to be held against litigation, regulatory and similar matters and other contingent liabilities, which added CHF 22.5 billion to our RWA at 31 December 2013. There can be no assurance that we will not in the future be subject to increases in capital requirements either from the imposition of additional requirements or changes in the calculation of RWA or other components of the existing minimum capital requirement.

Liquidity and funding: We are required to maintain a Liquidity Coverage Ratio (LCR) of high-quality liquid assets to estimated stressed short-term funding outflows and will be required to maintain a Net Stable Funding Ratio (NSFR) intended to ensure that we are not overly reliant on short-term funding and that we have sufficient long-term funding for illiquid assets. We currently calculate these ratios under supervisory guidance from FINMA, as neither the international nor Swiss standards for the calculation of these requirements have been fully implemented. These requirements, together with liquidity requirements imposed by other jurisdictions in which we operate, will likely require us to maintain substantially higher levels of overall liquidity. Increased capital requirements and higher liquidity requirements make certain lines of business less attractive and may reduce our overall ability to generate profits. The LCR and NSFR calculations make assumptions about the relative likelihood and amount of outflows of funding and available sources of additional funding in a market or firm-specific stress situation. There can be no assurance that in an actual stress situation our funding outflows would not exceed the assumed amounts.

Resolution planning and resolvability: The revised banking act and capital adequacy ordinances provide FINMA with additional powers to intervene to prevent a failure or resolve a failing financial institution. These measures may be triggered when certain thresholds are breached and permit the exercise of considerable discretion by FINMA in determining whether, when or in what manner to exercise such powers. In case of a threatened insolvency, FINMA may impose more onerous requirements on us, including restrictions on the payment of dividends and interest. Although the actions that FINMA may take in such circumstances are not yet defined, we could be required directly or indirectly, for example, to alter our legal structure (e.g., to separate lines of business into dedicated entities, with limitations on intra-group funding and certain guarantees), or to further reduce business risk levels in some manner. The banking act also provides FINMA with the ability to extinguish or convert to common equity the liabilities of a bank in connection with its resolution.

Swiss TBTF requirements require systemically important banks, including UBS, to put in place viable emergency plans to preserve the operation of systemically important functions despite a failure of the institution, to the extent that such activities are not sufficiently separated in advance. The Swiss TBTF law provides for the possibility of a limited reduction of capital requirements for systemically important institutions that adopt measures to reduce resolvability risk beyond what is legally required. Such actions would likely include an alteration of the legal structure of a bank group in a manner that would insulate parts of the group to exposure from risks arising from other parts of the group thereby making it easier to dispose of certain parts of the group in a recovery scenario, to liquidate or dispose of certain parts of the group in a resolution scenario or to execute a debt bail-in. In view of these factors, we intend to establish a new banking subsidiary of UBS AG in Switzerland. The scope of this potential future subsidiary's business is still being determined, but we would currently expect it to include our Retail & Corporate business division and likely the Swiss-booked business within our Wealth Management business division. We expect to implement this change in a phased approach starting in mid-2015. This structural change is being discussed on an ongoing basis with FINMA, and remains subject to a number of uncertainties that may affect its feasibility, scope or timing. We may consider further changes to the legal structure of the Group in response to regulatory requirements in Switzerland or in other countries in which we operate, including to improve the resolvability of the UBS Group, to respond to Swiss and other capital requirements (including seeking potential reduction in the progressive buffer requirement as applied to us) and to respond to regulatory required changes in legal structure. Movement of businesses to a new subsidiary ("subsidiarization") will require significant time and resources to implement. "Subsidiarization" in Switzerland and elsewhere may create operational, capital, funding and tax inefficiencies and increase our and counterparties' credit risk. Refer to "Regulatory and legislative changes outside Switzerland" for a description of other regulatory and legislative developments that may affect these decisions and further discussion of these risks.

In September 2013, the Swiss National Council approved two motions for the mandatory structural reform of banks in Switzerland that would, if also adopted by the Council of States, result in the submission to Parliament of a law requiring the separation of certain investment banking activities from systemically relevant activities, such as retail and commercial banking. No date has been set for the debate. It is unclear whether, when and in what form such a law will be adopted.

Market regulation: The Swiss government is working on fundamentally reviewing the rules on market infrastructure and on the relationship between us and our clients. These laws may, if enacted, have a material impact on the market infrastructure that we use, available platforms, collateral management and the way we interact with clients. In addition, these initiatives may cause us to incur material implementation costs.

Regulatory and legislative changes outside Switzerland

Regulatory and legislative changes in other locations in which we operate may subject us to a wide range of new restrictions both in individual jurisdictions and, in some cases, globally.

Banking structure and activity limitations: Some of these regulatory and legislative changes may subject us to requirements to move activities from UBS AG branches into subsidiaries. Such "subsidiarization" can create operational, capital and tax ineffi-

ciencies, increase our aggregate credit exposure to counterparties as they transact with multiple UBS AG affiliates, expose our businesses to higher local capital requirements, and potentially give rise to client and counterparty concerns about the credit quality of individual subsidiaries. Such changes could also negatively impact our funding model and severely limit our booking flexibility.

For example, we have significant operations in the UK and currently use UBS AG's London branch as a global booking center for many types of products. We are being required by the UK Prudential Regulatory Authority and by FINMA to increase very substantially the capitalization of our UK bank subsidiary, UBS Limited, and expect to be required to change our booking practices to reduce or even eliminate our utilization of UBS AG London branch as a global booking center for the ongoing business of the Investment Bank. In addition, the UK Independent Commission on Banking has recommended structural and non-structural reforms of the banking sector, most of which have been endorsed by the UK government and implemented in the Financial Services (Banking Reform) Act. Key measures proposed include the ring-fencing of retail banking activities in the UK (which we do not expect to impact us directly), additional common equity tier 1 capital requirements of up to 3% of RWA for retail banks, and the issuance by UK banks of debt subject to "bail-in" provisions. Furthermore, the European Commission's recent proposals in light of the Liikanen report also advocate a Volcker-style prohibition on proprietary trading together with a separation of trading from banking activities. The applicability and implications of such changes to branches and subsidiaries of foreign banks are not yet entirely clear, but they could have a material effect on our businesses located or booked in the UK.

In February 2014, the Federal Reserve Board issued final rules for foreign banking organizations (FBO) operating in the US (under section 165 of the Dodd-Frank Act) that include the following: (i) a requirement for FBO with more than USD 50 billion of US non-branch assets to establish an intermediate holding company (IHC) to hold all US subsidiary operations, (ii) risk-based capital and leverage requirements for the IHC, (iii) liquidity requirements, including a 30-day onshore liquidity requirement for the IHC, (iv) risk management requirements including the establishment of a risk committee and the appointment of a US chief risk officer, (v) stress test and capital planning requirements and (vi) a debt-to-equity limit for institutions that pose "a grave threat" to US financial stability. Requirements differ based on the overall size of the foreign banking organization and the amount of its US-based assets. We expect that we will be subject to the most stringent requirements based on our current operations. We will have until 1 July 2016 to establish an IHC and meet many of the new requirements. We must submit an implementation plan by 1 January 2015 and the IHC will not need to comply with the US leverage ratio until 1 January 2018.

US regulators published final regulations implementing the Volcker Rule in December 2013 and generally extended until 2015 the time to conform to this rule and the related regulations. In general, the Volcker Rule prohibits any banking entity from engaging in proprietary trading and from owning interests in hedge funds and other private fund vehicles. The Volcker Rule also broadly limits investments and other transactional activities between a bank and funds that the bank has sponsored or with which the bank has certain other relationships. The Volcker Rule permits us and other non-US banking entities to engage in certain activities that would otherwise be prohibited to the extent that they are conducted solely outside the US and certain other conditions are met. One impact will be the need to establish an extensive global compliance framework designed to ensure compliance with the Volcker Rule and the terms of the available exemptions. Moreover, the Volcker Rule could have an impact on the way in which we organize and conduct certain business lines. We continue to evaluate the final rule and its impact on our activities. The Volcker Rule could have a substantial impact on market liquidity and the economics of market-making activities.

OTC derivatives regulation: In 2009, the G20 countries committed to require all standardized over-the-counter (OTC) derivative contracts to be traded on exchanges or trading facilities and cleared through central counterparties by the end of 2012. This commitment is being implemented through the Dodd-Frank Act in the US and corresponding legislation in the European Union, Switzerland and other jurisdictions, and will have a significant impact on our OTC derivatives business, which is conducted primarily in the Investment Bank. For example, we expect that, as a rule, the shift of OTC derivatives trading to a central clearing model will tend to reduce profit margins in these products, although some market participants may be able to offset this effect with higher trading volumes in commoditized products. Although we are preparing for these thematic market changes, they are likely to reduce the revenue potential of certain lines of business for market participants generally, and we may be adversely affected.

UBS AG registered as a swap dealer with the Commodity Futures Trading Commission (CFTC) in the US at the end of 2012, enabling the continuation of swaps business with US persons. We also expect that UBS AG will be required to register as a securities-based swap dealer with the US Securities and Exchange Commission. Regulations issued by the CFTC impose substantial new requirements on registered swap dealers for clearing, trade execution, transaction reporting, recordkeeping, risk management and business conduct. Certain of the CFTC's regulations, including those relating to swap data reporting, recordkeeping, compliance and supervision, are expected to apply to UBS AG globally. In July 2013, the CFTC approved final cross-border guidance that defines the extraterritorial application of its swaps regulations. This guidance may allow non-US swap dealers, such as UBS AG, to operate on the basis of "substituted compliance," under which they may comply with home country requirements instead of the corresponding CFTC requirements if the CFTC determines the home country requirements to be "comprehensive and comparable." In December 2013, the CFTC issued comparability determinations for Switzerland (as well as the home countries of certain other non-US swap dealers) that will allow us to comply with relevant Swiss regulations instead of CFTC requirements for many, but not

all, of the CFTC regulations for which substituted compliance is available. While the CFTC deferred a comparability determination on swap data reporting requirements as we continue to review the issue, it granted reporting no-action relief that allows UBS AG (and other non-US swap dealers) to delay reporting transactions with non-US persons for several months. The CFTC's regulations will apply to swaps between non-US persons and non-US swap dealers when US personnel are involved, but in January 2014, the CFTC delayed the applicability of US regulations in this context until 15 September 2014, giving additional time for foreign swap dealers to comply with US requirements regarding transactions with non-US persons conducted from the US. Application of these requirements to our swaps business with non-US persons continues to present a substantial implementation burden, will likely duplicate or conflict with legal requirements applicable to us outside of the US and may place us at a competitive disadvantage to firms that are not CFTC-registered swap dealers.

Regulation of cross-border provision of financial services: In many instances, we provide services on a cross-border basis and are therefore sensitive to barriers restricting market access for third-country firms. In particular, efforts in the European Union (EU) to harmonize the regime for third-country firms to access the European market may have the effect of creating new barriers that adversely affect our ability to conduct business in these jurisdictions from Switzerland. In addition, a number of jurisdictions are increasingly regulating cross-border activities on the basis of some notion of comity (e.g., substituted compliance, equivalence determination). While the issuance of such determinations in particular jurisdictions may ensure market access for us to those jurisdictions, a negative determination in other jurisdictions may negatively influence our ability to act as a global firm. In addition, as jurisdictions tend to apply such determinations on a jurisdictional level rather than on an entity level, we will generally need to rely on jurisdictions' willingness to collaborate.

Resolution and recovery; bail-in

We are currently required to produce recovery and resolution plans in the US, UK, Switzerland and Germany and are likely to face similar requirements for our operations in other jurisdictions, including our operations in the EU as a whole, as part of the proposed EU Bank Recovery and Resolution Directive. Resolution plans may increase the pressure on us to make structural changes, such as the creation of separate legal entities, if the resolution plan in any jurisdiction identifies impediments that are not acceptable to the relevant regulators. Such structural changes may negatively impact our ability to benefit from synergies between business units, and if they include the creation of separate legal entities, may have the other negative consequences mentioned above with respect to "subsidiarization" more generally.

In addition, a number of jurisdictions, including Switzerland, the US, the UK and the EU, have implemented or are considering implementing changes that would allow resolution authorities to write down or convert into equity unsecured debt to effectuate a so-called "bail-in." Some jurisdictions are also considering adopting requirements that regulated firms maintain specified amounts of unsecured debt that could increase loss-absorbing capacity. The scope of bail-in authority and the legal mechanisms that would be utilized for the purpose are subject to a great deal of development and interpretation. Depending upon the outcome, bail-in authority may have a significant effect on our funding costs.

Possible consequences of regulatory and legislative developments

The planned and potential regulatory and legislative developments in Switzerland and in other jurisdictions in which we have operations may have a material adverse effect on our ability to execute our strategic plans, on the profitability or viability of certain business lines globally or in particular locations, and in some cases on our ability to compete with other financial institutions. They are likely to be costly to implement and could also have a negative impact on our legal structure or business model, potentially generating capital inefficiencies and resulting in an impact on our profitability. Finally, the uncertainty related to or the implementation of legislative and regulatory changes may have a negative impact on our relationships with clients and our success in attracting client business.

Our capital strength is important in supporting our strategy, client franchise and competitive position

Our capital position, as measured by the fully applied common equity tier 1 and total capital ratios under Basel III requirements, is determined by: (i) RWA (credit, non-counterparty related, market and operational risk positions, measured and risk-weighted according to regulatory criteria); and (ii) eligible capital. Both RWA and eligible capital may fluctuate based on a number of factors. RWA are driven by our business activities and by changes in the risk profile of our exposures, as well as regulatory requirements. For instance, substantial market volatility, a widening of credit spreads (the major driver of our value-at-risk), adverse currency movements, increased counterparty risk, a deterioration in the economic environment, or increased operational risk could result in a rise in RWA. Eligible capital would be reduced if we experience net losses or losses through other comprehensive income, as determined for the purpose of the regulatory capital calculation, which may also render it more difficult or more costly for us to raise new capital. In addition, eligible capital can be reduced for a number of other reasons, including certain reductions in the ratings of securitization exposures, acquisitions and divestments changing the level of goodwill, adverse currency movements affecting the value of equity, prudential adjustments that may be required due to the valuation uncertainty associated with certain types of positions, and changes in the value of certain pension fund assets and liabilities recognized in other comprehensive income. Any such increase in RWA or reduction in eligible capital could materially reduce our capital ratios.

Risks captured in the operational risk component of RWA have become increasingly significant as a component of our overall

RWA as a result of significant reductions in market and credit risk RWA, as we execute our strategy, and increased operational risk charges arising from operational risk events (including charges arising from litigation, regulatory and similar matters). We have agreed with FINMA on a supplemental analysis that will be used to calculate an incremental operational risk capital charge to be held for litigation, regulatory and similar matters and other contingent liabilities. The incremental RWA calculated based on this supplemental analysis as of 31 December 2013 was CHF 22.5 billion. Future developments in and the ultimate elimination of the incremental RWA attributable to the supplemental analysis will depend on provisions charged to earnings for litigation, regulatory and similar matters and other contingent liabilities and on developments in these matters. There can be no assurance that we will be successful in addressing these matters and reducing or eliminating the incremental operational risk RWA.

The required levels and calculation of our regulatory capital and the calculation of our RWA are also subject to changes in regulatory requirements or their interpretation, as well as the exercise of regulatory discretion. Changes in the calculation of RWA under Basel III and Swiss requirements (such as the revised treatment of certain securitization exposures under the Basel III framework) have significantly increased the level of our RWA and, therefore, have adversely affected our capital ratios. We have achieved substantial reductions in RWA, in part to mitigate the effects of increased capital requirements. However, there is a risk that we will not be successful in pursuing our plans to further reduce RWA, either because we are unable to carry out fully the actions we have planned or because other business or regulatory developments or actions to some degree counteract the benefit of our actions.

In addition to the risk-based capital requirements, we are subject to a minimum leverage ratio requirement for Swiss systemically relevant banks. The leverage ratio operates separately from the risk-based capital requirements, and, accordingly, under certain circumstances could constrain our business activities even if we are able to satisfy other risk-based capital requirements. We have achieved substantial reductions in our balance sheet size and anticipate further reductions as we wind down our Non-core and Legacy Portfolio positions. These reductions would improve our leverage ratio and contribute to our ability to comply with the more stringent leverage ratio requirements scheduled to become effective in future years. There can be no assurance that these plans will be executed successfully. There is also a risk that the minimum leverage ratio requirement will be increased significantly beyond the levels currently scheduled to come into effect, making it more difficult for us to satisfy the requirements without adversely affecting certain of our businesses.

Changes in the Swiss requirements for risk-based capital or leverage ratios, whether pertaining to the minimum levels required for large Swiss banks or to the calculation thereof, could have a material adverse effect on our business and could affect our competitive position internationally compared with institutions that are regulated under different regimes.

We may not be successful in completing our announced strategic plans or in implementing changes in our businesses to meet changing market, regulatory and other conditions

In October 2012, we announced a significant acceleration in the implementation of our strategy. The strategy included transforming our Investment Bank to focus it on its traditional strengths, very significantly reducing Basel III RWA and further strengthening our capital position, and significantly reducing costs and improving efficiency across the Group. We have made significant progress in implementing the strategy and as of the end of 2013 are ahead of the majority of our performance targets. There continues to be a risk that we will not be successful in completing the execution of our plans, or that our plans may be delayed or that the effects of our plans may differ from those intended.

Although we have substantially reduced the RWA and balance sheet usage associated with our Non-core and Legacy Portfolio positions, there can be no assurance that we will be able to exit them as quickly as our plans suggest or that we will not incur significant losses in doing so. The continued illiquidity and complexity of many of the legacy risk positions in particular could make it difficult to sell or otherwise exit these positions and reduce the RWA and the balance sheet usage associated with these exposures. At the same time, our strategy rests heavily on our ability to reduce those RWA and balance sheet usage in order to meet our future capital targets and requirements without incurring unacceptable losses.

As part of our strategy, we have underway a program to achieve significant incremental cost reductions. The success of our strategy and our ability to reach certain of the targets we have announced depends heavily on the effectiveness of the cost reduction and efficiency measures we are able to carry out. As is often the case with major cost reduction and efficiency programs, our plans involve significant risks. Included among these are the risks that restructuring costs may be higher and may be recognized sooner than we have projected and that we may not be able to identify feasible cost reduction opportunities at the level of our objective that are also consistent with our business goals. In addition, when we implement our cost reduction and efficiency programs we may experience unintended consequences such as the loss or degradation of capabilities that we need in order to maintain our competitive position and achieve our targeted returns.

We are exposed to possible outflows of client assets in our asset-gathering businesses and to changes affecting the profitability of our Wealth Management business division, and we may not be successful in implementing the business changes needed to address them. We experienced substantial net outflows of client assets in our wealth management and asset management businesses in 2008 and 2009. The net outflows resulted from a number of different factors, including our substantial losses, the damage to our reputation, the loss of client advisors, difficulty in recruiting qualified client advisors and tax, legal and regulatory developments concerning our cross-border private banking business.

Many of these factors have been successfully addressed. Our Wealth Management and Wealth Management Americas business divisions recorded substantial net new money inflows in 2013. Long-term changes affecting the cross-border private banking business model will, however, continue to affect client flows in the Wealth Management business division for an extended period of time. One of the important drivers behind the longer-term reduction in the amount of cross-border private banking assets, particularly in Europe but increasingly also in other regions, is the heightened focus of fiscal authorities on cross-border investments. Changes in local tax laws or regulations and their enforcement may affect the ability or the willingness of our clients to do business with us or the viability of our strategies and business model. In 2012 and 2013, we experienced net withdrawals in our Swiss booking center from clients domiciled elsewhere in Europe, in many cases related to the negotiation of tax treaties between Switzerland and other countries, including the treaty with Germany that was ultimately not ratified by Germany.

The net new money inflows in recent years in our Wealth Management business division have come predominantly from clients in Asia Pacific and in the ultra high net worth segment globally. Over time, inflows from these lower-margin segments and markets have been replacing outflows from higher-margin segments and markets, in particular cross-border European clients. This dynamic, combined with changes in client product preferences as a result of which low-margin products account for a larger share of our revenues than in the past, put downward pressure on our return on invested assets and adversely affect the profitability of our Wealth Management business division. We have implemented changes in our product offerings and service improvements, and will continue our efforts to adjust to client trends and market dynamics as necessary, in an effort to overcome the effects of these changes in the business mix on our profitability, but there can be no assurance that we will be able to counteract those effects. In addition, we have made changes to our business offerings and pricing practices in line with the Swiss Supreme Court case concerning "retrocessions" and other industry developments. These changes may adversely affect our margins on these products and the current offering may be less attractive to clients than the products it replaces. There can be no assurance that we will be successful in our efforts to offset the adverse impact of these trends and developments.

Global Asset Management experienced net outflows of client assets in 2012 and 2013. Further net outflows of client assets could adversely affect the results of this business division.

Material legal and regulatory risks arise in the conduct of our business

The nature of our business subjects us to significant regulatory oversight and liability risk. As a global financial services firm operating in more than 50 countries, we are subject to many different legal, tax and regulatory regimes. We are involved in a variety of claims, disputes, legal proceedings and government investigations in jurisdictions where we are active. These proceedings expose us to substantial monetary damages and legal defense costs, injunctive relief and criminal and civil penalties, in addition to potential regulatory restrictions on our businesses. The outcome of most of these matters, and their potential effect on our future business or financial results, is extremely difficult to predict.

We are subject to a large number of claims, disputes, legal proceedings and government investigations and expect that our ongoing business activities will continue to give rise to such matters in the future. The extent of our financial exposure to these and other matters could be material and could substantially exceed the level of provisions that we have established for litigation, regulatory and similar matters.

In December 2012, we announced settlements totaling approximately CHF 1.4 billion in fines by and disgorgements to US, UK and Swiss authorities to resolve investigations by those authorities relating to LIBOR and other benchmark interest rates. UBS AG entered into a non-prosecution agreement with the US Department of Justice and UBS Securities Japan Co. Ltd. also pled guilty to one count of wire fraud relating to the manipulation of certain benchmark interest rates. The settlements do not resolve investigations by other authorities or civil claims that have been or may in the future be asserted by private and governmental claimants with respect to submissions for LIBOR or other benchmark interest rates. The extent of our financial exposure to these remaining matters is extremely difficult to estimate and could be material.

These settlements starkly illustrate the much-increased level of financial and reputational risk now associated with regulatory matters in major jurisdictions. Very large fines and disgorgement amounts were assessed against UBS, and the guilty plea of a UBS subsidiary was required, in spite of our full cooperation with the authorities in the investigations relating to LIBOR and other benchmark interest rates, and in spite of our receipt of conditional leniency or conditional immunity from antitrust authorities in a number of jurisdictions, including the US and Switzerland. We understand that, in determining the consequences to us, the authorities considered the fact that we have in the recent past been determined to have engaged in serious misconduct in several other matters. The heightened risk level was further illustrated by the European Commission (EC) announcement in December 2013 of fines against other financial institutions related to its Yen Interest Rate Derivatives (YIRD) investigation. The EC stated that UBS would have been subject to fines of approximately EUR 2.5 billion had UBS not received full immunity for disclosing to the EC the existence of infringements relating to YIRD.

Under the non-prosecution agreement we entered into in connection with the LIBOR matter, we have agreed, among other things, that, for two years from 18 December 2012 UBS will not commit any US crime, and we will advise the Department of Justice of all potentially criminal conduct by UBS or any of its employees relating to violations of US laws concerning fraud or securities and commodities markets. UBS is also obligated to continue to cooperate fully with the Department of Justice. Failure to comply

with these obligations could result in termination of the non-prosecution agreement and potential criminal prosecution in relation to the matters covered by the non-prosecution agreement. As a result of this history and our ongoing obligations under the non-prosecution agreement, our level of risk with respect to regulatory enforcement may be greater than that of some of our peer institutions.

Considering our overall exposures and the current regulatory and political climate affecting financial institutions, we expect charges associated with legal, regulatory and similar matters to remain at elevated levels through 2014.

Ever since our losses in 2007 and 2008, we have been subject to a very high level of regulatory scrutiny and to certain regulatory measures that constrain our strategic flexibility. While we believe that we have remediated the deficiencies that led to the material losses during the 2007–2009 financial crisis, the unauthorized trading incident announced in September 2011 and the LIBOR-related settlements of 2012, the effects of these matters on our reputation and relationships with regulatory authorities have proven to be more difficult to overcome. For example, following the unauthorized trading incident FINMA informed us that we would not be permitted to undertake acquisitions in our Investment Bank unit (unless FINMA granted an exception), and that material new business initiatives in that unit would be subject to FINMA oversight. We are determined to address the issues that have arisen in the above and other matters in a thorough and constructive manner. We are in active dialogue with our regulators concerning the actions that we are taking to improve our operational risk management and control framework, but there can be no assurance that our efforts will have the effects desired. Although the special restrictions mentioned above have recently been withdrawn by FINMA, this example illustrates that difficulties associated with our relationships with regulatory authorities have the potential to adversely affect the execution of our business strategy.

➔ **Refer to “Note 22 Provisions and contingent liabilities” in the “Financial information” section of this report for more information on litigation, regulatory and similar matters**

Operational risks may affect our business

All of our businesses are dependent on our ability to process a large number of complex transactions across multiple and diverse markets in different currencies, to comply with requirements of many different legal and regulatory regimes to which we are subject and to prevent, or promptly detect and stop, unauthorized, fictitious or fraudulent transactions. Our operational risk management and control systems and processes are designed to help ensure that the risks associated with our activities, including those arising from process error, failed execution, unauthorized trading, fraud, system failures, cyber-attacks, breaches of information security and failure of security and physical protection, are appropriately controlled.

For example, cyber-crime is a fast growing threat to large organizations that rely on technology to support their business, like us. Cyber-crime can range from internet-based attacks that interfere with the organizations’ internet websites, to more sophisticated crimes that target the organizations, as well as their clients, and seek to gain unauthorized access to technology systems in efforts to disrupt business, steal money or obtain sensitive information.

A major focus of US governmental policy relating to financial institutions in recent years has been fighting money laundering and terrorist financing. Regulations applicable to us and our subsidiaries impose obligations to maintain effective policies, procedures and controls to detect, prevent and report money laundering and terrorist financing, and to verify the identity of their clients. Failure to maintain and implement adequate programs to combat money laundering and terrorist financing could have serious consequences, both in legal terms and in terms of our reputation.

Although we are continuously adapting our capability to detect and respond to the risks described above, if our internal controls fail or prove ineffective in identifying and remedying them we could suffer operational failures that might result in material losses, such as the loss from the unauthorized trading incident announced in September 2011.

Participation in high-volume and high-frequency trading activities, even in the execution of client-driven business, can also expose us to operational risks. Our loss in 2012 relating to the Facebook initial public offering illustrates the exposure participants in these activities have to unexpected results arising not only from their own systems and processes but also from the behavior of exchanges, clearing systems and other third parties and from the performance of third-party systems.

Certain types of operational control weaknesses and failures could also adversely affect our ability to prepare and publish accurate and timely financial reports. We identified control deficiencies following the unauthorized trading incident announced in September 2011, and management determined that we had a material weakness in our internal control over financial reporting as of the end of 2010 and 2011, although this has not affected the reliability of our financial statements for either year.

In addition, despite the contingency plans we have in place, our ability to conduct business may be adversely affected by a disruption in the infrastructure that supports our businesses and the communities in which we are located. This may include a disruption due to natural disasters, pandemics, civil unrest, war or terrorism and involve electrical, communications, transportation or other services used by us or third parties with whom we conduct business.

Our reputation is critical to the success of our business

Our reputation is critical to the success of our strategic plans. Damage to our reputation can have fundamental negative effects on our business and prospects. Reputational damage is difficult to reverse, and improvements tend to be slow and difficult to measure. This was demonstrated in recent years, as our very large losses during the financial crisis, the US cross-border matter and other events seriously damaged our reputation. Reputational damage

was an important factor in our loss of clients and client assets across our asset-gathering businesses, and contributed to our loss of and difficulty in attracting staff, in 2008 and 2009. These developments had short-term and also more lasting adverse effects on our financial performance, and we recognized that restoring our reputation would be essential to maintaining our relationships with clients, investors, regulators and the general public, as well as with our employees. More recently, the unauthorized trading incident announced in September 2011 and our involvement in the LIBOR matter also adversely affected our reputation. Any further reputational damage could have a material adverse effect on our operational results and financial condition and on our ability to achieve our strategic goals and financial targets.

Performance in the financial services industry is affected by market conditions and the macroeconomic climate

The financial services industry prospers in conditions of economic growth; stable geopolitical conditions; transparent, liquid and buoyant capital markets and positive investor sentiment. An economic downturn, continued low interest rates or weak or stagnant economic growth in our core markets, or a severe financial crisis can negatively affect our revenues and ultimately our capital base.

A market downturn and weak macroeconomic conditions can be precipitated by a number of factors, including geopolitical events, changes in monetary or fiscal policy, trade imbalances, natural disasters, pandemics, civil unrest, war or terrorism. Because financial markets are global and highly interconnected, even local and regional events can have widespread impacts well beyond the countries in which they occur. A crisis could develop, regionally or globally, as a result of disruptions in emerging markets as well as developed markets that are susceptible to macroeconomic and political developments, or as a result of the failure of a major market participant. We have material exposures to a number of these markets, both as a wealth manager and as an investment bank. Moreover, our strategic plans depend more heavily upon our ability to generate growth and revenue in emerging markets, causing us to be more exposed to the risks associated with them. The continued absence of sustained and credible improvements to unresolved issues in Europe, continued US fiscal and monetary policy issues, emerging markets fragility and the mixed outlook for global growth demonstrate that macroeconomic and political developments can have unpredictable and destabilizing effects. Adverse developments of these kinds have affected our businesses in a number of ways, and may continue to have further adverse effects on our businesses as follows:

– a general reduction in business activity and market volumes, as we have recently experienced, affects fees, commissions and margins; local or regional economic factors, such as the ongoing European sovereign debt concerns, could also have an effect on us;
– a market downturn is likely to reduce the volume and valuations of assets we manage on behalf of clients, reducing our asset- and performance-based fees;
– the ongoing low interest rate environment will further erode interest margins in several of our businesses;
– reduced market liquidity or volatility limits trading and arbitrage opportunities and impedes our ability to manage risks, impacting both trading income and performance-based fees;
– deteriorating market conditions could cause a decline in the value of assets that we own and account for as investments or trading positions;
– worsening economic conditions and adverse market developments could lead to impairments and defaults on credit exposures and on trading and investment positions, and losses may be exacerbated by declines in the value of collateral we hold; and
– if individual countries impose restrictions on cross-border payments or other exchange or capital controls, or change their currency (for example, if one or more countries should leave the euro), we could suffer losses from enforced default by counterparties, be unable to access our own assets, or be impeded in – or prevented from – managing our risks.

Because we have very substantial exposures to other major financial institutions, the failure of one or more of such institutions could have a material effect on us.

The developments mentioned above have in the past affected and could materially affect the performance of our business units and of UBS as a whole, and ultimately our financial condition. As discussed below, there is also a somewhat related risk that the carrying value of goodwill of a business unit might suffer impairments and deferred tax assets levels may need to be adjusted.

We hold legacy and other risk positions that may be adversely affected by conditions in the financial markets; legacy risk positions may be difficult to liquidate

We, like other financial market participants, were severely affected by the financial crisis that began in 2007. The deterioration of financial markets since the beginning of the crisis was extremely severe by historical standards, and we recorded substantial losses on fixed income trading positions, particularly in 2008 and 2009. Although we have very significantly reduced our risk exposures starting in 2008, and more recently as we progress our strategy and focus on complying with Basel III capital standards, we continue to hold substantial legacy risk positions, primarily in our Non-core and Legacy Portfolio. In many cases these risk positions remain illiquid, and we continue to be exposed to the risk that the remaining positions may again deteriorate in value. In the fourth quarter of 2008 and the first quarter of 2009, certain of these positions were reclassified for accounting purposes from fair value to amortized cost; these assets are subject to possible impairment due to changes in market interest rates and other factors.

Moreover, we hold positions related to real estate in various countries, and could suffer losses on these positions. These positions include a very substantial Swiss mortgage portfolio. Although management believes that this portfolio has been very prudently managed, we could nevertheless be exposed to losses if the con-

cerns expressed by the Swiss National Bank and others about unsustainable price escalation in the Swiss real estate market come to fruition. Other macroeconomic developments, such as the implications on export markets of any return of crisis conditions within the eurozone and the potential implications of the recent decision in Switzerland to reinstate immigration quotas for EU/EEA countries, could also adversely affect the Swiss economy, our business in Switzerland in general and, in particular, our Swiss mortgage and corporate loan portfolios.

In addition, we are exposed to risk in our prime brokerage, reverse repo and Lombard lending activities, as the value or liquidity of the assets against which we provide financing may decline rapidly.

Our global presence subjects us to risk from currency fluctuations

We prepare our consolidated financial statements in Swiss francs. However, a substantial portion of our assets, liabilities, invested assets, revenues and expenses are denominated in other currencies, particularly the US dollar, the euro and the British pound. Accordingly, changes in foreign exchange rates, particularly between the Swiss franc and the US dollar (US dollar revenues account for the largest portion of our non-Swiss franc revenues) have an effect on our reported income and expenses, and on other reported figures such as other comprehensive income, invested assets, balance sheet assets, RWA and tier 1 capital. For example, in 2011 the strengthening of the Swiss franc, especially against the US dollar and euro, had an adverse effect on our revenues and invested assets. Because exchange rates are subject to constant change, sometimes for completely unpredictable reasons, our results are subject to risks associated with changes in the relative values of currencies.

We are dependent upon our risk management and control processes to avoid or limit potential losses in our counterparty credit and trading businesses

Controlled risk-taking is a major part of the business of a financial services firm. Credit risk is an integral part of many of our retail, corporate, wealth management and Investment Bank activities, and our non-core activities transferred to Corporate Center – Non-core and Legacy Portfolio, including lending, underwriting and derivatives activities. Changes in interest rates, credit spreads, securities' prices, market volatility and liquidity, foreign exchange levels and other market fluctuations can adversely affect our earnings. Some losses from risk-taking activities are inevitable, but to be successful over time, we must balance the risks we take against the returns we generate. We must, therefore, diligently identify, assess, manage and control our risks, not only in normal market conditions but also as they might develop under more extreme (stressed) conditions, when concentrations of exposures can lead to severe losses.

As seen during the financial crisis of 2007–2009, we are not always able to prevent serious losses arising from extreme or sudden market events that are not anticipated by our risk measures and systems. Value-at-risk, a statistical measure for market risk, is derived from historical market data, and thus by definition could not have anticipated the losses suffered in the stressed conditions of the financial crisis. Moreover, stress loss and concentration controls and the dimensions in which we aggregate risk to identify potentially highly correlated exposures proved to be inadequate. Notwithstanding the steps we have taken to strengthen our risk management and control framework, we could suffer further losses in the future if, for example:

- we do not fully identify the risks in our portfolio, in particular risk concentrations and correlated risks;
- our assessment of the risks identified or our response to negative trends proves to be untimely, inadequate, insufficient or incorrect;
- markets move in ways that we do not expect – in terms of their speed, direction, severity or correlation – and our ability to manage risks in the resultant environment is, therefore, affected;
- third parties to whom we have credit exposure or whose securities we hold for our own account are severely affected by events not anticipated by our models, and accordingly we suffer defaults and impairments beyond the level implied by our risk assessment; or
- collateral or other security provided by our counterparties proves inadequate to cover their obligations at the time of their default.

We also manage risk on behalf of our clients in our asset and wealth management businesses. The performance of assets we hold for our clients in these activities could be harmed by the same factors. If clients suffer losses or the performance of their assets held with us is not in line with relevant benchmarks against which clients assess investment performance, we may suffer reduced fee income and a decline in assets under management, or withdrawal of mandates.

If we decide to support a fund or another investment that we sponsor in our asset or wealth management businesses, it might, depending on the facts and circumstances, incur charges that could increase to material levels.

Investment positions, such as equity holdings made as a part of strategic initiatives and seed investments made at the inception of funds that we manage, may also be affected by market risk factors. These investments are often not liquid and generally are intended or required to be held beyond a normal trading horizon. They are subject to a distinct control framework. Deteriorations in the fair value of these positions would have a negative impact on our earnings.

➔ **Refer to the "Risk management and control" section of this report for more information**

Valuations of certain positions rely on models; models have inherent limitations and may use inputs which have no observable source

If available, fair values of a financial instrument or non-financial asset or liability are determined using quoted prices in active markets for identical assets or liabilities. Where the market is not active, fair value is established using a valuation technique, including pricing models. Where available, valuation techniques use market observable assumptions and inputs. If such information is not available, inputs may be derived by reference to similar instruments in active markets, from recent prices for comparable transactions or from other observable market data. If market observable data is not available, we select non-market observable inputs to be used in our valuation techniques. We also use internally developed models. Such models have inherent limitations; different assumptions and inputs would generate different results, and these differences could have a significant impact on our financial results. We regularly review and update our valuation models to incorporate all factors that market participants would consider in setting a price, including factoring in current market conditions. Judgment is an important component of this process, and failure to make the changes necessary to reflect evolving market conditions could have a material adverse effect on our financial results. Moreover, evolving market practice may result in changes to valuation techniques that have a material impact on financial results. Changes in model inputs or calibration, changes in the valuation methodology incorporated in models, or failure to make the changes necessary to reflect evolving market conditions could have a material adverse effect on our financial results.

Liquidity and funding management are critical to our ongoing performance

The viability of our business depends upon the availability of funding sources, and our success depends upon our ability to obtain funding at times, in amounts, for tenors and at rates that enable us to efficiently support our asset base in all market conditions. A substantial part of our liquidity and funding requirements is met using short-term unsecured funding sources, including retail and wholesale deposits and the regular issuance of money market securities. The volume of our funding sources has generally been stable, but could change in the future due to, among other things, general market disruptions or widening credit spreads, which could also influence the cost of funding. A change in the availability of short-term funding could occur quickly.

Reductions in our credit ratings can increase our funding costs, in particular with regard to funding from wholesale unsecured sources, and can affect the availability of certain kinds of funding. In addition, as we experienced in connection with Moody's downgrading of our long-term rating in June 2012, ratings downgrades can require us to post additional collateral or make additional cash payments under master trading agreements relating to our derivatives businesses. Our credit ratings, together with our capital strength and reputation, also contribute to maintaining client and counterparty confidence and it is possible that ratings changes could influence the performance of some of our businesses.

More stringent Basel III capital and liquidity requirements will likely lead to increased competition for both secured funding and deposits as a stable source of funding, and to higher funding costs. The addition of loss-absorbing debt as a component of capital requirements and potential future requirements to maintain senior unsecured debt that could be written down in an insolvency or other resolution of UBS, or a subsidiary, may increase our funding costs or limit the availability of funding of the types required.

We might be unable to identify or capture revenue or competitive opportunities, or retain and attract qualified employees

The financial services industry is characterized by intense competition, continuous innovation, detailed (and sometimes fragmented) regulation and ongoing consolidation. We face competition at the level of local markets and individual business lines, and from global financial institutions that are comparable to us in their size and breadth. Barriers to entry in individual markets and pricing levels are being eroded by new technology. We expect these trends to continue and competition to increase. Our competitive strength and market position could be eroded if we are unable to identify market trends and developments, do not respond to them by devising and implementing adequate business strategies, adequately developing or updating our technology, particularly in trading businesses, or are unable to attract or retain the qualified people needed to carry them out.

The amount and structure of our employee compensation are affected not only by our business results but also by competitive factors and regulatory considerations. Constraints on the amount or structure of employee compensation, higher levels of deferral, performance conditions and other circumstances triggering the forfeiture of unvested awards may adversely affect our ability to retain and attract key employees, and may in turn negatively affect our business performance. We have made changes to the terms of compensation awards to reflect the demands of various stakeholders, including regulatory authorities and shareholders. These terms include the introduction of a deferred contingent capital plan with many of the features of the loss-absorbing capital that we have issued in the market but with a higher capital ratio write-down trigger, increased average deferral periods for stock awards, and expanded forfeiture provisions for certain awards linked to business performance. These changes, while intended to better align the interests of our staff with those of other stakeholders, increase the risk that key employees will be attracted by competitors and decide to leave us, and that we may be less successful than our competitors in attracting qualified employees. The loss of key staff and inability to attract qualified replacements, depending upon which and how many roles are affected, could seriously compromise our ability to execute our strategy and to successfully improve our operating and control environment.

In a referendum in March 2013, the Swiss cantons and voters accepted an initiative to give shareholders of Swiss listed companies more influence over board and management compensation (the Minder Initiative). In November 2013, the Swiss Federal Council issued the final transitional ordinance implementing the constitutional amendments resulting from this initiative, which came into force on 1 January 2014. The ordinance requires public companies to specify in their articles of association (AoA) a mechanism to permit a "say-on-pay" vote, setting out three requirements: (i) the vote on compensation must be held annually, (ii) the vote on compensation must be binding rather than advisory and (iii) the vote on compensation must be held separately for the board of directors and members of the executive board. In addition, shareholders will need to determine the details of the "say-on-pay" vote in the AoA, in particular the nature of the vote, timing aspects and the consequences of a "no" vote. Each company affected by the Minder Initiative must undertake a first binding vote on management compensation and remuneration of the board of directors at its 2015 annual general meeting.

The EU has adopted legislation that caps the amount of variable compensation in proportion to the amount of fixed compensation for employees of a bank active within the EU. This legislation will apply to employees of UBS in the EU. These and other similar initiatives may require us to make further changes to our compensation structure and may increase the risks described above.

➔ **Refer to the "Corporate governance, responsibility and compensation" section of this report for more information on our compensation awards and programs**

Our financial results may be negatively affected by changes to accounting standards

We report our results and financial position in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB). Changes to IFRS or interpretations thereof may cause our future reported results and financial position to differ from current expectations. Such changes may also affect our regulatory capital and ratios. We monitor potential accounting changes and when these are finalized by the IASB, we determine the potential impact and disclose significant future changes in our financial statements. Currently, there are a number of issued but not yet effective IFRS changes, as well as potential IFRS changes, some of which could be expected to impact our reported results, financial position and regulatory capital in the future.

➔ **Refer to the "Financial information" section of this report for more information on changes in accounting requirements**

Our financial results may be negatively affected by changes to assumptions supporting the value of our goodwill

The goodwill we have recognized on the respective balance sheets of our operating segments is tested for impairment at least annually. Our impairment test in respect of the assets recognized as of 31 December 2013 indicated that the value of our goodwill is not impaired. The impairment test is based on assumptions regarding estimated earnings, discount rates and long-term growth rates impacting the recoverable amount of each segment and on estimates of the carrying amounts of the segments to which the goodwill relates. If the estimated earnings and other assumptions in future periods deviate from the current outlook, the value of our goodwill may become impaired in the future, giving rise to losses in the income statement. In the third quarter of 2012, for example, the recognition by the Investment Bank of a full impairment of goodwill and of an impairment of other non-financial assets resulted in a charge of almost CHF 3.1 billion against our operating profit before tax.

The effect of taxes on our financial results is significantly influenced by reassessments of our deferred tax assets

The deferred tax assets we have recognized on our balance sheet as of 31 December 2013 in respect of prior years' tax losses reflect the probable recoverable level based on future taxable profit as informed by our business plans. If the business plan earnings and assumptions in future periods substantially deviate from current forecasts, the amount of recognized deferred tax assets may need to be adjusted in the future. These adjustments may include write-downs of deferred tax assets through the income statement.

Our effective tax rate is highly sensitive both to our performance and to the accuracy of new business plan forecasts. Our results in recent periods have demonstrated that changes in the recognition of deferred tax assets can have a very significant effect on our reported results. If the Group's performance is expected to improve, particularly in the US, UK or Switzerland, we could potentially recognize additional deferred tax assets as a result of that assessment. The effect of doing so would be to significantly reduce the Group's effective tax rate in years in which additional deferred tax assets are recognized. Conversely, if our performance in those countries is expected to produce diminished taxable profit in future years, we may be required to write down all or a portion of the currently recognized deferred tax assets through the income statement. This would have the effect of increasing the Group's effective tax rate in the year in which any write-downs are taken.

In 2014, notwithstanding the effects of any potential reassessment of the level of deferred tax assets, we expect our effective tax rate to be in the range of 20% to 25%. Consistent with past practice, we expect to revalue our overall level of deferred tax assets in the second half of 2014 based on a reassessment of future profitability taking into account updated business plan forecasts. The full year effective tax rate could change significantly on the basis of this reassessment. It could also change if aggregate tax expenses for locations other than Switzerland, the US and UK differ from what is expected. Our effective tax rate is also sensitive to any future reductions in statutory tax rates, particularly in the US and Switzerland. Reductions in the statutory tax rate would cause the expected future tax benefit from items such as tax loss carry-forwards in the affected

locations to diminish in value. This in turn would cause a write-down of the associated deferred tax assets.

In addition, statutory and regulatory changes, as well as changes to the way in which courts and tax authorities interpret tax laws could cause the amount of taxes ultimately paid by us to materially differ from the amount accrued.

This is a potential risk particularly as we consider reorganizations of our legal entity structures in the US, UK and Switzerland in response to regulatory changes. The tax authorities in these countries may prevent the transfer of tax losses incurred in one legal entity to newly organized or reorganized subsidiaries or affiliates that are expected to carry on businesses formerly conducted by the transferor. Were this to occur in situations where there were also limited planning opportunities to utilize the tax losses in the originating entity, the deferred tax assets associated with such tax losses could be written down through the income statement.

In 2011, the UK government introduced a balance sheet based levy payable by banks operating or resident in the UK. A net charge of CHF 124 million was recognized in operating expenses (within operating profit before tax) in 2013. The Group's bank levy expense for future years will depend on both the rate of the levy and the Group's taxable UK liabilities at each year-end; changes to either factor could increase the cost. This expense will likely increase if, for example, we change our booking practices so as to book more liabilities into our UK bank subsidiary, UBS Limited. We expect that the annual bank levy charge will continue to be recognized for IFRS purposes as an expense arising in the final quarter of each financial year, rather than being accrued throughout the year, as it is charged by reference to the year-end balance sheet position.

Financial and operating performance

Critical accounting policies

Basis of preparation and selection of policies

We prepare our consolidated financial statements in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB). The application of these accounting standards requires the use of judgment, based upon estimates and assumptions that may involve significant uncertainty at the time they are made. Such judgments, including the underlying estimates and assumptions, which reflect historical experience, expectations of the future and other factors, or some combination thereof, are regularly evaluated to determine their continuing relevance under the circumstances. Using different assumptions could cause the reported results to differ. Changes in assumptions may have a significant impact on the financial statements in the periods when changes occur.

We believe that the assumptions we have made are appropriate under the circumstances, and that our financial statements therefore present fairly the financial position, financial performance and cash flows, in all material respects. Alternative outcomes and sensitivity analyses discussed or referred to in this section are included solely to assist the reader in understanding the uncertainty inherent in the estimates and assumptions used in our financial statements. They are not intended to suggest that other estimates and assumptions would be more appropriate.

This section discusses accounting policies that are deemed critical to our financial position, financial performance and cash flows, because they are material in terms of the items to which they apply, and they involve significant assumptions and estimates. A broader and more detailed description of our significant accounting policies is included in "Note 1 Summary of significant accounting policies" in the "Financial information" section of this report.

Consolidation of structured entities

We sponsor the formation of structured entities (SE) and interact with non-sponsored SE for a variety of reasons, including allowing clients to obtain or be exposed to particular risk profiles, to provide funding or to sell or purchase credit risk. An SE is an entity that has been designed so that voting or similar rights are not the dominant factor in deciding who controls the entity. Such entities generally have a narrow and well-defined objective and include those historically referred to as special purpose entities and some investment funds. In accordance with IFRS, we do not consolidate SE that we do not control.

With effect from 1 January 2013, UBS adopted IFRS 10 *Consolidated Financial Statements*. IFRS 10 provides a cohesive consolidation framework that applies to all types of entities, both SE and non-SE. That framework is based on the principle that an entity should consolidate all other entities that it controls, with control being defined as a function of three elements: power over the relevant activities of the entity, exposure to variable returns and an investor's ability to use its power to affect its returns. UBS consolidates an entity when all three elements of control are present. Where UBS has an interest in an SE that absorbs variability, we consider whether UBS has power over the SE which allows it to affect the variability of its returns. Consideration is given to all facts and circumstances to determine whether the Group has power over the SE, that is, the current ability to direct the relevant activities of the SE when decisions about those activities need to be made. Determining whether we have power to direct the relevant activities requires a significant degree of judgment in light of all facts and circumstances. In making that determination, we consider a range of factors, including the purpose and design of the SE, any rights held through contractual arrangements such as call rights, put rights or liquidation rights, as well as potential decision-making rights. Where the Group has power over the relevant activities, a further assessment is made to determine whether, through that power, it has the ability to affect its own returns, that is, assessing whether power is held in a principal or agent capacity. Consideration is given to the overall relationship between UBS, the SE and other parties involved in the SE. In particular, we assess the following: (i) the scope of decision-making authority, (ii) rights held by other parties, including removal or other participating rights and (iii) exposure to variability, including remuneration, relative to the total variability of the SE, as well as whether UBS's exposure is different from that of other investors. Appropriate weightings are applied to each of these factors on the basis of the particular facts and circumstances. If, after review of these factors, UBS concludes that it can exercise its power to affect its own returns, the SE is consolidated.

➔ **Refer to "Note 1a) 3) Subsidiaries and structured entities" and "Note 30 Interests in subsidiaries and other entities" in the "Financial information" section of this report for more information**

Fair value of financial instruments

UBS accounts for a significant portion of its assets and liabilities at fair value. Under IFRS, the relative degree of uncertainty associated with the measurement of fair value is reflected by use of a three-level valuation hierarchy. The best evidence of fair value is a quoted price in an actively traded market (Level 1). In the event that the market for a financial instrument is not active, or where quoted prices are not otherwise available, a valuation technique is used. In these cases, fair value is estimated using observable data in respect of similar financial instruments as well as financial models. Level 2 of the hierarchy pertains to instruments for which in-

puts to a valuation technique are principally based on observable market data. Level 3 applies to instruments that are measured by a valuation technique that incorporates one or more significant unobservable inputs. Valuation techniques that rely to a greater extent on unobservable inputs require a higher level of judgment to calculate a fair value than those based wholly on observable inputs. Substantially all of UBS's financial assets and financial liabilities are based on observable prices and inputs and hence are classified in Levels 1 and 2 of the hierarchy.

Where valuation techniques, including models, are used to determine fair values, they are periodically reviewed and validated by qualified personnel independent of those who sourced them. Models are calibrated to ensure that outputs reflect actual data and comparable market prices. Also, models prioritize the use of observable inputs, when available, over unobservable inputs. Judgment is required in selecting appropriate models as well as inputs for which observable data is less readily or not available.

The valuation techniques employed may not fully reflect all the factors relevant to the positions we hold. Valuations are therefore adjusted, where appropriate, to allow for additional factors, including model risk, liquidity risk and credit risk. We use different approaches to calculate the credit risk, depending on the nature of the instrument. A credit-valuation-adjustment approach based on an expected exposure profile is used to adjust the fair value of derivative instruments to reflect counterparty credit risk. Correspondingly, a debit-valuation-adjustment approach is applied to incorporate UBS's own credit risk, where applicable, in the fair value of derivative instruments. Own credit risk for financial liabilities designated at fair value is calculated using the funds transfer price curve.

As of 31 December 2013, financial assets and financial liabilities for which valuation techniques are used and whose significant inputs are considered observable (Level 2) amounted to CHF 289 billion and CHF 310 billion, respectively, (68% and 88% of total financial assets measured at fair value and total financial liabilities measured at fair value, respectively). Financial assets and financial liabilities whose valuations include significant unobservable inputs (Level 3) amounted to CHF 15 billion and CHF 17 billion, respectively, (4% and 5% of total financial assets measured at fair value and total financial liabilities measured at fair value, respectively). These amounts reflect the effect of offsetting, wherever such presentation is required under IFRS.

Uncertainty inherent to estimating unobservable market inputs can affect the amount of gain or loss recorded for a particular position. While the Group believes its valuation techniques are appropriate and consistent with those of other market participants, the use of different techniques or assumptions to determine the fair value of certain financial instruments could result in a different estimate of fair value at the reporting date. As of 31 December 2013, the total favorable and unfavorable effects of changing one or more of the unobservable inputs to reflect reasonably possible alternative assumptions for financial instruments classified as Level 3 were CHF 1.2 billion and CHF 1.1 billion, respectively. Further discussion of the Group's use of valuation techniques, the critical estimates and adjustments applied to reflect uncertainties within the fair value measurement process, and its governance over the fair value measurement process can be found in "Note 24 Fair value measurement" in the "Financial information" section of this report.

➔ **Refer to "Note 24 Fair value measurement" in the "Financial information" section of this report for more information**

Allowances for credit losses on loans and receivables measured at amortized cost

Allowances for credit losses represent management's best estimate of credit losses incurred in the lending portfolio at the balance sheet date due to credit deterioration of the issuer or counterparty. The loan portfolio, which is measured at amortized cost less impairment, consists of financial assets presented on the balance sheet lines, *Due from banks* and *Loans,* including reclassified securities. In addition, irrevocable loan commitments are tested for impairment as described below.

Credit loss expense is recognized if there is objective evidence that the Group will be unable to collect all amounts due (or the equivalent thereof) on a claim based on the original contractual terms due to credit deterioration of the issuer or counterparty. Allowances for credit losses are evaluated at both a counterparty-specific level and collectively. Under this incurred loss model, a financial asset or group of financial assets is impaired if there is objective evidence that a credit loss has occurred by the balance sheet date. Judgment is used in making assumptions when calculating impairment losses both on a counterparty-specific level and collectively.

The impairment loss for a loan is the excess of the carrying value of the financial asset over the estimated recoverable amount. The estimated recoverable amount is the present value, using the loan's original effective interest rate, of expected future cash flows, including amounts that may result from restructuring or the liquidation of collateral. If a loan has a variable interest rate, the discount rate for measuring any impairment loss is the current effective interest rate. An allowance for credit losses is reported as a reduction of the carrying value of the financial asset on the balance sheet.

Our collective allowances for credit losses are calculated for our portfolios with similar credit risk characteristics, taking into account historical loss experience and current conditions. The methodology and assumptions used are reviewed regularly to reduce any differences between estimated and actual loss experience. For all of our portfolios, we also assess whether there have been any unforeseen developments which might result in impairments but which are not immediately observable. To determine whether an event-driven collective allowance for credit losses is required, we consider global economic drivers to assess the most vulnerable countries and industries. Our current event-based collective allowance for credit losses methodology considers the heightened credit risk arising from corporate clients in industries exposed to the recessionary effects in certain countries, combined with the strength of the Swiss franc.

Estimated cash flows associated with financial assets reclassified from *Held for trading* to *Loans and receivables,* as described in "Note 1a) 10) Loans and receivables" in the "Financial information" section of this report, and other similar assets acquired subsequently are revised periodically. Adverse revisions in cash flow estimates related to credit events are recognized in profit or loss as credit loss expenses. For reclassified securities, increases in estimated future cash receipts (above those originally forecast at the date of reclassification) as a result of increased recoverability are recognized as an adjustment to the effective interest rate on the loan from the date of change.

As of 31 December 2013, the gross loan portfolio was CHF 288 billion and the related allowances for credit losses amounted to CHF 0.7 billion, consisting of specific and collective allowances of CHF 669 million and CHF 20 million, respectively.

➔ **Refer to "Note 1a) 11) Allowances and provisions for credit losses," "Note 10 Due from banks and loans (held at amortized cost)," "Note 12 Allowances and provisions for credit losses" and "Note 27a Measurement categories of financial assets and liabilities" in the "Financial information" section of this report for more information**

➔ **Refer to "Policies for past due, non-performing and impaired claims" in the "Risk management and control" section of this report for more information**

Goodwill impairment test

UBS performs an impairment test annually on its goodwill assets, or when indicators of impairment exist. Our segments are each considered cash-generating units. The impairment test is performed for each segment to which goodwill is allocated and compares the recoverable amount, based on its value-in-use, to the carrying amount of the respective segment. An impairment charge is recognized if the carrying amount exceeds the recoverable amount. The impairment test is based on the assumptions described below.

The recoverable amounts are determined using a discounted cash flow model, which incorporates inputs relevant to the banking business and its regulatory environment. The recoverable amount of a segment is the sum of the discounted earnings attributable to shareholders from the first five forecasted years and the terminal value. The terminal value, reflecting all periods beyond the fifth year, is calculated on the basis of the forecast of fifth-year profit, the discount rate and the long-term growth rate and is adjusted for the effect of the capital assumed to be needed to support the perpetual growth implied by the long-term growth rate.

The carrying amount for each segment is determined by reference to the Group's equity attribution framework. Within this framework, which is described in the "Capital management" section of this report, the Board of Directors (BoD) attributes equity to the businesses after considering their risk exposure, risk-weighted assets and leverage ratio denominator usage, goodwill and intangible assets. The framework is used primarily for purposes of measuring the performance of the businesses and includes certain management assumptions. Attributed equity equates to the capital that a segment requires to conduct its business and is considered an appropriate starting point from which to determine the carrying value of the segments. The attributed equity methodology is aligned with the business planning process, the inputs from which are used in calculating the recoverable amounts of the respective cash-generating units.

Valuation parameters used within the Group's impairment test model are linked to external market information, where applicable. The model used to determine the recoverable amount is most sensitive to changes in the forecast earnings available to shareholders in years one to five, to changes in the discount rates, and to changes in the long-term growth rate. The applied long-term growth rate is based on long-term economic growth rates for different regions worldwide. Earnings available to shareholders are based on forecast results, which are part of the business plan approved by the BoD. The discount rates are determined by applying a capital-asset-pricing-model-based approach, as well as considering quantitative and qualitative inputs from both internal and external analysts and the view of management.

Key assumptions used to determine the recoverable amounts of each segment are tested for sensitivity by applying a reasonably possible change to those assumptions, as follows: forecast earnings available to shareholders were changed by 10%, the discount rates were changed by 1% and the long-term growth rates were changed by 0.5%. Under all scenarios, the recoverable amounts for each segment exceeded the respective carrying amount, such that the reasonably possible changes in key assumptions would not result in impairment as of 31 December 2013.

If the estimated earnings and other assumptions in future periods deviate from the current outlook, the value of our goodwill may become impaired in the future, giving rise to losses in the income statement. Recognition of any impairment of goodwill would reduce IFRS equity attributable to UBS shareholders and net profit. It would not impact cash flows and, as goodwill is required to be deducted from capital under the Basel capital framework, no impact would be expected on the Group total capital ratios.

As of 31 December 2013, total goodwill recognized on the balance sheet was CHF 5.8 billion, of which CHF 1.3 billion, CHF 3.1 billion and CHF 1.4 billion was carried by Wealth Management, Wealth Management Americas and Global Asset Management, respectively. On the basis of the impairment testing methodology described above, UBS concluded that the year-end 2013 balances of goodwill allocated to its segments remain recoverable.

➔ **Refer to "Note 1a) 21) Goodwill and intangible assets," "Note 2 Segment reporting" and "Note 17 Goodwill and intangible assets" in the "Financial information" section of this report for more information**

Deferred taxes

Deferred tax assets arise from a variety of sources, the most significant being the following: (i) tax losses that can be carried forward

to be utilized against profits in future years and (ii) expenses recognized in our income statement that are not deductible until the associated cash flows occur.

We record a valuation allowance to reduce our deferred tax assets to the amount which can be recognized in line with IAS 12 *Income Taxes*. The level of deferred tax asset recognition is influenced by management's assessment of our future profitability based on relevant business plan forecasts. Existing assessments are reviewed and, if necessary, revised to reflect changed circumstances. This review is conducted annually, in the second half of each year, but adjustments may be made at other times, if required. In a situation where recent losses have been incurred, IAS 12 requires convincing evidence that there will be sufficient future profitability.

Swiss tax losses can be carried forward for seven years, US federal tax losses for 20 years and UK and Jersey tax losses for an unlimited period. The deferred tax assets recognized as of 31 December 2013 have been based on future profitability assumptions, adjusted to take into account the recognition criteria of IAS 12. The level of deferred tax assets recognized may, however, need to be adjusted in the future in the event of changes in those profitability assumptions. As of 31 December 2013, the deferred tax assets amounted to CHF 8.8 billion, which included CHF 6.3 billion in respect of tax losses (mainly in Switzerland and the US) that can be utilized to offset taxable income in future years.

➔ **Refer to "Note 1a) 22) Income taxes" and "Note 8 Income taxes" in the "Financial information" section of this report for more information**

Provisions

Provisions are liabilities of uncertain timing or amount, and are recognized when UBS has a present obligation as a result of a past event, it is probable that an outflow of resources will be required to settle the obligation and a reliable estimate of the amount of the obligation can be made. Provisions are recognized for the best estimate of the consideration required to settle the present obligation at the balance sheet date.

Recognition of provisions often involves significant judgment in assessing the existence of an obligation resulting from past events and in estimating the probability, timing and amount of any outflows of resources. This is particularly the case with litigation, regulatory and similar matters which, because of their nature, are subject to many uncertainties, making their outcome difficult to predict. Such matters may involve unique fact patterns or novel legal theories, proceedings which have not yet been initiated or are at early stages of adjudication, or as to which alleged damages have not been quantified by the claimants. Determining whether an obligation exists as a result of a past event and estimating the probability, timing and amount of any potential outflows is based on a variety of assumptions, variables, and known and unknown uncertainties. The amount of any provision recognized can be very sensitive to the assumptions used and there could be a wide range of possible outcomes for any particular matter. Statistical or other quantitative analytical tools are of limited use in determining whether to establish or determine the amount of provisions in the case of litigation, regulatory or similar matters. Furthermore, information currently available to management may be incomplete or inaccurate increasing the risk of erroneous assumptions with regards to the future developments of such matters. Management regularly reviews all the available information regarding such matters, including advice from legal advisors, to assess whether the recognition criteria for provisions have been satisfied for those matters and, if not, to evaluate whether such matters represent contingent liabilities. Legal advice is a significant consideration in determining whether it is more likely than not that an obligation exists as a result of a past event and in assessing the probability, timing and amount of any potential outflows.

As of 31 December 2013, total provisions amounted to CHF 2,971 million, of which CHF 1,622 million pertained to the litigation, regulatory and similar matters class. Since the future outflow of resources in respect of these matters cannot be determined with certainty based on currently available information, the actual outflows may ultimately prove to be substantially greater (or less) than the provisions recognized.

➔ **Refer to "Note 1a) 27) Provisions" and "Note 22 Provisions and contingent liabilities" in the "Financial information" section of this report for more information**

Pension and other post-employment benefit plans

During 2012, UBS adopted revisions to IAS 19 *Employee Benefits* ("IAS 19R") issued by the IASB in June 2011. IAS 19R eliminated the "corridor method," under which the recognition of actuarial gains and losses was deferred. Instead, the full defined benefit obligation, net of plan assets, is now recorded on the balance sheet, with changes resulting from remeasurements recognized immediately in other comprehensive income. The net defined benefit liability at the end of the year and the related personnel expense depend on the expected future benefits to be provided, determined using a number of economic and demographic assumptions. The most significant assumptions include life expectancy, the discount rate, expected salary increases, pension rates, and in addition, for the Swiss plan, interest credits on retirement savings account balances.

Life expectancy is determined by reference to published mortality tables. The discount rate is determined by reference to the rates of return on high-quality fixed-income investments of appropriate currency and term at the measurement date. The assumption for salary increases reflects the long-term expectations for salary growth and takes into account inflation, seniority, promotion and other relevant factors such as supply and demand in the labor market. For a sensitivity analysis of the defined benefit obligation to these significant actuarial assumptions, refer to "Note 28 Pension and other post-employment benefit plans" in the "Financial information" section of this report.

The most significant plan is the Swiss pension plan. Consistent with 2012, life expectancy for this plan has been based on

the 2010 BVG generational mortality tables. The assumption for the discount rate has changed from 1.9% in the prior year to 2.3% in the current year, as a result of higher market yields on corporate bonds.

➔ **Refer to "Note 1a) 24) Pension and other post-employment benefit plans" and "Note 28 Pension and other post-employment benefit plans" in the "Financial information" section of this report for more information**

Equity compensation

We recognize shares, performance shares, options and share-settled stock appreciation rights awarded to employees as compensation expense based on their fair value at grant date. The fair value of UBS shares issued to employees is determined by reference to quoted market prices, adjusted, when relevant, to take into account the terms and conditions inherent in the award. Options, stock appreciation rights, and certain performance shares issued by UBS to its employees have features which are not directly comparable with our shares and options traded in active markets. Accordingly, we determine the fair value using suitable valuation models. Several recognized valuation models exist. The models we apply have been selected because they are able to accommodate the specific features included in the various instruments granted to our employees. If we were to use different models, the values produced would differ, even if the same inputs were used.

The models we use require inputs such as expected dividends, share price volatility and historical employee exercise behavior patterns. Some of the model inputs we use are not market observable and have to be estimated or derived from available data. Use of different estimates would produce different valuations, which in turn would result in recognition of higher or lower compensation expense.

➔ **Refer to "Note 1a) 25) Equity participation and other compensation plans" and "Note 29 Equity participation and other compensation plans" in the "Financial information" section of this report for more information**

Significant accounting and financial reporting changes

Significant accounting changes

IFRS 7 *Financial Instruments: Disclosures*

On 1 January 2013, UBS adopted revised IFRS 7 *Financial Instruments: Disclosures,* requiring the disclosure of new information in respect of an entity's use of enforceable netting arrangements. The amendments to IFRS 7 are intended to enable users of financial statements to better evaluate the effect or potential effect of netting arrangements on the entity's financial position. The amendments require entities to disclose both gross and net amounts of recognized financial assets and financial liabilities associated with master netting agreements and similar arrangements, including the effects of financial collateral, whether or not presented net on the face of the balance sheet. The resultant disclosures are reflected in "Note 26 Offsetting financial assets and financial liabilities" of our consolidated financial statements.

IFRS 10 *Consolidated Financial Statements*

On 1 January 2013, UBS adopted IFRS 10 *Consolidated Financial Statements,* which introduced a new definition of control for determining when one entity should consolidate another. Upon adoption of IFRS 10, the Group has changed the consolidation status of certain entities, including entities issuing preferred securities which are no longer consolidated by the Group. As a result of deconsolidating the preferred securities entities, UBS now recognizes the preferred notes issued to these entities instead of the preferred securities which were previously presented as equity attributable to non-controlling interests. Except for one preferred note issuance of CHF 1.2 billion, which is classified as a liability, UBS presents the preferred notes as equity attributable to preferred noteholders. As of 31 December 2012, the Group's equity attributable to non-controlling interests decreased by CHF 4.3 billion, equity attributable to preferred noteholders increased by CHF 3.1 billion and debt issued held at amortized cost increased by CHF 1.2 billion. For 2012, net profit attributable to non-controlling interests decreased by CHF 271 million and net profit attributable to preferred noteholders increased by CHF 220 million. The implementation of IFRS 10 did not have a material effect on our regulatory capital.

IFRS 12 *Disclosure of Interests in Other Entities*

On 1 January 2013, UBS adopted IFRS 12 *Disclosure of Interests in Other Entities,* which provides new and comprehensive annual disclosure requirements about entities with which a reporting entity is involved. IFRS 12 replaces the disclosure requirements previously included in IAS 27 *Consolidated and Separate Financial Statements,* IAS 28 *Investment in Associates* and IAS 31 *Interests in Joint Ventures*. The standard requires entities to disclose information that helps users to evaluate the nature, risks and financial effects associated with a reporting entity's interests in subsidiaries, associates, joint arrangements and, in particular, unconsolidated structured entities. The resultant disclosures are reflected in "Note 30 Interests in subsidiaries and other entities" of our consolidated financial statements.

IFRS 13 *Fair Value Measurement*

On 1 January 2013, UBS adopted IFRS 13 *Fair Value Measurement,* which establishes a single source of guidance for all fair value measurements under IFRS. It defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date, i.e., an exit price. The standard emphasizes that fair value is a market-based measurement, not an entity-specific measurement. It clarifies that the unit of measurement is generally a particular asset or liability unless an entity manages and reports its net risk exposures on a portfolio basis, in which case it may elect to apply portfolio-level price adjustments under limited circumstances. It also introduces new disclosure requirements and enhancements to existing disclosures, which are reflected in "Note 24 Fair value measurement" of our consolidated financial statements.

As a result of implementing the unit of measurement guidance, the Group's valuation reserves increased by approximately CHF 25 million as of 1 January 2013, decreasing operating profit before tax in 2013.

➔ Refer to "Note 1b Changes in accounting policies, comparability and other adjustments" in the "Financial information" section of this report for more information on the adoption of IFRS 7, IFRS 10, IFRS 12 and IFRS 13

Financial reporting changes

Change in the definition of funded assets

From 2013, we define funded assets as total IFRS balance sheet assets less positive replacement values (PRV) and collateral delivered against over-the-counter (OTC) derivatives. In prior reporting periods, we defined funded assets as total IFRS balance sheet assets less PRV and did not exclude the collateral delivered for OTC derivatives. Prior periods were restated to reflect the change in definition.

Funded assets exclude PRV because they are volatile but have little effect on funding requirements. As there is a direct correla-

tion between replacement values and collateral delivered for OTC derivatives, collateral delivered is also excluded to create a more consistent view of our funded assets and to better reflect how we manage our businesses.

Corporate Center – Non-core and Legacy Portfolio

In line with our strategy to focus the Investment Bank's business on its traditional strengths, UBS is exiting many business lines which are capital- and balance sheet-intensive or are in areas with high operational complexity or long tail risks. In 2013, these non-core activities and positions formerly in the Investment Bank were transferred to and are managed and reported in the Corporate Center. Together with the Legacy Portfolio and the option to acquire the equity of the SNB StabFund, which was exercised on 7 November 2013, these non-core activities and positions are reported as a separate reportable segment within the Corporate Center called "Non-core and Legacy Portfolio." Prior period segment information was restated for this change.

➔ Refer to "Note 1b Changes in accounting policies, comparability and other adjustments" in the "Financial information" section of this report for more information

Other reporting segment changes

In 2013, the Investment Bank was reorganized into two business units, Corporate Client Solutions and Investor Client Services.

Furthermore, the repurchase agreement and short-term interest rate cash units were transferred from the Investment Bank to the Asset Liability Management unit of Group Treasury within Corporate Center – Core Functions in 2013. Following this transfer, the Asset Liability Management unit oversees all financing, portfolio, and structural risk management activities for the Group. Revenues associated with the ongoing business activities of Asset Liability Management are allocated to the business divisions and Non-core and Legacy Portfolio, with the exception of excess funding costs.

Lastly, also in 2013, the risk management responsibility for a portfolio of financial investments available-for-sale and associated cash and balances with central banks was transferred from Wealth Management Americas to Group Treasury within Corporate Center – Core Functions. Following this transfer, net interest income associated with that portfolio is allocated back to Wealth Management Americas, whereas realized gains and losses arising from the sales and impairments of individual financial investments are retained by Group Treasury.

Prior period segment information was restated for these changes.

➔ Refer to "Note 1b Changes in accounting policies, comparability and other adjustments" in the "Financial information" section of this report for more information

➔ Refer to "Investment Bank" in the "Operating environment and strategy" section of this report for more information on our Investment Bank's businesses

Changes to allocations of centralized shared services units' personnel

As part of our ongoing efforts to improve our operational effectiveness and heighten our cost efficiency across the firm, on 1 July 2012 operations units from business divisions were centralized into our shared services units in the Corporate Center. Effective

1 January 2013, personnel allocations to our business divisions for shared services were revised to reflect the following factors: (i) enhancements to the Corporate Center service-level agreement framework for Group Operations, (ii) an ongoing review of attribution keys, including for technology-related personnel and (iii) organizational changes related to the accelerated implementation of our strategy, including the transfer of certain non-core businesses and positions from the Investment Bank.

Attributed equity

With effect from 1 January 2013, attributed equity required to support remaining goodwill and intangible assets that arose from the PaineWebber acquisition was transferred from the business divisions to the Corporate Center. Net charges associated with this attributed equity are retained in Corporate Center – Core Functions.

➔ **Refer to "Equity attribution framework" in the "Capital management" section of this report for more information**

➔ **Refer to "Note 17 Goodwill and intangible assets" in the "Financial information" section of this report for more information**

Definition of restructuring charges

In 2013, we expanded our definition of restructuring charges to include non-recurring and other temporary costs necessary to effect our restructuring programs.

➔ **Refer to "Note 32 Changes in organization" in the "Financial information" section of this report for more information**

Refinement to the allocation of operating costs for internal services

To further enhance cost discipline and strengthen our efforts to reduce our underlying cost base, we will refine the way that operating costs for internal services are allocated from Corporate Center – Core Functions to the business divisions and Corporate Center – Non-core and Legacy Portfolio. Under this refinement, each year, as part of the annual business planning cycle, Corporate Center – Core Functions will agree with the business divisions and Non-core and Legacy Portfolio cost allocations for services at fixed amounts or at variable amounts based on formulas, depending on capital and service consumption levels as well as the nature of the services to be performed. These pre-agreed cost allocations will be designed with the expectation that Corporate Center – Core Functions will recover its costs, without a mark-up. Because actual costs incurred may differ from those expected, however, Corporate Center – Core Functions may recognize significant under- or over-allocations depending on various factors, including Corporate Center – Core Functions' ability to manage the delivery of its services and achieve cost savings. Each year these cost allocations will be reset, taking account of the prior year's experience and plans for the forthcoming period. We expect the refined approach to strengthen the effectiveness and efficiency of the services performed by Corporate Center – Core Functions, and in particular to facilitate the achievement of cost savings, by better aligning cost accountability with the management of these services. This change will become effective for 2014.

Enhancing our disclosure

We believe the market rewards companies that provide clear, consistent and informative disclosure about their business and we have established financial disclosure principles in support of this objective. More information on our financial disclosure principles can be found within "Information policy" in the "Corporate governance, responsibility and compensation" section of this report.

Consistent with these principles, we are a member of and endorse the work of the Enhanced Disclosure Task Force (EDTF), established by the Financial Stability Board in 2012 to facilitate discussion between users, preparers and other interested parties as to how enhanced disclosure could help in restoring investor confidence in banks. Our reports contain disclosures aligned with the recommendations issued by the EDTF on 29 October 2012 in its report "Enhancing the Risk Disclosures of Banks." Certain disclosures in our Annual Report 2012 were cited by the EDTF in its July 2013 "Progress Report on Implementation of Disclosure Recommendations" as "leading practice" and by Deloitte in its report, "Responding to the EDTF recommendations – A review of 2012 year end reporting," as "good practice."

For our Annual Report 2013, we have made significant further improvements to our disclosures in light of these recommendations, including making structural changes to the "Risk, treasury and capital management" section of this report and introducing a large number of both new and enhanced disclosures. Consistent with Recommendation 1 of the EDTF, where appropriate we now present together those related risk disclosures we consider to be most relevant to a particular component of our business, including integrating certain disclosures previously presented separately within our Pillar 3 disclosures or our financial statements.

Further information on our implementation of each of the EDTF recommendations can be found at the start of the "Risk, treasury and capital management" section of this report, in which most of the new and enhanced disclosures are presented.

Consistent with our financial reporting and disclosure principles, we regard the enhancement of disclosures as an ongoing commitment and we expect to make further refinements to our disclosures in 2014 and beyond.

➔ **Refer to the "Risk, treasury and capital management" section of this report for more information on our implementation of the EDTF recommendations**

➔ **Refer to the "Financial information" section of this report for an overview of our Pillar 3 related disclosures**

Group performance

Net profit attributable to UBS shareholders for 2013 was CHF 3,172 million compared with a loss of CHF 2,480 million in 2012. Operating profit before tax was 3,272 million compared with a loss of CHF 1,794 million in the prior year. Operating income increased by CHF 2,309 million and operating expenses decreased by CHF 2,755 million. Furthermore, we recorded a net tax benefit of CHF 110 million compared with a net tax expense of CHF 461 million in the prior year.

2013 compared with 2012

Performance

Operating profit before tax was CHF 3,272 million in 2013 compared with a loss of CHF 1,794 million in the prior year, reflecting a CHF 2,309 million increase in operating income and a CHF 2,755 million reduction in operating expenses.

In addition to reporting our results in accordance with IFRS, we report adjusted results that exclude items considered non-recurring and certain other items that management believes are not representative of the underlying performance of our businesses. Such adjusted results are non-GAAP financial measures as defined by SEC regulations. For 2013, the items we excluded were an own credit loss of CHF 283 million, gains on sales of real estate of CHF 288 million, net losses related to the buyback of debt in public tender offers of CHF 167 million, a gain on the sale of Global Asset Management's Canadian domestic business of CHF 34 million, a net gain on the sale of our remaining proprietary trading business of CHF 31 million and net restructuring charges of CHF 772 million. For 2012, the items we excluded were an own credit loss of CHF 2,202 million, gains on sales of real estate of CHF 112 million, net restructuring charges of CHF 371 million, a credit related to changes to our Swiss pension plan of CHF 730 million, a credit related to changes to our retiree benefit plans in the US of CHF 116 million and the impairment of goodwill and other non-financial assets of CHF 3,064 million.

On this adjusted basis, profit before tax was CHF 4,141 million in 2013 compared with CHF 2,885 million in the prior year. Adjusted operating income increased by CHF 316 million, mainly reflecting an increase of CHF 891 million in net fee and commission income, largely in our wealth management businesses. Adjusted net interest and trading income declined by CHF 535 million, mainly as a result of reductions in Corporate Center – Non-core and Legacy Portfolio as well as Corporate Center – Core Functions, partly offset by higher revenues in the Investment Bank. Adjusted other income decreased by CHF 108 million, mainly due to lower net gains on financial investments available-for-sale.

Adjusted operating expenses decreased by CHF 938 million to CHF 23,689 million, mainly due to a decline of CHF 848 million in charges for provisions for litigation, regulatory and similar matters as well as a CHF 199 million reduction in personnel expenses, partly offset by CHF 110 million higher other non-personnel expenses.

Operating income

Total operating income was CHF 27,732 million compared with CHF 25,423 million. On an adjusted basis, total operating income increased by CHF 316 million to CHF 27,829 million from CHF 27,513 million, as we recorded an increase of CHF 891 million in net fee and commission income, largely in our wealth management businesses. This increase was largely offset by a CHF 535 million decline in adjusted net interest and trading income, mainly as a result of reductions in Non-core and Legacy Portfolio as well as Corporate Center – Core Functions, partly offset by higher revenues in the Investment Bank. Adjusted other income decreased by CHF 108 million, mainly due to lower net gains on financial investments available-for-sale.

Total net interest and trading income	**10,915**	**9,504**	**11,169**	**15**

Net interest and trading income

Net interest and trading income increased by CHF 1,411 million to CHF 10,915 million. 2013 included an own credit loss on financial liabilities designated at fair value of CHF 283 million, primarily due to further tightening of our funding spreads, compared with an own credit loss of CHF 2,202 million in the prior year when our funding spreads tightened significantly. Excluding the effect of own credit and a net interest and trading income gain related to the buyback of debt in a public tender offer of CHF 27 million in 2013, net interest and trading income decreased by CHF 535 million to CHF 11,171 million, mainly as a result of reductions in Non-core and Legacy Portfolio as well as Corporate Center – Core Functions, partly offset by higher revenues in the Investment Bank.

Net interest and trading income in Wealth Management increased by CHF 140 million. Net interest income increased by CHF 110 million to CHF 2,061 million, mainly due to revenues of CHF 110 million allocated from the repurchase agreement unit within Group Treasury in Corporate Center – Core Functions. Previously, such revenues were not allocated to the business divisions. The increase in net interest income was also due to lower costs related to the multi-currency portfolio of unencumbered, high-quality, short-term assets managed centrally by Group Treasury. These factors, together with higher income resulting from increased loan and client deposit volumes, more than offset the negative effect of a lower deposit margin resulting from the ongoing low interest rate environment. Net trading income increased by CHF 29 million to CHF 807 million and included higher income from foreign exchange-related products and increased treasury-related income, partly offset by lower income from precious metals.

In Wealth Management Americas, net interest and trading income increased by CHF 58 million, reflecting a CHF 144 million increase in net interest income primarily due to higher client balances in securities-backed lending and mortgages. Furthermore, net funding costs related to the goodwill and intangible assets that arose from the PaineWebber acquisition are retained in Corporate Center – Core Functions with effect from 1 January 2013. These increases were partly offset by lower net interest income from the available-for-sale portfolio, primarily due to lower average balances. Net trading income decreased by CHF 86 million to CHF 387 million, mainly due to trading losses related to the Puerto Rico municipal market as well as lower income from taxable fixed income and US municipal bond trading.

Net interest and trading income in Retail & Corporate increased by CHF 18 million.

Within the Investment Bank, Investor Client Services net interest and trading income increased by CHF 981 million, primarily due to higher derivatives revenues, mainly as a result of higher revenues in Asia Pacific and Europe, Middle East and Africa. Furthermore, cash revenues increased, largely as 2012 included a loss of CHF 349 million related to the Facebook initial public offering. Revenues in financing services and other equities also increased. These increases were partly offset by lower revenues in rates and credit, primarily due to weaker trading performance in the flow businesses, and by slightly lower foreign exchange revenues. Corporate Client Solutions net interest and trading income increased by CHF 460 million, largely due to higher revenues in equity capital markets, mainly as a result of a large private transaction recorded in the first half of 2013.

Corporate Center – Core Functions net interest and trading income, excluding the effect of own credit, decreased by CHF 972 million, partly due to losses of CHF 153 million related to our macro cash flow hedge models compared with gains of CHF 152 million in the prior year. The decrease in net interest and trading income was also due to a decline in revenues to CHF 22 million from CHF 245 million in the repurchase agreement unit, which was transferred

from the Investment Bank to Corporate Center – Core Functions in 2013 and for which prior period information was restated. Whereas restated results reflected no allocation of revenues from the repurchase agreement unit to the business divisions, from 2013 onwards revenues from this unit are allocated to the business divisions, mainly to Wealth Management. In addition, 2013 included losses from cross-currency basis swaps of CHF 222 million which are held as economic hedges and central funding costs retained in Group Treasury increased. Furthermore, 2013 included CHF 102 million in net funding costs related to the goodwill and intangible assets that arose from the PaineWebber acquisition which are retained in Corporate Center – Core Functions with effect from 1 January 2013.

In Non-core and Legacy Portfolio, net interest and trading income decreased by CHF 1,191 million. Non-core net interest and trading income decreased by CHF 1,146 million, largely due to lower revenues in rates and credit as we focused on risk-weighted assets (RWA) and balance sheet reduction, as well as on reducing operational complexity as part of the accelerated implementation of our strategy. In 2012, portfolios were actively traded and benefited from increased liquidity, with strong two-way client flow that resulted in higher revenues. Legacy Portfolio net interest and trading income decreased by CHF 45 million. In 2013, we exercised our option to acquire the SNB StabFund's equity and recorded an option revaluation gain of CHF 431 million prior to the exercise compared with a gain of CHF 526 million in the prior year. Trading revenues also decreased due to an interest charge of CHF 34 million in 2013 relating to tax obligations of the SNB StabFund. Legacy Portfolio net interest and trading income, excluding the SNB StabFund option, increased by CHF 83 million, mainly as 2012 included losses on collateralized debt obligations (CDO) and related hedging swaps of CHF 171 million as we exited certain CDO positions to reduce RWA.

➔ **Refer to "Note 24 Fair value measurement" in the "Financial information" section of this report for more information on own credit**

Credit loss expense / recovery

We recorded net credit loss expenses of CHF 50 million compared with CHF 118 million in the prior year.

In Wealth Management, net credit loss expenses were CHF 10 million compared with net credit loss recoveries of CHF 1 million in the prior year.

In Wealth Management Americas, 2013 included net credit loss expenses of CHF 27 million compared with net credit loss expenses of CHF 14 million in the prior year. The 2013 expenses were largely due to loan loss allowances on securities-backed lending facilities collateralized by Puerto Rico municipal securities and related funds.

In Retail & Corporate, net credit loss expenses were CHF 18 million compared with net credit loss expenses of CHF 27 million in the prior year. 2013 included net specific loan loss allowances of CHF 113 million, reflecting a number of new workout cases that were individually reviewed, downgraded and impaired as well as adjustments on existing positions. This was largely offset by a net release of CHF 95 million of collective loan loss allowances based on the ongoing review of the portfolio, as well as the overall improved outlook for relevant industries. The prior year included net specific loan loss allowances of CHF 43 million, partly offset by a net decrease in collective loan loss allowances of CHF 16 million.

In Non-core and Legacy Portfolio, net credit loss recoveries were CHF 3 million compared with net credit loss expenses of CHF 78 million in the prior year, which mainly reflected an impairment charge related to certain student loan auction rate securities, subsequently sold to reduce RWA.

➔ **Refer to the "Wealth Management Americas," "Retail & Corporate" and "Corporate Center" sections of this report for more information**

Net fee and commission income

Net fee and commission income increased by CHF 891 million to CHF 16,287 million.

Portfolio management and advisory fees increased by CHF 730 million to CHF 6,625 million, mainly in Wealth Management Americas and in Wealth Management, largely due to higher average invested assets as well as pricing adjustments.

Net brokerage fees increased by CHF 231 million to CHF 3,196 million, mainly in the Investment Bank due to improved market activity levels, and in Wealth Management Americas due to higher client activity levels.

Credit loss (expense) / recovery

Total	**(50)**	(118)	(84)	(58)

Investment fund fees increased by CHF 177 million to CHF 3,803 million, primarily due to higher managed account fees calculated on higher invested asset levels in Wealth Management Americas and higher client activity levels in Wealth Management.

Total underwriting fees decreased by CHF 165 million to CHF 1,374 million, reflecting a decrease of CHF 208 million in debt underwriting fees, mainly in the Investment Bank.

➔ **Refer to "Note 4 Net fee and commission income" in the "Financial information" section of this report for more information**

Other income

Other income was CHF 580 million compared with CHF 641 million in the prior year.

Income from financial investments available-for-sale was CHF 168 million compared with CHF 308 million in the prior year.

Net gains from disposals of financial investments available-for-sale in 2013 included gains of CHF 74 million resulting from the divestment of our participation in Euroclear Plc., of which CHF 27 million was allocated to Retail & Corporate, CHF 25 million to Wealth Management and CHF 22 million to the Investment Bank. Further, net gains from disposals of financial investments available-for-sale included net gains of CHF 61 million in Corporate Center – Core Functions in 2013. 2012 included net gains of CHF 272 million in Corporate Center – Core Functions, as well as gains of CHF 101 million in Non-core and Legacy Portfolio, mainly related to the sale of an equity investment.

Income related to associates and subsidiaries increased by CHF 79 million to CHF 160 million, mainly due to lower charges for certain provisions for litigation, regulatory and similar matters recorded within other income, partly offset by lower income related to our participation in the SIX Group. Furthermore, 2013 included a net gain on sale of our remaining proprietary trading business of CHF 31 million.

Other income excluding income from financial investments available-for-sale and income related to associates and subsidiaries was unchanged at CHF 252 million. Gains on sales of real estate were CHF 288 million compared with CHF 112 million in the prior year. Net gains on sales of loans and receivables were CHF 53 million compared with net losses of CHF 11 million in the prior year. Furthermore, 2013 included losses related to the buyback of debt in public tender offers of CHF 194 million.

➔ **Refer to "Note 5 Other income" in the "Financial information" section of this report for more information**

Operating expenses

Total operating expenses decreased by CHF 2,755 million to CHF 24,461 million. Restructuring charges were CHF 772 million compared with CHF 371 million in the prior year, mainly related to

1 Excluding adjusting items. 2 Includes expenses relating to performance awards and other variable compensation for the respective performance year. 3 Consists of amortization of prior years' awards relating to performance awards and other variable compensation. 4 Financial advisor compensation consists of grid-based compensation based directly on compensable revenues generated by financial advisors and supplemental compensation calculated based on financial advisor productivity, firm tenure, assets and other variables. It also includes costs related to compensation commitments with financial advisors entered into at the time of recruitment, which are subject to vesting requirements. 5 Consists of expenses related to contractors, social security, pension and other post-employment benefit plans and other personnel expenses. Refer to "Note 6 Personnel expenses" in the "Financial information" section of this report for more information. 6 Includes general and administrative expenses excluding charges for provisions for litigation, regulatory and similar matters, as well as depreciation and impairment of property and equipment and amortization and impairment of intangible assets. 7 Refer to "Note 28 Pension and other post-employment benefit plans" in the "Financial information" section of this report for more information. 8 Refer to "Note 17 Goodwill and intangible assets" in the "Financial information" section of this report for more information.

increased non-personnel related restructuring charges, partly offset by lower personnel-related restructuring charges.

Furthermore, 2012 included a credit related to changes to our Swiss pension plan of CHF 730 million and a credit related to changes to our retiree benefit plans in the US of CHF 116 million, as well as impairment losses on goodwill and other non-financial assets of CHF 3,064 million. On an adjusted basis, total operating expenses decreased by CHF 938 million to CHF 23,689 million, mainly due to a reduction of CHF 848 million in charges for provisions for litigation, regulatory and similar matters as well as a decrease of CHF 199 million in personnel expenses, partly offset by an increase of CHF 110 million in other non-personnel expenses.

➔ Refer to "Note 32 Changes in organization" in the "Financial information" section of this report for more information on restructuring charges

Personnel expenses

Personnel expenses increased by CHF 445 million to CHF 15,182 million. 2013 included net charges of CHF 156 million in personnel-related restructuring expenses compared with CHF 358 million in the prior year. Furthermore, 2012 included a credit related to changes to our Swiss pension plan of CHF 730 million and a credit related to changes to our retiree benefit plans in the US of CHF 116 million. On an adjusted basis, personnel expenses decreased by CHF 199 million to CHF 15,026 million.

Expenses for salaries, excluding the effects of restructuring, decreased by CHF 547 million, largely due to a reduction in the number of personnel as a result of our ongoing cost reduction programs.

Excluding the effects of restructuring, total variable compensation expenses increased by CHF 196 million. Expenses for performance awards increased by CHF 116 million, due to higher expenses for current year performance awards reflecting a 28% increase in the overall performance award pool, partly offset by a lower charge for the amortization of deferred compensation awards from prior years. Including restructuring, expenses for performance awards were virtually unchanged. Other variable compensation expenses excluding restructuring increased by CHF 80 million, mainly due to increased expenses for retention payments.

Financial advisor compensation in Wealth Management Americas increased by CHF 267 million, corresponding with higher compensable revenues.

Other personnel expenses decreased by CHF 114 million on an adjusted basis, mainly due to lower expenses for pension and other post-employment benefits plans and reduced expenses for contractors.

➔ Refer to "Note 6 Personnel expenses" in the "Financial information" section of this report for more information

➔ Refer to "Note 28 Pension and other post-employment benefit plans" in the "Financial information" section of this report for more information

➔ Refer to "Note 29 Equity participation and other compensation plans" in the "Financial information" section of this report for more information

➔ Refer to the "Compensation" section of this report for more information

General and administrative expenses

General and administrative expenses decreased by CHF 273 million to CHF 8,380 million. On an adjusted basis, excluding net restructuring charges of CHF 548 million in 2013 compared with zero in 2012, general and administrative expenses decreased by CHF 821 million.

Net charges for provisions for litigation, regulatory and similar matters decreased by CHF 848 million to CHF 1,701 million, primarily as the prior year included charges arising from fines and disgorgement resulting from regulatory investigations concerning LIBOR and other benchmark rates. This was partly offset by higher provisions in 2013 for claims related to sales of residential mortgage-backed securities and mortgages. In view of the current regulatory and political climate affecting financial institutions, and because we continue to be exposed to a number of significant claims and regulatory matters, we expect charges associated with litigation, regulatory and similar matters to remain at elevated levels through 2014.

2013 expenses included a net charge of CHF 124 million for the UK bank levy, mainly in Non-core and Legacy Portfolio and the Investment Bank, compared with a net charge of CHF 127 million recognized in the prior year, as well as a charge of CHF 110 million related to the Swiss-UK tax agreement, allocated primarily to Wealth Management, and an impairment charge of CHF 87 million in Non-core and Legacy Portfolio related to certain disputed receivables. Furthermore, excluding the effects of restructuring, expenses decreased for outsourcing of information technology and other services, occupancy, and marketing and public relations, by CHF 76 million, CHF 66 million and CHF 50 million, respectively.

➔ Refer to "Note 7 General and administrative expenses" in the "Financial information" section of this report for more information

➔ Refer to "Note 22 Provisions and contingent liabilities" in the "Financial information" section of this report for more information

➔ Refer to the "Regulatory and legal developments" section of this report for more information on the charge in relation to the Swiss-UK tax agreement

Depreciation, impairment and amortization

Depreciation and impairment of property and equipment was CHF 816 million compared with CHF 689 million in the prior year, partly as restructuring-related charges increased to CHF 68 million from CHF 14 million.

Impairment of goodwill was zero compared with CHF 3,030 million in the prior year.

Amortization and impairment of intangible assets was CHF 83 million compared with CHF 106 million in the prior year. We recorded impairment charges of CHF 3 million compared with CHF 17 million.

➔ Refer to "Note 17 Goodwill and intangible assets" in the "Financial information" section of this report for more information

Tax

We recognized a net income tax benefit of CHF 110 million for 2013, which included a Swiss tax expense of CHF 548 million and a net foreign tax benefit of CHF 658 million.

The Swiss tax expense included a current tax expense of CHF 93 million related to taxable profits, against which no losses were available to offset, earned by Swiss subsidiaries and also from the sale of real estate. In addition, it included a deferred tax expense of CHF 455 million, mainly reflecting the amortization of deferred tax assets previously recognized in relation to tax losses carried forward used to offset taxable profits for the year.

The net foreign tax benefit included a current tax expense of CHF 342 million in respect of taxable profits earned by non-Swiss subsidiaries and branches, against which no losses were available to offset. This was more than offset by a net deferred tax benefit of CHF 1,000 million reflecting a net upward revaluation of deferred tax assets, partially offset by the amortization of deferred tax assets, as tax losses were used against taxable profits.

In 2014, notwithstanding the effects of any potential reassessment of the level of deferred tax assets, we expect the tax rate to be in the range of 20% to 25%. Consistent with past practice, we expect to revalue our overall level of deferred tax assets in the second half of 2014 based on a reassessment of future profitability taking into account updated business plan forecasts. Furthermore, based on our actual and forecasted financial performance, we may reassess the manner in which the probability of future taxable income is evaluated and include additional forecasted taxable income in our deferred tax assets assessment which may have a material effect on recognized deferred tax assets and tax expense. The full year effective tax rate could change significantly on the basis of this reassessment. It could also change if aggregate tax expenses for locations other than Switzerland, the US and UK differ from what is expected.

➔ Refer to "Note 8 Income taxes" in the "Financial information" section of this report for more information

Total comprehensive income attributable to UBS shareholders

Total comprehensive income attributable to UBS shareholders includes all changes in equity (including net profit) attributed to UBS shareholders during a period, except those resulting from investments by and distributions to shareholders as well as equity-settled share-based payments. Items included in comprehensive income, but not in net profit, are reported under other comprehensive income (OCI). These items will be reclassified to net profit when the underlying item is sold or realized, with the exception of gains and losses on defined benefit plans and certain property revaluations.

In 2013, total comprehensive income attributable to UBS shareholders was CHF 1,961 million, reflecting net profit attributable to UBS shareholders of CHF 3,172 million, partly offset by negative OCI attributable to UBS shareholders of CHF 1,211 million (net of tax).

OCI in 2013 included negative cash flow hedge OCI of CHF 1,520 million (net of tax), mainly reflecting significant increases in long-term interest rates across all major currencies.

Foreign currency translation losses amounted to CHF 471 million (net of tax), primarily related to a weakening of the US dollar, Indian rupee and Australian dollar against the Swiss franc.

OCI associated with financial investments available-for-sale was negative CHF 154 million (net of tax), mainly as previously unrealized net gains were reclassified from OCI to the income statement upon sale of investments.

These decreases in OCI were partly offset by net OCI gains on defined benefit plans of CHF 939 million (net of tax), mainly related to our Swiss pension plan which recorded a pre-tax OCI gain of CHF 1,119 million. This OCI gain on the Swiss pension plan reflected a gain of CHF 1,124 million due to a reduction of the defined benefit obligation and a gain of CHF 803 million related to an increase in the fair value of plan assets, partly offset by an OCI reduction of CHF 808 million representing the excess of the pension surplus over the estimated future economic benefit. The net pre-tax OCI gains on non-Swiss pension plans amounted to CHF 49 million.

➔ Refer to the "Statement of comprehensive income" in the "Financial information" section of this report for more information

➔ Refer to "Note 28 Pension and other post-employment benefit plans" in the "Financial information" section of this report for more information on OCI related to defined benefit plans

Net profit attributable to preferred noteholders

Net profit attributable to preferred noteholders was CHF 204 million compared with CHF 220 million in the prior year.

We expect net profit attributable to preferred noteholders to be approximately CHF 110 million in both 2014 and 2015, and approximately CHF 85 million in 2016.

Key figures

Cost/income ratio

The cost/income ratio improved to 88.0% in 2013 compared with 106.6% in the prior year. On an adjusted basis, the cost/income ratio improved to 85.0% from 89.1%.

Risk-weighted assets

Our phase-in Basel III RWA decreased by CHF 33 billion to CHF 229 billion, mainly due to a CHF 41 billion reduction in credit risk RWA and a CHF 17 billion reduction in market risk RWA, partly offset by a CHF 25 billion increase in operational risk RWA. The CHF 41 billion decrease in credit risk RWA was mainly due to a CHF 24 billion reduction related to Other exposure segments, mainly driven by a reduction in RWA for advanced and standardized credit valuation adjustments (CVA) of CHF 18 billion, mainly due to benefits from economic CVA hedges, ratings migration,

reduced exposures and market-driven reductions in the Investment Bank and Non-core and Legacy Portfolio. Furthermore, a decline of CHF 6 billion was realized due to the sale of securitization exposures in Non-core and Legacy Portfolio. Credit risk RWA for exposures to corporates decreased by CHF 10 billion, primarily due to a reduction in drawn loans, undrawn loan commitments and derivative exposures in Wealth Management Americas, the Investment Bank and Non-core and Legacy Portfolio. Credit risk RWA for exposures to banks declined by CHF 6 billion, mainly due to lower derivative exposures in the Investment Bank and Non-core and Legacy Portfolio. The CHF 17 billion decrease in market risk RWA was due to a CHF 5 billion decrease in the comprehensive risk measure, a decline of CHF 4 billion in the incremental risk charge and reductions of CHF 2 billion, CHF 3 billion and CHF 1 billion in RWA related to value-at-risk (VaR), stressed VaR and risks-not-in-VaR, respectively. The CHF 25 billion increase in operational risk RWA was primarily due to incremental RWA of CHF 22.5 billion resulting from the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA.

➔ Refer to the "Investment Bank," "Corporate Center" and "Capital management" sections of this report for more information

➔ Refer to the "Regulatory and legal developments" section of this report for more information on the incremental RWA resulting from the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA

Net new money

In Wealth Management, all regions contributed to net inflows of CHF 35.9 billion in 2013, compared with CHF 26.3 billion in the prior year. The strongest net inflows were recorded in Asia Pacific followed by emerging markets, Switzerland and Europe. Net inflows in the European onshore and the Swiss-based Global Family Office business in Europe more than offset net outflows in the European cross-border business, which was negatively affected by ongoing asset outflows in the context of fiscal and regulatory concerns. On a global basis, net new money from ultra high net worth clients was CHF 33.6 billion compared with CHF 19.9 billion in the prior year.

In Wealth Management Americas, net new money totaled CHF 17.6 billion, or USD 19.0 billion, compared with CHF 20.6 billion, or USD 22.1 billion, in the prior year, due to lower inflows from financial advisors employed with UBS for more than one year as well as lower inflows from net recruiting of financial advisors. This decrease was partly offset by higher inflows from the Global Family Office.

Excluding money market flows, Global Asset Management recorded net new money inflows from third parties of CHF 0.7 billion compared with net outflows of CHF 0.6 billion in 2012. Net inflows, notably from clients serviced from Europe, Middle East and Africa and from Switzerland, were partly offset by net outflows from clients serviced from the Americas. Net new money outflows from clients of UBS's wealth management businesses, excluding money market flows, were CHF 5.5 billion compared with CHF 5.2 billion in the prior year. Net outflows, mainly from clients serviced from Switzerland, were partly offset by net inflows from clients serviced from the Americas. Money market net outflows from third parties were CHF 1.5 billion compared with net inflows of CHF 0.9 billion in the prior year and were mainly from clients serviced from the Americas. Money market net outflows from clients of UBS's wealth management businesses were CHF 13.6 billion compared with CHF 8.3 billion in the prior year. In both years, net outflows were primarily due to an ongoing initiative by Wealth Management Americas to increase deposit account balances in UBS banking entities. This led to CHF 8.3 billion in outflows from money market funds managed by Global Asset Management in 2013 and CHF 6.2 billion in 2012. The corresponding increase in deposit account balances in Wealth Management Americas does not constitute net new money. Total net new money outflows were CHF 19.9 billion compared with CHF 13.3 billion in the prior year.

➔ Refer to the "Wealth Management," "Wealth Management Americas" and "Global Asset Management" sections of this report for more information

Invested assets

	As of			% change from
CHF billion	**31.12.13**	31.12.12	31.12.11	31.12.12
Wealth Management	**886**	821	750	8
Wealth Management Americas	**865**	772	709	12
Global Asset Management	**583**	581	574	0

Invested assets

In Wealth Management, invested assets were CHF 886 billion as of 31 December 2013, representing an increase of CHF 65 billion from 31 December 2012. Net new money inflows of CHF 36 billion and positive market performance of CHF 34 billion were slightly offset by negative currency translation effects of CHF 4 billion.

In Wealth Management Americas, invested assets were CHF 865 billion as of 31 December 2013, an increase of CHF 93 billion from 31 December 2012. In US dollar terms, invested assets increased by USD 127 billion to USD 970 billion, reflecting positive market performance of USD 108 billion and continued strong net new money inflows of USD 19 billion.

In Global Asset Management, invested assets were CHF 583 billion as of 31 December 2013 compared with CHF 581 billion as of 31 December 2012. Net new money outflows of CHF 20 billion, combined with negative currency translation effects of CHF 15 billion and a reduction of CHF 7 billion related to the aforementioned sale of the Canadian domestic business, were more than offset by positive market performance of CHF 44 billion.

➔ **Refer to the “Wealth Management,” “Wealth Management Americas” and “Global Asset Management” sections of this report for more information**

2012 compared with 2011

Performance

Operating profit before tax was a loss of CHF 1,794 million in 2012 compared with a profit of CHF 5,307 million in the prior year. The 2012 loss was primarily due to impairment losses of CHF 3,064 million on goodwill and other non-financial assets and net charges for provisions for litigation, regulatory and similar matters of CHF 2,549 million, including charges for provisions arising from fines and disgorgement resulting from regulatory investigations concerning LIBOR and other benchmark rates, as well as claims related to sales of residential mortgage-backed securities. The full year 2012 result also included an own credit loss on financial liabilities designated at fair value of CHF 2,202 million and net restructuring charges of CHF 371 million.

In addition to reporting our results in accordance with IFRS, we report adjusted results that exclude items considered non-recurring and certain other items that management believes are not representative of the underlying performance of our businesses. Such adjusted results are non-GAAP financial measures as defined by SEC regulations. For 2012, the items we excluded were the abovementioned impairment losses of CHF 3,064 million, the own credit loss of CHF 2,202 million, gains on sales of real estate of CHF 112 million, a credit to personnel expenses related to changes to our Swiss pension plan of CHF 730 million, net restructuring charges of CHF 371 million and a credit to personnel expenses related to changes to our retiree benefit plans in the US of CHF 116 million. The adjustments in 2011 were an own credit gain of CHF 1,537 million, gains on sales of real estate of CHF 94 million, a gain on sale of our strategic investment portfolio of CHF 722 million and net restructuring charges of CHF 380 million.

On this adjusted basis, the 2012 profit before tax was CHF 2,885 million compared with CHF 3,334 million in 2011, mainly as net charges for provisions for litigation, regulatory and similar matters increased by CHF 2,273 million to CHF 2,549 million, while 2011 included a loss of CHF 1,849 million related to the unauthorized trading incident announced in September of that year.

Operating income

Total operating income was CHF 25,423 million in 2012 compared with CHF 27,788 million in 2011. Excluding the impacts of own credit as well as gains on sales of real estate in both years and the gain on the sale of our strategic investment portfolio in 2011, operating income increased by CHF 2,078 million to CHF 27,513 million.

Net interest and trading income

Net interest and trading income decreased by CHF 1,665 million to CHF 9,504 million. 2012 included an own credit loss on financial liabilities designated at fair value of CHF 2,202 million, primarily reflecting significant tightening of our funding spreads, compared with an own credit gain of CHF 1,537 million in 2011. Excluding the impact of own credit, net interest and trading income increased by CHF 2,074 million.

Net interest and trading income in Wealth Management declined by CHF 118 million, mainly as the prior year included CHF 103 million of interest income stemming from the abovementioned strategic investment portfolio. Moreover, net interest income was negatively affected by increased costs of CHF 69 million related to assets managed centrally by Group Treasury. Furthermore, net trading revenues declined as a result of lower treasury-related income and lower client activity levels following reduced volatility in the foreign exchange market. These factors were partly offset by CHF 180 million higher product-related interest income, reflecting the beneficial effects of increases in client deposit and lending volumes.

In Wealth Management Americas, net interest and trading income increased by CHF 86 million, reflecting favorable currency effects and higher client balances in securities-backed lending and mortgages.

Retail & Corporate net interest and trading income declined by CHF 194 million, partly as the prior year included interest income of CHF 68 million related to our strategic investment portfolio. Net interest income was also negatively affected by increased costs related to assets managed centrally by Group Treasury and lower allocations related to investment proceeds from the firm's equity. The loan margin was stable, but the historically low interest rate environment continued to negatively affect the deposit margin. This was partly offset by growth in average deposit and, to a lesser extent, loan volumes as well as a number of pricing adjustments. Net trading income decreased to CHF 281 million from CHF 333 million due to lower treasury-related income and lower valuation income in 2012 related to credit default swaps to hedge certain loans.

Within the Investment Bank, Corporate Client Solutions net interest and trading income increased by CHF 176 million, largely due to higher revenues in debt capital markets. Investor Client Services net interest and trading income increased by CHF 567 million, mainly as 2011 included a loss of CHF 1,849 million related to the unauthorized trading incident, partly offset by lower equities cash revenues, mainly as 2012 included a loss of CHF 349 million related to the Facebook initial public offering. In addition, equities derivatives revenues declined, as trading revenues, particularly in Asia Pacific and Europe, Middle East and Africa, were affected by lower volatility levels. Other equities revenues also decreased, primarily reflecting a reduced contribution from proprietary trading as we continued to exit the business. Furthermore, foreign exchange revenues declined, mainly within foreign exchange spot and foreign exchange options as volatility decreased from the high levels seen in 2011 resulting from eurozone uncertainty. Rates and credit revenues also declined, primarily due to increased negative debit valuation adjustments and lower revenues from flow businesses, partly offset by higher revenues from solutions businesses.

Excluding own credit, net interest and trading revenues in Corporate Center – Core Functions decreased by CHF 18 million.

In Non-core and Legacy Portfolio, net interest and trading income increased by CHF 1,573 million. Our option to acquire the SNB StabFund's equity resulted in a gain of CHF 526 million in 2012, compared with a loss of CHF 133 million in 2011. Legacy Portfolio net interest and trading income excluding the SNB StabFund option increased by CHF 714 million, partly as 2011 included a loss of CHF 284 million related to credit valuation adjustments for monoline credit protection. Non-core net interest and trading revenues increased by CHF 200 million, mainly as a result of higher credit revenues.

➔ **Refer to "Note 3 Net interest and trading income" in the "Financial information" section of this report for more information**

➔ **Refer to "Note 24 Fair value measurement" in the "Financial information" section of this report for more information on own credit**

Credit loss expense / recovery

In 2012, we recorded net credit loss expenses of CHF 118 million compared with net credit loss expenses of CHF 84 million in 2011. In 2012, we recorded net credit loss expenses of CHF 78 million in Non-core and Legacy Portfolio, mainly related to student loan auction rate securities, and net credit loss expenses of CHF 27 million in Retail & Corporate.

➔ **Refer to the "Wealth Management Americas," "Retail & Corporate" and "Corporate Center" sections of this report for more information**

Net fee and commission income

Net fee and commission income increased by CHF 160 million to CHF 15,396 million.

Underwriting fees increased by CHF 359 million to CHF 1,539 million, reflecting an increase in both equity and debt underwriting fees. The increase in underwriting fees corresponded to increased market share in both equity underwriting and debt underwriting. In addition, we increased our participation in private and structured transactions.

Portfolio management and advisory fees increased by CHF 344 million to CHF 5,895 million, mainly reflecting an increase in Wealth Management Americas.

Net brokerage fees fell by CHF 271 million, primarily in the Investment Bank due to a lower level of client activity.

Merger and acquisition and corporate finance fees decreased by CHF 313 million due to a lower volume of transactions.

➔ **Refer to "Note 4 Net fee and commission income" in the "Financial information" section of this report for more information**

Other income

Other income was CHF 641 million compared with CHF 1,467 million in the previous year.

In 2012, net revenues from financial investments available-for-sale were CHF 308 million, which included CHF 272 million in gains from Corporate Center – Core Functions, as well as a gain of CHF 101 million in Non-core and Legacy Portfolio mainly related to the sale of an equity investment. In 2011, net revenues from financial investments available-for-sale were CHF 887 million, which included a gain of CHF 722 million from the sale of our strategic investment portfolio as well as net gains of CHF 141 million in Corporate Center – Core Functions.

Other income from associates and subsidiaries was CHF 81 million compared with CHF 44 million, mainly related to higher revenues from our participation in the SIX Group.

Other income in 2012 further included gains of CHF 112 million on sales of Swiss real estate compared with a gain of CHF 78 million on sale of a property in Switzerland in 2011. Other income in 2011 included net gains of CHF 344 million from the sale of loans and receivables.

➔ **Refer to "Note 5 Other income" in the "Financial information" section of this report for more information**

Operating expenses

Total operating expenses increased by CHF 4,734 million to CHF 27,216 million, mainly due to impairment losses of CHF 3,064 million on goodwill and other non-financial assets and CHF 2,273 million higher net charges for provisions for litigation, regulatory and similar matters. The appreciation of the US dollar and British pound against the Swiss franc also contributed to the overall increase. These increases were partly offset by a credit to personnel expenses of CHF 730 million related to changes to our Swiss pension plan and a credit to personnel expenses of CHF 116 million related to changes to our retiree benefit plans in the US. Net restructuring charges were CHF 371 million in 2012 compared with CHF 380 million in 2011.

➔ **Refer to "Note 32 Changes in organization" in the "Financial information" section of this report for more information on restructuring charges**

Personnel expenses

Personnel expenses decreased by CHF 897 million to CHF 14,737 million. In 2012, personnel expenses included a credit of CHF 730 million related to changes to our Swiss pension plan and a credit of CHF 116 million related to changes to our retiree benefit plans in the US. Net personnel-related restructuring charges were CHF 358 million in 2012 compared with CHF 261 million in 2011. Excluding the effects of restructuring and the credits related to the Swiss and US benefit plans, personnel expenses decreased by CHF 148 million, despite the appreciation of the US dollar and British pound against the Swiss franc.

On this adjusted basis, expenses for performance awards declined by CHF 577 million to CHF 2,885 million. Expenses relating to 2012 performance awards recognized in the performance year 2012 were CHF 1,724 million, down CHF 123 million from the prior year, reflecting a 7% decrease in the overall performance award pool for the 2012 performance year. The amortization of

deferred compensation awards from prior years decreased by CHF 454 million to CHF 1,161 million.

Other variable compensation excluding restructuring charges increased by CHF 51 million, reflecting increased expenses for employee retention, including costs related to a special plan award program.

Salary expenses, excluding restructuring, decreased by CHF 78 million, partly related to a one-time net credit of CHF 31 million from changes to the rules for the Swiss long-service and sabbatical awards.

Financial advisor compensation in Wealth Management Americas increased by CHF 354 million excluding restructuring reflecting higher revenue production and higher compensation commitments with recruited financial advisors.

➔ Refer to "Note 6 Personnel expenses" in the "Financial information" section of this report for more information

➔ Refer to "Note 28 Pension and other post-employment benefit plans" in the "Financial information" section of this report for more information

➔ Refer to "Note 29 Equity participation and other compensation plans" in the "Financial information" section of this report for more information

➔ Refer to the "Compensation" section of this report for more information

General and administrative expenses

General and administrative expenses were CHF 8,653 million in 2012 compared with CHF 5,959 million in 2011.

Net charges for provisions for litigation, regulatory and similar matters increased by CHF 2,273 million, primarily as a result of charges for provisions arising from fines and disgorgement resulting from regulatory investigations concerning LIBOR and other benchmark rates and claims related to sales of residential mortgage-backed securities.

Costs for outsourcing of information technology and other services increased by CHF 206 million due to higher business demand.

Expenses for marketing and public relations increased by CHF 135 million, partly due to expenditures related to our 150th anniversary, and professional fees increased by CHF 86 million. In 2012, no general and administrative restructuring charges were recorded compared with net charges of CHF 93 million in 2011.

➔ Refer to "Note 7 General and administrative expenses" in the "Financial information" section of this report for more information

➔ Refer to "Note 22 Provisions and contingent liabilities" in the "Financial information" section of this report for more information

Depreciation, impairment and amortization

Depreciation and impairment of property and equipment was CHF 689 million, a decrease of CHF 72 million from the prior year, mainly reflecting lower depreciation of information technology equipment.

Impairment of goodwill was CHF 3,030 million in 2012.

Amortization and impairment of intangible assets was CHF 106 million compared with CHF 127 million. In 2012, we recorded impairment charges of CHF 17 million. In 2011, impairment charges were CHF 37 million, mainly related to a past acquisition in the UK.

➔ Refer to "Note 17 Goodwill and intangible assets" in the "Financial information" section of this report for more information

Tax

We recognized a net income tax expense in the income statement for the year of CHF 461 million. This included a Swiss current tax expense of CHF 95 million, which relates to taxable profits, against which no losses were available to offset, earned by Swiss subsidiaries and also from the sale of real estate. The net income tax expense for the year also includes a Swiss deferred tax expense of CHF 23 million, which relates to a decrease in recognized deferred tax assets due to Swiss pre-tax profits earned during the year, offset by Swiss tax relief for the impairment of goodwill. In addition, it includes a foreign net current tax expense of CHF 72 million, which relates to a tax expense in respect of taxable profits earned by non-Swiss subsidiaries and branches, against which no losses were available to offset, which were partly offset by a tax benefit from the release of provisions in respect of tax positions which were previously uncertain. Finally, the net income tax expense for the year includes a foreign deferred tax expense of CHF 271 million, which mainly reflects a tax expense for the amortization of deferred tax assets, as tax losses were used against taxable profits.

➔ Refer to "Note 8 Income taxes" in the "Financial information" section of this report for more information

Total comprehensive income attributable to UBS shareholders

Total comprehensive income attributable to UBS shareholders in 2012 was negative CHF 1,966 million, reflecting the net loss attributable to UBS shareholders of CHF 2,480 million, partly offset by positive other comprehensive income attributable to UBS shareholders of CHF 514 million.

OCI in 2012 included net OCI gains on defined benefit plans of CHF 609 million (net of tax). This reflected net pre-tax OCI gains of CHF 1,023 million, which were almost entirely due to an increase in the fair value of plan assets of the Swiss pension plan, partly offset by an income tax expense of CHF 413 million. Cash flow hedge OCI was positive CHF 384 million (net of tax), mainly reflecting decreases in long-term interest rates across all major currencies, partly offset by the reclassification of net gains associated with the effective portion of changes in fair value of hedging derivatives to the income statement. Financial investments available-for-sale OCI was positive CHF 26 million (net of tax). Foreign currency translation OCI was a loss of CHF 511 million (net of tax),

predominantly related to the 2% weakening of the US dollar against the Swiss franc.

OCI attributable to UBS shareholders in 2011 was CHF 934 million (net of tax), mainly reflecting positive cash flow hedge OCI of CHF 1,537 million and foreign currency translation gains of CHF 722 million, partly offset by net OCI losses on defined benefit plans of CHF 1,820 million.

➔ Refer to the "Statement of comprehensive income" in the "Financial information" section of this report for more information

➔ Refer to "Note 28 Pension and other post-employment benefit plans" in the "Financial information" section of this report for more information on OCI related to defined benefit plans

Net profit attributable to preferred noteholders

Net profit attributable to preferred noteholders was CHF 220 million in 2012.

Key figures

Cost/income ratio

The cost/income ratio increased to 106.6% in 2012 compared with 80.7% in the prior year. On an adjusted basis, the cost/income ratio increased to 89.1% from 86.6%.

Net new money

In Wealth Management, net new money inflows were CHF 26.3 billion in 2012 compared with CHF 23.5 billion in 2011. The strongest net inflows were recorded in Asia Pacific and emerging markets as well as globally from ultra high net worth clients. Europe reported net outflows in the offshore business, mainly related to clients from countries neighboring Switzerland. This was partly offset by net inflows in the European onshore business. Swiss wealth management reported increased net inflows compared with the prior year.

Wealth Management Americas recorded net new money inflows of CHF 20.6 billion or USD 22.1 billion in 2012, compared with net new money inflows of CHF 12.1 billion or USD 14.1 billion in 2011 due to stronger inflows from net recruiting of financial advisors as well as financial advisors employed with UBS for more than one year.

Excluding money market flows, Global Asset Management recorded net new money outflows of CHF 5.9 billion in 2012 compared with net inflows of CHF 9.0 billion in the prior year. Net new money from third parties was a net outflow of CHF 0.6 billion compared with a net inflow of CHF 12.2 billion. Net new money from clients of UBS's wealth management businesses was a net outflow of CHF 5.2 billion compared with a net outflow of CHF 3.1 billion.

➔ Refer to the "Wealth Management," "Wealth Management Americas" and "Global Asset Management" sections of this report for more information

Invested assets

Invested assets in Wealth Management rose by CHF 71 billion to CHF 821 billion during the year. Positive market performance and net new money inflows were partly offset by negative currency translation effects.

In Wealth Management Americas, invested assets increased by CHF 63 billion to CHF 772 billion, reflecting positive market performance and strong net new money inflows.

Global Asset Management invested assets increased by CHF 7 billion to CHF 581 billion, mainly due to positive market performance, partly offset by net new money outflows and negative currency translation effects. The sale, as agreed prior to the acquisition, of parts of the ING Investment Management business acquired in Australia in 2011 resulted in a net divestment of CHF 14 billion of invested assets in 2012.

➔ Refer to the "Wealth Management," "Wealth Management Americas" and "Global Asset Management" sections of this report for more information

Balance sheet

As of 31 December 2013, our balance sheet assets stood at CHF 1,010 billion, a decrease of CHF 250 billion or 20% from 31 December 2012, primarily due to a reduction in positive replacement values (PRV) in Corporate Center – Non-core and Legacy Portfolio. Funded assets, which represent total assets excluding PRV and collateral delivered against over-the-counter (OTC) derivatives, decreased by CHF 66 billion to CHF 739 billion, mainly due to reductions in both collateral trading and trading portfolio assets, primarily reflecting the ongoing execution of our strategy. Currency effects reduced funded assets by approximately CHF 18 billion.

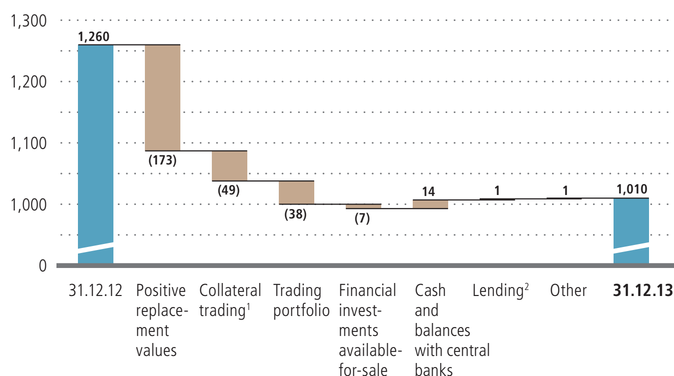
Balance sheet development

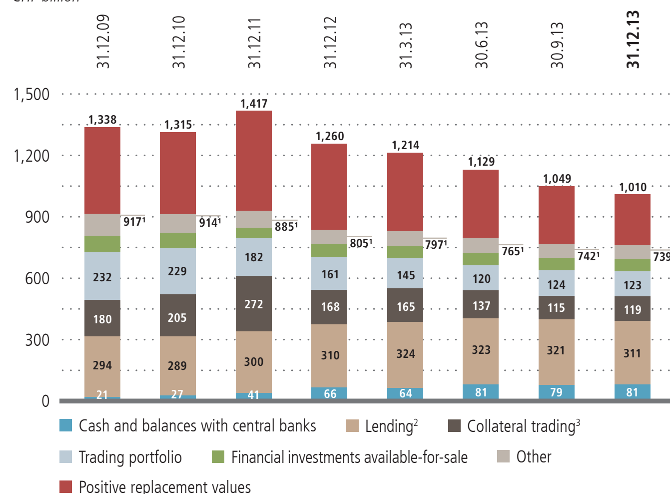
Non-core and Legacy Portfolio total assets decreased by CHF 218 billion to CHF 211 billion as of 31 December 2013, mainly reflecting a CHF 170 billion decline in positive replacement values in Non-core and Legacy Portfolio, primarily from a reduction in OTC derivative exposures by means of negotiated bilateral settlements with specific counterparties, third-party novations, including transfers to central clearing houses, agreements to net down trades with other dealer counterparties, as well as, to a lesser extent, fair value changes due to interest rate movements. Non-core and Legacy Portfolio funded assets decreased by CHF 39 billion to CHF 22 billion, primarily due to the exit of government and other liquid bond positions, along with the sale of a portfolio of distressed assets in Non-core and sales and redemptions of student loan auction rate securities in the Legacy Portfolio. Investment Bank total assets decreased by CHF 21 billion to CHF 241 billion, and funded assets declined by CHF 23 billion to CHF 162 billion, largely due to lower collateral trading assets across businesses, as well as due to a reduction in trading portfolio assets in our foreign exchange, rates and credit business and a reduction in lending assets in Corporate Client Solutions. Corporate Center – Core

Balance sheet assets: development during 2013



1 Consists of reverse repurchase agreements and cash collateral on securities borrowed.
2 Consists of due from banks, financial assets designated at fair value and loans.

Balance sheet assets: development 2009–2013



1 Total assets excluding positive replacement values and collateral delivered against OTC derivatives.
2 Consists of due from banks, financial assets designated at fair value and loans. 3 Consists of reverse repurchase agreements and cash collateral on securities borrowed.

Total assets and funded assets

	31.12.13					31.12.12

1 Mainly consists of cash collateral receivables on derivative instruments and reverse repurchase agreements. 2 Non-core: CHF 17 billion as of 31 December 2013 (CHF 27 billion as of 31 December 2012). Legacy Portfolio: CHF 1 billion as of 31 December 2013 (CHF 2 billion as of 31 December 2012).

Functions assets decreased by CHF 16 billion to CHF 247 billion, primarily reflecting lower collateral trading assets, reduced PRV and sales of mortgage-backed securities held as financial investments available-for-sale. The overall size of our multi-currency portfolio of unencumbered, high-quality, short-term assets managed centrally by Group Treasury remained stable. Retail & Corporate total assets decreased by CHF 4 billion to CHF 141 billion, largely reflecting a reduction in cash balances. Wealth Management total assets increased by CHF 5 billion to CHF 110 billion mainly resulting from increased Lombard and mortgage lending activities. Wealth Management Americas and Global Asset Management total assets were broadly unchanged at CHF 45 billion and CHF 14 billion, respectively.

Cash and balances with central banks

Cash and balances with central banks increased by CHF 14 billion to CHF 81 billion as of 31 December 2013, mainly due to a rebalancing of our multi-currency portfolio of unencumbered, high-quality, short-term assets.

Lending

Loans increased by CHF 7 billion to CHF 287 billion, predominantly in our wealth management businesses and mainly reflecting increased Lombard and residential mortgage lending, partly offset by sales and redemptions of student loan auction rate securities in the Legacy Portfolio. Interbank lending was lower by CHF 4 billion, mainly in the Investment Bank, and financial assets designated at fair value were reduced by CHF 2 billion, primarily due to trade terminations in Non-core.

Collateral trading

Collateral trading assets (reverse repurchase agreements and cash collateral on securities borrowed) decreased by CHF 49 billion to CHF 119 billion, primarily due to the rebalancing of our multi-currency portfolio of unencumbered, high-quality, short-term assets, lower collateral trading activity in the Investment Bank and a reduction in externally sourced securities collateral by Group Treasury.

Collateral trading liabilities (repurchase agreements and cash collateral on securities lent) were reduced by CHF 24 billion, reflecting reduced funding requirements.

Trading portfolio

Trading portfolio assets were reduced by CHF 38 billion to CHF 123 billion, mainly due to a CHF 34 billion decrease in debt instruments held, primarily reflecting lower government, corporate and mortgage-backed securities debt, and a reduction of CHF 8 billion in precious metal holdings, partly offset by a CHF 4 billion client-driven increase in equity instruments. A majority of the reduction in trading portfolio assets occurred in Non-core, reflecting the ongoing execution of our strategy.

Trading portfolio liabilities were lower by CHF 8 billion, primarily reflecting reduced government debt and corporate bonds short sales.

Replacement values

Positive and negative replacement values declined on both sides of the balance sheet, decreasing by CHF 173 billion or 41% and CHF 155 billion or 39% to CHF 246 billion and CHF 240 billion,

respectively. Decreases in positive replacement values mainly occurred in Non-core and Legacy Portfolio, primarily from a reduction in OTC derivative exposures by means of negotiated bilateral settlements with specific counterparties, third-party novations, including transfers to central clearing houses, agreements to net down trades with other dealer counterparties, as well as, to a lesser extent, fair value changes due to interest rate movements. Similarly, decreases in negative replacement values also mainly occurred in interest rate contracts in Non-core and Legacy Portfolio.

Financial investments available-for-sale

Financial investments available-for-sale were reduced by CHF 7 billion to CHF 60 billion, mainly reflecting lower holdings of government debt as well as sales of mortgage-backed securities.

Short-term borrowings

Short-term borrowings (short-term debt issued and due to banks) decreased by CHF 15 billion to CHF 40 billion, primarily due to lower interbank precious metal accounts recognized on our balance sheet, combined with reduced funding requirements. The reduction in short-term debt issued primarily occurred in commercial paper and client customized issuances, partly offset by an increase in certificates of deposit.

➔ Refer to the "Treasury management" section of this report for more information

Due to customers

Customer deposits increased by CHF 17 billion to CHF 391 billion as Wealth Management, Wealth Management Americas and Retail & Corporate all continued to attract client money into both current and deposit accounts.

➔ Refer to the "Treasury management" section of this report for more information

Long-term debt

Long-term debt decreased by CHF 40 billion to CHF 124 billion, primarily resulting from a CHF 22 billion reduction in financial liabilities designated at fair value, mainly in the Investment Bank and Non-core and Legacy Portfolio. Long-term debt issued held at amortized cost was reduced by CHF 18 billion, primarily due to decreases in senior debt. As part of our reduction in wholesale funding, we successfully completed two cash tender offers during 2013 to repurchase certain subordinated and senior unsecured bonds.

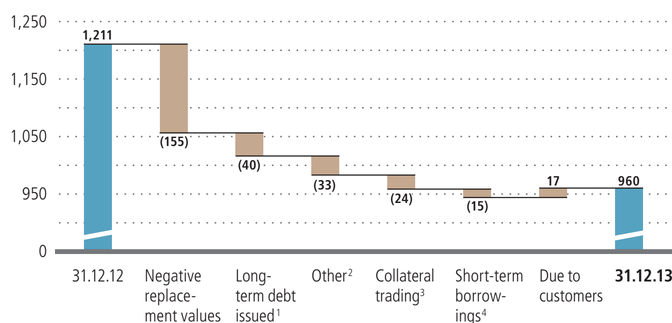
➔ Refer to the "Treasury management" section of this report for more information

Other assets / Other liabilities

Other assets were largely unchanged at CHF 70 billion, mainly as a CHF 3 billion increase in prime brokerage receivables was mostly offset by a CHF 2 billion reduction in cash collateral receivables on derivative instruments.

Balance sheet liabilities: development during 2013

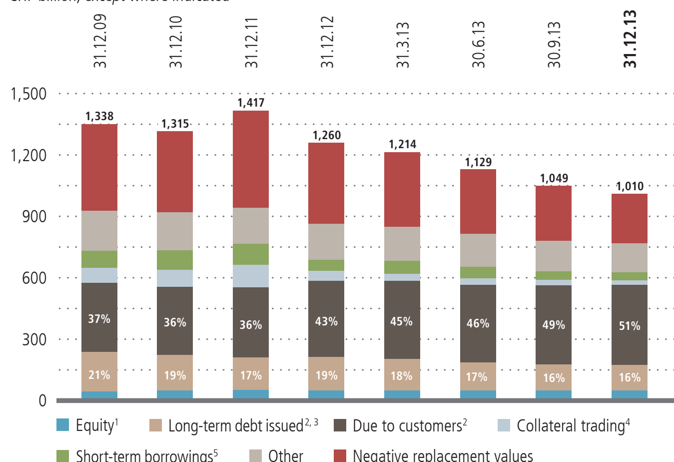
CHF billion



1 Consists of long-term debt issued and financial liabilities designated at fair value.
2 Includes trading portfolio liabilities and cash collateral payables on derivative instruments.
3 Consists of repurchase agreements and cash collateral on securities lent.
4 Consists of short-term debt issued and due to banks.

Balance sheet liabilities and equity: development 2009–2013

CHF billion, except where indicated



1 Consists of equity attributable to UBS shareholders, equity attributable to preferred noteholders and equity attributable to non-controlling interests. 2 Percentages based on total liabilities and equity excluding negative replacement values. 3 Consists of long-term debt issued and financial liabilities designated at fair value. 4 Consists of repurchase agreements and cash collateral on securities lent. 5 Consists of short-term debt issued and due to banks.

Other liabilities decreased by CHF 25 billion to CHF 115 billion, primarily due to a CHF 22 billion reduction in cash collateral payables on derivative instruments.

Equity

Equity attributable to UBS shareholders increased by CHF 2,053 million to CHF 48,002 million as of 31 December 2013 from CHF 45,949 million a year earlier. Total comprehensive income attributable to UBS shareholders was CHF 1,961 million, reflecting the net profit attributable to UBS shareholders of CHF 3,172 million, partly offset by negative other comprehensive income (OCI) attributable to UBS shareholders of CHF 1,211 million (net of tax). OCI included foreign currency translation losses of CHF 471 million as well as negative OCI movements related to cash flow hedges and financial investments available-for-sale of CHF 1,520 million and CHF 154 million, respectively, partly offset by net gains on defined benefit plans of CHF 939 million. Share premium increased by CHF 54 million, mainly reflecting an increase of CHF 305 million related to employee share and share option plans and treasury share gains of CHF 203 million, partly offset by the payment of CHF 564 million to UBS shareholders out of the capital contribution reserve. Net treasury share activity increased equity attributable to UBS shareholders by CHF 41 million.

➔ Refer to the "Statement of changes in equity" in the "Financial information" section of this report for more information

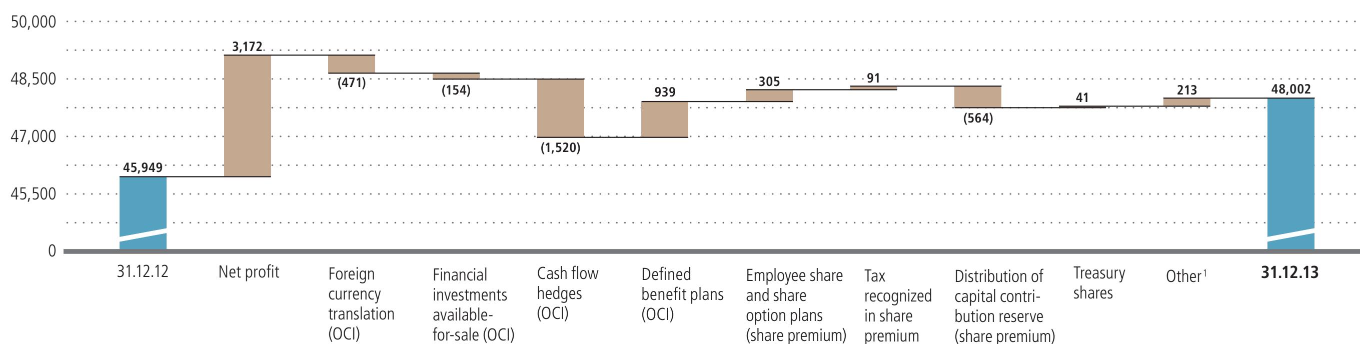
➔ Refer to "Total comprehensive income attributable to UBS shareholders" in the "Group performance" section of this report for more information

Intra-period balances

Balance sheet positions disclosed in this section represent year-end positions. Intra-period balance sheet positions fluctuate in the ordinary course of business and may differ from quarter-end and year-end positions.

Equity attributable to UBS shareholders: development during 2013

CHF million



1 Includes treasury share gains (share premium) of CHF 203 million.

Off-balance sheet

Off-balance sheet arrangements

In the normal course of business, we enter into transactions that may not be fully recognized on the balance sheet due to the International Financial Reporting Standards (IFRS) accounting treatment adopted for the arrangement entered into. These transactions include derivative instruments, guarantees and similar arrangements, as well as purchased and retained interests in non-consolidated structured entities (SE), which are transacted for a number of reasons, including market-making and hedging activities, to meet specific needs of our clients or to offer investment opportunities to clients through entities that are not controlled by us.

When we, through these arrangements, incur an obligation or become entitled to an asset, we recognize these on the balance sheet. It should be noted that in certain instances the amount recognized on the balance sheet does not represent the full gain or loss potential inherent in such arrangements.

➔ Refer to "Note 1a) 3) Subsidiaries and structured entities" and "Note 1a) 5) Recognition and derecognition of financial instruments" in the "Financial information" section of this report for more information on accounting policies regarding consolidation and deconsolidation of subsidiaries, including structured entities, and recognition and derecognition of financial instruments, respectively

➔ Refer to "Note 30 Interests in subsidiaries and other entities" in the "Financial information" section of this report for more information on our interests in, and maximum exposure to loss from, unconsolidated structured entities

The following paragraphs provide more information on several distinct off-balance sheet arrangements. Additional off-balance sheet information is primarily provided in "Note 14 Derivative instruments and hedge accounting," "Note 22 Provisions and contingent liabilities," "Note 25 Restricted and transferred financial assets," "Note 30 Interests in subsidiaries and other entities" and "Note 33 Operating lease commitments" in the "Financial information" section and in the "Supplemental disclosures required under Basel III Pillar 3 regulations" section of this report.

Risk disclosures, including our involvement with off-balance sheet vehicles

Refer to the "Risk, treasury and capital management" section of this report for comprehensive liquidity, market and credit risk information related to risk positions, which includes our exposures to off-balance sheet vehicles.

Support provided to non-consolidated investment funds

In 2013, the Group did not provide material support, financial or otherwise, to unconsolidated investment funds when the Group was not contractually obligated to do so, nor does the Group have an intention to do so.

Guarantees and similar arrangements

In the normal course of business, we issue various forms of guarantees, commitments to extend credit, standby and other letters of credit to support our clients, commitments to enter into forward starting transactions, note issuance facilities and revolving underwriting facilities. With the exception of related premiums, generally these guarantees and similar obligations are kept as off-balance sheet items unless a provision to cover probable losses is required.

As of 31 December 2013, the net exposure (gross values less sub-participations) from guarantees and similar instruments was CHF 15.8 billion, compared with CHF 17.8 billion as of 31 December 2012. Fee income from issuing guarantees was not significant to total revenues in 2013.

Guarantees represent irrevocable assurances, subject to the satisfaction of certain conditions, that we will make a payment in the event that clients fail to fulfill their obligations to third parties. We also enter into commitments to extend credit in the form of credit lines that are available to secure the liquidity needs of clients. The majority of these unutilized credit lines range in maturity from one month to five years. If customers fail to meet their obligations, our maximum exposure to credit risk is the contractual amount of these instruments. The risk is similar to the risk involved in extending loan facilities and is subject to the same risk management and control framework. For the year ended 31 December 2013, we recognized net credit loss recoveries of CHF 2 million, compared with net credit loss recoveries of CHF 16 million for the year ended 31 December 2012, related to obligations incurred for guarantees and loan commitments. Provisions recognized for guarantees and loan commitments were CHF 61 million as of 31 December 2013 and CHF 64 million as of 31 December 2012.

For certain obligations, we enter into partial sub-participations to mitigate various risks from guarantees and loan commitments. A sub-participation is an agreement by another party to take a share of the loss in the event that the obligation is not fulfilled by the obligor and, where applicable, to fund a part of the credit facility. We retain the contractual relationship with the obligor, and the sub-participant has only an indirect relationship. We will only enter into sub-participation agreements with banks to which we ascribe a credit rating equal to or better than that of the obligor.

Furthermore, we provide representations, warranties and indemnifications to third parties in the normal course of business.

Clearing house and exchange memberships

We are a member of numerous securities and derivative exchanges and clearing houses. In connection with some of those memberships, we may be required to pay a share of the financial obliga-

Financial instruments not recognized on the balance sheet

The table below shows the maximum irrevocable amount of guarantees, commitments and forward starting transactions.

	31.12.13			31.12.12		
CHF million	**Gross**	**Sub-participations**	**Net**	Gross	Sub-participations	Net

1 Cash to be paid in the future by either UBS or the counterparty.

tions of another member who defaults, or we may be otherwise exposed to additional financial obligations. While the membership rules vary, obligations generally would arise only if the exchange or clearing house had exhausted its resources. We consider the probability of a material loss due to such obligations to be remote.

Swiss deposit insurance

Swiss banking law and the deposit insurance system require Swiss banks and securities dealers to jointly guarantee an amount of up to CHF 6 billion for privileged client deposits in the event that a Swiss bank or securities dealer becomes insolvent. The Swiss Financial Market Supervisory Authority (FINMA) estimates our share in the deposit insurance system to be CHF 0.9 billion. The deposit insurance is a guarantee and exposes us to additional risk. This is not reflected in the table above due to its unique characteristics. As of 31 December 2013, we consider the probability of a material loss from our obligation to be remote.

Underwriting commitments

Gross equity underwriting commitments as of 31 December 2013 and 31 December 2012 amounted to CHF 0.8 billion and CHF 0.2 billion, respectively. Gross debt and private equity underwriting commitments as of 31 December 2013 and 31 December 2012 were not material.

Contractual obligations

The table below summarizes payments due by period under contractual obligations as of 31 December 2013.

All contracts included in this table, with the exception of purchase obligations (i.e., those in which we are committed to purchasing determined volumes of goods and services), are either recognized as liabilities on our balance sheet or, in the case of operating leases, disclosed in "Note 33 Operating lease commitments" in the "Financial information" section of this report.

Long-term debt obligations as of 31 December 2013 were CHF 136 billion and consisted of financial liabilities designated at fair value (CHF 73 billion) and long-term debt issued (CHF 64 billion) and represent both estimated future interest and principal payments on an undiscounted basis. Refer to "Note 27b Maturity analysis of financial liabilities" in the "Financial information" section of this report for more information. Approximately half of total long-

Contractual obligations

	Payment due by period			
CHF million	< 1 year	1–3 years	3–5 years	> 5 years
Long-term debt obligations	30,448	37,672	27,479	40,972
Finance lease obligations	39	42	6	2
Operating lease obligations	737	1,257	1,021	2,316
Purchase obligations	1,433	890	427	240
Other liabilities	128	8	6	2
Total	**32,785**	**39,869**	**28,939**	**43,532**

term debt obligations had a variable rate of interest. Amounts due on interest rate swaps used to hedge interest rate risk inherent in fixed-rate debt issued, and designated in fair value hedge accounting relationships, are not included in the table on the previous page. The notional amount of these interest rate swaps was CHF 31 billion as of 31 December 2013. Financial liabilities designated at fair value (CHF 73 billion on an undiscounted cash flow basis) mostly consist of structured notes and are generally economically hedged, but it would not be practicable to estimate the amount and/or timing of the payments on interest swaps used to hedge these instruments as interest rate risk inherent in respective liabilities is generally risk managed on a portfolio level.

Within purchase obligations, the obligation to employees under mandatory notice periods is excluded (i.e., the period in which we must pay contractually agreed salaries to employees leaving the firm).

Our obligations recognized on the balance sheet as *Due to banks, Cash collateral on securities lent, Repurchase agreements, Trading portfolio liabilities, Negative replacement values, Cash collateral payables on derivative instruments, Due to customers, Provisions* and *Other liabilities* are excluded from the table on the previous page. Refer to the respective Notes in the "Financial information" section of this report for more information on these liabilities.

Cash flows

As a global financial institution, our cash flows are complex and may bear little relation to our net earnings and net assets. Consequently, we believe that traditional cash flow analysis is less meaningful in evaluating our liquidity position than the liquidity, funding and capital management polices described within the "Risk, treasury and capital management" section of this report. Cash flow analysis may, however, be helpful in highlighting certain macro trends and strategic initiatives in our businesses.

Statement of cash flows (condensed)

	For the year ended	
CHF million	**31.12.13**	31.12.12
Net cash flow from / (used in) operating activities	**54,325**	67,160
Net cash flow from / (used in) investing activities	**5,457**	(14,879)
Net cash flow from / (used in) financing activities	**(47,555)**	(38,110)
Effects of exchange rate differences on cash and cash equivalents	**(2,702)**	(673)
Net increase / (decrease) in cash and cash equivalents	**9,524**	**13,500**
Cash and cash equivalents at the end of the year	**108,632**	**99,108**

As of 31 December 2013, cash and cash equivalents totaled CHF 108.6 billion, an increase of CHF 9.5 billion from 31 December 2012.

Operating activities

For the year ended 31 December 2013, net cash inflow generated from operating activities was CHF 54.3 billion, primarily due to the deleveraging of our balance sheet, compared with net cash inflow from operating activities of CHF 67.2 billion in 2012. Net operating cash inflow (before changes in operating assets and liabilities and income taxes paid, net of refunds) totaled CHF 12.4 billion in 2013 compared with net operating cash inflow of CHF 11.2 billion in 2012. In 2013, net cash inflow of CHF 42.4 billion was generated by the overall decrease in operating assets and liabilities. Gross cash inflows of CHF 99.9 billion primary resulted from the reduction of cash collateral on securities borrowed and reverse repurchase agreement assets (CHF 43.8 billion), and from the reduction of trading portfolio, replacement values and financial assets designated at fair value balances (CHF 44.1 billion). Key components of the gross cash outflows of CHF 57.6 billion were the reduction of cash collateral on securities lent and repurchase agreement liabilities (CHF 23.7 billion), as well as the reduction of cash collateral on derivative instruments balances (CHF 22.4 billion).

Investing activities

Net cash inflow from investing activities was CHF 5.5 billion in 2013 compared with a net cash outflow of CHF 14.9 billion in 2012. The 2013 cash inflow was primarily due to the net divestment of financial investments available-for-sale of CHF 6.0 billion. This includes gross cash inflow from sales and maturities of CHF 7.3 billion and gross cash outflow from purchases of CHF 3.5 billion predominantly related to longer-term US asset-backed securities held as financial investments available-for-sale. The remaining net cash inflow of CHF 2.2 billion almost entirely related to our multi-currency portfolio of unencumbered, high-quality, short-term assets managed centrally by Group Treasury.

Financing activities

Net cash flow used in financing activities was CHF 47.6 billion in 2013, primarily due to the net repayment of long-term debt and financial liabilities designated at fair value of CHF 40.9 billion (issuances less redemptions). Furthermore, the net redemption of short-term debt generated cash outflows of CHF 4.3 billion, dividends paid and redemptions of preferred notes led to cash outflows of CHF 1.4 billion and dividends of CHF 0.6 billion were paid to UBS shareholders. In 2012, financing activities generated net cash outflows of CHF 38.1 billion.

➔ **Refer to the "Statement of cash flows" in the "Financial information" section of this report for more information**

Wealth Management

Profit before tax was CHF 2,247 million in 2013, a decrease of CHF 160 million compared with CHF 2,407 million in 2012. Operating expenses included restructuring charges of CHF 178 million in 2013, while the prior year included a credit to personnel expenses of CHF 358 million related to changes to our pension and retiree benefit plans as well as restructuring charges of CHF 26 million. Adjusted for these items, profit before tax increased by CHF 350 million to CHF 2,425 million, reflecting CHF 522 million higher operating income, partly offset by a CHF 172 million increase in adjusted operating expenses, which included a charge in relation to the Swiss-UK tax agreement of CHF 107 million. The gross margin on invested assets declined by 1 basis point to 88 basis points. Net new money was CHF 35.9 billion compared with CHF 26.3 billion in the prior year.

1 For the definitions of our key performance indicators, refer to the "Measurement of performance" section of this report. 2 Based on the Wealth Management business area structure, and excluding minor functions with 63 client advisors, CHF 10 billion of invested assets, and CHF 0.1 billion of net new money outflows. 3 Joint venture between Wealth Management and the Investment Bank. Global Family Office is reported as a sub-segment of ultra high net worth and is included in the ultra high net worth figures. 4 Net new money excludes interest and dividend income. 5 Gross margin includes income booked in the Investment Bank. Gross margin only based on income booked in Wealth Management was 20 basis points. 6 Dedicated ultra high net worth units: 638 client advisors. Non-dedicated ultra high net worth units: 254 client advisors.

2013 compared with 2012

Results

Operating income

Total operating income was CHF 7,563 million compared with CHF 7,041 million in 2012, primarily due to higher net fee and commission income, as well as higher net interest income.

Net interest income increased by CHF 110 million to CHF 2,061 million, mainly due to revenues of CHF 110 million allocated from the repurchase agreement unit within Group Treasury in Corporate Center – Core Functions. Previously, such revenues were not allocated to the business divisions. The increase in net interest income was also due to lower costs related to the multi-currency portfolio of unencumbered, high-quality, short-term assets managed centrally by Group Treasury. These factors, together with higher income resulting from increased loan and client deposit volumes, more than offset the negative effect of a lower deposit margin resulting from the ongoing low interest rate environment.

Net fee and commission income increased by CHF 373 million to CHF 4,648 million, mainly due to higher recurring net fee and commission income, which primarily resulted from a 10% increase in average invested assets, pricing adjustments and sales efforts. These positive effects were partly offset by the negative effect of the migration to retrocession-free products for investment mandates during 2013, as well as lower income due to ongoing outflows of assets from cross-border clients. Non-recurring net fee and commission income increased due to higher client activity levels, particularly in Asia Pacific, in the first half of 2013.

Net trading income increased by CHF 29 million to CHF 807 million and included higher income from foreign exchange-related products and increased treasury-related income, partly offset by lower income from precious metals.

Other income increased to CHF 57 million from CHF 37 million and included higher revenues for other services, as well as a gain of CHF 25 million related to the divestment of our participation in Euroclear Plc. This was partly offset by impairments of CHF 10 million related to our global property fund compared with gains of CHF 4 million in 2012.

Operating expenses

Total operating expenses were CHF 5,316 million, an increase of CHF 682 million from the prior year. Restructuring charges were CHF 178 million compared with CHF 26 million in 2012. Adjusted for restructuring charges and the aforementioned credit related to changes to our pension and retiree benefit plans of CHF 358 million, operating expenses increased by CHF 172 million to CHF 5,138 million, mainly as 2013 included a charge in relation to the Swiss-UK tax agreement of CHF 107 million.

Personnel expenses increased to CHF 3,371 million from CHF 2,865 million. Excluding restructuring charges and the credit related to changes to our pension and retiree benefit plans, personnel expenses increased by CHF 102 million to CHF 3,300 million. This increase included CHF 120 million higher personnel expenses due to the centralization of our operations units and higher variable compensation expenses, partly offset by lower personnel expenses related to technology and control functions. The centralization of our operations units from the business divisions in the Corporate Center in July 2012 and the subsequent reallocation of the operations units resulted in increased personnel expenses and general and administrative expenses, offset by decreased net charges from other business divisions as Retail & Corporate previously provided significant services to Wealth Management, which are now provided by the Corporate Center.

➔ Refer to the "Significant accounting and financial reporting structure changes" section of our Annual Report 2012 for more information on changes related to the centralization of operations units

General and administrative expenses increased by CHF 290 million to CHF 1,650 million. This included restructuring charges of CHF 100 million compared with zero in the prior year. Excluding restructuring charges, general and administrative expenses increased by CHF 190 million, mainly due to the aforementioned CHF 107 million charge in relation to the Swiss-UK tax agreement, CHF 36 million higher expenses related to the aforementioned centralization of operations units as well as slightly higher marketing and branding expenses.

Charges for services from other business divisions decreased to CHF 97 million from CHF 243 million, mainly due to CHF 157 million lower allocations following the aforementioned centralization of operations units.

Depreciation was CHF 190 million compared with CHF 159 million, largely due to higher amortization of capitalized software, an impairment of capitalized software and restructuring charges of CHF 7 million compared with zero in the prior year. Amortization of intangible assets was CHF 8 million, a slight increase from CHF 7 million.

Cost / income ratio

The cost / income ratio was 70.2% compared with 65.8% in the prior year. Excluding restructuring charges and the effect from the credit related to changes to our pension and retiree benefit plans in 2012, the cost / income ratio improved to 67.8% from 70.5% and was within our target range of 60% to 70%.

Net new money growth

The net new money growth rate increased to 4.4% from 3.5% and was near the higher end of our target range of 3% to 5%. All regions contributed to net inflows of CHF 35.9 billion in 2013. The strongest net inflows were recorded in Asia Pacific followed by emerging markets, Switzerland and Europe. Net inflows in the European onshore and the Swiss-based Global Family Office business in Europe more than offset net outflows in the European cross-border business, which was negatively affected by ongoing asset out-

flows in the context of fiscal and regulatory concerns. On a global basis, net new money from ultra high net worth clients was CHF 33.6 billion compared with CHF 19.9 billion in the prior year.

Invested assets

Invested assets were CHF 886 billion as of 31 December 2013, representing an increase of CHF 65 billion from 31 December 2012. Net new money inflows of CHF 36 billion and positive market performance of CHF 34 billion were slightly offset by negative currency translation effects of CHF 4 billion.

Gross margin on invested assets

The gross margin on invested assets decreased by 1 basis point to 88 basis points, as the increase in average invested assets outpaced the increase in revenues. The gross margin was below our target range of 95 to 105 basis points. The calculation excludes any effect on profit or loss from a property fund.

Personnel

Wealth Management employed 16,414 personnel as of 31 December 2013 compared with 16,210 as of 31 December 2012, mainly reflecting an increase in non-client-facing staff.

The number of client advisors increased to 4,164 from 4,128, primarily in the key strategic growth areas of Asia Pacific and emerging markets, partly offset by reductions in Switzerland. The number of client advisors in Europe remained stable. The increase in non-client-facing staff was mainly recorded in Asia Pacific and emerging markets, in line with the increase in the number of client advisors.

2012 compared with 2011

Results

Profit before tax was CHF 2,407 million in 2012 compared with CHF 2,633 million in the prior year, which included a gain of CHF 433 million from the sale of our strategic investment portfolio in the third quarter of 2011. Operating expenses in 2012 included a credit to personnel expenses of CHF 358 million related to changes to our pension and retiree benefit plans. Adjusted for these two items and restructuring charges, profit before tax decreased by CHF 207 million to CHF 2,075 million, partly reflecting that the prior year benefited from CHF 103 million of accrued interest from the aforementioned strategic investment portfolio. Net new money was CHF 26.3 billion compared with CHF 23.5 billion.

Operating income

Total operating income was CHF 7,041 million in 2012 compared with CHF 7,645 million in 2011. Adjusted for the gain on the sale of our strategic investment portfolio, total operating income declined by CHF 171 million, mainly because 2011 included CHF 103 million of interest income stemming from the aforementioned strategic investment portfolio.

Net interest income decreased by CHF 17 million to CHF 1,951 million, mainly as the prior year included CHF 103 million of interest income stemming from the abovementioned strategic investment portfolio. Moreover, net interest income was negatively affected by increased costs of CHF 69 million related to the multi-currency portfolio of unencumbered, high-quality, short-term assets managed centrally by Group Treasury and CHF 22 million lower allocations related to investment proceeds from the firm's equity. These factors were largely offset by CHF 180 million higher product-related interest income, reflecting the beneficial effects of increases in client deposit and lending volumes.

Net fee and commission income declined by CHF 88 million to CHF 4,275 million, mainly due to lower recurring fees on discretionary business, investment funds and non-asset based fees, primarily resulting from the ongoing outflows of assets from cross-border clients. This was partly offset by 2% higher transaction-based fees due to increased client activity levels in Asia Pacific throughout the year.

Net trading income decreased by CHF 100 million to CHF 778 million, primarily due to lower treasury-related income and lower client activity levels following reduced volatility in the foreign exchange market.

Other income was CHF 37 million compared with CHF 425 million in 2011, mainly as the prior year included the abovementioned gain on the sale of our strategic investment portfolio.

Operating expenses

Total operating expenses were CHF 4,634 million, a decrease of CHF 378 million from the prior year. Restructuring charges were CHF 26 million, down from CHF 82 million in the previous year. Adjusted for these restructuring charges and the aforementioned credit related to changes to our pension and retiree benefit plans, operating expenses increased by CHF 36 million to CHF 4,966 million.

Personnel expenses decreased to CHF 2,865 million from CHF 3,300 million in the prior year. Excluding the abovementioned factors, personnel expenses decreased by CHF 38 million, primarily reflecting lower variable compensation expenses as well as reduced personnel expenses related to technology and operations costs. This was partly offset by higher personnel expenses of CHF 129 million due to the aforementioned centralization of operations units in July 2012. As Retail & Corporate previously provided significant services to Wealth Management, the centralization and subsequent reallocation of operations units had the effect of reducing net charges from other business divisions and increasing personnel and non-personnel costs in 2012.

General and administrative expenses were CHF 1,360 million compared with CHF 1,192 million in the prior year. This included higher investment in marketing and branding and increased charges for provisions for litigation, regulatory and similar matters. Further, the aforementioned centralization of operations units in 2012 led to increased expenses of CHF 45 million in 2012.

Charges for services from other business divisions decreased to CHF 243 million from CHF 318 million, mainly due to the CHF 175 million lower allocations from the aforementioned centralization of operations units, partly offset by higher allocations from other business transfers.

Depreciation was CHF 159 million compared with CHF 165 million in the prior year. Amortization of intangible assets was CHF 7 million, a decrease from CHF 37 million in 2011, which included the impairment of intangible assets related to a past acquisition in the UK.

Cost/income ratio

The cost/income ratio was 65.8% in 2012. On an adjusted basis excluding restructuring charges, the effect of the credit related to changes to our pension and retiree benefit plans in 2012 and the gain from the sale of the strategic investment portfolio in 2011, the cost/income ratio increased 2.0 percentage points to 70.5% and was above our target range of 60% to 70%.

Net new money growth

The net new money growth rate increased to 3.5% from 3.1% and remained within our target range of 3% to 5%. The strongest net inflows were recorded in Asia Pacific and emerging mar-

kets, as well as globally from ultra high net worth clients. Europe reported net outflows in the offshore business, mainly related to clients from countries neighboring Switzerland. This was partly offset by net inflows in the European onshore business. Swiss wealth management reported increased net inflows compared with the prior year.

Invested assets

Invested assets were CHF 821 billion as of 31 December 2012, representing an increase of CHF 71 billion from 31 December 2011. Positive market performance and net new money inflows were partly offset by negative currency translation effects, mainly resulting from a slight strengthening of the Swiss franc against the US dollar and the euro.

Gross margin on invested assets

In 2012, the gross margin on invested assets decreased 12 basis points to 89 basis points. Adjusted for the aforementioned gain on the sale of the strategic investment portfolio in the prior year, the gross margin declined 7 basis points to 89 basis points and was below our target range of 95 to 105 basis points. The gross margin calculation excludes any effect on profit or loss from a property fund.

Personnel

Wealth Management employed 16,210 personnel as of 31 December 2012 compared with 15,904 as of 31 December 2011. The aforementioned centralization and subsequent reallocation of personnel from operations units led to an increase of personnel. Excluding this effect, the number of non-client-advisor staff and client advisors decreased, mainly reflecting measures taken as a part of our cost reduction program announced in July 2011.

The number of client advisors decreased to 4,128 from 4,202 in the prior year due to reductions in more established markets, partly offset by further increases in the strategic growth areas of Asia Pacific and emerging markets.

Wealth Management Americas

Profit before tax was a record USD 927 million in 2013 compared with the prior record of USD 638 million in 2012. Adjusted for the effects of restructuring in both years as well as a credit in 2012 related to changes to our retiree benefit plans in the US, profit before tax increased to USD 991 million from USD 635 million. The adjusted result reflected a 12% increase in revenues due to higher recurring income and a 7% increase in operating expenses due to higher financial advisor related compensation, partly offset by lower charges for provisions for litigation, regulatory and similar matters. Net new money inflows were USD 19.0 billion compared with USD 22.1 billion in the prior year.

2013 compared with 2012

Results

Operating income

Total operating income increased to USD 7,075 million from USD 6,297 million in 2012.

Net fee and commission income increased by USD 712 million to USD 5,637 million, mainly due to a 20% increase in recurring fees resulting from higher managed account fees calculated on higher invested asset levels. Transaction-based revenues increased 2%, primarily due to higher income from equities and structured products, partly offset by lower income from annuity products.

Net interest income increased by USD 165 million to USD 1,014 million, primarily due to higher client balances in securities-backed lending and mortgages. The average securities-backed lending portfolio balance increased 14% and the average mortgage portfolio balance nearly doubled from 2012. Furthermore, net funding costs related to the goodwill and intangible assets that arose from the PaineWebber acquisition are retained in Corporate Center – Core Functions with effect from 1 January 2013. These increases were partly offset by lower net interest income from the available-for-sale portfolio, primarily due to lower average balances.

Net trading income decreased by USD 89 million to USD 418 million, mainly due to trading losses related to the Puerto Rico municipal market as well as lower income from taxable fixed income and US municipal bond trading.

Other income increased by USD 4 million to USD 36 million.

Recurring income, the combination of recurring fees and net interest income, increased by USD 845 million to USD 5,110 million due to higher managed account fees as well as higher interest income. Recurring income comprised 72% of income compared with 68% in the prior year. Non-recurring income decreased by USD 53 million to USD 1,994 million, primarily due to the above-mentioned decrease in trading income.

Net credit loss expenses were USD 30 million compared with net credit loss expenses of USD 15 million in the prior year. The 2013 expenses were largely due to loan loss allowances on securities-backed lending facilities collateralized by Puerto Rico municipal securities and related funds.

➔ Refer to the "Risk management and control" section of this report for more information on our exposure to Puerto Rico municipal securities and related funds

Operating expenses

Operating expenses increased by USD 488 million to USD 6,147 million from USD 5,659 million, primarily due to higher financial advisor compensation corresponding to higher compensable revenues. In 2013, we recorded restructuring charges of USD 64 million, compared with restructuring provision releases of USD 1 million in 2012.

Excluding the effects of restructuring in both years as well as a credit to personnel expenses of USD 2 million related to changes to our retiree benefit plans in the US in 2012, adjusted personnel expenses were USD 4,933 million, an increase of USD 379 million from USD 4,554 million due to a 13% increase in financial advisor compensation corresponding to higher compensable revenues, and a 2% increase in expenses for compensation commitments with recruited financial advisors. Recruitment loans to financial advisors were USD 3,063 million as of 31 December 2013, a decrease of USD 178 million from 31 December 2012. On an adjusted basis, salaries and other personnel costs increased 4% due to higher other variable compensation expenses and USD 20 million of costs related to the partial settlement of a previously discontinued US defined benefit pension plan.

Excluding restructuring charges, non-personnel expenses increased by USD 42 million to USD 1,150 million from USD 1,108 million, mainly due to higher Corporate Center shared services costs and lower net charges to the Investment Bank after the discontinuation of an interdivisional joint venture effective 1 January 2013. These increases were partly offset by USD 70 million lower charges for provisions for litigation, regulatory and similar matters.

Cost/income ratio

The cost/income ratio improved to 86.5% from 89.7% in 2012. On an adjusted basis, the cost/income ratio improved to 85.6% from 89.7% and remained within our target range of 80% to 90%.

Net new money

The net new money growth rate was 2.3% compared with 2.9% in 2012, and was within the target range of 2% to 4%. Net new money totaled USD 19.0 billion compared with USD 22.1 billion in the prior year due to lower inflows from financial advisors employed with UBS for more than one year as well as lower inflows from net recruiting of financial advisors, partly offset by higher inflows from the Global Family Office. Including interest and dividend income, net new money inflows were USD 44.2 billion compared with USD 44.8 billion in the prior year.

Invested assets

Invested assets were USD 970 billion as of 31 December 2013, an increase of USD 127 billion from USD 843 billion as of 31 December 2012, reflecting positive market performance of USD 108 billion and continued strong net new money inflows. During 2013, managed account assets increased by USD 60 billion to USD 308 billion as of 31 December 2013, and comprised 32% of invested assets compared with 29% as of 31 December 2012.

Gross margin on invested assets

The gross margin on invested assets was 79 basis points in 2013, an increase of 1 basis point from 78 basis points in 2012, and remained within our target range of 75 to 85 basis points. This reflected a 13% increase in income compared with a 12% increase in average invested assets. The gross margin from recurring income increased by 4 basis points due to higher managed account fees and higher net interest income, while the gross margin from non-recurring income decreased by 3 basis points, primarily due to lower trading income.

Personnel

As of 31 December 2013, Wealth Management Americas employed 16,344 personnel, an increase of 250 from 31 December 2012. Financial advisor headcount increased by 78 to 7,137, mainly reflecting the hiring of experienced financial advisors and trainees as well as continued low financial advisor attrition. The number of non-financial advisor employees increased by 172 to 9,207, mainly due to hiring of wealth strategy associates to further enhance advice-based wealth management solutions offered to target client segments.

2012 compared with 2011

Results

Profit before tax was USD 638 million in 2012 compared with USD 526 million in 2011. This improved performance resulted from a 6% increase in revenue due to increases in fees and commissions. Operating expenses increased 5% due to higher financial advisor related compensation and higher charges for provisions for litigation, regulatory and similar matters, partly offset by lower restructuring charges. In addition, 2012 included a pre-tax gain of USD 53 million net of compensation charges related to a change in accounting estimates for certain mutual fund and annuity fee income, compared with USD 32 million related to a change in accounting estimates for certain mutual fund fees in 2011. Net new money inflows of USD 22.1 billion were the highest full year total since 2007.

Operating income

Total operating income increased 6% to USD 6,297 million from USD 5,915 million in 2011.

Net fee and commission income increased by USD 366 million to USD 4,925 million. Recurring fees increased 10% due to higher fees on managed accounts corresponding to higher invested asset levels. In addition, recurring fees included USD 59 million related to a change to accrual-based accounting estimates from a cash basis for certain mutual fund and annuity fee income, compared with USD 48 million related to the prior year. Transaction-based revenues increased 3%, primarily due to higher income from taxable fixed income products.

Net interest income increased by USD 21 million to USD 849 million, primarily due to higher client balances in securities-backed lending and mortgages. The securities-backed lending average portfolio balance increased 12% and the mortgage average portfolio balance nearly doubled from 2011. In addition, 2012 included lower income from mortgage-backed securities in the available-for-sale portfolio due to yield adjustments arising from updated cash flow estimates compared with an upward adjustment reclassifying USD 22 million from other comprehensive income in 2011.

Net trading income decreased by USD 2 million to USD 507 million due to lower municipal securities trading, mostly offset by higher income from taxable fixed income, unit investment trusts and emerging market products.

Other income increased by USD 7 million to USD 32 million.

Recurring income, the combination of recurring fees and net interest income, increased by USD 344 million to USD 4,265 million due to higher managed account and annuity fees as well as higher interest income. Recurring income for 2012 comprised 68% of income, compared with 66% in 2011. Non-recurring income increased by USD 47 million to USD 2,047 million, primarily due to higher transaction-based activity.

Credit loss expenses were USD 15 million compared with USD 6 million in 2011, and primarily related to a loan loss allowance for a single client.

Operating expenses

Operating expenses increased by USD 270 million to USD 5,659 million from USD 5,389 million due to higher financial advisor compensation corresponding to higher revenues. In 2012, Wealth Management Americas recognized restructuring provision releases of USD 1 million, while 2011 included restructuring charges of USD 10 million.

Excluding the effects of restructuring as well as a credit related to changes to our retiree benefit plans in the US, personnel expenses were USD 4,554 million, up USD 211 million from USD 4,343 million due to a 7% increase in financial advisor compensation corresponding to higher revenue production, and an 11% increase in expenses for compensation commitments with recruited financial advisors. On an adjusted basis, salaries and other personnel costs declined 1%. Recruitment loans to financial advisors were USD 3,241 million as of 31 December 2012, an increase of USD 143 million from 31 December 2011.

Excluding restructuring charges, non-personnel expenses increased USD 70 million to USD 1,108 million from USD 1,038 million. General and administrative costs increased 9% on an adjusted basis to USD 963 million from USD 883 million in 2011 due to higher Corporate Center shared services costs and higher charges for provisions for litigation, regulatory and similar matters. This increase was partly offset by lower professional legal fees.

Cost/income ratio

The cost/income ratio improved to 89.7% from 91.0% in 2011. On an adjusted basis, the cost/income ratio was 89.7% compared with 90.8% in 2011 and moved within our target range of 80% to 90%.

Net new money growth

Net new money growth rate for 2012 improved to 2.9% from 1.9% in 2011, moving within the target range of 2% to 4%. Net new money inflows improved to USD 22.1 billion compared with USD 14.1 billion in 2011 due to stronger inflows from net recruiting of financial advisors as well as financial advisors employed with UBS for more than one year. Including interest and dividend income, Wealth Management Americas had net new money inflows of USD 44.8 billion in 2012 compared with USD 34.7 billion in 2011.

Invested assets

Invested assets were USD 843 billion as of 31 December 2012, an increase of 12% from USD 756 billion as of 31 December 2011, reflecting positive market performance and strong net new money inflows. As of 31 December 2012, managed account assets had increased by USD 40 billion to USD 248 billion, and comprised 29% of invested assets compared with 28% as of 31 December 2011.

Gross margin on invested assets

The gross margin on invested assets was 78 basis points in 2012, a decline of 1 basis point from 79 basis points in 2011, and remained within our target range of 75 to 85 basis points. This reflected a 7% increase in income compared with an 8% increase in average invested assets. The gross margin from recurring income increased by 1 basis point as a result of higher managed account fees and higher annuities fees, while the gross margin from non-recurring income decreased by 2 basis points from 2011 mainly due to transaction-based revenue.

Personnel

As of 31 December 2012, Wealth Management Americas employed 16,094 personnel, a decrease of 113 from 31 December 2011. Financial advisor headcount of 7,059 increased by 92 from the prior year, mainly reflecting the hiring of experienced financial advisors and continued low financial advisor attrition. The number of non-financial advisor employees decreased by 205 to 9,035, reflecting staff reductions related to our cost reduction programs.

Retail & Corporate

Profit before tax decreased to CHF 1,458 million in 2013 from CHF 1,827 million in the prior year, mainly as 2012 included a credit to personnel expenses of CHF 287 million related to changes to our Swiss pension plan. Adjusted for this and restructuring charges of CHF 54 million in 2013 and CHF 3 million in 2012, profit before tax decreased by CHF 31 million to CHF 1,512 million, as higher operating expenses were only partly offset by higher operating income. The annualized net new business volume growth rate was 1.8% in 2013.

1 Comparative figures in this table may differ from those originally published in quarterly and annual reports due to adjustments following organizational changes and restatements due to retrospective adoption of new accounting standards. 2 Refer to "Note 32 Changes in organization" in the "Financial information" section of this report for information on restructuring charges. 3 For the definitions of our key performance indicators, refer to the "Measurement of performance" section of this report. 4 Refer to the "Risk management and control" section of this report for more information on impairment ratios. 5 Refer to the "Capital management" section of this report for more information on the equity attribution framework. 6 Based on the Basel III framework as applicable for Swiss systemically relevant banks (SRB). Numbers for 31 December 2012 are on a pro-forma basis. Refer to the "Capital management" section of this report for more information. 7 Based on Basel III risk-weighted assets (phase-in) for 2013. Based on Basel 2.5 risk-weighted assets for 2012. 8 The leverage ratio denominator is also referred to as "total adjusted exposure" and is calculated in accordance with Swiss SRB leverage ratio requirements. Data represent the average of the total adjusted exposure at the end of the three months preceding the end of the reporting period. Data as of 31 December 2012 are not available on a reporting segment level due to organizational changes. Refer to the "Capital management" section of this report for more information.

2013 compared with 2012

Results

Operating income

Total operating income increased by CHF 28 million to CHF 3,756 million.

Net interest income was CHF 2,144 million compared with CHF 2,186 million. The ongoing low interest rate environment continued to adversely affect the deposit margin. The resulting lower interest income was partly offset by pricing adjustments and substantial growth in average deposit volumes. Interest income from loans increased, reflecting slightly higher average volume and an improved margin. Furthermore, costs related to the multi-currency portfolio of unencumbered, high-quality, short-term assets managed centrally by Group Treasury decreased.

Net fee and commission income was CHF 1,203 million, almost unchanged from CHF 1,198 million, mainly due to higher custody fee income.

Net trading income increased to CHF 341 million from CHF 281 million, reflecting higher treasury-related income as well as higher client activity levels in 2013.

Other income was CHF 86 million, broadly unchanged from CHF 90 million in the prior year, and included a CHF 27 million gain related to the divestment of our participation in Euroclear Plc., almost entirely offset by lower income related to our participation in the SIX Group.

Credit loss expenses were CHF 18 million in 2013 compared with CHF 27 million in the prior year. 2013 included net specific loan loss allowances of CHF 113 million, reflecting a number of new workout cases that were individually reviewed, downgraded and impaired as well as adjustments on existing positions. This was largely offset by a net release of CHF 95 million of collective loan loss allowances based on the ongoing review of the portfolio, as well as the overall improved outlook for relevant industries. The prior year included net specific loan loss allowances of CHF 43 million, partly offset by a net decrease in collective loan loss allowances of CHF 16 million. The remaining balance of the collective loan loss allowances amounted to CHF 15 million as of 31 December 2013.

➔ Refer to "Note 1a) 11) Allowances and provisions for credit losses" in the "Financial information" section of this report for more information on collective loan loss allowances

Operating expenses

Operating expenses increased to CHF 2,298 million from CHF 1,901 million, mainly as 2012 included a credit to personnel expenses of CHF 287 million related to changes to our Swiss pension plan. Adjusted for this and restructuring charges of CHF 54 million in 2013 and CHF 3 million in the prior year, operating expenses increased by CHF 59 million to CHF 2,244 million, mainly as a result of CHF 45 million higher charges for provisions for litigation, regulatory and similar matters.

Personnel expenses increased by CHF 155 million to CHF 1,442 million, due to the aforementioned credit in 2012 related to changes to our Swiss pension plan. Adjusted for this item and restructuring charges, personnel expenses decreased by CHF 148 million to CHF 1,423 million, mainly due to the centralization of operations units in Corporate Center in July 2012. This centralization and subsequent reallocation of the operations units had the effect of reducing personnel expenses as well as general and administrative expenses, and decreasing net charges to other business divisions. Moreover, personnel expenses decreased as 2013 included a credit from the release of accruals for untaken vacation compared with a charge in 2012 when accruals for untaken vacation were increased. These decreases were partly offset by higher variable compensation expenses.

General and administrative expenses were CHF 875 million compared with CHF 857 million in 2012. Adjusted for restructuring charges, general and administrative expenses decreased by CHF 15 million to CHF 842 million, reflecting the abovementioned centralization of operations units. This was partly offset by CHF 45 million higher net charges for provisions for litigation, regulatory and similar matters. Moreover, costs rose as a result of increased expenses related to the refurbishment of our branch network and our multi-channel offering, as well as due to higher marketing expenses.

Net charges to other business divisions were CHF 162 million, a decrease from CHF 370 million in the prior year, primarily as a result of the abovementioned centralization of operations units in 2012.

Depreciation was CHF 143 million, an increase of CHF 15 million from the prior year, reflecting higher software depreciation expenses.

Cost/income ratio

The cost/income ratio was 60.9% compared with 50.6% in the prior year. On an adjusted basis excluding the credit related to changes to our Swiss pension plan in 2012 as well as restructuring charges, the cost/income ratio was 59.5% compared with 58.2% in the prior year and was within our target range of 50% to 60%.

Net interest margin

The net interest margin decreased 4 basis points to 156 basis points, reflecting the aforementioned reduction in net interest income on a slightly higher average loan volume. The net interest margin remained within the target range of 140 to 180 basis points.

Net new business volume growth

The growth rate for net new business volume was 1.8% compared with 4.9% in 2012. Our retail business recorded a net new business volume growth rate of 1.9% in 2013 compared with 3.3% in the prior year. Both our retail and corporate businesses recorded positive net new client assets. Net new loan inflows were slightly positive for retail clients and slightly negative for corporate clients, reflecting our strategy to grow our business in high-quality loans moderately and selectively. Net new business volume growth was within the target range of 1% to 4%.

Personnel

Retail & Corporate employed 9,463 personnel as of 31 December 2013, a decrease of 693 compared with 10,156 as of 31 December 2012, mainly reflecting changes to allocations of centralized shared services units' personnel, which led to a decrease of approximately 500 personnel.

2012 compared with 2011

Results

Profit before tax decreased by CHF 57 million to CHF 1,827 million from CHF 1,884 million in the prior year. In 2012, personnel expenses benefited from a CHF 287 million credit related to changes to our Swiss pension plan. In 2011, there was a gain of CHF 289 million from the sale of our strategic investment portfolio. Adjusted for these items and restructuring charges of CHF 3 million in 2012 and CHF 32 million in 2011, profit before tax decreased by CHF 84 million to CHF 1,543 million, mainly as the prior year benefited from CHF 68 million of accrued interest from the abovementioned strategic investment portfolio sold in the third quarter of 2011.

Operating income

Total operating income decreased by CHF 357 million to CHF 3,728 million, mainly due to the abovementioned gain from the sale of our strategic investment portfolio in 2011. Adjusted for this gain, operating income decreased by CHF 68 million to CHF 3,728 million from CHF 3,796 million.

Net interest income decreased by CHF 142 million to CHF 2,186 million, as the prior year included interest income of CHF 68 million related to our strategic investment portfolio. Net interest income was also negatively affected by increased costs related to the multi-currency portfolio of unencumbered, high-quality, short-term assets managed centrally by Group Treasury and lower allocations related to investment proceeds from the firm's equity. The loan margin was stable, but the historically low interest rate environment continued to negatively affect the deposit margin. This was partly offset by growth in average deposit and, to a lesser extent, loan volumes, as well as a number of pricing adjustments.

Net fee and commission income was CHF 1,198 million, an increase of CHF 23 million from CHF 1,175 million in 2011, reflecting strong corporate finance activity related to our continued focus on our fee-based advisory offering.

Net trading income decreased to CHF 281 million from CHF 333 million due to lower treasury-related income and lower valuation income in 2012 related to credit default swaps to hedge certain loans.

Other income decreased to CHF 90 million from CHF 350 million, reflecting the abovementioned gain of CHF 289 million from the sale of our strategic investment portfolio in 2011, partly offset by higher income in 2012 related to our participation in the SIX Group.

Credit loss expenses were CHF 27 million in 2012 compared with CHF 101 million in 2011, mainly reflecting a CHF 16 million decrease in 2012 and an increase of CHF 82 million in 2011 in collective loan loss allowances.

➔ Refer to "Note 1a) 11) Allowances and provisions for credit losses" in the "Financial information" section of this report for more information on collective loan loss allowances

Operating expenses

Total operating expenses were CHF 1,901 million compared with CHF 2,201 million, mainly reflecting the CHF 287 million credit related to changes to our Swiss pension plan in 2012. Excluding this credit and restructuring charges, adjusted operating expenses increased by CHF 16 million to CHF 2,185 million.

Personnel expenses decreased to CHF 1,287 million from CHF 1,702 million. Excluding the abovementioned credit and restructuring charges, adjusted personnel expenses were CHF 1,571 million, a decrease of CHF 102 million from CHF 1,673 million in 2011 due to the centralization of operations units in 2012, which decreased personnel expenses by CHF 176 million. As Retail & Corporate previously provided significant services to other business divisions, this centralization and subsequent reallocation of the operations units had the effect of reducing personnel expenses as well as general and administrative expenses, and decreasing net charges to other business divisions. This was partly offset by higher personnel expenses resulting from other business transfers.

General and administrative expenses were CHF 857 million compared with CHF 834 million in 2011, reflecting higher net charges for provisions for litigation, regulatory and similar matters as well as increased marketing expenses related to our 150th anniversary in 2012. The abovementioned centralization of operations units led to a decrease in costs, which was partly offset by the effects of other business transfers.

Net charges to other business divisions were CHF 370 million, a decrease compared with CHF 470 million in the prior year, primarily as a result of the abovementioned centralization of operations units in 2012, which reduced net charges for services provided to other business divisions. This was partly offset by the effects of other business transfers.

Depreciation was CHF 128 million compared with CHF 136 million, reflecting a change in the depreciation period of certain information technology equipment.

Cost/income ratio

The cost/income ratio improved to 50.6% from 52.6%, reflecting lower expenses partly offset by lower income. On an adjusted basis excluding the credit related to changes to our Swiss pension plan in 2012, the gain from the sale of our strategic investment

portfolio as well as restructuring charges, the cost/income ratio was 58.2% compared with 55.7% and was within of our target range of 50% to 60%.

Net interest margin

The net interest margin decreased 11 basis points to 160 basis points, reflecting lower interest income as detailed above and a slightly higher average loan volume. The net interest margin remained within the target range of 140 to 180 basis points.

Net new business volume growth

The growth rate for net new business volume was 4.9% compared with 3.5% in the prior year. Both our retail and corporate businesses recorded strong net inflows, reflecting high net new client assets. Net new loan inflows were also slightly positive, in line with our strategy to grow our business selectively in high-quality loans. Net new business volume growth exceeded the target range of 1% to 4%.

Personnel

Retail & Corporate employed 10,156 personnel as of 31 December 2012 compared with 11,430 as of 31 December 2011, mainly reflecting the aforementioned centralization and subsequent reallocation of operations units personnel. We continued to adapt our cost base to the challenging business environment.

Global Asset Management

Profit before tax was CHF 576 million in 2013 compared with CHF 569 million in 2012. Adjusted for a gain on the sale of our Canadian domestic business in 2013, restructuring charges in 2013 and 2012 as well as credits related to changes to pension and benefit plans in 2012, profit before tax was CHF 585 million compared with CHF 543 million in the prior year. This increase was due to higher performance fees coupled with lower operating expenses. Excluding money market flows, net new money outflows were CHF 4.8 billion compared with CHF 5.9 billion in the prior year.

1 Comparative figures in this table may differ from those originally published in quarterly and annual reports due to adjustments following organizational changes and restatements due to retrospective adoption of new accounting standards. 2 Net new money excludes interest and dividend income. 3 This includes UBS and third-party fund assets, for which the fund services unit provides professional services, including fund set-up, accounting and reporting for traditional investment funds and alternative funds. 4 Inflows of assets under administration from new and existing funds less outflows from existing funds or fund exits. 5 Refer to the "Capital management" section of this report for more information on the equity attribution framework. 6 Based on the Basel III framework as applicable for Swiss systemically relevant banks (SRB). Numbers for 31 December 2012 are on a pro-forma basis. Refer to the "Capital management" section of this report for more information. 7 Based on Basel III risk-weighted assets (phase-in) for 2013. Based on Basel 2.5 risk-weighted assets for 2012. 8 The leverage ratio denominator is also referred to as "total adjusted exposure" and is calculated in accordance with Swiss SRB leverage ratio requirements. Data represent the average of the total adjusted exposure at the end of the three months preceding the end of the reporting period. Data as of 31 December 2012 are not available on a reporting segment level due to organizational changes. Refer to the "Capital management" section of this report for more information.

2013 compared with 2012

Results

Operating income

Total operating income was CHF 1,935 million compared with CHF 1,883 million in 2012. Performance fees were higher at CHF 196 million compared with CHF 162 million, mainly due to strong investment performance in O'Connor and A&Q. Net management fees included a gain of CHF 34 million on the sale of our Canadian domestic business. Excluding this gain, net management fees were CHF 16 million lower, as lower fees in O'Connor and A&Q more than offset higher fees in global real estate.

Operating expenses

Total operating expenses were CHF 1,359 million in 2013 compared with CHF 1,314 million in 2012. Adjusted for restructuring charges of CHF 43 million in 2013 and CHF 20 million in 2012, as well as credits of CHF 30 million and CHF 16 million in 2012 related to changes to our Swiss pension plan and our retiree benefit plans in the US respectively, operating expenses were lower at CHF 1,316 million compared with CHF 1,340 million.

Personnel expenses were CHF 873 million compared with CHF 885 million. Adjusted for restructuring charges and the abovementioned credits related to our Swiss pension plan and US retiree benefit plans, personnel expenses were lower at CHF 863 million compared with CHF 911 million, mainly due to lower variable compensation expenses.

General and administrative expenses were CHF 448 million in 2013 compared with CHF 395 million. Adjusted for restructuring charges of CHF 26 million in 2013, general and administrative expenses were CHF 422 million compared with CHF 395 million. This increase was mainly due to higher professional fees, higher ETF-related index licensing fees, and higher fund promotion activity. Restructuring charges in 2013 included CHF 19 million real estate-related provisions for onerous lease contracts as we rationalized our office space in some principal locations.

Depreciation and impairment of property and equipment increased to CHF 47 million from CHF 37 million in the prior year, primarily due to asset impairments related to the abovementioned office space rationalization and higher depreciation of software and information technology equipment.

Cost/income ratio

The cost/income ratio was 70.2% compared with 69.8% in the prior year. Adjusted for restructuring charges, the gain on sale of our Canadian domestic business and credits related to our Swiss pension plan and US retiree benefit plans, the cost/income ratio improved to 69.2% from 71.2% and was within our target range of 60% to 70%.

Net new money

Excluding money market flows, net new money inflows from third parties were CHF 0.7 billion compared with net outflows of CHF 0.6 billion in 2012. Net inflows, notably from clients serviced from Europe, Middle East and Africa and from Switzerland, were partly offset by net outflows from clients serviced from the Americas. Excluding money market flows, net new money outflows from clients of UBS's wealth management businesses were CHF 5.5 billion compared with CHF 5.2 billion in the prior year. Net outflows, mainly from clients serviced from Switzerland, were partly offset by net inflows from clients serviced from the Americas.

Money market net outflows from third parties were CHF 1.5 billion compared with net inflows of CHF 0.9 billion in the prior year and were mainly from clients serviced from the Americas. Money market net outflows from clients of UBS's wealth management businesses were CHF 13.6 billion compared with CHF 8.3 billion in the prior year. In both years, net outflows were primarily due to an ongoing initiative by Wealth Management Americas to increase deposit account balances in UBS banking entities. This led to CHF 8.3 billion in outflows from money market funds managed by Global Asset Management in 2013 and CHF 6.2 billion in 2012.

Total net new money outflows were CHF 19.9 billion compared with CHF 13.3 billion in the prior year. The net new money growth rate was negative 3.4% compared with negative 2.3%. Our target net new money growth rate range is 3% to 5%.

Invested assets

Invested assets were CHF 583 billion as of 31 December 2013 compared with CHF 581 billion as of 31 December 2012. Net new money outflows, combined with negative currency translation effects of CHF 15 billion and a reduction of CHF 7 billion related to the aforementioned sale of our Canadian domestic business, were more than offset by positive market performance of CHF 44 billion.

As of 31 December 2013, CHF 65 billion, or 11%, of invested assets were money market assets and CHF 166 billion, or 28%, were in indexed strategies. On a regional basis, 34% of invested assets related to clients serviced from Switzerland, 24% from the Americas, 22% from Europe, Middle East and Africa, and 20% from Asia Pacific.

Gross margin on invested assets

The gross margin of 33 basis points was in line with 2012 and within our target range of 32 to 38 basis points.

Results by business line

Traditional investments

Operating income was CHF 1,144 million compared with CHF 1,119 million in 2012. Excluding the abovementioned gain on sale of our Canadian domestic business, net management fees were in line with the prior year, while performance fees were lower.

The gross margin was 22 basis points compared with 23 basis points, reflecting lower performance fees.

Net new money outflows were CHF 18.5 billion compared with CHF 11.6 billion in the prior year. Excluding money market flows, net new money outflows were CHF 3.5 billion compared with CHF 4.3 billion. Equities net inflows, notably to indexed strategies, were CHF 2.6 billion compared with net outflows of CHF 1.3 billion. Fixed income net outflows were CHF 6.0 billion compared with net inflows of CHF 2.4 billion. Multi-asset net outflows (which included flows related to alternative investments not managed by the O'Connor and A&Q, global real estate or infrastructure and private equity investment areas) were CHF 0.1 billion compared with CHF 5.4 billion.

Invested assets were CHF 506 billion as of 31 December 2013 compared with CHF 504 billion as of 31 December 2012. By mandate type, CHF 196 billion of invested assets related to equities, CHF 135 billion to fixed income, CHF 65 billion to money markets and CHF 109 billion to multi-asset mandates (including CHF 5 billion of alternative investments not managed by the O'Connor and A&Q, global real estate or infrastructure and private equity investment areas).

O'Connor and A&Q

During 2013, the management of the former alternative and quantitative investments business line was split into its two constituent parts – O'Connor, the single-manager hedge funds business, and A&Q hedge fund solutions (A&Q), the multi-manager hedge funds business. The two businesses continue to be reported together as O'Connor and A&Q.

Operating income was CHF 266 million compared with CHF 268 million in the prior year. Higher performance fees as a result of strong investment performance, in both A&Q multi-manager funds and O'Connor single-manager funds, were offset by lower net management fees as a result of net new money outflows.

The gross margin increased to 95 basis points from 91 basis points due to higher performance fees.

Net new money outflows were CHF 2.5 billion compared with CHF 2.7 billion in the prior year.

Invested assets were CHF 27 billion as of 31 December 2013 compared with CHF 28 billion as of 31 December 2012.

Global real estate

Operating income was CHF 317 million compared with CHF 293 million, due to higher net management and performance fees. The gross margin increased to 76 basis points compared with 74 basis points in 2012, due to higher operating income. Net new money inflows were CHF 1.2 billion compared with CHF 1.3 billion in 2012. Invested assets were CHF 42 billion as of 31 December 2013 compared with CHF 40 billion as of 31 December 2012.

Infrastructure and private equity

Operating income was CHF 38 million compared with CHF 35 million, with the increase reflecting higher net management fees. The gross margin was 48 basis points compared with 44 basis points. Net new money flows were zero compared with net outflows of CHF 0.2 billion in the prior year. Invested assets were CHF 8 billion as of 31 December 2013, in line with the prior year-end.

Fund services

Operating income was CHF 171 million compared with CHF 169 million, due to higher administration fees resulting from higher average assets under administration. The gross margin on assets under administration was 4 basis points, in line with the prior year. Net new assets under administration inflows were CHF 3.8 billion compared with CHF 7.7 billion in the prior year. Total assets under administration increased to CHF 432 billion as of 31 December 2013 from CHF 410 billion as of 31 December 2012, mainly due to positive market performance and net new assets under administration inflows.

Personnel

Global Asset Management employed 3,729 personnel as of 31 December 2013 compared with 3,781 as of 31 December 2012, a net decrease of 52 personnel. The decrease was primarily due to cost reduction programs in centralized support functions, and a net reduction in O'Connor and A&Q, partly offset by headcount increases in fund services and global real estate.

Investment performance

A majority of our active equities strategies performed well versus their benchmarks in 2013, as the equity market focus continued to be on company fundamentals. Across core and growth teams, the performance of global, US and other developed market single-country strategies was generally strong versus benchmarks and ahead of peer averages. Performance was similarly strong in European concentrated alpha strategies, but core European strategies underperformed benchmarks and peers due to generally cautious positioning in favor of quality stocks. Core Asian and emerging markets strategies also underperformed, largely as a result of portfolio positioning in the financial sector which was adversely affected by market reaction to the US Federal Reserve's tapering announcements. Nevertheless, other Asian and emerging markets strategies performed well, including growth, small cap and China equity. On a longer-term basis, most active strategies were close to or ahead of benchmarks over three and five years. Indexed strategies met their objectives in 2013 by closely tracking benchmarks.

2013 was a solid year for fixed income, even in the volatile markets resulting from major political and macroeconomic developments. A majority of key traditional bond strategies, such as Australian, Asian, Global, Swiss and US, outperformed their respective benchmarks. Higher alpha strategies, such as high yield and total return, also performed well. Liquidity and money market funds continued to achieve their capital preservation objectives.

In global investment solutions, most key multi-asset strategies managed versus benchmarks were close to those benchmarks for the year, with some outperforming and some underperforming. Security selection was the main detracting factor. Key mutual funds performed strongly versus peers with many in the top quartile. Global convertible strategies maintained their long-term track record but were marginally below benchmark for the year, having not held a small number of highly equity-sensitive benchmark bonds that performed strongly mid-year.

The O'Connor core single-manager hedge funds posted positive returns and outperformed many peers on an absolute and risk-adjusted basis. For A&Q's funds of hedge funds, it was a strongly positive year for investment performance, both in absolute terms and versus industry benchmarks. Performance was particularly strong in the broad-based diversified funds that comprise the majority of A&Q's assets. The highest-returning funds were in equity hedged-oriented mandates.

Global real estate's pan-European direct strategies produced mixed results in 2013, while the German core logistics fund performed positively for the year. The UK core fund produced a positive absolute return but underperformed its benchmark, while the UK value-add strategy produced double-digit absolute returns. The Swiss composite outperformed its benchmark for the year. US real estate and farmland strategies delivered strong positive absolute returns in 2013. In Japan, both J-REITs underperformed their benchmarks yet produced very strong absolute returns for the year. Multi-manager strategies had positive absolute returns for the year and the Swiss real estate securities composite's performance was positive relative to benchmark.

In infrastructure and private equity, the direct infrastructure portfolio continued to deliver above target cash distributions, while continuing to track longer-term total return targets. From private equity portfolios, it was a year of very high distributions for both institutional and private banking clients. Infrastructure multi-manager portfolios continued to be built out, with investors benefiting from increased distributions from portfolio companies.

2012 compared with 2011

Results

Profit before tax was CHF 569 million in 2012 compared with CHF 430 million in 2011. Performance fees were significantly higher, mainly in O'Connor and A&Q. Net management fees were also higher. Operating expenses were lower due to lower personnel costs, which resulted from lower variable compensation expenses and from credits related to changes to pension and benefit plans.

Operating income

Total operating income was CHF 1,883 million compared with CHF 1,803 million in 2011. Performance fees were significantly higher at CHF 162 million compared with CHF 99 million, mainly due to stronger investment performance in O'Connor and A&Q as well as in traditional investments. Net management fees were also higher, notably in global real estate.

Operating expenses

Total operating expenses were CHF 1,314 million in 2012 compared with CHF 1,373 million in 2011. Lower personnel costs were partly offset by higher general and administrative expenses. Restructuring charges were CHF 20 million in 2012, mainly associated with our cost reduction programs but also including CHF 3 million related to the acquisition of the ING Investment Management business in Australia, which was completed in late 2011 and fully integrated in early 2012. The prior year's restructuring charges were CHF 26 million, of which CHF 7 million related to the same acquisition.

After adjusting for restructuring charges in 2012 and 2011, as well as credits of CHF 30 million and CHF 16 million in 2012 related to changes to our Swiss pension plan and our retiree benefit plans in the US respectively, operating expenses were marginally lower at CHF 1,340 million in 2012 compared with CHF 1,347 million in 2011.

Personnel expenses were CHF 885 million in 2012 compared with CHF 954 million in 2011. The decrease was mainly due to lower variable compensation expenses, partly offset by higher base salaries, and the abovementioned pension and benefit-related credits.

General and administrative expenses were CHF 395 million in 2012 compared with CHF 375 million in 2011. CHF 5 million of the increase related to a charge for provisions for litigation, regulatory and similar matters, and although 2012 included a reversal of previously recognized expenses related to a past business closure of CHF 5 million, there was also a similar reversal of CHF 9 million in 2011.

Net charges to other business divisions increased to CHF 10 million in 2012 from CHF 1 million in 2011. The increase was mainly due to the centralization of operations units from the business divisions in the Corporate Center during the year, which also had the effect of increasing personnel costs by CHF 4 million and general and administrative expenses by CHF 2 million.

Cost/income ratio

The cost/income ratio was 69.8% in 2012 compared with 76.2% in 2011. On an adjusted basis, the cost/income ratio was 71.2% compared with 74.7%. Our target cost/income ratio range is 60% to 70%.

Net new money

Excluding money market flows, net new money outflows from third parties were CHF 0.6 billion in 2012 compared with net inflows of CHF 12.2 billion in 2011. Net inflows, notably from sovereign clients, were more than offset by net outflows, particularly from clients serviced from the Americas and Asia Pacific. Excluding money market flows, net new money outflows from clients of UBS's wealth management businesses were CHF 5.2 billion compared with CHF 3.1 billion in 2011. The net outflows in 2012 were mainly from clients serviced from Switzerland and from O'Connor and A&Q.

Money market net inflows from third parties were CHF 0.9 billion compared with CHF 0.2 billion in 2011 and were mainly from sovereign clients. Money market net outflows from clients of UBS's wealth management businesses were CHF 8.3 billion compared with CHF 5.0 billion in 2011. Net outflows in 2012 were mainly from clients serviced from the Americas, where an initiative by Wealth Management Americas to deposit client cash in UBS banking entities led to outflows of CHF 6.2 billion from money market funds managed by Global Asset Management, and from clients serviced from Switzerland.

Total net new money outflows were CHF 13.3 billion compared with net inflows of CHF 4.3 billion in the prior year. The net new money growth rate was negative 2.3% in 2012 compared with positive 0.8% in 2011. Our target net new money growth rate range is 3% to 5%.

Invested assets

Invested assets increased to CHF 581 billion as of 31 December 2012 from CHF 574 billion as of 31 December 2011, mainly due to positive market performance, partly offset by net new money outflows and negative currency translation effects. The sale, as agreed prior to the acquisition, of parts of the ING Investment Management business acquired in Australia in 2011 resulted in a net divestment of CHF 14 billion of invested assets in 2012.

Gross margin on invested assets

The gross margin of 33 basis points in 2012 was in line with 2011 and within our target range of 32 to 38 basis points.

Results by business line

Traditional investments

Operating income increased to CHF 1,119 million in 2012 from CHF 1,097 million in 2011, mainly due to higher performance fees as a result of stronger investment performance.

The gross margin of 23 basis points was in line with the prior year.

Net new money outflows were CHF 11.6 billion compared with zero net flows in the prior year. Excluding money market flows, net new money outflows were CHF 4.3 billion compared with net inflows of CHF 4.7 billion. Equities net outflows were CHF 1.3 billion compared with net inflows of CHF 4.7 billion. Fixed income net inflows were CHF 2.4 billion compared with CHF 5.7 billion. Multi-asset net outflows (which included flows related to alternative investments not managed by the O'Connor and A&Q, global real estate or infrastructure and private equity investment areas) were CHF 5.4 billion compared with CHF 5.7 billion.

Invested assets were CHF 504 billion as of 31 December 2012 compared with CHF 497 billion as of 31 December 2011. By mandate type, CHF 163 billion of invested assets related to equities, CHF 154 billion to fixed income, CHF 83 billion to money markets and CHF 103 billion to multi-asset mandates (including CHF 7 billion of alternative investments not managed by the O'Connor and A&Q, global real estate or infrastructure and private equity investment areas).

O'Connor and A&Q

Operating income was CHF 268 million compared with CHF 253 million. Higher performance fees as a result of strong investment performance, notably in O'Connor single-manager funds, were partly offset by the full year impact of the transfer of the infrastructure and private equity funds of funds businesses from A&Q to infrastructure and private equity in mid-2011.

The gross margin increased from 76 basis points to 91 basis points, primarily due to the higher performance fees.

Net new money outflows were CHF 2.7 billion compared with CHF 0.8 billion in the prior year.

Invested assets were CHF 28 billion as of 31 December 2012 compared with CHF 31 billion as of 31 December 2011, mainly due to the net new money outflows.

Global real estate

Operating income was CHF 293 million compared with CHF 263 million, mainly due to higher net management and performance fees. The gross margin increased to 74 basis points compared with 72 basis points in 2011, primarily due to higher performance fees. Net new money inflows were CHF 1.3 billion compared with CHF 1.6 billion in 2011. Invested assets were CHF 40 billion as of 31 December 2012 compared with CHF 38 billion as of 31 December 2011. The increase was mainly due to positive market performance.

Infrastructure and private equity

Operating income was CHF 35 million compared with CHF 24 million, with the increase reflecting the full year impact of the transfer of the infrastructure and private equity funds of funds businesses from A&Q in mid-2011. The gross margin decreased to 44 basis points from 83 basis points, largely due to the aforementioned business transfer and resulting changes in the business mix. Net new money outflows were CHF 0.2 billion compared with net inflows of CHF 3.5 billion in 2011. Invested assets were CHF 8 billion as of 31 December 2012, in line with the prior year-end.

Fund services

Operating income was CHF 169 million compared with CHF 165 million, mainly due to higher administration fees resulting from higher average assets under administration. The gross margin on assets under administration was 4 basis points, in line with the prior year. Net new assets under administration inflows were CHF 7.7 billion compared with net outflows of CHF 5.5 billion in the prior year. Total assets under administration increased to CHF 410 billion as of 31 December 2012 from CHF 375 billion as of 31 December 2011, mainly due to positive market performance and net new assets under administration inflows.

Personnel

Global Asset Management employed 3,781 personnel as of 31 December 2012 compared with 3,750 as of 31 December 2011, a net increase of 31 personnel. Increases in personnel resulted from an increased allocation from the Corporate Center following the centralization of operations units (approximately 50 personnel) and the transfer of the Jersey fund services business from Wealth Management to Global Asset Management. These increases were partly offset by our cost reduction programs, mainly in the business acquired from ING Investment Management in Australia.

Investment Bank

Profit before tax was CHF 2,300 million in 2013 compared with CHF 267 million in 2012. Adjusted for a gain from the sale of our remaining proprietary trading business in 2013 and restructuring charges in both years as well as prior year credits related to changes to our retiree benefit plans in the US and our Swiss pension plan, profit before tax was CHF 2,455 million compared with CHF 398 million. This increase was largely due to higher revenues in Investor Client Services and lower operating expenses. Fully applied risk-weighted assets (RWA) decreased by CHF 2 billion to CHF 62 billion.

Refer to "Note 2 Segment reporting" in the "Financial information" section of this report for more information. 3 Refer to the "Capital management" section of this report for more information on the equity attribution framework. 4 Based on the Basel III framework as applicable for Swiss systemically relevant banks (SRB). Numbers for 31 December 2012 are on a pro-forma basis. Refer to the "Capital management" section of this report for more information. 5 Based on Basel III risk-weighted assets (phase-in) for 2013. Based on Basel 2.5 risk-weighted assets for 2012. 6 The leverage ratio denominator is also referred to as "total adjusted exposure" and is calculated in accordance with Swiss SRB leverage ratio requirements. Data represent the average of the total adjusted exposure at the end of the three months preceding the end of the reporting period. Data as of 31 December 2012 are not available on a reporting segment level due to organizational changes. Refer to the "Capital management" section of this report for more information. 7 Refer to the "Risk management and control" section of this report for more information on impairment ratios.

2013 compared with 2012

Results

Operating income

Total operating income increased 20% to CHF 8,601 million from CHF 7,144 million, mainly as a result of higher equities revenues within Investor Client Services. On an adjusted basis, excluding a gain from the sale of our remaining proprietary trading business in the first half of 2013, total operating income increased 20% to CHF 8,546 million from CHF 7,144 million. In US dollar terms, adjusted operating income increased 21%.

Operating expenses

Total operating expenses decreased 8% to CHF 6,300 million compared with CHF 6,877 million. Adjusted for restructuring charges of CHF 210 million in 2013 and CHF 273 million in 2012, a credit of CHF 91 million related to changes to our retiree benefit plans in the US and a credit of CHF 51 million related to changes to our Swiss pension plan in 2012, total operating expenses decreased 10% to CHF 6,090 million compared with CHF 6,746 million. This reduction was mainly due to our ongoing cost reduction programs and CHF 241 million lower charges for provisions for litigation, regulatory and similar matters. These decreases were partly offset by higher variable compensation expenses, reflecting improved business performance. In US dollar terms, adjusted operating expenses decreased 9%.

Personnel expenses declined to CHF 3,984 million from CHF 4,539 million. Adjusted for restructuring charges of CHF 9 million in 2013 and CHF 250 million in 2012, as well as the abovementioned credits related to changes to our retiree benefit plans in the US and our Swiss pension plan in 2012, personnel expenses decreased to CHF 3,975 million from CHF 4,431 million, largely due to savings resulting from our ongoing cost reduction programs, partly offset by higher variable compensation expenses, in line with improved business performance.

General and administrative expenses decreased to CHF 2,040 million from CHF 2,312 million. Adjusted for restructuring charges of CHF 177 million in 2013 and CHF 11 million in 2012, general and administrative expenses decreased to CHF 1,863 million from CHF 2,301 million, largely due to CHF 241 million lower charges for provisions for litigation, regulatory and similar matters and lower professional fees.

Cost/income ratio

The cost/income ratio improved to 73.3% from 96.3%. On an adjusted basis, the cost/income ratio improved to 71.3% from 94.4%, within our target range of 65% to 85%.

Risk-weighted assets

Fully applied RWA decreased to CHF 62 billion as of 31 December 2013 from CHF 64 billion as of 31 December 2012, primarily due to a reduction in credit risk RWA, partly offset by the incremental RWA resulting from the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA. Year-end 2013 RWA were within our target of less than CHF 70 billion.

➔ **Refer to the "Capital management" section of this report for more information**

Funded assets

Funded assets decreased to CHF 162 billion as of 31 December 2013 from CHF 185 billion as of 31 December 2012 and were within our target of less than CHF 200 billion. This decline was largely due to lower collateral trading assets across businesses as well as due to a reduction in trading portfolio assets in our foreign exchange, rates and credit business and a reduction in lending assets in Corporate Client Solutions.

➔ **Refer to the "Balance sheet" section of this report for more information**

Return on attributed equity

Return on attributed equity for 2013 was 28.7%, and 30.6% on an adjusted basis, consistent with our target of more than 15%.

➔ **Refer to "Equity attribution framework" in the "Capital management" section of this report for more information**

Operating income by business area

Corporate Client Solutions

Corporate Client Solutions revenues increased 5% to CHF 2,979 million from CHF 2,826 million, largely due to higher revenues in equity capital markets. In US dollar terms, revenues increased 6%.

Advisory revenues declined 8% to CHF 588 million from CHF 638 million, mainly as the market fee pool decreased 11%.

Equity capital markets revenues increased 47% to CHF 1,142 million from CHF 777 million. This increase was mainly due to a large private transaction recorded in the first half of 2013.

Debt capital markets revenues decreased 12% to CHF 888 million from CHF 1,009 million, largely due to a decline in investment grade revenues. Leveraged finance revenues were broadly in line with the prior year.

Financing solutions revenues decreased 13% to CHF 599 million compared with CHF 685 million, mainly due to a reduction in revenues in both the structured financing and real estate finance businesses.

Risk management revenues improved to negative CHF 239 million from negative CHF 283 million, mainly due to lower mark-to-market losses.

Investor Client Services

Investor Client Services revenues increased 30% to CHF 5,619 million from CHF 4,319 million, due to higher revenues in the equities businesses. In US dollar terms, revenues also increased 30%.

Equities

Equities revenues increased to CHF 4,030 million from CHF 2,532 million, as a result of higher revenues across all businesses and regions.

Cash revenues increased to CHF 1,374 million compared with CHF 879 million. Revenues increased due to higher commission income and an improvement in client trading revenues. In addition, 2012 included a loss of CHF 349 million related to the Facebook initial public offering.

Derivatives revenues increased to CHF 1,350 million from CHF 660 million, mainly as a result of higher revenues in Asia Pacific and Europe, Middle East and Africa. In addition, 2012 included negative adjustments related to the refinement of our own credit calculation methodology.

In financing services, formerly called prime services, revenues increased to CHF 1,199 million from CHF 1,036 million, as a result of higher trading revenues in equity finance and increased commissions in clearing and execution.

Other equities revenues increased to CHF 107 million from negative CHF 44 million. Adjusted for a gain from the sale of our former proprietary trading business in 2013, other equities revenues increased to CHF 52 million from negative CHF 44 million. This improvement was mainly due to both higher revenues on equity investments prior to their transfer to Corporate Center – Non-core and Legacy Portfolio, and a gain related to the divestment of our participation in Euroclear Plc.

Foreign exchange, rates and credit

Foreign exchange, rates and credit revenues decreased to CHF 1,590 million from CHF 1,787 million, mainly due to lower rates and credit revenues.

Foreign exchange revenues declined slightly, primarily due to a decrease in revenues from the emerging market short-term interest rate business, partly offset by an increase in electronic trading revenues as volumes rose.

Rates and credit revenues declined, primarily due to weaker trading performance in the flow businesses. This was partly offset by negative debit valuation adjustments of CHF 18 million in 2013 compared with negative debit valuation adjustments of CHF 115 million in the prior year.

Personnel

The Investment Bank employed 11,615 personnel as of 31 December 2013, a decrease of 1,980 compared with 13,595 as of 31 December 2012, mainly as a result of our ongoing cost reduction programs.

2012 compared with 2011

Results

The Investment Bank recorded a profit before tax of CHF 267 million in 2012 compared with a loss before tax of CHF 217 million in 2011. Adjusted for restructuring charges as well as credits related to our retiree benefit plans in the US and our Swiss pension plan, profit before tax was CHF 398 million in 2012 compared with a loss before tax of CHF 15 million in 2011, which included a loss of CHF 1,849 million related to the unauthorized trading incident.

Operating income

Total operating income increased 5% to CHF 7,144 million in 2012 from CHF 6,802 million in 2011. Investor Client Services revenues, excluding the unauthorized trading incident, decreased significantly, also as 2012 included a loss of CHF 349 million related to the Facebook initial public offering. This decline in Investor Client Services revenues was partly offset by higher equity capital markets and debt capital markets revenues within Corporate Client Solutions.

Operating expenses

Total operating expenses decreased 2% to CHF 6,877 million in 2012 compared with CHF 7,019 million in 2011. Adjusted for restructuring charges of CHF 273 million in 2012 and CHF 202 million in 2011, a credit of CHF 91 million related to changes to our retiree benefit plans in the US and a credit of CHF 51 million related to changes to our Swiss pension plan in 2012, total operating expenses decreased 1% to CHF 6,746 million compared with CHF 6,817 million. This reduction was mainly due to lower personnel expenses, which were almost entirely offset by higher general and administrative expenses and lower charges for services to other business divisions.

Personnel expenses declined to CHF 4,539 million from CHF 5,026 million. Adjusted for restructuring charges of CHF 250 million in 2012 and CHF 129 million in 2011 and the aforementioned credits related to changes to our retiree benefit plans in the US and our Swiss pension plan in 2012, personnel expenses decreased to CHF 4,431 million from CHF 4,897 million, largely due to lower variable compensation expenses.

General and administrative expenses increased to CHF 2,312 million from CHF 2,129 million. Adjusted for restructuring charges of CHF 11 million in 2012 and CHF 55 million in 2011, general and administrative expenses increased to CHF 2,301 million from CHF 2,074 million, largely due to increased charges for provisions for litigation, regulatory and similar matters and higher professional fees.

Cost/income ratio

The cost/income ratio improved to 96.3% from 103.0%. On an adjusted basis, the cost/income ratio improved to 94.4% from 100.1%.

Operating income by business area

Corporate Client Solutions

Corporate Client Solutions revenues increased 7% to CHF 2,826 million from CHF 2,636 million, largely due to higher revenues in equity capital markets and debt capital markets which more than offset lower advisory revenues. In US dollar terms, revenues increased 2%.

Advisory revenues declined 34% to CHF 638 million from CHF 964 million, as our market share declined against a 7% reduction in the fee pool in US dollar terms.

Equity capital markets revenues increased 35% to CHF 777 million from CHF 574 million, mainly as our market share improved against a 15% decline in the fee pool in US dollar terms. In addition, we increased our participation in private and structured transactions.

Debt capital markets revenues increased 28% to CHF 1,009 million from CHF 791 million, as our market share improved in both debt and leveraged capital markets, and the global fee pool increased 6% in US dollar terms.

Financing solutions revenues increased 14% to CHF 685 million compared with CHF 600 million, as revenues in 2011 were negatively affected by mark-to-market trading losses, mainly in the second half of the year, as trading conditions were challenging due to uncertainty surrounding the eurozone and the global economic outlook.

Risk management revenues improved to negative CHF 283 million from negative CHF 294 million, primarily due to a decrease in risk management premiums.

Investor Client Services

Investor Client Services revenues increased 3% to CHF 4,319 million from CHF 4,177 million, due to higher revenues in the equities businesses. In US dollar terms, revenues decreased 2%.

Equities

Equities revenues increased by 27% to CHF 2,532 million from CHF 2,000 million, mainly as 2011 included a loss of CHF 1,849 million related to the unauthorized trading incident.

Cash revenues decreased to CHF 879 million compared with CHF 1,441 million, due to lower commission revenues resulting from lower market activity levels as well as a CHF 349 million loss related to the Facebook initial public offering.

Derivatives revenues decreased to CHF 660 million from CHF 1,060 million. During the year, client activity levels were lower across all regions, and trading revenues, particularly in Asia Pacific and Europe, Middle East and Africa, were affected by lower volatility levels.

In financing services revenues increased to CHF 1,036 million from negative CHF 680 million, mainly as the prior year included the loss resulting from the unauthorized trading incident. This was partly offset by lower revenues in 2012, primarily in the clearing business due to lower client activity levels.

Other equities revenues decreased to negative CHF 44 million from CHF 180 million, primarily reflecting a reduced contribution from proprietary trading as we continued to exit the business.

Foreign exchange, rates and credit

Foreign exchange, rates and credit revenues decreased 18% to CHF 1,787 million from CHF 2,177 million, mainly due to lower rates and credit revenues.

Foreign exchange revenues declined, mainly within foreign exchange spot and foreign exchange options as volatility decreased from the high levels seen in 2011 resulting from eurozone uncertainty. This decrease was partly offset by higher revenues from the emerging market short-term interest rate business, and electronic trading revenues as volumes rose.

Rates and credit revenues also declined, primarily due to increased negative debit valuation adjustments and lower revenues from flow businesses, partly offset by higher revenues from solutions businesses.

Personnel

The Investment Bank employed 13,595 personnel as of 31 December 2012, a decrease of 1,090 compared with 14,685 as of 31 December 2011, mainly as a result of our ongoing cost reduction programs.

Data as of 31 December 2012 are not available on a reporting segment level due to organizational changes. Refer to the "Capital management" section of this report for more information.

Corporate Center – Core Functions

Corporate Center – Core Functions recorded a loss before tax of CHF 1,854 million in 2013 compared with CHF 3,698 million in the prior year. The 2013 loss was mainly due to treasury income remaining in Corporate Center – Core Functions of negative CHF 902 million, an own credit loss of CHF 283 million and operating expenses remaining in Corporate Center – Core Functions of CHF 847 million. These negative effects were partly offset by gains on sales of real estate of CHF 288 million.

2013 compared with 2012

Results

Operating income

Total operating income was negative CHF 1,007 million in 2013. Treasury income remaining in Corporate Center – Core Functions of negative CHF 902 million and an own credit loss on financial liabilities designated at fair value of CHF 283 million were partly offset by income related to other items of CHF 178 million. Total operating income in the prior year was negative CHF 1,689 million.

➔ **Refer to "Note 24 Fair value measurement" in the "Financial information" section of this report for more information on own credit**

Treasury income remaining in Corporate Center – Core Functions, after allocations to the business divisions, was negative CHF 902 million. This was mainly due to central funding costs of CHF 510 million, which were retained in Group Treasury, losses of CHF 222 million from cross-currency basis swaps which are held as economic hedges and net losses of CHF 194 million related to the buyback of debt in public tender offers. Furthermore, we recorded losses of CHF 153 million related to our macro cash flow hedge models. These negative effects were partly offset by trading gains of CHF 47 million on derivative instruments which are used to economically hedge financial investments available-for-sale.

Compared with the prior year, treasury income remaining in Corporate Center – Core Functions decreased to negative CHF 902 million from positive CHF 688 million. The 2012 result included gains of CHF 152 million related to our macro cash flow hedge models, as opposed to the abovementioned losses in 2013, and central funding costs retained in Group Treasury of CHF 268 million compared with CHF 510 million. Furthermore, 2013 included the aforementioned losses from cross-currency basis swaps and net losses related to the buyback of debt as well as a decline in revenues to CHF 22 million from CHF 245 million in the repurchase agreement unit, which was transferred from the Investment Bank to Corporate Center – Core Functions in 2013 and for which prior period information was restated. Whereas restated results reflected no allocation of revenues from the repurchase agreement unit to the business divisions, from 2013 onwards revenues from this unit are allocated to the business divisions, mainly to Wealth Management. 2013 also included CHF 206 million lower realized gains on sales of financial investments held in the available-for-sale portfolio which was transferred from Wealth Management Americas to Group Treasury during 2013.

➔ **Refer to the "Treasury management" section of this report for more information on funding costs**

We recorded an own credit loss on financial liabilities designated at fair value of CHF 283 million, primarily due to tightening of our funding spreads. The prior year included an own credit loss of CHF 2,202 million when our funding spreads tightened significantly.

Operating income excluding own credit and treasury income was CHF 178 million, largely due to gains on sales of real estate of CHF 288 million, partly offset by CHF 102 million in net funding costs related to the goodwill and intangible assets that arose from the PaineWebber acquisition which are retained in Corporate Center – Core Functions with effect from 1 January 2013. In 2012, income related to other items was negative CHF 175 million, mainly due to charges related to our multi-currency portfolio of unencumbered, high-quality, short-term assets managed centrally by Group Treasury and charges for certain provisions for litigation, regulatory and similar matters which were recorded within other income, partly offset by gains on sales of real estate of CHF 112 million.

Operating expenses before service allocations

On a gross basis, before service allocations to the business divisions and Corporate Center – Non-core and Legacy Portfolio, total operating expenses decreased by CHF 769 million to CHF 9,291 million, including net restructuring charges of CHF 707 million compared with CHF 37 million in the prior year. The prior year included the positive effects from changes to our Swiss pension plan and our retiree benefit plans in the US of CHF 276 million and CHF 16 million, respectively. Adjusted for these items, operating expenses before allocations to the business divisions and Non-core and Legacy Portfolio were CHF 8,584 million compared with CHF 10,315 million in the prior year. This decrease of CHF 1,731 million was mainly due to CHF 1,283 million lower charges for provisions for litigation, regulatory and similar matters, our ongoing cost reduction programs and lower marketing costs.

Personnel expenses increased by CHF 89 million to CHF 4,199 million. Adjusted for net restructuring charges of CHF 129 million compared with CHF 24 million in 2012, as well as the abovementioned positive effects from changes to our Swiss pension plan and our retiree benefit plans in the US, personnel expenses were CHF 4,070 million in 2013 compared with CHF 4,378 million in the prior year. This decrease of CHF 308 million was mainly due to further headcount reductions related to our ongoing cost reduction programs.

General and administrative expenses decreased by CHF 975 million to CHF 4,327 million. On an adjusted basis, excluding net restructuring charges of CHF 513 million in 2013 and restructuring releases of CHF 1 million in 2012, general and administrative expenses decreased by CHF 1,489 million, mainly due to CHF 1,283 million lower charges for provisions for litigation, regulatory and similar matters and lower marketing costs.

Depreciation and impairment of property and equipment increased to CHF 761 million from CHF 647 million, mainly due to real estate-related restructuring charges of CHF 65 million compared with CHF 14 million as well as higher amortization and an impairment of capitalized software.

The business divisions and Non-core and Legacy Portfolio were charged CHF 8,444 million for shared services costs, an increase of CHF 392 million, mainly related to higher restructuring charges, partly offset by lower cost allocations following reduced personnel expenses incurred.

Operating expenses after service allocations

Total operating expenses remaining after allocations to the business divisions and Non-core and Legacy Portfolio decreased to CHF 847 million from CHF 2,008 million. This decrease of CHF 1,161 million was mainly due to CHF 1,283 million lower charges for provisions for litigation, regulatory and similar matters.

Operating expenses remaining in Corporate Center – Core Functions are related to Group governance functions and other corporate activities.

Risk-weighted assets

Fully applied risk-weighted assets (RWA) were CHF 21 billion as of 31 December 2013, CHF 5 billion higher than at the end of the prior year, mainly due to incremental RWA resulting from the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA.

➔ **Refer to the "Capital management" section of this report for more information**

Personnel

As of 31 December 2013, Corporate Center – Core Functions employed 23,860 personnel compared with 25,351 as of 31 December 2012. This decrease of 1,491 personnel was mainly related to our ongoing cost reduction programs. As of 31 December 2013, 22,804 personnel were allocated to the business divisions as well as Non-core and Legacy Portfolio, based on services consumed. The 1,055 personnel remaining in Corporate Center – Core Functions after allocations were related to Group governance functions and other corporate activities.

2012 compared with 2011

Results

Corporate Center – Core Functions recorded a loss before tax of CHF 3,698 million in 2012 compared with profit before tax of CHF 1,562 million in 2011. 2012 included charges for provisions for litigation, regulatory and similar matters of CHF 1,470 million, mainly arising from fines and disgorgement resulting from regulatory investigations concerning LIBOR and other benchmark rates, as well as an own credit loss of CHF 2,202 million. Treasury income remaining in Corporate Center – Core Functions was CHF 688 million.

Operating income

Total operating income was negative CHF 1,689 million, mainly due to an own credit loss on financial liabilities designated at fair value of CHF 2,202 million and negative income related to other items of CHF 175 million, partly offset by treasury income remaining in Corporate Center – Core Functions of CHF 688 million. Total operating income in 2011 was CHF 1,931 million.

Treasury income remaining in Corporate Center – Core Functions, after allocations to the business divisions, was CHF 688 million. 2012 included revenues of CHF 245 million in the repurchase agreement unit, which was transferred from the Investment Bank to Corporate Center – Core Functions in 2013 and for which prior period information was restated, realized gains of CHF 219 million on sales of financial investments held in the available-for-sale portfolio and gains of CHF 152 million related to our macro cash flow hedge models.

Compared with the prior year, treasury income remaining in Corporate Center – Core Functions increased to CHF 688 million from CHF 386 million. This increase was mainly due to gains of CHF 152 million related to our macro cash flow hedge models compared with losses of CHF 52 million and increased realized gains of CHF 219 million on sales of financial investments held in the available-for-sale portfolio compared with CHF 81 million.

In 2012, we recorded an own credit loss on financial liabilities designated at fair value of CHF 2,202 million, primarily due to tightening of our funding spreads. 2011 included an own credit gain on financial liabilities of CHF 1,537 million.

Operating income excluding own credit and treasury income was negative CHF 175 million in 2012, mainly due to charges of CHF 196 million related to our multi-currency portfolio of unencumbered, high-quality, short-term assets managed centrally by Group Treasury and charges for provisions for litigation, regulatory and similar matters which were recorded as other income. These negative effects were partly offset by gains on sales of real estate of CHF 112 million. Compared with the prior year, income related to other items decreased to negative CHF 175 million from positive CHF 8 million, mainly due to the abovementioned charges related to our multi-currency portfolio of unencumbered, high-quality, short-term assets and higher charges for provisions for litigation, regulatory and similar matters.

Operating expenses before service allocations

On a gross basis, before service allocations to the business divisions and Corporate Center – Non-core and Legacy Portfolio, total operating expenses increased by CHF 1,063 million to CHF 10,060 million in 2012. Adjusted for restructuring charges of CHF 37 million in 2012 and CHF 185 million in 2011, as well as the positive effect in 2012 of the changes to our Swiss pension plan and our retiree benefit plans in the US of CHF 276 million and CHF 16 million, respectively, operating expenses before allocations to the business divisions and Non-core and Legacy Portfolio were CHF

10,315 million compared with CHF 8,812 million in the prior year. This increase of CHF 1,503 million was mainly due to CHF 1,417 million higher charges for provisions for litigation, regulatory and similar matters, increased business demand for information technology infrastructure services as well as higher marketing costs. These increases were partly offset by reduced personnel expenses associated with our ongoing cost reduction programs.

Personnel expenses decreased by CHF 548 million to CHF 4,110 million. On an adjusted basis, excluding restructuring charges of CHF 24 million in 2012 and CHF 66 million in 2011, as well as the positive effect in 2012 of the changes to our Swiss pension plan and our retiree benefit plans in the US of CHF 276 million and CHF 16 million, respectively, personnel expenses were CHF 4,378 million in 2012 compared with CHF 4,592 million in the prior year. This decrease of CHF 214 million was mainly due to reduced personnel expenses associated with our ongoing cost reduction programs, a one-time net credit from changes to the rules for the Swiss long-service and sabbatical awards announced in the third quarter of 2012, as well as the effect related to the capitalization of internally generated software in 2012.

General and administrative expenses increased by CHF 1,694 million to CHF 5,302 million. Adjusted for net restructuring releases of CHF 1 million in 2012 and net restructuring charges of CHF 94 million in 2011, general and administrative expenses increased by CHF 1,789 million, mainly due to CHF 1,417 million higher charges for provisions for litigation, regulatory and similar matters largely arising from fines and disgorgement resulting from regulatory investigations concerning LIBOR and other benchmark rates. Further, 2012 included higher marketing costs and increased business demand for information technology infrastructure services, partly offset by the effect of the capitalization of internally generated software.

Depreciation and impairment of property and equipment decreased to CHF 647 million from CHF 731 million, mainly due to lower restructuring charges and amortization of software costs in 2011.

The business divisions and Non-core and Legacy Portfolio were charged CHF 8,052 million for shared services costs, a decrease of CHF 576 million, primarily reflecting the aforementioned decrease in personnel expenses.

Operating expenses after service allocations

Total operating expenses remaining after allocations to the business divisions and Non-core and Legacy Portfolio increased to CHF 2,008 million from CHF 369 million. This mainly reflects CHF 1,417 million higher charges for provisions for litigation, regulatory and similar matters as well as CHF 65 million higher marketing costs in relation to our 150th anniversary, including expenses related to the education initiative we launched to mark the occasion in 2012.

Personnel

As of 31 December 2012, Corporate Center – Core Functions employed 25,351 personnel, compared with 26,374 as of 31 December 2011. This decrease of 1,023 personnel was mainly related to our ongoing cost reduction programs. As of 31 December 2012, 24,863 personnel were allocated to the business divisions as well as Non-core and Legacy Portfolio, based on services consumed. The 488 personnel remaining in Corporate Center – Core Functions after allocations were related to Group governance functions and other corporate activities.

Corporate Center – Non-core and Legacy Portfolio

Corporate Center – Non-core and Legacy Portfolio recorded a loss before tax of CHF 2,312 million in 2013 compared with a loss of CHF 3,764 million in the prior year. The 2013 loss was mainly due to total operating expenses of CHF 2,660 million which included charges of CHF 1,320 million for provisions for litigation, regulatory and similar matters. Operating income was CHF 347 million, mainly due to gains from the revaluation of our option to acquire the SNB StabFund's equity, prior to our exercise of the option. Fully applied risk-weighted assets (RWA) decreased by CHF 39 billion to CHF 64 billion.

Refer to the "Capital management" section of this report for more information. 7 The leverage ratio denominator is also referred to as "total adjusted exposure" and is calculated in accordance with Swiss SRB leverage ratio requirements. Data represent the average of the total adjusted exposure at the end of the three months preceding the end of the reporting period. Data as of 31 December 2012 are not available on a reporting segment level due to organizational changes. Refer to the "Capital management" section of this report for more information.

2013 compared with 2012

Operating income by business unit

Non-core

Total income was negative CHF 50 million in 2013, mainly due to a negative debit valuation adjustment of CHF 99 million, partly offset by slightly positive revenues in rates of CHF 17 million and credit of CHF 15 million. These modestly positive revenues demonstrate that significant reductions in RWA and balance sheet assets, as well as operational complexity, following the accelerated implementation of our strategy, were achieved at negligible cost.

In the prior year, Non-core revenues were positive CHF 1,135 million as, during 2012, the portfolios were actively traded and benefited from increased liquidity, with strong two-way client flow that resulted in higher revenues.

Legacy Portfolio

Total income was CHF 394 million in 2013. We exercised our option to acquire the SNB StabFund's equity and recorded total option revaluation gains of CHF 431 million prior to the exercise, partly offset by a reduction in trading revenues due to an interest charge of CHF 34 million relating to tax obligations of the SNB StabFund.

Legacy Portfolio income excluding the SNB StabFund option was negative CHF 18 million, mainly due to mark-to-market losses of CHF 122 million in the municipal portfolios, partly offset by gains of CHF 84 million from reference-linked note portfolios.

Compared with the prior year, income in the Legacy Portfolio increased to CHF 394 million from CHF 381 million, mainly as 2012 included losses on collateralized debt obligations (CDO) and related hedging swaps of CHF 171 million as we exited certain CDO positions to reduce RWA. In 2012, we recorded gains of CHF 526 million on the revaluation of our option to acquire the SNB StabFund's equity.

Credit loss expense / recovery

In 2013, we recorded credit loss recoveries of CHF 3 million, mainly in the Legacy Portfolio, due to sales and redemptions of student loan auction rate securities impaired in prior periods. Net credit loss expenses were CHF 78 million in 2012, which mainly reflected an impairment charge related to certain student loan auction rate securities, subsequently sold to reduce RWA.

Operating expenses

Total operating expenses decreased to CHF 2,660 million from CHF 5,202 million in the prior year.

Personnel expenses declined by CHF 113 million to CHF 515 million, mainly due to a decrease in front office personnel following the accelerated implementation of our strategy and headcount reductions related to our ongoing cost reduction programs, as well as restructuring charges of CHF 35 million in 2013 compared with CHF 58 million in the prior year.

General and administrative expenses increased by CHF 881 million to CHF 2,022 million, largely due to charges for provisions for litigation, regulatory and similar matters of CHF 1,320 million compared with CHF 634 million, restructuring charges of CHF 173 million compared with zero, as well as an impairment charge of CHF 87 million related to certain disputed receivables.

Charges for services from other business divisions decreased by CHF 270 million to CHF 65 million, mainly as a result of reduced consumption of shared services.

Depreciation and impairment of property and equipment increased to CHF 55 million from CHF 41 million, mainly due to restructuring charges of CHF 26 million compared with zero in the prior year.

An impairment of goodwill of CHF 3,030 million was recognized in 2012.

➔ Refer to "Note 17 Goodwill and intangible assets" in the "Financial information" section of this report for more information

Risk-weighted assets

Fully applied RWA for Corporate Center – Non-core and Legacy Portfolio decreased by CHF 39 billion to CHF 64 billion, significantly below our year-end 2013 target of CHF 85 billion.

Non-core RWA decreased by CHF 32 billion to CHF 33 billion as a result of continued activity targeted at reducing the number of outstanding over-the-counter derivative transactions by means of negotiated bilateral settlements with specific counterparties, third-party novations or trade compressions. These reductions were partly offset by the effect of the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA.

Legacy Portfolio RWA decreased by CHF 7 billion to CHF 31 billion, mainly due to sales and redemptions of student loan auction rate securities and sales of bonds within the reference-linked notes portfolios. These reductions were partly offset by the effect of the supplemental operational risk capital analysis referred to above.

➔ Refer to the "Risk management and control" and "Capital management" sections of this report for more information

Balance sheet assets

Balance sheet assets decreased 51% to CHF 211 billion as of 31 December 2013 from CHF 429 billion as of 31 December 2012. This decrease was mainly due to a CHF 170 billion reduction in positive replacement values, largely in Non-core, primarily as a result of significant ongoing unwind, novation and compression activity during 2013. Funded assets decreased by CHF 39 billion, mainly as a result of exiting government and other liquid bond positions along with the sale of distressed assets in Non-core, as well as sales and redemptions of student loan auction rate securities in the Legacy Portfolio.

➔ Refer to the "Balance sheet" section of this report for more information

➔ Refer to "Corporate Center – Non-core and Legacy Portfolio" in the "Risk management and control" section of this report for more information

Personnel

As of 31 December 2013, a total of 1,585 personnel were employed within Non-core and Legacy Portfolio compared with 2,304 as of 31 December 2012. Front office personnel decreased to 222 from 541 and personnel allocated from centralized shared services units decreased by 400 to 1,363.

2012 compared with 2011

We do not provide a full comparison of 2012 performance versus 2011 as the restated information for both years is not representative of the way the business was managed during those years and as such is an estimate of such periods' performance. Amounts were determined reflecting a number of assumptions and allocations in order to achieve comparability with how the business would be managed in the future.

Results

Corporate Center – Non-core and Legacy Portfolio recorded a loss before tax of CHF 3,764 million in 2012 compared with CHF 1,448 million in 2011. The 2012 loss was mainly due to total operating expenses of CHF 5,202 million, mainly related to an impairment of goodwill and other non-financial assets of CHF 3,064 million as well as charges of CHF 634 million for provisions for litigation, regulatory and similar matters. Operating income was CHF 1,439 million, mainly due to revenues of CHF 1,135 million in Non-core and gains of CHF 526 million from the revaluation of our option to acquire the SNB StabFund's equity. Fully applied RWA were CHF 103 billion as of 31 December 2012 on a pro-forma basis.

Operating income by business unit

Non-core

Total income was CHF 1,135 million in 2012 as rates and credit portfolios, which were part of the Investment Bank prior to the accelerated implementation of our strategy, were actively traded and benefited from increased liquidity, with strong two-way client flow. Compared with 2011, income in Non-core increased to CHF 1,135 million from CHF 928 million as a result of improved performance in credit with revenues of CHF 671 million compared with CHF 308 million in the prior year.

Legacy Portfolio

Total income was CHF 381 million in 2012. The revaluation of our option to acquire the SNB StabFund's equity resulted in a gain of CHF 526 million.

Legacy Portfolio income excluding the SNB StabFund option was negative CHF 158 million. 2012 included losses of CHF 171 million on CDO and related hedging swaps which we exited in order to reduce RWA.

Compared with the prior year, income in the Legacy Portfolio increased to CHF 381 million from negative CHF 642 million, mainly due to gains of CHF 526 million from the revaluation of our option to acquire the SNB StabFund's equity in 2012 compared with losses of CHF 133 million in 2011. Additionally, 2011 included a loss of CHF 284 million related to credit valuation adjustments for monoline credit protection.

Credit loss expense / recovery

In 2012, we incurred credit loss expenses of CHF 78 million, mainly in the Legacy Portfolio, reflecting an impairment charge related to certain student loan auction rate securities, subsequently sold to reduce RWA.

Operating expenses

Total operating expenses increased to CHF 5,202 million from CHF 1,756 million in 2011.

Personnel expenses decreased by CHF 78 million to CHF 628 million, mainly due to a decrease in front office personnel following the accelerated implementation of our strategy and headcount reductions related to our cost reduction programs.

General and administrative expenses increased by CHF 655 million to CHF 1,141 million, largely due to CHF 607 million higher charges for provisions for litigation, regulatory and similar matters and increased professional fees.

Charges for services from other business divisions decreased by CHF 168 million to CHF 335 million, mainly as a result of reduced consumption of shared services.

An impairment of goodwill of CHF 3,030 million was recognized in 2012.

Implementation of the recommendations of the Enhanced Disclosure Task Force (EDTF)

In light of the recommendations of the EDTF, we have made significant enhancements to disclosures in this report, including making structural changes to this section and introducing a large number of both new and improved disclosures. Consistent with Recommendation 1 of the EDTF, where appropriate, we now present together those related risk disclosures we consider to be most relevant to a particular component of our business, including integrating certain disclosures previously presented separately within our Pillar 3 disclosures or our consolidated financial statements.

Consistent with our financial reporting and disclosure principles, we regard the enhancement of disclosures as an ongoing commitment and we expect to make further refinements to our disclosures in 2014 and beyond.

The index on the following pages summarizes our implementation of the 32 recommendations of the EDTF, including reference to related disclosures that support the objectives of each of these recommendations.

➔ **Refer to the “Significant accounting and financial reporting changes” section of this report for more information on enhancing our disclosures**

➔ **Refer to “Information policy” in the “Corporate governance, responsibility and compensation” section of this report for more information on our financial disclosure principles**

General

1 Presentation of related risk information

Wherever possible, our risk information is disclosed primarily in the "Risk, treasury and capital management" section with related risk information presented together, as explained in the "Significant accounting and financial reporting changes" section. Information on the following pages summarizes where key disclosures relating to the recommendations of the EDTF can be found.

2 Risk terminology

Our "Risk categories" disclosure within the "Risk management and control" section presents our definitions for all risk types, including information on our management and measurement of these risks. In addition, we provide explanations for the key parameters used in our risk measurement models in our "Credit risk" and "Market risk" disclosure in the "Risk management and control" section, as well as assumptions underlying our stress testing scenarios in our "Risk measurement" disclosure within the same section.

3 Top and emerging risks

Our "Top and emerging risks" disclosure within the "Risk management and control" section summarizes those risks that we consider to be "top and emerging," as contemplated by EDTF recommendations, in relation to our current business activities. Further information on each of these risks in the relevant other sections is indicated by reference. Investors should consider carefully all information set out in our "Risk factors" disclosure within the "Operating environment and strategy" section. Information on future accounting changes is included in "Note 1 Summary of significant accounting policies" in the "Financial information" section.

4 Regulatory ratio developments

We have provided extensive information on the key proposed regulatory ratios, (the leverage ratio, the Liquidity Coverage Ratio (LCR) and the Net Stable Funding Ratio (NSFR)), all of which are still subject to further amendments by the Swiss authorities. These ratios are described briefly in the "Regulatory and legal developments" and "Risk factors" sections. Detailed information, including pro-forma disclosure based on current Swiss Financial Market Supervisory Authority (FINMA) guidance where appropriate, is included in our "Swiss SRB leverage ratio" disclosure within the "Capital management" section for the leverage ratio and in our "Liquidity regulatory requirements" disclosure within the "Treasury management" section for the LCR and NSFR. In addition, our leverage ratio denominator is disclosed by business division in our "Overview of risks arising from our business activities" disclosure within the "Risk management and control" section and in our "Swiss SRB leverage ratio" disclosure in the "Capital management section," the key components of our pro-forma LCR and NSFR are summarized in our "Strategy and objectives" disclosure within the "Treasury management" section and an analysis of the liquidity asset buffer that supports our pro-forma LCR is disclosed in our "Liquidity management, contingency funding and stress testing" disclosure within the same section.

Risk governance and risk management strategies / business model

5 Risk management organization

Our "Risk governance" disclosure within the "Risk management and control" section summarizes our risk management organization and provides information on the risk management responsibilities for key roles, including the relevant responsibilities of the business divisions and the functions providing independent oversight.

6 Risk culture

Our "Risk principles and risk culture" disclosure within the "Risk management and control" section summarizes the tools we use to ensure that our desired risk culture is embedded within the organization, including our performance measurement and compensation framework, and provides information on developments during the year. Further information, including a related illustration of the determination of individual performance awards, is included in the "Corporate responsibility" and "Compensation" sections.

7 Business model
Our "Overview of risks arising from our business activities" and subsequent disclosure in the "Risk management and control" section provides extensive information on the key risks arising from our business model, on our risk appetite framework and on our management of these risks. The "Key risks, risk measures and performance by business division and Corporate Center" disclosure in the same section provides a summary of the key risks for each business division and the Corporate Center and relates these business activities to key financial risk measures – risk-weighted assets (RWA), the leverage ratio denominator, risk-based capital, average tangible attributed equity, total assets and adjusted performance before tax. Following information on our risk governance, we disclose our five risk management and control principles and detailed information on our risk appetite objectives covering capital, solvency, earnings, leverage ratio and liquidity.

8 Stress testing
We consider the use of stress testing within an established risk governance framework to be a more relevant risk management tool within a bank than the use of standardized regulatory capital calculations. Our "Stress testing" disclosure within the "Risk management and control" section provides information on our use of stress testing within our risk governance and capital framework, including detailed information on scenarios used and agreed with the regulators and the linkage of stress testing results to our risk appetite objectives. In addition, information on our use of stress testing for credit risk, market risk and liquidity and funding risk is included within our disclosures for each of these risk categories.

Capital adequacy and risk-weighted assets

9 Minimum capital requirements
Our "Swiss SRB Basel III capital information" disclosure within the "Capital management" section includes information on our capital requirements, comparison with available capital and information on capital ratios, together with narrative explanation. We compare our capital requirements under the Swiss SRB rules with those under BIS rules in our disclosure "Differences between Swiss SRB and BIS Basel III capital" within the same section. Information on the capital surcharge for our Swiss residential mortgage business is included in our "Capital requirements" disclosure in the "Capital management" section. Separately, our "Operational risk" disclosure within the "Risk management and control" section includes information on the incremental RWA resulting from the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA.

10 Components of capital
Our "Eligible capital" disclosure within the "Capital management" section includes information on our common equity tier 1, tier 1 and tier 2 capital, a reconciliation of our IFRS equity to our Swiss SRB Basel III capital showing regulatory adjustments and a summary listing of our eligible capital instruments. The "Supplemental disclosures required under Basel III Pillar 3 regulations" section includes a balance sheet reconciliation showing the scope of regulatory consolidation.

11 Flow statement of capital
Our "Eligible capital" disclosure within the "Capital management" section includes a tabular flow statement of our Swiss SRB Basel III capital movement.

12 Strategic and capital planning
The sections "Our strategy" and "Capital management" provide information on our capital planning in the context of our strategy, including our current and target capital ratios and our plans for capital returns.

13 Risk-weighted assets and related business activities
Our "Risk-weighted assets" disclosure within the "Capital management" section includes information on our RWA and related capital requirements for each risk type, presented by business division and Corporate Center. This same information is also presented together with related underlying gross and net exposures in the "Supplemental disclosures required under Basel III Pillar 3 regulations" section. More detailed information on the related business activities for market risk is presented in the linked "Market risk exposures arising from our business activities" disclosure within the "Risk management and control" section. Reflecting our focus on RWA and balance sheet reduction in Non-core and Legacy Portfolio, more detailed information on these RWA and balance sheet changes is disclosed in "Corporate Center – Non-core and Legacy Portfolio" within the same section.

14 Capital requirements for each risk type

The "Supplemental disclosures required under Basel III Pillar 3 regulations" section includes information on our RWA and related capital requirements for each risk type, together with related underlying gross and net exposures. Similar information is also presented by business division and Corporate Center in our "Risk-weighted assets" disclosure within the "Capital management" section. Detailed information on significant risk models used is included in "Credit risk," "Market risk" and "Operational risk" within the "Risk management and control" section.

15 Credit risk analysis

The "Supplemental disclosures required under Basel III Pillar 3 regulations" section includes disclosure of our regulatory net credit exposure by BIS asset class (exposure segment), linking probability of default and loss given default to RWA, using internal ratings grades based on a 14 point internal scale mapped to external ratings in our "Credit risk models" disclosure.

16 Flow statement of risk-weighted assets

Our "Risk-weighted assets" disclosure within the "Capital management" section includes a flow statement presenting our movement in RWA by key driver. Reflecting our focus on RWA and balance sheet reduction in Non-core and Legacy Portfolio, more detailed information on these RWA and balance sheet changes is disclosed in "Corporate Center – Non-core and Legacy Portfolio" within the "Risk management and control" section.

17 Credit risk model performance

Our "Credit risk models" disclosure within the "Risk management and control" section includes extensive information on the composition of our credit risk models, including backtesting of probability of default, loss given default and credit conversion factors as well as expected loss analysis.

Liquidity

18 Liquidity needs and reserves

In our "Liquidity and funding management" disclosure within the "Treasury management" section, our liquidity strategy is described in "Strategy and objectives" and our liquidity management is described in "Liquidity management, contingency funding and stress testing." This section also includes disclosure of the composition of the liquidity asset buffer that forms the basis for our pro-forma LCR disclosed in "Liquidity regulatory requirements," as well as a summary of the key changes in this liquidity asset buffer, together with the monthly average amount for the year and information on our liquidity stress testing. Our internal funding model is described in "Internal funding and funds transfer pricing" in the same section and limitations on use of funding reserves from a Group perspective are incorporated within the narrative and quantitative "Asset encumbrance" disclosure.

Funding

19 Encumbered and unencumbered assets

Our "Asset encumbrance" disclosure within the "Treasury management" section differentiates our on- and off-balance sheet assets between those available and those encumbered or otherwise not available to meet future funding and collateral needs, including the proportion of available assets by type. Further information on our sources and uses of off-balance sheet collateral is included in "Note 25 Restricted and transferred assets" in the "Financial information" section. Our "Credit ratings" disclosure within the "Treasury management" section includes information on our potential additional contractual obligations following credit rating downgrades.

20 Contractual maturity analysis

Our "Maturity analysis of assets and liabilities" disclosure within the "Treasury management" section provides an analysis of total assets, liabilities and off-balance sheet commitments by remaining contractual maturity. For risk management purposes we consider behavioral characteristics to adjust contractual maturities. The assumptions used to support these adjustments are described in the context of our stress testing in our "Liquidity management, contingency funding and stress testing" disclosure within the "Treasury management" section.

21 Funding strategy

In our "Liquidity and funding management" disclosure within the "Treasury management" section, our funding strategy is described in "Strategy and objectives." Our "Funding" disclosure within the same section has extensive information on our funding sources, including product and currency mix, as well as changes in sources of funding during the year and our management thereof. Further information on our stress testing and contingent funding sources is included in our "Liquidity management, contingency funding and stress testing" disclosure within the "Treasury management" section.

Market risk

22 Market risk linkage to the balance sheet

Our "Market risk exposures arising from our business activities" disclosure within the "Risk management and control" section shows the extent to which business activities in each of our business divisions and Corporate Center contribute to market risk. This disclosure table distinguishes balance sheet line items between market risk in the banking book and market risk in the trading book and provides a link to market risk RWA and total asset amounts disclosed in our "Overview of risks arising from our business activities" within the "Risk management and control" section. There are also linkages from this disclosure table to our disclosure of RWA for each risk type in the "Supplemental disclosures required under Basel III Pillar 3 regulations" section and to the related table by business division and Corporate Center in our "Risk-weighted assets" disclosure within the "Capital management" section. Further information on value-at-risk and related market risk measures, including the derivation of market risk RWA follows from the disclosure table "Market risk exposures arising from our business activities" within the "Risk management and control" section.

23 Market risk analysis

Our disclosure table "Market risk exposures arising from our business activities" within the "Risk management and control" section presents trading and non-trading market risk factors relevant to our business activities. The subsequent pages provide both quantitative and qualitative information on each of these risk factors, including the derivation of market risk RWA for each risk category, risk sensitivities for banking book exposures and "Other market risk exposures" disclosure for own credit, equity investments, debt investments, pension risk and own share exposure.

24 Market risk measurement model performance

Our "Market risk" disclosure within the "Risk management and control" section includes extensive qualitative and quantitative information on each of our market risk measurement models including information on methodology, key assumptions, model limitations and changes and backtesting.

25 Other market risk management techniques

Our "Market risk stress loss" disclosure within the "Risk management and control" section provides information on our primary measure of stress loss for market risk – our liquidity adjusted stress framework. Further information on our broader stress testing framework and how this is incorporated within our risk appetite framework is included in our "Risk measurement" disclosure within the same section. In addition, our disclosure on market risk measurement models provides both qualitative and quantitative information on stressed value-at-risk, the incremental risk charge and the comprehensive risk measure.

Credit risk

26 Analysis of credit risk exposures
Our "Credit risk profile of the Group – IFRS view" disclosure within the "Risk management and control" section provides a summary for on- and off-balance sheet maximum exposure to credit risk, as well as information on collateral, credit enhancements, ratings, impaired assets and allowances. More detailed disclosures on the composition of our loan and over-the-counter (OTC) derivative portfolios at a business division or Corporate Center level follow, including information on loan type, loan-to-value, net exposure at default and counterparty geographical region and industry sector. Further information on our largest loan portfolio, being our mortgage loan portfolio in Switzerland, is also included. Our "Credit risk models" disclosure within the "Risk management and control" section includes information on stress testing.

27 Policies for impaired and non-performing loans
Our disclosure "Policies for past due, non-performing and impaired claims" within the "Risk management and control" section provides a summary of our policies, with further detail included in "Note 1 Summary of significant accounting policies" in the "Financial information" section.

28 Analysis of impaired and non-performing loans
Our disclosure "Development of individually impaired loans" within the "Risk management and control" section presents a reconciliation of impaired loans during the year. Further information on impaired and non-performing loans, as well as credit allowances, is also included in our "Credit risk profile of the Group – IFRS view" disclosure within the same section.

29 Counterparty credit risk from derivative transactions
Our disclosure on derivatives exposures is primarily in "Note 14 Derivative instruments and hedge accounting" and "Note 26 Offsetting financial assets and financial liabilities" in the "Financial information" section, with additional information, including our use of central counterparties, in our "Credit risk mitigation" disclosure within the "Risk management and control" section. The majority of our counterparty risk from OTC derivatives arises in the Investment Bank and Corporate Center – Non-core and Legacy Portfolio, on which further information is included in our "Traded products" disclosure within the "Risk management and control" section.

30 Credit risk mitigation
Our "Credit risk mitigation" disclosure within the "Risk management and control" section provides information on our use of collateral and credit hedging, including loan-to-value and other credit risk mitigation information. We also discuss in this section our approach to monitoring collateral concentrations in our lending portfolios secured by securities collateral.

Other risks

31 Other risks
Our "Risk categories" disclosure within the "Risk management and control" section presents our definitions for risk types to which we are exposed. This disclosure also provides information on our management and measurement of these risks including which function provides independent oversight and whether the risk is specifically included in the risk appetite framework. Further information is included within the relevant sections.

32 Publicly known risk events
Our disclosure in "Note 22 Provisions and contingent liabilities" in the "Financial information" section provides extensive information on those matters management considers to be material or considers otherwise significant due to potential financial, reputational or other effects. Our "Operational risk" disclosure includes information on the remediation program following the Investment Bank's unauthorized trading incident and our "Risk principles and risk culture" disclosure summarizes the tools we use to ensure that our desired risk culture is embedded within the organization.

Risk, treasury and capital management key developments

In line with our strategy, we actively managed down risks within Non-core and Legacy Portfolio, maintained a low level of market risk within our Investment Bank and experienced moderate increases in lending within our wealth management businesses. As our balance sheet assets have reduced, we have generated capacity within our liquidity and funding positions, enabling us to execute tender offers to repurchase certain outstanding long-term debt in 2013, which lowers our interest expense and allows us to optimize our funding liability structure for the future. Our strong capital position provides us with a solid foundation for growing our business and enhancing our competitive positioning. At the end of 2013, our common equity tier 1 (CET1) capital ratio was 18.5% on a phase-in basis and 12.8% on a fully applied basis, a significant increase compared with year-end 2012 pro-forma ratios and the highest in our peer group. At the same time, strengthening our operational control framework remained a primary focus, with substantial progress made in remediating identified operational risk issues.

Key developments in 2013 included the following.

Non-core and Legacy Portfolio

During 2013, we actively managed down risks within Non-core and Legacy Portfolio, exceeding our year-end targets for balance sheet and risk-weighted assets (RWA) reductions. We disposed of our more liquid cash and loan positions and sold a significant portion of the distressed portfolio and student loan auction rate securities, alongside the steady run-off of the Non-core loan book. Exposures to over-the-counter derivative contracts were reduced through negotiated bilateral settlements, portfolio compressions and negotiated assignments and novations. In the fourth quarter, we exercised our option to acquire the equity of the SNB StabFund from the Swiss National Bank. The fair value of the option was previously deducted from our CET1 capital and its exercise resulted in a CET1 capital increase of CHF 2.1 billion compared with our CET1 capital as of 31 December 2012. The additions to our RWA as a result of the exercise were de minimis.

➔ **Refer to "Corporate Center – Non-core and Legacy Portfolio" in the "Risk management and control" section of this report for more information**

Market risks

In line with our strategy, we maintained a low level of market risk in our trading businesses, with the risk profile of the Investment Bank reducing and migrating towards less complex and more client-oriented businesses. Average exposure levels of our stress loss and statistical (value-at-risk) measures roughly halved over the course of the year.

➔ **Refer to "Market risk" in the "Risk management and control" section of this report for more information**

Credit risks

Credit risk continues to account for the vast majority of Basel III RWA although our net credit loss expenses remained low, totaling CHF 50 million for the year. Our impaired loan portfolio decreased by CHF 0.4 billion to CHF 1.2 billion.

Our lending exposure arises mainly from our Swiss domestic business, which offers corporate loans and mortgage loans secured against residential properties and income-producing real estate, and is therefore tied to the health of the Swiss economy. Although these domestic lending portfolios continued to perform well and net credit loss expenses remain low, we are closely monitoring macroeconomic developments in our home market. These include signs of a deceleration in the growth in Swiss real estate prices in some regions, a rising trend in the UBS Swiss Real Estate Bubble Index, the Swiss National Bank's increase of the countercyclical capital buffer from 1% to 2% effective 30 June 2014, along with implications of any return of crisis conditions within the eurozone on export markets, and the potential implications of the recent decision to reinstate immigration quotas for European Union / European Economic Area countries.

In our wealth management businesses outside Switzerland, we experienced moderate increases in credit exposures in line with our strategy to grow our lending businesses. Within the Investment Bank, our credit exposure is predominantly investment grade, but includes loan underwriting characterized by concentrated exposure to lower-rated credits, albeit of a temporary nature. Distribution of these loans through syndication and securitization continued to be sound.

➔ **Refer to "Credit risk" in the "Risk management and control" section of this report for more information**

Treasury risk control framework

Our treasury risk control framework has been further developed and extended, providing holistic risk control for all treasury activities and non-traded market risk portfolios across the Group. Key enhancements during the year were the introduction of a centralized balance sheet simulation tool and additional monitoring of the effect of rising rates scenarios on our treasury portfolios. Our exposure to fair value losses on our *Financial investments available-for-sale* (AFS) portfolios as interest rates rise is limited as the interest rate risk of our largest AFS portfolio, our global liquidity reserve, is substantially hedged.

➔ Refer to the "Risk management and control" section of this report for more information

Consequential risks

Operational risk is an inevitable consequence of being in business and managing it is a core element of our business activities, implemented through our operational risk framework and an effective front-to-back control environment.

The impact of operational risk remains at elevated levels, including that arising from pending or potential litigation and regulatory risks as discussed in "Top and emerging risks" in the "Risk management and control" section of this report. Accordingly, strengthening our operational risk control framework remained a primary focus during 2013, with substantial progress made in implementing a range of measures to enhance the Group's risk management and control processes and drive the right behaviors to protect our reputation while delivering on our strategic goals.

A program of independent management testing for key procedural controls commenced in 2013, focused on areas deemed to have the highest levels of inherent risk. Any material control deficiencies identified are recorded in a central inventory, and assigned senior management ownership, which is reflected in the respective employees' annual performance measurement and management objectives, to ensure effective and sustainable remediation.

Significant progress was made on the remediation programs for operational risk issues, resulting in the completion of many remediation activities. In particular, the Investment Bank's unauthorized trading incident remediation program has been completed and this has further enhanced the Group's ability to detect or prevent such incidents. Independent third-party reviews have been completed with no material issues identified.

➔ Refer to "Operational risk" in the "Risk management and control" section of this report for more information

Risk appetite framework

In 2013, we updated our risk appetite objectives to align with the Swiss systemically relevant banks (SRB) Basel III capital and liquidity requirements that came into force on 1 January 2013. In addition, we further cascaded the risk appetite objectives into the divisions by establishing stress-based risk appetite triggers at business division level. The trigger levels were set based on forecasted risk exposure levels as embedded in our strategic plan.

➔ Refer to the "Risk management and control" section of this report for more information

Sources of funding

During 2013, the composition of our funding sources moved towards less reliance on wholesale funding. The implementation of our strategy has driven a reduction in secured funding needs, as well as lower issuances of short-term and structured debt and the repurchase of unsecured debt. At the same time, our Retail & Corporate and wealth management businesses continued to attract new customer deposits.

➔ Refer to the "Treasury management" section of this report for more information

Liquidity management

We continued to maintain a sound liquidity position throughout the year. As of 31 December 2013, our liquidity asset buffer, that is derived from high-quality liquid assets (HQLA) and supports our estimated pro-forma regulatory LCR, was CHF 153 billion, with additional available funding of CHF 54 billion. In aggregate, these sources of available liquidity represented 28% of our funded balance sheet assets.

➔ Refer to the "Treasury management" section of this report for more information

Capital management

During 2013, we managed our capital according to our capital ratio targets, making progress towards meeting the Swiss SRB Basel III fully applied capital requirements and achieving a CET1 capital ratio of 18.5% on a phase-in basis and 12.8% on a fully applied basis. We have a strong track record of RWA reduction, surpassing our 2013 Basel III RWA targets well ahead of schedule and demonstrating progress towards achieving our RWA target of less than CHF 200 billion by 2017 on a fully applied basis, despite the incremental RWA resulting from the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA.

➔ Refer to the "Capital management" section of this report for more information

Risk management and control

Overview of risks arising from our business activities

Our business is constrained by the capital we have available to cover risk-weighted assets (RWA) resulting from the risks in our business, by the size of our on- and off-balance sheet assets through their contribution to leverage ratio requirements and regulatory liquidity ratios, and by our risk appetite. Together, these constraints create a close link between our strategy, the risks that our businesses take and the balance sheet and capital resources that we have available to absorb those risks.

As described in "Equity attribution framework" in the "Capital management" section of this report, our equity attribution framework reflects our objectives of maintaining a strong capital base and guiding businesses towards activities that appropriately balance profit potential, risk, balance sheet and capital usage. The framework establishes this link through the inclusion of phase-in Basel III RWA, Swiss SRB leverage ratio denominator (LRD) and risk-based capital (RBC), an internal measure of risk similar to economic capital, as three key drivers for the allocation of tangible equity to our business divisions. In addition to tangible equity, we allocate equity to support goodwill and intangible assets as well as certain capital deduction items to arrive at equity attributed to the business divisions and Corporate Center.

The table on the next page presents the linkage for each of our business divisions and Corporate Center between their risk exposures, the constraints described above and their performance. In addition to the key risks arising in each business division and Corporate Center, it presents together the key drivers of tangible attributed equity, being RWA, LRD and RBC, as well as tangible attributed equity, total assets and adjusted operating profit before tax. We present tangible attributed equity because we consider it to be more closely correlated with the risk measures applied. This enables an understanding of how the activities in our business divisions and Corporate Center are reflected in our risk measures and the performance of the business divisions and Corporate Center in the context of these requirements.

➔ **Refer to the "Capital management" section of this report for more information on RWA, LRD and our equity attribution framework**

➔ **Refer to "Statistical measures" in this section for more information on RBC**

➔ **Refer to the table "Adjusted results" in the "Group performance" section of this report for more information**

Key risks, risk measures and performance by business division and Corporate Center

Business divisions and Corporate Center	Wealth Management	Wealth Management Americas	Retail & Corporate	Global Asset Management	Investment Bank	CC – Core Functions	CC – Non-core and Legacy Portfolio
Key risks arising from business activities	**Credit risk** from lending against securities collateral and mortgages, and a small amount of derivatives trading activity. Minimal contribution to market risk	**Credit risk** from lending against securities collateral and mortgages **Market risk** from municipal securities and closed-end fund secondary trading	**Credit risk** from retail, mortgage, secured and unsecured corporate lending, and a small amount of derivatives trading activity	Small amounts of credit and market risk	**Credit risk** from lending, derivatives trading and securities financing **Market risk** from trading in equities, fixed income, foreign exchange (FX) and commodities	**Credit** and **market risks** from Group Treasury's balance sheet, capital, and profit and loss management responsibilities **Liquidity, funding** and **structural FX risk** are managed centrally within Group Treasury	**Credit risk** from remaining lending and derivatives exposures **Market risk** is mainly from Non-core exposures, is materially hedged and primarily relates to liquid market factors

Operational risk is an inevitable consequence of being in business, as losses can result from inadequate or failed internal processes, people and systems, or from external events. It can arise as a result of our past and current business activities across all business divisions and Corporate Center

CHF billion	As of or for the year ended 31.12.13						
	Wealth Management	**Wealth Management Americas**	**Retail & Corporate**	**Global Asset Management**	**Investment Bank**	**CC – Core Functions**	**CC – Non-core and Legacy Portfolio**
Phase-in Basel III RWA	21.4	24.5	31.4	3.8	62.6	21.3	63.5
of which: credit risk	*11.9*	*8.1*	*29.9*	*2.7*	*35.5*	*4.8*	*31.3*
of which: market risk	*0.0*	*1.6*	*0.0*	*0.0*	*7.6*	*(4.9)*[1]	*9.4*
of which: operational risk	*9.2*	*14.8*	*1.4*	*1.1*	*19.4*	*9.2*	*22.8*
Swiss SRB leverage ratio denominator[2]	122.1	57.2	164.7	14.0	275.3	234.5	160.0
Risk-based capital	1.7	1.2	3.7	0.6	6.5	13.6	4.6
Average tangible attributed equity	2.7	2.2	4.1	0.5	7.9	8.7	10.8
Total assets	109.8	45.5	141.4	14.2	241.1	247.4	210.5
Operating profit / (loss) before tax (adjusted)	2.4	0.9	1.5	0.6	2.5	(1.6)	(2.1)

1 Negative market risk numbers are due to the diversification effect allocated to CC – Core Functions. 2 Swiss SRB leverage ratio denominator is the average for the fourth quarter of 2013.

Risk categories

We categorize the risks faced by our business divisions and Corporate Center as outlined in the table below.

Risk definitions

Audited

	Risk managed by	Independent oversight by	Captured in our risk appetite framework
Primary risks: the risks that our businesses may take in pursuit of their business objectives			
Credit risk: the risk of loss resulting from the failure of a client or counterparty to meet its contractual obligations. This includes settlement risk and loan underwriting risk: *Settlement risk:* the risk of loss resulting from transactions involving exchange of value where we must fulfill our obligation to deliver without first being able to determine with certainty that we will receive the counter value *Loan underwriting risk:* the risk of loss arising during the holding period of financing transactions which are intended for further distribution	Business management	Risk Control	●
Market risk: the risk of loss resulting from changes in general market risk factors (e.g., interest rates, equity index levels, exchange rates, commodity prices and general credit spreads) and changes in prices of debt and equity instruments which result from factors and events specific to individual companies or entities. Market risk includes issuer risk and investment risk: *Issuer risk:* the risk of loss from changes in fair value resulting from credit-related events affecting an issuer or group of related issuers, including sovereigns, to which we are exposed through tradable securities or derivatives referencing the issuer *Investment risk:* issuer risk associated with positions held as financial investments	Business management	Risk Control	●
Country risk: the risk of losses resulting from country-specific events. It includes transfer risk, whereby a country's authorities prevent or restrict the payment of an obligation, as well as systemic risk events arising from country-specific political or macroeconomic developments	Business management	Risk Control	●
Consequential risks: the risks to which our businesses are exposed as a consequence of being in business			
Liquidity risk: the risk of being unable to generate sufficient funds from assets to meet payment obligations when they fall due, including in times of stress	Group Treasury	Risk Control	●
Funding risk: the risk of higher than expected funding costs due to higher than expected UBS credit spreads when existing funding positions mature and need to be rolled over, or replaced by other more expensive funding sources. If a shortage of available funding sources is expected in a stress event, funding risk also covers potential additional losses from forced asset sales			
Operational risk: the risk of loss resulting from inadequate or failed internal processes, people and systems, or from external events. Operational risk includes legal risk and compliance risk: *Legal risk:* the risk of (i) financial loss resulting from the non-enforceability of a contract, or (ii) loss due to UBS being held responsible for a contractual or legal claim, debt or legal action based on the breach or default of a contract, commitment of a tort, violation of law, infringement of trademarks or antitrust action *Compliance risk:* the financial or reputational risk incurred by UBS by not adhering to the applicable laws, rules and regulations, local and international best practice (including ethical standards) and UBS's own internal standards	Business management	Risk Control Legal Risk Control	●
Structural foreign exchange risk: the risk of decreases in our capital, due to changes in foreign exchange rates with an adverse translation effect on capital held in currencies other than CHF	Group Treasury	Risk Control	●
Pension risk: the risk of a negative impact on other comprehensive income as a result of deteriorating funded status from decreases in the fair value of assets held in the defined benefit pension funds and / or changes in the value of defined benefit pension obligations, due to changes in actuarial assumptions (e.g., discount rate, life expectancy, rate of pension increase) and / or changes to plan designs	Human Resources	Risk Control and Finance	●
Environmental and social risk: the possibility of UBS suffering reputational or financial harm from transactions, products, services or activities that involve a party associated with environmentally or socially sensitive activities ➔ **Refer to the "Corporate responsibility" section of this report for more information**	Business management	Risk Control	
Reputational risk: the risk of a decline in the reputation of UBS from the point of view of its stakeholders – customers, shareholders, staff and general public	All functions	Control functions	
Business risks: the risks arising from the commercial, strategic and economic environment in which our businesses operate			
Business risks: the potential negative impact on earnings from lower than expected business volumes and / or margins, to the extent not offset by a decrease in expenses	Business management	Finance	●

Top and emerging risks

Our approach to identifying and monitoring top and emerging risks is an ongoing part of our risk management framework. The top and emerging risks disclosed below reflect those risks that we currently consider have the potential for high impact on the Group and which could materialize within one year. Investors should also carefully consider all information set out in the "Risk factors" section of this report, where we discuss the top and emerging risks in more detail and where we also discuss other risks we currently consider material, which we are presently aware of and which may impact our ability to execute our strategy and affect our business activities, financial condition, results of operations and prospects.

Regulatory and legislative changes: We continue to be exposed to a number of regulatory and legislative changes, some of which have already been adopted and implemented, but some of which are subject to legislative action or to further rulemaking by regulatory authorities before final implementation. This results in uncertainty as to whether and in which form these regulatory and legislative changes will be adopted, the timing and content of implementing regulations and interpretations and/or the dates of their effectiveness. In addition, both adopted and proposed changes differ significantly across the major jurisdictions, making it increasingly difficult to manage a global institution and potentially putting us at a disadvantage to those peers operating in jurisdictions considered to be less stringent.

We have programs in place to address the risks arising from regulatory and legislative changes, including ongoing monitoring of proposals, providing guidance and feedback to the relevant authorities and developing internal assessment and implementation plans. During 2013, our more active programs included those relating to resolution planning and resolvability, new and revised capital-, liquidity- and funding-related ratios and the Minder Initiative. We have made good progress across all of these programs in preparing for their implementation, including announcing our intention to establish a new banking subsidiary of UBS AG in Switzerland. Our phase-in leverage ratio and pro-forma LCR and NSFR as of 31 December 2013 were 4.65%, 110%, and 109%, respectively and, based on our current understanding of the potential requirements, we expect to be in full compliance with all of these requirements when they become effective.

In addition, following discussions with FINMA, UBS has mutually agreed to an incremental operational risk capital requirement which had an unexpected significant effect on our RWA in 2013 that amounted to CHF 22.5 billion as of 31 December 2013. We continue to work closely with FINMA and other regulators to mitigate the risk of further additional capital requirements, as well as working to reduce the level of incremental operational risk-related RWA.

➔ **Refer to "Regulatory and legislative changes may adversely affect our business and ability to execute our strategic plans" in the "Risk factors" section of this report for more information**

➔ **Refer to the "Treasury management" section of this report for more information on the LCR and the NSFR**

➔ **Refer to the "Capital management" section of this report for more information on the leverage ratio**

➔ **Refer to the "Regulatory and legal developments" section of this report for more information on the Minder Initiative**

➔ **Refer to "Operational risk" in this section for more information on the incremental operational risk capital requirement**

Legal and regulatory risks: We are subject to a large number of claims, disputes, legal proceedings and government investigations and we anticipate that our ongoing business activities will continue to give rise to such matters in the future. We continue to work on enhancing our operational risk framework and our relationships with regulatory authorities and on resolving open matters in a manner most beneficial to our stakeholders. Information on those litigation, regulatory and similar matters currently considered by management as significant is disclosed in Note 22 of the "Financial information" section of this report. The extent of our financial exposure to these and other matters could be material and could substantially exceed the level of provisions that we have established, which was CHF 1.6 billion as of 31 December 2013. Considering our overall exposures and the current regulatory and political climate affecting financial institutions, we expect charges associated with these matters to remain at elevated levels through 2014.

➔ **Refer to "Material legal and regulatory risks arise in the conduct of our business" in the "Risk factors" section of this report for more information**

Market conditions and the macroeconomic climate: We are exposed to a number of macroeconomic issues as well as general market conditions. These external pressures may have a significant adverse effect on our business activities and related financial results, primarily through reduced margins, asset impairments and other valuation adjustments. Developments in the eurozone are currently considered by management to be of the greatest significance to us, due to the lackluster economic outlook, potential implications of the slowing of reforms, uncertainty regarding the outcome of the European Central Bank's comprehensive assessment and the potential disruption, in the event that one or more countries exit the euro. Our current exposures to select eurozone countries are disclosed in "Country risk." In addition, as our strategic plans depend more heavily upon our ability to generate growth and revenue in emerging markets particularly in Asia,

management is monitoring developments in this geographic sector very closely. These macroeconomic factors are considered in our development of stress testing scenarios for our ongoing risk management activities.

➔ **Refer to "Performance in the financial services industry is affected by market conditions and the macroeconomic climate" in the "Risk factors" section of this report for more information**
➔ **Refer to "Risk measurement" in this section for more information on macroeconomic considerations, including stress testing**

Execution of our strategy: In October 2012, we announced a significant acceleration in the implementation of our strategy to focus our activities on a set of highly synergistic, less capital- and balance sheet-intensive businesses dedicated to serving clients and well-positioned to maximize value for shareholders. During 2013, we made significant progress in implementing that strategy and are ahead of the majority of our performance targets, including improving our leading fully applied Basel III common equity tier 1 (CET1) ratio 300 basis points in the year to 12.8% and surpassing our fully applied RWA reduction target for the year. There continues to be a risk that we will not be successful in completing the execution of our plans, or that our plans may be delayed or that the effects of our plans may differ from those intended. This could lead to a reduction in the confidence of our stakeholders and challenges in meeting regulatory requirements in the future.

➔ **Refer to "We may not be successful in completing our announced strategic plans or in implementing changes in our businesses to meet changing market, regulatory and other conditions" in the "Risk factors" section of this report for more information**
➔ **Refer to "Regulatory and legislative changes may adversely affect our business and ability to execute our strategic plans" in the "Risk factors" section of this report for more information**
➔ **Refer to "We hold legacy and other risk positions that may be adversely affected by conditions in the financial markets; legacy risk positions may be difficult to liquidate" in the "Risk factors" section of this report for more information**
➔ **Refer to "We might be unable to identify or capture revenue or competitive opportunities, or retain and attract qualified employees" in the "Risk factors" section of this report for more information**
➔ **Refer to the "Our strategy" section of this report for more information on our strategy**

Reputational risk: Our reputation is critical to achieving our strategic goals and financial targets and damage to our reputation can have fundamental negative effects on our business and prospects. This has been emphasized for us in recent years following events such as the LIBOR matter and the unauthorized trading incident and has triggered an enhanced focus on sustaining a strong risk culture across the Group.

➔ **Refer to "Our reputation is critical to the success of our business" in the "Risk factors" section of this report for more information**
➔ **Refer to "Risk culture" in this section for more information**

Other operational risks: Due to the operational complexity of all our businesses, we are continually exposed to operational risks such as process error, failed execution and fraud. We believe we have a strong operational risk management framework in place to help ensure that these risks are appropriately controlled, which has been significantly enhanced following the unauthorized trading incident in 2011. In view of the changing nature of operational risks and the environment within which we operate, we continuously review our associated control frameworks to allow us to make enhancements where necessary. In this regard, key compliance risk focus areas for 2014 will include conduct risk and other areas where we see evolving inherent risk considerations or regulatory landscape, such as suitability, conflicts of interest, anti-money laundering and corruption. Additionally, the increasingly complex threat of cyber-attacks and cyber-criminal activity facing the financial services industry is evolving and we have initiated multiple security programs to address this threat.

➔ **Refer to "Operational risks may affect our business" in the "Risk factors" section of this report for more information**
➔ **Refer to "Operational risk" in this section for more information on our management of operational risk**

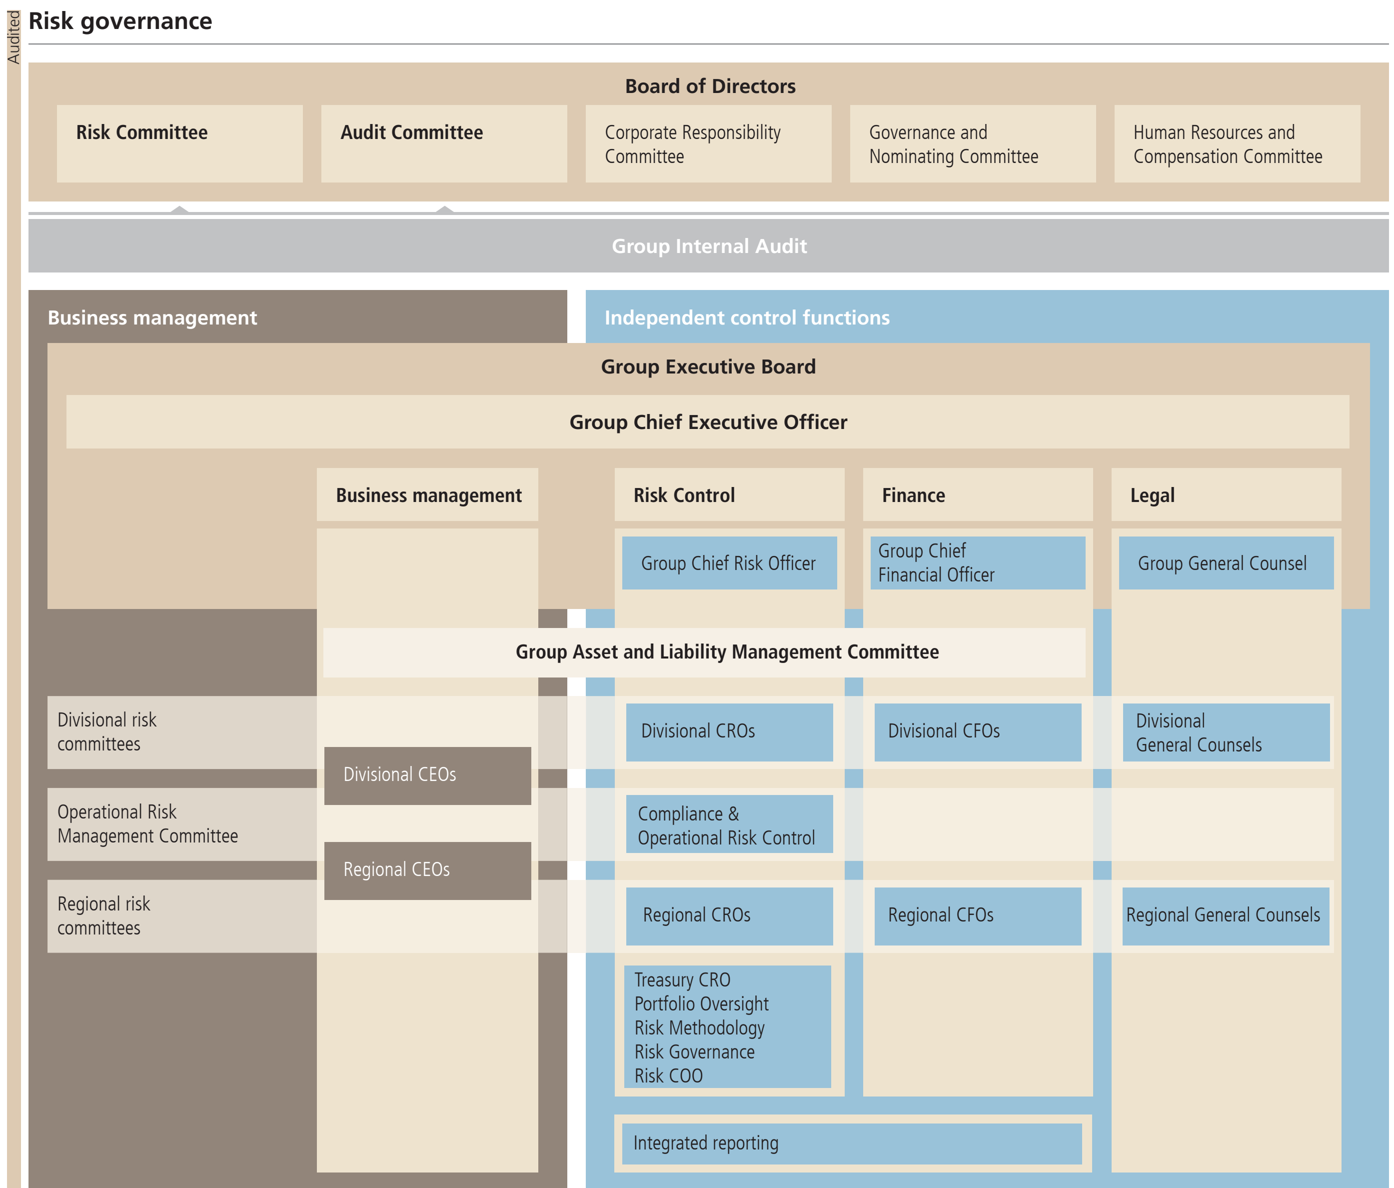
Risk governance

Our risk governance framework operates along three lines of defense: business management, who own their risk exposures, control functions, which provide independent oversight of risks, and Group Internal Audit, which evaluates the overall effectiveness of the control environment.

These key roles and responsibilities for risk management and control are illustrated in the following chart and described below.

Audited

Risk governance



Audited

The *Board of Directors* (BoD) is responsible for determining the Group's risk principles, risk appetite and major portfolio limits, including their allocation to the business divisions and Corporate Center. The risk assessment and management oversight performed by the BoD considers evolving best practices and is intended to conform to statutory requirements. The BoD has a Risk Committee, which monitors and oversees the Group's risk profile and the implementation of the risk framework as approved by the BoD, as well as assessing and approving the Group's key risk measurement methodologies. The Risk Committee, in conjunction with the Chairman of the BoD and the Audit Committee, oversees the performance of Group Internal Audit.

The *Group Chief Executive Officer* (Group CEO) is responsible for the results of the Group, has risk authority over transactions, positions and exposures, and also allocates portfolio limits approved by the BoD within the business divisions and Corporate Center.

The *Group Executive Board* (GEB) implements the risk framework, controls the Group's risk profile and approves key risk policies.

Business management comprises divisional and regional Chief Executive Officers. The *divisional Chief Executive Officers* are accountable for the results of their business divisions. This includes actively managing their risk exposures and ensuring profit potential, risk, balance sheet and capital usage are balanced. The *regional Chief Executive Officers* coordinate and implement UBS's strategy in their region, jointly with the divisional CEOs and heads of the control and support functions. They have a veto power over decisions in respect to all business activities that may have a negative regulatory or reputational impact in their respective regions.

The *Group Chief Risk Officer* (Group CRO) reports directly to the Group CEO and has functional and management authority over Risk Control (including compliance) throughout the Group. Risk Control provides independent oversight of all primary and certain consequential risks as outlined in "Risk categories." This includes establishing methodologies to measure and assess risk, setting risk limits, and developing and operating an appropriate risk control infrastructure. The risk control process is supported by a framework of policies and approval authorities. *Divisional and regional Chief Risk Officers* have delegated authority for their respective divisions and regions. Further, authorities are delegated to risk officers according to their expertise, experience and responsibilities.

Audited

The *Group Chief Financial Officer* (Group CFO) is responsible for ensuring that disclosure of our financial performance meets regulatory requirements and corporate governance standards as well as being leading practice in clarity and transparency. The Group CFO is also responsible for the management of UBS's tax affairs, treasury and capital, including management of funding and liquidity risk and UBS's regulatory capital ratios. Responsibility for implementation of the control framework for tax and funding risks resides with the Group CFO whereas responsibility for implementation of the control framework for treasury activities is with Risk Control.

The *Group General Counsel* (Group GC) is responsible for implementing the Group's risk management and control principles for legal matters, and for managing the legal function for the UBS Group. The Group GC is responsible for reporting legal risks and material litigation, and for managing legal, internal, special and regulatory investigations.

Group Internal Audit (GIA) independently, objectively and systematically assesses the adherence to our strategy, the effectiveness of governance, risk management and control processes at Group, divisional and regional levels, including compliance with legal, regulatory and statutory requirements, as well as with internal policies and contracts. GIA has a functional reporting line to the Risk Committee and the Audit Committee.

Risk appetite framework

Our risk appetite framework contains both qualitative and quantitative risk appetite statements. The qualitative risk appetite statements comprise the risk management and control principles and various policies and initiatives that ensure we maintain the desired risk culture. The quantitative statements aim to ensure the Group's resilience against the impact of potential severe adverse economic or geopolitical events, by setting objectives for the level of capital, earnings and liquidity that we seek to maintain even after experiencing severe losses over a defined time horizon. The framework is comprehensive in aggregating all material risks across the Group. The combination of the qualitative and quantitative risk appetite statements aims to protect our businesses and reputation in both normal and stressed environments.

Audited

Risk management and control principles

Protection of financial strength	Protection of reputation	Business management accountability	Independent controls	Risk disclosure
Protecting the financial strength of UBS by controlling our risk exposures and avoiding potential risk concentrations at individual exposure levels, at specific portfolio levels and at an aggregate firm-wide level across all risk types	Protecting our reputation through a sound risk culture characterized by a holistic and integrated view of risk, performance and reward, and through full compliance with our standards and principles, particularly our Code of Business Conduct and Ethics	Ensuring management accountability, whereby business management, as opposed to Risk Control, owns all risks assumed throughout the firm and is responsible for the continuous and active management of all risk exposures to ensure that risk and return are balanced	Independent control functions which monitor the effectiveness of the business's risk management and oversee risk-taking activities	Disclosure of risks to senior management, the Board of Directors, shareholders, regulators, rating agencies and other stakeholders with an appropriate level of comprehensiveness and transparency

Risk principles and risk culture

A strong and dynamic culture is a prerequisite for success in today's highly complex operating environment. We are focused on fostering and further developing our cultural strength and ensuring it is a competitive advantage both from a risk and a performance point of view. Our efforts are underpinned by our shared belief that how we deliver results is as important as the results themselves.

In 2013, the Group Executive Board (GEB) led a global initiative to foster the strong aspects of the Group's culture and evolve them further, building on our strategic pillars – capital strength, efficiency and effectiveness, and risk management – and our principles: excellence, client focus and sustainable performance. We began a program to raise awareness and further embed the standards of behavior we ask of our employees at every level of the Group. Each employee is accountable for ensuring these behaviors are integrated into every aspect of their daily work. To reflect the importance we attach to this, we incorporated assessment of adherence to these standards in our performance measurement and compensation framework for 2013.

Our performance measurement and management process requires that all employees have risk objectives aligned to their roles and responsibilities. Our employees know that rigorous risk management plays an essential role in our efforts to deliver the best possible client experience and achieve our business objectives. In short, everyone at UBS is responsible for anticipating, addressing and managing risks. We encourage our employees to provide candid, constructive and actionable feedback. To that end, in 2013, we enhanced our process by making such feedback anonymous. The performance measurement and management process links into the Group's compensation framework.

Our compensation philosophy is to provide our employees with compensation that recognizes their individual contributions and clearly links their pay to performance – not simply the delivery of business targets, but also how those results were achieved. As explained in more detail in the "Compensation" section of this report, the performance of GEB members includes both quantitative and qualitative factors, with the latter contributing 35% to their overall compensation decision. Qualitative factors include reinforcing a culture of accountability and responsibility, demonstrating commitment to being a responsible corporate citizen and acting with integrity in all interactions with our stakeholders.

The "Compensation" section of this report explains how the compensation of each employee is based on the individual's contribution (absolute and relative) and shows how the individual's contribution to promoting our principles and standards of behaviors is factored into the compensation process. The process includes an examination of the individual's efforts to actively manage risk, striking an appropriate balance between risk and reward, and to what extent the individual exhibited professional and ethical behavior. Forfeiture provisions enable the firm to forfeit some, or all, of any unvested deferred portion of compensation if an employee commits certain harmful acts.

In addition, we have a range of policies and initiatives in place to embed the desired risk culture within the Group, covering employees at all levels. These policies and initiatives include the following.

Code of Business Conduct and Ethics

This Code enshrines the principles and practices that all of our employees and Board members are required to follow unreservedly, both in letter and in spirit, supported by an annual adherence certification process. Included in the Code are requirements covering laws, rules and regulations, ethical and responsible behavior, information management, the work environment, social responsibility and disciplinary measures.

Whistleblowing

Our Whistleblowing policy provides a formal framework and independent channel for employees to raise concerns about suspected breaches of the Group's laws, regulations, policies, procedures or other matters including those covered by our Code of Business Conduct and Ethics. In recognition of the importance for a strong and successful business of enabling employees to speak up and constructively challenge others, in 2013 our Chairman and Group CEO promoted an awareness campaign of our Whistleblowing policy.

Compliance and risk training

We have a mandatory training program for all employees covering a range of compliance and risk-related topics including anti-money laundering and operational risk. In addition, more specialized training is provided for employees according to their roles and responsibilities, such as training on credit risk and market risk for those working in trading areas. During 2013, employees were required to complete over 500,000 mandatory training sessions in aggregate, an increase of approximately one-third from 2012. The training sessions need to be completed, usually together with an assessment, within a specified period of time. Since mid-2012, failure to satisfactorily complete the mandatory training sessions within 30 days of the deadline results in disciplinary action, usually in the form of a written warning, with employees still required to complete the training. In 2013, 12 employees received such a warning and ultimately our completion rate for these mandatory training sessions was 100%. If an employee fails to complete two or more training sessions within 10 days of the deadline, this is factored into the performance measurement and management process and the related promotion and compensation processes.

Principles of good supervision

The Group has developed principles of good supervision, which are applicable to every region and business division of UBS. These principles establish clear expectations of managers and employees with respect to supervisory responsibilities, specifically: to take responsibility, to organize their business, to know their employees and what they do, to know their business, to create a good compliance culture and to respond to and resolve issues. Supervisors are expected to understand and set a good example of professional behavior and to act as role models, to be open about issues, to be attentive to unusual behavior and to act on any red flags,

ensuring that issues are resolved. To ensure adherence, frameworks have been established which are subject to periodic review and assessment.

Maintaining a strong culture complements our goal of being a responsible corporate citizen. As a truly global firm with a diverse workforce, we have a deep understanding and appreciation of the communities in which we operate. Our longstanding and active community affairs programs are focused on promoting education and entrepreneurship supported by the volunteering efforts of our employees across the globe. These programs continued to thrive in 2013. For instance, we launched new initiatives in the Americas and received various awards for our work in the UK. In the second quarter, the UBS Optimus Foundation announced a new and major global initiative to put nutrition at the center of the global development agenda and, later in the year, the Foundation was involved in fundraising for Typhoon Haiyan relief efforts in the Philippines. The Group matched client and employee donations on a 1:1 basis. In the third quarter, UBS was named in the Dow Jones Sustainability Indices which track the leading sustainability-driven companies worldwide. Additionally, we co-launched the Thun Group of Banks' discussion paper on banking and human rights. In the fourth quarter, our Global Philanthropy Forum looked at how we can work with clients to help improve women's rights and opportunities around the world. During 2013, we also continued our support for the arts through culturally enriching programs for our clients, employees and the public, including the launch of a multi-year agreement with Art Basel and support for exhibitions in the Americas and in Switzerland.

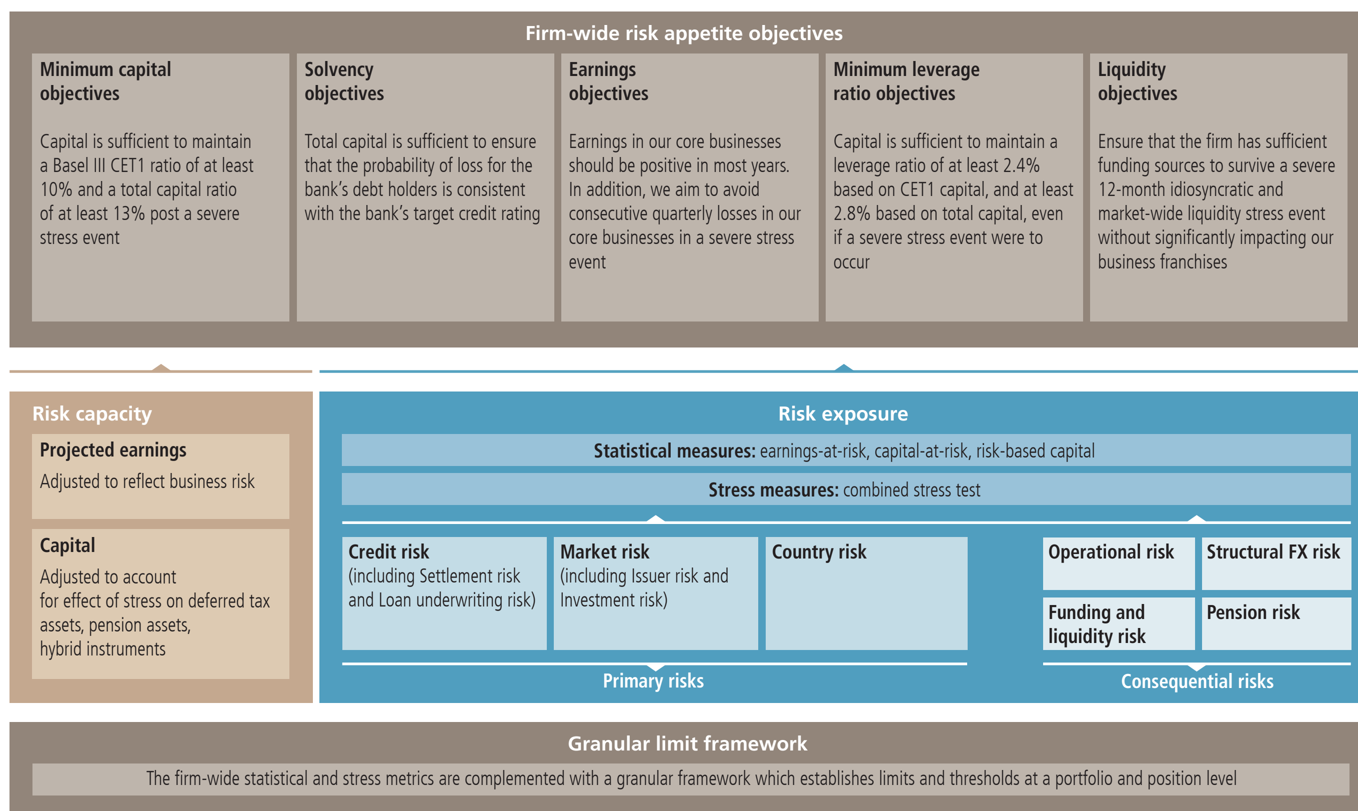
Quantitative risk appetite objectives

Through a set of quantitative risk appetite objectives, we aim to ensure that our aggregate risk exposure is within our desired risk capacity, based on our capital and business plans. The specific definition of risk capacity for each objective seeks to ensure that we have sufficient capital, earnings and funding liquidity to protect our business franchises and exceed minimum regulatory requirements under a severe stress event. The risk appetite objectives are evaluated as part of the annual business planning

Risk appetite framework



process, and approved by the BoD. The comparison of risk exposure with risk capacity is a key consideration in management decisions on potential adjustments to the business strategy and the risk profile of the Group.

We make use of both scenario-based stress tests and statistical risk measurement techniques to assess the impact of a severe stress event at a Group-wide level. These complementary frameworks capture exposures to all material primary and consequential risks across all of our business divisions and the Corporate Center.

➔ **Refer to "Risk measurement" in this section for more information on our stress test and statistical frameworks**

In determining our risk capacity, we adjust projected earnings from the strategic plan for business risk to reflect lower expected earnings in a severe stress event, and include the impact on deferred tax assets, pension assets and hybrid capital instruments through adjustments to our capital.

The chart on the previous page provides an overview of our quantitative risk appetite objectives. Our strategic plan approved by the BoD is consistent with these objectives.

Risk measurement

Audited

A variety of methodologies and measurements are applied to quantify the risks of our portfolios and potential risk concentrations. Risks that are not fully reflected within standard measures are subject to additional controls, which may include pre-approval of specific transactions and the application of specific restrictions. Models to quantify risk are generally developed by dedicated units within control functions, are independently verified and subjected to periodic confirmation and control by the Group CRO and the Group CFO organizations.

Stress testing

We perform stress testing to quantify the loss that could result from extreme yet plausible macroeconomic and geopolitical stress events. This enables us to identify, better understand and manage our potential vulnerabilities and risk concentrations. Stress testing plays a key role in establishing limits at Group-wide, divisional and portfolio levels. Stress test results are regularly reported to the BoD, the Risk Committee and GEB. We also provide detailed stress loss analyses to the Swiss Financial Market Supervisory Au-

thority (FINMA) in accordance with its requirements. As described in the "Risk appetite" section above, stress testing, along with statistical loss measures, plays a central role in risk appetite and business planning processes.

Our stress testing framework incorporates three pillars: (i) combined stress tests, (ii) a comprehensive range of portfolio- and risk-type-specific stress tests and (iii) reverse stress testing.

Our *combined stress test (CST)* framework is scenario-based and aims to quantify overall Group-wide losses which could result from a number of potential global systemic events. The framework captures all primary and consequential risks, as well as business risks, as shown in the "Risk categories" section above. Scenarios are forward-looking and encompass macroeconomic and geopolitical stress events calibrated to different levels of potential severity. Each scenario is implemented through the expected evolution of market indicators and economic variables under that scenario. The resulting effect on our primary, consequential and business risks is then assessed to estimate the overall loss and capital implications were the scenario to occur. At least once a year, the Risk Committee approves the most relevant scenario, known as the binding scenario, to be used as the main scenario for regular CST reporting and for monitoring risk exposure against our minimum capital and earnings objectives in our risk appetite framework. Results are reported to, and discussed with, the Risk Committee and the GEB on a monthly basis and reported to the BoD and FINMA monthly. The results of other CST scenarios are monitored and reported quarterly to the BoD, the Risk Committee, the GEB and FINMA.

Within the overall model governance framework overseen by the Group CRO and Group CFO, the Risk Aggregation and Stress Committee (RASC) is responsible for ensuring the consistency and adequacy of methodologies and scenarios used for our Group-wide stress measures and risk aggregation. As part of these responsibilities, the RASC is charged with ensuring that the suite of stress scenarios adequately reflects current and potential developments in the macroeconomic and geopolitical environment, our current and planned business activities, and actual or potential risk concentrations and vulnerabilities in our portfolios. The RASC meets at least quarterly and is comprised of Group and divisional representatives of Risk Control and the Group Treasurer. In executing its responsibilities, the RASC considers input from the Risk "Think Tank," a panel of senior representatives from the business divisions, Risk Control and economic research, which meets quarterly to review the current and possible future market environment, with the aim of identifying potential stress scenarios which could materially impact the Group's profitability. This results in a range of internal stress scenarios that are developed and evolve over time, separate from the scenarios mandated by FINMA.

Each scenario captures a wide range of macroeconomic variables that are considered relevant to assessing the impact of the stress scenario on our portfolios. These include gross domestic product (GDP), equity indices, interest rates, foreign exchange rates, unemployment and property prices. Assumed changes in these macroeconomic variables in each scenario are used to stress the key risk drivers of our portfolios. For example, lower GDP growth and rising interest rates may reduce the profitability of clients to whom we have lent money, leading to changes in the credit risk parameters for probability of default, loss given default and exposure at default, and resulting in higher predicted credit losses in the stress scenario. We also capture the business risk resulting from lower fee income, interest income and trading income. These effects are measured across all material risk types and all businesses to calculate the aggregate estimated effect of the scenario on profit and loss, other comprehensive income, RWA, Swiss SRB leverage ratio denominator (LRD) and, ultimately, our capital and leverage ratios.

For 2013, the binding scenario for CST was the internal *Euro Crisis scenario.* This scenario assumes a worsening economic environment in the eurozone with defaults of certain countries in the form of debt restructurings, coupled with a disorderly exit from the eurozone by one country. This triggers sell-offs in financial markets, increased market volatility and severe pressure on the euro. The European economy falls into recession and sovereign exposures on banks' balance sheets trigger a banking crisis in Europe. The Swiss export and tourism industries are assumed to be severely affected.

As part of the CST framework, five additional stress scenarios are routinely monitored.

– *Recession scenario* represents renewed financial market turmoil due to the failure of a major global financial institution, leading to prolonged financial deleveraging and dramatically plunging activity around the globe.
– *US Crisis scenario* represents a loss of confidence in the US, leading to international portfolio repositioning out of US dollar-denominated assets, sparking an abrupt and substantial US dollar sell-off. The US is pushed back into recession, other industrialized countries replicate this pattern and inflationary concerns lead to an overall higher interest rate level.
– *China Hard Landing scenario* represents an economic correction in China with resulting impact on the global economy, particularly emerging markets.
– *Middle East / North Africa scenario* represents a spill-over of political upheaval leading to a spike in oil prices and a recession in developed countries.
– *Depression scenario* represents a more pronounced and prolonged version of the Euro Crisis scenario. Additional peripheral countries default and exit the eurozone, and advanced economies are pulled into a prolonged period of economic stagnation.

CST results over the year indicate a reduction in risk levels, as expected, in line with the execution of our strategy to operate a more client-focused and less capital-intensive Investment Bank.

Portfolio-specific stress tests are measures that are tailored to the risks of specific portfolios. Our portfolio stress loss measures are informed by past events but also include forward-looking elements. For example, the stress scenarios for trading risks capture the liquidity characteristics of different markets and positions. Results of portfolio-specific stress tests may be subject to limits to explicitly control risk-taking, or may be monitored without limits to identify vulnerabilities.

Reverse stress testing starts from a defined stress outcome (for example, a specified loss amount, reputational damage, a liquidity shortfall, or a breach of regulatory capital ratios) and works backwards to identify the economic or financial scenarios that could result in such an outcome. As such, reverse stress testing is intended to complement forward stress tests by assuming "what if" outcomes that could extend beyond the range normally considered, and thereby potentially challenge assumptions regarding severity and plausibility. The results of reverse stress testing are reported to relevant governance bodies according to the materiality and scope of the exercise.

Additionally, the impact of increasing interest rates, and changes in the structure of yield curves, is routinely analyzed.

Most major financial firms employ stress tests, but their approaches vary significantly, having been tailored to their individual business models and portfolios. Moreover, there is a lack of industry standards defining stress scenarios or the way they should be applied to a firm's risk exposures. Consequently, comparisons of stress test results between firms can be misleading and, therefore, like many of our peers, we do not publish quantitative stress test results of our internal stress tests.

➔ Refer to "Credit risk" and "Market risk" in this section for more information on stress loss measures

Statistical measures

In addition to our scenario-based CST measure, we employ a statistical stress framework that allows us to calculate and aggregate risks using statistical techniques, enabling us to derive stress events at chosen confidence levels.

This framework is used to derive a distribution of potential earnings based on historically observed market changes, the level of risk exposures, and business plan forecasts, considering effects on both income and expenses. From this we determine earnings-at-risk (EaR), which measures the potential shortfall in earnings (the deviation from forecasted earnings) at a 95% confidence level and which we evaluate over both three-month and one-year horizons. EaR is used for the assessment of the earnings objectives in our risk appetite framework.

We extend the EaR measure by incorporating the effects of gains and losses recognized through other comprehensive income, to derive a distribution of potential effects on capital. From this distribution, we establish capital-at-risk (CaR) measures based on confidence levels from 95% to 99.9%. These measures consider the impact on Basel III common equity tier 1 (CET1) capital of stress events at the respective confidence levels and are used for the assessment of our capital, solvency and leverage ratio objectives.

We also derive risk-based capital (RBC) from this distribution, taken at a 99.97% confidence level, to provide an estimate of the potential capital impairment in such an extreme stress event. As discussed above, RBC is a core component of our equity attribution framework.

➔ Refer to "Credit risk," "Market risk" and "Operational risk" in this section for more information on our portfolio-level statistical loss measures

Portfolio and position limits

The Group-wide stress and statistical metrics are complemented by lower-level portfolio and position limits. The combination of these measures provides for a comprehensive, granular limit framework which is applied to our business divisions and Corporate Center as relevant to the key risks arising from their business models.

We apply limits to a variety of exposures at portfolio level, using statistical- and stress-based measures, such as value-at-risk, liquidity adjusted stress, notional loan underwriting limits, economic value sensitivity and portfolio default simulations for our loan books. These are complemented with a set of thresholds for net interest income sensitivity, mark-to-market losses on available-for-sale portfolios, and the impact of foreign exchange movements on capital and capital ratios.

Portfolio measures are supplemented with position-level limits. Risk measures for position limits are based on market risk sensitivities and counterparty-level credit risk exposures. Market risk sensitivities include sensitivities to changes in general market risk factors such as equity indices, foreign exchange rates and interest rates, and sensitivities to issuer-specific factors such as changes in an issuer's credit spread or default risk. We monitor a significant number of market risk limits for the Investment Bank and Corporate Center – Non-core and Legacy Portfolio on a daily basis. Counterparty measures capture the current and potential future exposure to an individual counterparty taking into account collateral and legally enforceable netting agreements.

Risk concentrations

Audited

A risk concentration exists where (i) a position is affected by changes in a group of correlated factors, or a group of positions are affected by changes in the same risk factor or a group of correlated factors, and (ii) the exposure could, in the event of large but plausible adverse developments, result in significant losses. The categories in which risk concentrations may occur include counterparties, industries, legal entities, countries, products and businesses.

The identification of risk concentrations requires judgment, as potential future developments cannot be accurately predicted and may vary from period to period. In determining whether we have a risk concentration, we consider a number of elements, both individually and collectively. These elements include the

Audited

shared characteristics of the positions and our counterparties, the size of the position or group of positions, the sensitivity of the position or group of positions to changes in risk factors and the volatility and correlations of those factors. Also important in our assessment is the liquidity of the markets where the positions are traded, and the availability and effectiveness of hedges or other potential risk-mitigating factors. The value of a hedge instrument may not always move in line with the position being hedged, and this mismatch is referred to as basis risk.

Risk concentrations are subject to increased monitoring by Risk Control and are assessed to determine whether they should be reduced or mitigated depending on the available means to do so. It is possible that material losses could occur on asset classes, positions and hedges, particularly if the correlations that emerge in a stressed environment differ markedly from those envisaged by our risk models.

➔ **Refer to "Credit risk" and "Market risk" in this section for more information on the compositions of our portfolios**

Credit risk

Key developments during the period

During 2013, we actively managed down risks within Non-core and Legacy Portfolio, disposing of our more liquid loan positions alongside the steady run-off of the Non-core loan book. Exposures to over-the-counter derivative contracts were reduced through negotiated bilateral settlements, portfolio compressions, negotiated assignments and novations, and commutations of monoline insurance. We experienced moderate increases in credit exposures in line with our strategy to grow our wealth management lending businesses. The delinquency ratio of our Swiss residential mortgage loans and our Swiss corporate loans remained at low levels. Loan underwriting activity within the Investment Bank remained steady, with distribution of loans through syndication and securitization continuing to be sound. Net credit loss expenses totaled CHF 50 million, taking into account releases of collective loan loss allowances of CHF 93 million. The amount of impaired loans decreased by CHF 0.4 billion to CHF 1.2 billion, mainly as a result of repayments.

Main sources of credit risk

Audited

- Our lending exposure arises mainly from our Swiss domestic business, which offers corporate loans and mortgage loans secured against residential properties and income-producing real estate, and is therefore tied to the health of the Swiss economy.
- Within the Investment Bank, our credit exposure is predominantly investment grade, but includes loan underwriting characterized by concentrated exposure to lower-rated credits, albeit of a temporary nature.
- Our wealth management businesses conduct securities-based lending and mortgage lending.
- Credit risk within the Legacy Portfolio has been significantly reduced and the balance largely relates to securitized positions.
- Derivatives activities, a significant portion of which has been determined to be non-core and will therefore be run down, are predominantly transacted on a cash collateralized basis.

Overview of measurement, monitoring and management techniques

Audited

- Credit risk arising from transactions with individual counterparties is measured according to our estimates of probability of default, exposure at default and loss given default. Limits are established for individual counterparties and groups of counterparties covering banking and traded products as well as settlement amounts. Risk control authorities are approved by the Board of Directors and are delegated to the Group CEO, Group CRO and divisional Chief Risk Officers based on risk exposure amounts and internal credit rating.
- Limits apply not only to the current outstanding amount, but also to contingent commitments and the potential future exposure of traded products.
- For the Investment Bank, our monitoring, measurement and limit framework distinguishes between exposures intended to be held to maturity (take-and-hold exposures) and those which are intended to be held for a short term, pending distribution or risk transfer (temporary exposures).
- We also use models to derive portfolio credit risk measures of expected loss, statistical loss and stress loss at the Group-wide and business division levels and establish portfolio level limits at these levels.
- Credit risk concentrations can arise if clients are engaged in similar activities, are located in the same geographical region or have comparable economic characteristics, for example if their ability to meet contractual obligations would be similarly affected by changes in economic, political or other conditions. To avoid credit risk concentrations, we establish limits and/or operational controls that constrain risk concentrations at portfolio and sub-portfolio levels with regard to sector exposure, country risk and specific product exposures.

Credit risk profile of the Group – IFRS view

Maximum exposure to credit risk

The table below represents the IFRS view of the Group's maximum exposure to credit risk by class of financial instrument and the respective collateral and other credit enhancements mitigating credit risk for these classes of financial instruments. The maximum exposure to credit risk includes the carrying amounts of financial instruments recognized on the balance sheet subject to credit risk and the notional amounts for off-balance sheet arrangements.

Where information is available, collateral is presented at fair value. For other collateral such as real estate, a reasonable alternative value is used. Credit enhancements, such as credit derivative contracts and guarantees, are included at their notional amounts. Both are capped at the maximum exposure to credit risk for which they serve as security.

Further on in this section, we provide complementary views of credit risk based on our internal management view, which can differ in certain respects from the requirements of IFRS.

➔ **Refer to the "Supplemental disclosures required under Basel III Pillar 3 regulations" section of this report for more information on the credit exposures used in the determination of our required regulatory capital and additional information on credit derivatives**

Impaired assets

Audited

The following tables show impaired assets, comprising loans, guarantees, loan commitments, defaulted derivatives contracts and securities financing transactions. Gross impaired assets decreased by CHF 0.6 billion to CHF 1.9 billion as of 31 December 2013, mainly due to resolution through repayment, sale or upgrade. After deducting the estimated liquidation proceeds of collateral and specific allowances, provisions and credit valuation adjustments (CVA), net impaired assets amounted to CHF 0.6 billion as of 31 December 2013 compared with CHF 0.8 billion at the end of the prior year.

Impaired assets by type of financial instrument

Balance at the end of the year	**730**[3]	**283**	**1,013**	**20**	**1,033**[4]	1,233

1 This table does not include collective credit valuation adjustments of CHF 433 million (31 December 2012: CHF 736 million). They are partially included in the tier 1 capital capital calculation. 2 Total actual credit loss (credit loss expense and changes in specific credit valuation adjustments recognized in net trading income). 3 Includes CHF 2 million allowances for securities financing (31 December 2012: CHF 2 million). 4 Does not include an allowance of CHF 83 million related to certain disputed receivables.

Impaired loans

The majority of our gross impaired exposure relates to loans, primarily in our Swiss domestic business. Gross impaired loans (including due from banks) decreased to CHF 1,199 million as of 31 December 2013 from CHF 1,606 million at the end of the prior year, as new impairments and increases were offset by repayments, sales and upgrades, mainly related to the run-down of the Legacy Portfolio. This decrease in impaired loan exposure, combined with the increase in gross exposure, led to a reduction in the ratio of impaired loans to total loans to 0.4% from 0.6%.

Audited

Collateral held against our impaired loan exposure mainly consisted of real estate and securities as of 31 December 2013. It is our policy to dispose of foreclosed real estate as soon as practicable. The carrying amount of foreclosed property recorded in our balance sheet under *Other assets* at the end of 2013 and 2012 amounted to CHF 40 million and CHF 47 million, respectively. We seek to liquidate collateral held in the form of financial assets expeditiously and at prices considered fair. This may require us to purchase assets for our own account, where permitted by law, pending orderly liquidation.

Specific and collective allowances and provisions for credit losses decreased by CHF 44 million to CHF 750 million as of 31 December 2013. This includes collective loan loss allowances of CHF 20 million, a reduction of CHF 94 million compared with CHF 114 million at the end of the prior year.

The table "Loss history statistics" on page 172 provides a five-year history of our credit loss experience for loans (including due from banks) relative to our impaired and non-performing loans.

Past due but not impaired loans

The table below shows a breakdown of total loan balances where payments have been missed, but which we do not consider impaired because we expect to collect all amounts due under the contractual terms of the loans or the equivalent value from liquidation of collateral. The loan balances in the table arise entirely within our Wealth Management and Retail & Corporate divisions, where delayed payments are routinely observed. We currently have no past due but not impaired loans in Wealth Management Americas, the Investment Bank and Corporate Center – Non-core and Legacy Portfolio.

The increase in our past due but not impaired loan exposure resulted from a few individual corporate loans, notably a single client within the 11–30 days category. The amount of past due but not impaired mortgage loans was not significant compared with the overall size of the mortgage portfolio.

➔ Refer to "Policies for past due, non-performing and impaired claims" in this section and "Note 1 Summary of significant accounting policies" in the "Financial information" section of this report for more information on our impairment policies

Credit risk profile of the Group – Internal risk view

The exposures detailed in this section are based on our internal management view of credit risk which differs in certain respects from the measurement requirements of IFRS.

Internally, we categorize credit risk exposures into two broad categories: banking products and traded products. Banking products comprise drawn loans, undrawn guarantees and loan commitments, due from banks and balances with central banks. Traded products comprise over-the-counter (OTC) derivatives, exchange-traded derivatives (ETD) and securities financing transactions (SFT), comprised of securities lending and reverse repurchase agreements.

Banking products

The breakdowns of our banking product exposures are shown before and after allowances and provisions for credit losses and related single-name credit hedges. The effect of portfolio hedges, such as index CDS, is not reflected. Guarantees and loan commitments are shown on a notional basis, without applying credit conversion factors.

Total gross banking products exposure increased to CHF 453 billion as of 31 December 2013 compared with CHF 441 billion at the end of 2012, mainly due to increases in balances with central banks and in the loan books of Wealth Management and Wealth Management Americas, which were only partly offset by reductions in Retail & Corporate and the Legacy Portfolio.

Wealth Management

Gross banking products exposure within Wealth Management increased to CHF 102 billion as of 31 December 2013 compared with CHF 92 billion as of 31 December 2012, in line with our strategy to grow this business.

Our Wealth Management loan portfolio is mainly secured by securities, residential property and cash as outlined in the table "Wealth Management: composition of loan portfolio, gross." The majority of loans secured by securities were of high quality, with 95% as of 31 December 2013 (91% as of 31 December 2012) rated investment grade, based on our internal ratings.

The portfolio of mortgage loans secured by properties outside Switzerland continued to grow to CHF 4.5 billion as of 31 December 2013 from CHF 3.4 billion at the end of the prior year. The overall quality of this portfolio remains high, with an average loan-to-value (LTV) ratio of 57% in Europe and 42% in Asia Pacific. There were no credit losses within the portfolio in 2013.

Wealth Management Americas

Gross banking products exposure within Wealth Management Americas increased to CHF 38 billion as of 31 December 2013 from CHF 35 billion as of 31 December 2012. This exposure largely relates to loans secured by securities and residential mortgage loans.

The majority of loans secured by marketable securities were of high quality, with 81% as of 31 December 2013 (87% as of 31 December 2012) rated investment grade, based on our internal ratings.

The mortgage loan portfolio consists primarily of residential mortgages offered in all US states. Exposure continued to grow to CHF 5.6 billion as of 31 December 2013 from CHF 3.5 billion at the end of the prior year. The overall quality of this portfolio remains high with an average LTV of 58%, and we have experienced no credit losses since the inception of the mortgage program. The five largest geographic concentrations in the portfolio are in California (32%), New York (16%), Florida (8%), Connecticut (4%) and New Jersey (4%).

The credit risk exposure arising from the credit card business was CHF 161 million as of 31 December 2013 compared with CHF 152 million at the end of the prior year.

Banking products exposure as of 31 December 2012 was restated to reflect the transfer of cash balances from Wealth Management Americas to Group Treasury during the third quarter of 2013.

There was an increase in the amount of impaired loans, to CHF 40 million as of 31 December 2013 from CHF 15 million at the end of the prior year, as a result of impairments of securities-backed loan facilities collateralized by Puerto Rico municipal securities and related funds. Securities-backed lending facilities provided by Wealth Management Americas to its customers and repurchase agreements with institutional clients are, in part, collateralized by Puerto Rico municipal securities and closed-end funds primarily invested in Puerto Rico municipal securities. This collateral is subject to lending value haircuts and daily margining. Our total lending exposure against Puerto Rico municipal securities and closed-end fund collateral as of 31 December 2013 was approximately USD 1.0 billion. This collateral had a market value of approximately USD 2.2 billion as of 31 December 2013. For a significant number of these loans, UBS has recourse to the borrower. UBS also has direct exposure to Puerto Rico municipal securities and related funds arising from its secondary market activities, which was less than USD 50 million at 31 December 2013. UBS acts as investment manager for, and is the primary liquidity provider in the market for shares of, a number of affiliated closed-end funds invested in Puerto Rico municipal securities. These funds use leverage, which is currently provided primarily through repurchase agreements between the funds and third-party institutions, through short-term secured debt obligations, and by UBS through the aforementioned repurchase agreements.

Retail & Corporate

Gross banking products exposure within Retail & Corporate was CHF 156 billion as of 31 December 2013 compared with CHF 159 billion as of 31 December 2012.

Retail & Corporate's gross loan portfolio decreased to CHF 136 billion from CHF 137 billion at the end of the prior year. The composition of the Retail & Corporate loan portfolio was largely unchanged over the year. At year-end 2013, 93% of this portfolio was secured by collateral, mainly residential and commercial property. Based on our internal ratings, 54% of the unsecured loan portfolio was rated investment grade. Of the total unsecured amount, 60% related to cash flow-based lending to corporate counterparties and approximately a quarter related to lending to public authorities. At the end of the year, and based on our internal ratings, approximately 64% of Retail & Corporate's net banking products exposure was classified as investment grade compared with 69% in the prior year, with over 80% of this portion categorized in the lowest loss given default (LGD) bucket of 0% to 25%. Our Swiss mortgage portfolio, which is managed together with Swiss mortgage loans originated through our Wealth Management business, is discussed further below. Rating tools and LGD for real estate exposures were recalibrated during the year to take the Swiss real estate crisis of the 1990s into account. As a result, the overall profile of exposures shifted towards sub-investment grade and higher LGD.

Our Swiss corporate lending portfolio consists of loans to multinational counterparties and corporates. Although this portfolio is well-diversified across industries, these Swiss counterparties are, in general, highly reliant on the domestic economy and the economies to which they export. The EUR/CHF exchange rate, for which the Swiss National Bank has maintained a target minimum rate of CHF 1.20 since September 2011, is an important risk factor for Swiss corporates engaged in exports, predominantly to the European Union (EU). We are also closely monitoring the implications of any return of crisis conditions within the eurozone on export markets, and the potential implications of the recent decision to reinstate immigration quotas for EU/EEA countries.

The delinquency ratio, being the ratio of past due but not impaired loans to total loans, was 0.9% for the corporate loan portfolio as of 31 December 2013 compared with 0.7% as of 31 December 2012.

➔ **Refer to "Credit risk models" in this section for more information on LGD, rating grades and rating agency mappings**

➔ **Refer to "Changes to models and model parameters during the period" in this section for more information on the recalibration of the rating tools and LGD for real estate exposures**

Our largest loan portfolio continues to be our mortgage loan portfolio secured by residential and commercial real estate in Switzerland. These mortgage loans mainly originate from Retail & Corporate but also include mortgage loans originating from Wealth Management. The majority of these mortgage loans, CHF 124 billion, relate to residential properties that the borrower either occupies or rents out and are full recourse to the borrower. Approximately 70% of the Swiss residential mortgage loan portfolio relates to properties occupied by the borrower. The average loan-to-value (LTV) ratio of this portfolio was 53% as of 31 December 2013 compared with 55% as of 31 December 2012. The average LTV for newly originated loans in 2013 was 62% compared with 63% in 2012. The remaining 30% of the Swiss residential mortgage loan portfolio relates to properties rented out by the borrower. The average LTV of this portfolio was 57% as of 31 December 2013 compared with 58% as of 31 December 2012. The average LTV for newly originated loans in 2013 was 59% compared with 56% in 2012.

As illustrated by the table "Swiss mortgages: distribution of net exposure at default (EAD) across exposure segments and loan-to-value (LTV) buckets," over 99% of the aggregate amount of Swiss residential mortgage loans would continue to be covered by the real estate collateral even if the value assigned to that collateral were to decrease by 20%. In this table, the amount of each mortgage loan is allocated across the LTV buckets to indicate the portion at risk at the various value levels shown. For example, a loan of 75 with an LTV ratio of 75% (collateral value of 100) would result in allocations of 30 in the less than 30% bucket, 20 in the 31–50% bucket, 10 in the 51–60% bucket, 10 in the 61–70% bucket and five in the 71–80% bucket.

The delinquency ratio for the Swiss mortgages portfolio was approximately 0.5% as of 31 December 2013, unchanged from the end of the prior year.

Global Asset Management

Gross banking products exposure within Global Asset Management was less than CHF 1 billion as of 31 December 2013.

Investment Bank

The Investment Bank's lending activities are largely associated with corporates and non-bank financial institutions, which is broadly diversified across industry sectors, but concentrated in North America.

The gross banking products exposure of the Investment Bank decreased to CHF 61 billion as of 31 December 2013 compared with CHF 79 billion as of 31 December 2012.

The Investment Bank actively manages the credit risk of this portfolio and, as of 31 December 2013, held CHF 9.8 billion of single-name CDS hedges against its exposures to corporates and other non-banks, a decrease compared with CHF 19.5 billion at the end of 2012. In addition, the Investment Bank held CHF 396 million of loss protection from the subordinated tranches of structured credit protection which is not reflected in the table.

Net banking products exposure, excluding balances with central banks and the vast majority of due from banks and after allowances, provisions and hedges, reduced to CHF 42.3 billion as of 31 December 2013 from CHF 48.9 billion at the end of 2012. At the end of the year and based on our internal ratings, 57% of the Investment Bank's net banking products exposure was classified as investment

Investment Bank: banking products[1]

grade compared with 59% at the end of the prior year. The majority of the Investment Bank's net banking products exposure had estimated LGD of between 0% and 50%.

➔ **Refer to "Credit risk models" in this section for more information on LGD, rating grades and rating agency mappings**

Corporate Center – Core Functions

Gross banking products exposure within Corporate Center – Core Functions increased by CHF 18 billion to CHF 82 billion. This exposure arises in connection with treasury activities and primarily consists of balances with central banks.

Corporate Center – Non-core and Legacy Portfolio

➔ **Refer to "Corporate Center – Non-core and Legacy Portfolio" in this section for more information**

Traded products

Exposures to OTC derivatives are generally measured as net positive replacement values after the application of legally enforceable netting agreements and the deduction of cash collateral. Exchange-traded derivatives (ETD) exposures take into account initial and daily variation margins. Securities financing exposures are reported taking into account collateral received.

The majority of the credit risk arising from traded products relates to OTC derivatives, primarily within Corporate Center – Non-core and Legacy Portfolio and the Investment Bank. As counterparty risk for traded products exposure is managed at a counterparty level, no split between exposures in the Investment Bank and those in Non-core and Legacy Portfolio is provided. The tables below provide information on our OTC derivative exposures across the Investment Bank and Corporate Center – Non-core and Legacy Portfolio.

Credit risk arising from traded products, after the effects of master netting agreements but excluding credit valuation adjustments and hedges, decreased by CHF 6 billion to CHF 50 billion. This decrease reflected continued progress in managing down credit risks within Corporate Center – Non-core and Legacy Portfolio.

Investment Bank and CC – Non-core and Legacy Portfolio: OTC derivatives exposure[1]

Credit risk mitigation

Audited We actively manage the credit risk in our portfolios by taking collateral against exposures and by utilizing credit hedging.

Lending secured by real estate

Audited We use a scoring model as part of a standardized front-to-back process to support credit decisions for the origination or modification of Swiss mortgage loans. The two key factors within this model are an affordability calculation relative to gross income and the loan-to-value (LTV) ratio. The calculation of affordability takes into account interest payments, minimum amortization requirements, potential property maintenance costs and, in the case of properties expected to be rented out, the level of rental income. Interest payments are estimated using a predefined framework, which takes into account the potential for significant increases in interest rates during the lifetime of the loan.

For properties occupied by the borrower, the maximum LTV allowed within the standard approval process is 80%. This is reduced to 60% in the case of vacation properties and luxury real estate. For properties rented out by the borrower, the maximum LTV allowed within the standard approval process ranges from 60% to 80%, depending on the type of property, the age of the property and the amount of any renovation work required.

Audited The value assigned by UBS to each property is based on the lowest value determined based on internally calculated valuations, the purchase price and, in some cases, an additional external valuation. We use two separate models provided by a market-leading external vendor to derive property valuations for owner-occupied residential properties (ORP) and income-producing real estate. For ORP, we estimate the current value of properties by using a regression model (hedonic model) to compare detailed characteristics for each property against a database of property transactions. In addition to the model-derived values, valuations for ORP are updated annually throughout the lifetime of the loan by using region-specific real estate price indices. The price indices are sourced from an external vendor and are subject to internal validation and benchmarking against two other external vendors. On an annual basis, we use these valuations to compute indexed LTV for all ORP and consider these together with other risk measures (e.g., rating migration and behavioral information) to identify higher-risk loans, which are then reviewed manually by client advisors and credit officers and actions are taken where considered necessary.

For income-producing real estate, a capitalization model is used to determine the property valuation by discounting estimated sustainable future income using a capitalization rate based on various attributes. These attributes consider regional as well as specific property characteristics such as market and location data (e.g., vacancy rates), benchmarks (e.g., for running costs) and certain other standardized input parameters (e.g., property condition). Rental income from properties is reviewed, at a minimum, once every three years but indications of significant changes in the amount of rental income or the level of vacancy rate can trigger an interim reappraisal.

To take market developments into account for these models, the external vendor regularly updates the parameters and/or refines the architecture for each model. Model changes and parameter updates are subject to the same validation procedures as for our internally developed models.

Audited We similarly apply underwriting guidelines for our Wealth Management Americas mortgage loan portfolio to ensure affordability of the loans and sufficiency of collateral. These include the following: maximum loan amounts, maturities and LTV limits by type of property, debt-to-income limits, required reserves as a percentage of proposed loan amounts and appropriate credit score guidelines. The maximum LTV allowed within the standard approval process ranges from 45% to 80% depending on property type and overall loan size.

➔ **Refer to "Retail & Corporate" in "Credit risk profile of the Group – Internal risk view" in this section for more information on LTV in our Swiss mortgage portfolio**

➔ **Refer to "Wealth Management Americas" in "Credit risk profile of the Group – Internal risk view" in this section for more information on LTV in our Wealth Management Americas mortgage portfolio**

Exposures secured by other forms of collateral

Audited Lombard loans and other lending such as securities financing transactions are secured against the pledge of eligible marketable securities, guarantees and other forms of collateral. Eligible financial securities primarily include transferable securities (such as bonds and equities), which are liquid and actively traded, and other transferable securities such as approved structured products for which regular prices are available and for which the issuer of the security provides a market.

We apply discounts (haircuts) to reflect the collateral's risk and to derive the "lending value." Haircuts for eligible marketable securities are calculated to cover the possible change in the market value over a given close-out period and confidence level. For less liquid instruments such as structured products and certain bonds, and for products with long redemption periods, the close-out period might be much longer than that for highly liquid instruments, resulting in a higher haircut. For cash, life insurance policies and guarantees/letters of credit, haircuts are determined on a product-/client-specific basis. Where such products are held with a third party, a further haircut is applied to cover any related operational risks and the potential cost of closing out such collateral.

Audited We also consider concentration risks across collateral pledged. A concentration of collateral in single securities, issuers or issuer groups, industry sectors, countries, regions or currencies may result in higher risk and reduced liquidity. In such cases, transactions are subject to a higher level of credit approval and the lending value of the collateral, margin call and close-out levels are adjusted accordingly.

Exposures and collateral values are monitored on a daily basis to ensure that the credit exposure continues to be covered by sufficient collateral. A shortfall occurs when the lending value drops

below the exposure. If a shortfall exceeds a defined trigger level, a margin call is initiated, requiring the client to provide additional collateral, reduce the exposure or take other action to bring exposure in line with the lending value of the collateral. If the shortfall widens, or is not corrected within the required period, a close-out is initiated, through which collateral is liquidated, open derivative positions are closed and guarantees or letters of credit are called.

We also conduct stress testing of collateralized exposures to simulate market events which increase the risk of collateral shortfalls and unsecured exposures by significantly reducing the value of the collateral, increasing the exposure of traded products, or both. The results are monitored against thresholds at a portfolio level and, in some cases, at an individual client level.

➔ Refer to "Stress loss" in "Credit risk models" in this section for more information on our stress testing

Audited

Our OTC derivatives trading is conducted through central counterparties (CCP) where practicable. Where CCP are not used, we have clearly defined processes for entering into netting and collateral arrangements, including the requirement to have a legal opinion on the enforceability of contracts in relevant jurisdictions in the case of insolvency. Trading is generally conducted under bilateral International Swaps and Derivatives Association (ISDA) or ISDA-equivalent master netting agreements, which allow for the close-out and netting of all transactions in the event of default. For certain major market participant counterparties, we may in addition use two-way collateral agreements under which either party can be required to provide collateral in the form of cash or marketable securities, typically limited to well-rated government debt, when the exposure exceeds specified levels.

➔ Refer to "Note 14 Derivative instruments and hedge accounting" in the "Financial information" section of this report for more information on our OTC derivatives settled through CCP

➔ Refer to "Note 26 Offsetting financial assets and financial liabilities" in the "Financial information" section of this report for more information on the effect of netting and collateral arrangements on our derivative exposures

Credit hedging

Audited

We utilize single-name credit default swaps CDS, credit index CDS, bespoke protection, and other instruments to actively manage credit risk in the Investment Bank and Corporate Center – Non-core and Legacy Portfolio. This is aimed at reducing concentrations of risk from specific counterparties, sectors or portfolios.

We maintain high standards for taking credit hedges into account for credit risk mitigation purposes. For example, when monitoring exposures against limits, we do not usually recognize credit risk mitigants such as proxy hedges (credit protection on a correlated but different name) or credit index CDS. Buying credit protection also creates credit exposure against the protection provider. We monitor our exposures to credit protection providers and the effectiveness of credit hedges as part of our overall credit exposures to the relevant counterparties. In addition, we identify and monitor positions where we believe there is significant exposure and correlation between the counterparty and the hedge provider (so-called wrong-way risk). Our policy is to discourage such activity, and in any event or as market correlations may change, not to recognize hedge benefits subject to wrong-way risk within counterparty limits and credit exposure-related capital calculations.

➔ Refer to "Note 14 Derivative instruments and hedge accounting" in the "Financial information" section of this report for more information

Mitigation of settlement risk

To mitigate settlement risk, we reduce our actual settlement volumes through the use of multilateral and bilateral agreements with counterparties, including payment netting.

Our most significant source of settlement risk is foreign exchange transactions. We are a member of Continuous Linked Settlement, a foreign exchange clearing house which allows transactions to be settled on a delivery-versus-payment basis, thereby significantly reducing foreign exchange-related settlement risk relative to the volume of business. The mitigation of settlement risk through Continuous Linked Settlement membership and other means does not eliminate our credit risk in foreign exchange transactions (resulting from changes in exchange rates prior to settlement), which is managed as part of our overall credit risk management of OTC derivatives.

Credit risk models

Audited

We have developed tools and models in order to estimate future credit losses that may be implicit in our current portfolio.

Exposures to individual counterparties are measured based on three generally accepted parameters: probability of default (PD), loss given default (LGD) and exposure at default (EAD). For a given credit facility, the product of these three parameters results in the 12 months' expected loss. These parameters are the basis for the majority of our internal measures of credit risk, and are key inputs for the regulatory capital calculation under the advanced internal ratings-based approach of the Basel III framework governing international convergence of capital. We also use models to derive the portfolio credit risk measures of expected loss, statistical loss and stress loss.

The table on the next page summarizes the key features of the models that we use to derive PD, LGD and EAD for our main portfolios and is followed by more detailed explanations of these parameters.

➔ Refer to the "Supplemental disclosures required under Basel III Pillar 3 regulations" section of this report for more information on the regulatory capital calculation under the advanced internal ratings-based approach

Probability of default

The PD is an estimate of the likelihood of a counterparty defaulting on its contractual obligations over the next 12 months. PD

Risk, treasury and capital management

ratings are used for credit risk measurement and as an important input for determining credit risk approval authorities.

PD is assessed using rating tools tailored to the various categories of counterparties. Statistically developed score cards, based on key attributes of the obligor and any associated collateral, are used to determine PD for many of our corporate clients and for loans secured by real estate. Where available, market data may also be used to derive the PD for large corporate counterparties. For Lombard loans, Merton-type model simulations taking into account potential changes in the value of securities collateral are used in our rating approach. These categories are also calibrated to our internal credit rating scale (masterscale), which is designed to ensure a consistent assessment of default probabilities across counterparties. Our masterscale expresses one-year default probabilities that we determine through our various rating tools by means of distinct classes, whereby each class incorporates a range of default probabilities. Counterparties migrate between rating classes as our assessment of their PD changes.

The ratings of the major credit rating agencies, and their mapping to our internal rating masterscale and internal PD bands, are shown in the table "Internal UBS rating scale and mapping of external ratings" below. The mapping is based on the long-term average of one-year default rates available from the rating agencies. For each external rating category, the average default rate is

Key features of our main credit risk models

	Portfolio in scope	Model approach	Main drivers	Number of years loss data
Probability of default	Swiss owner-occupied mortgages	Score card	Behavioral data, affordability relative to income, property type, loan-to-value	19
	Income Producing Real Estate mortgages	Transaction rating	Loan-to-value, debt-service-coverage	19
	Lombard lending	Merton type	Loan-to-value, portfolio volatility	5–10
	Retail & Corporate – Corporates	Score card	Financial data including balance sheet ratios and profit and loss, and qualitative risk factors	15
	Investment Bank – Banks	Score card	Financial data including balance sheet ratios and profit and loss	5–10
	Investment Bank – Corporates	Score card / market data	Financial data including balance sheet ratios and profit and loss, and market data	5–10
Loss given default	Swiss owner-occupied mortgages	Actuarial model	Historical observed loss rates, loan-to-value, property type	19
	Income Producing Real Estate mortgages	Actuarial model	Historical observed loss rates	19
	Lombard lending	Actuarial model	Portfolio volatility, portfolio illiquidity	5–10
	Investment Bank – all counterparties	Actuarial model	Counterparty and facility specific, including industry segment, collateral, seniority, legal environment and bankruptcy procedures	5–10
Exposure at default	Banking products	Statistical model	Exposure type (committed credit lines, revocable credit lines, contingent products)	> 10
	Traded products	Statistical model	Product specific market drivers, e.g., interest rates	> 10

compared with our internal PD bands to derive a mapping to our internal rating scale. Our internal rating of a counterparty may, therefore, diverge from one or more of the correlated external ratings shown in the table. Observed defaults by rating agencies may vary through economic cycles, and we do not necessarily expect the actual number of defaults in our equivalent rating band to equal the rating agencies' average in any given period. We periodically assess the long-term average default rates of credit rating agencies' grades, and we adjust their mapping to our masterscale as necessary to reflect any material changes.

Loss given default

Loss given default (LGD) is the magnitude of the likely loss if there is a default. LGD estimates include loss of principal, interest and other amounts (such as workout costs, including the cost of carrying an impaired position during the workout process) less recovered amounts. We determine LGD based on the likely recovery rate of claims against defaulted counterparties, which depends on the type of counterparty and any credit mitigation by way of collateral or guarantees. Our estimates are supported by our internal loss data and external information where available. Where we hold collateral, such as marketable securities or a mortgage on a property, loan-to-value ratios are a key parameter in determining LGD.

Exposure at default

Exposure at default (EAD) represents the amount we expect to be owed by a counterparty at the time of a possible default. We derive EAD from our current exposure to the counterparty and the possible future development of that exposure.

The EAD of a loan is the drawn or face value of the loan. For loan commitments and guarantees, the EAD includes the amount drawn as well as potential future amounts that may be drawn, which are estimated based on historical observations.

For traded products, we derive the EAD by modeling the range of possible exposure outcomes at various points in time using scenario and statistical techniques. We assess the net amount that may be owed to us or that we may owe to others, taking into account the impact of market moves over the potential time it would take to close out our positions. For exchange-traded derivatives, our calculation of EAD takes into account initial and daily variation margins. When measuring individual counterparty exposure against credit limits, we consider the maximum likely exposure measured to a high level of confidence. However, when aggregating exposures to different counterparties for portfolio risk measurement purposes, we use the expected exposure to each counterparty at a given time period (usually one year) generated by the same model.

We assess our exposures where there is a material correlation between the factors driving the credit quality of the counterparty and those driving the potential future value of our traded product exposure (wrong-way risk), and we have established specific controls to mitigate these risks.

Expected loss

Credit losses are an inherent cost of doing business, but the occurrence and amount of credit losses can be erratic. In order to quantify future credit losses that may be implicit in our current portfolio, we use the concept of expected loss.

Expected loss is a statistical measure used to estimate the average annual costs we expect to experience from positions that become impaired. The expected loss for a given credit facility is a function of the three components described above: PD, EAD and LGD. We aggregate the expected loss for individual counterparties to derive our expected portfolio credit losses.

Expected loss is the basis for quantifying credit risk in all our portfolios. It is also the starting point for the measurement of our portfolio statistical loss and stress loss.

We use a statistical modeling approach to estimate the loss profile of each of our credit portfolios over a one-year period to a specified level of confidence. The mean value of this loss distribution is the expected loss. The loss estimates deviate from the mean value due to statistical uncertainty on the defaulting counterparties and to systematic default relationships among counterparties within and between segments. The statistical measure is sensitive to concentration risks on individual counterparties and groups of counterparties. The outcome provides an indication of the level of risk in our portfolio and the way it may develop over time.

Stress loss

We complement our statistical modeling approach with scenario-based stress loss measures. Stress tests are run on a regular basis to monitor the potential impact of extreme but nevertheless plausible events on our portfolios, under which key credit risk parameters are assumed to deteriorate substantially. Where we consider it appropriate, we apply limits on this basis.

Stress scenarios and methodologies are tailored to the nature of the portfolios, ranging from regionally focused to global systemic events, and varying in time horizon. For example, for our loan underwriting portfolio, we apply a global market event under which, simultaneously, the market for loan syndication freezes, market conditions significantly worsen, and credit quality deteriorates. Similarly, for Lombard lending, we apply a range of scenarios representing instantaneous market shocks to all collateral positions, taking into consideration their liquidity and potential concentrations. The portfolio-specific stress test for our mortgage lending in Switzerland reflects a multi-year event and the overarching stress test for global wholesale and counterparty credit risk to corporates uses a one-year global stress event and takes into account exposure concentrations to single counterparties.

➔ **Refer to "Stress testing" in this section for more information on our stress testing framework**

Credit risk model validation

Applied models and methodologies must be approved and regularly reviewed in accordance with regulatory requirements as well

as internal policies to ensure that models perform as expected, produce results consistent with real events and values, and reflect best-in-practice approaches as well as recent academic developments. Accordingly, we assess whether the model is performing satisfactorily, additional analysis is required, or recalibration or redevelopment need to be performed. Results and conclusions are presented to the relevant governance body and, as required, to regulators.

The ongoing process of assessing model quality and performance in the production environment comprises two components: model verification, being the initial and regular assessment of the model's conceptual soundness, performed by the internal Independent Verification Unit (IVU), and model confirmation, representing the regular process of checking the accuracy and appropriateness of the model output and its application, carried out by the model developers and reviewed by the IVU.

Our approach to model confirmation involves both quantitative methods, including monitoring compositional changes in the portfolios and the results of backtesting, and qualitative assessments, including feedback from users on the model output as a practical indicator of the performance and reliability of the model.

Material changes in a portfolio composition may invalidate the conceptual soundness of the model. We therefore perform regular analysis of the evolution of portfolios to identify such changes in the structure and credit quality of portfolios. This includes analysis of changes in key attributes, changes in portfolio concentration measures, as well as changes in RWA.

Backtesting

We monitor the performance of our models by backtesting and benchmarking them, whereby model outcomes are compared with actual results, based on our internal experience as well as externally observed results. We take a portfolio (or sub-portfolio or rating bucket) approach to determine whether behavior observed is in line with that predicted by our models.

For PD, we use statistical modeling to derive a distribution of expected number of defaults. The observed number of defaults is then compared with this distribution, allowing us to derive a sta-

1 Average of all observations over the last five years. 2 Minimum / maximum annual average of observations in any single year from the last five years. Yearly averages are only calculated where five or more observations occurred during that year. 3 Reported averages are low due to the impact of managed funds, which have relatively low default rates. 4 For Lombard lending, the minimum and maximum annual observations for LGD relate to 2009, being the only year in which five or more defaults were observed. Due to the low number of defaults over this period, the observed averages are not meaningful comparators to the equivalent estimated average, which is calibrated using a larger data set spanning a longer historical period.

tistical level of confidence in the model accuracy. In addition, we derive a lower and upper bound for the average default rate. If the portfolio average PD lies outside the derived interval, the rating tool is, as a general rule, recalibrated.

We apply a similar approach to assess the predictive power of our simulations of potential future exposures for traded products such as OTC derivatives.

For LGD, we compute the difference between observed and estimated LGD for defaulted counterparties with the expectation that, for each specific LGD model, the distribution of those differences is symmetric around zero with a small dispersion. Models are recalibrated where these differences are outside expectations.

Credit conversion factors (CCF), used for the calculation of EAD for undrawn facilities with corporate counterparties, are dependent on several contractual dimensions of the credit facility. Similar to our approach for PD, we compare the predicted amount drawn with observed historical utilization of such facilities for defaulted counterparties. If any statistically significant deviation is observed, the relevant CCF are redefined.

The table on the previous page compares the current model calibration for PD, LGD and CCF with historical observed values over the last five years.

Changes to models and model parameters during the period

As part of our continuous efforts to enhance models to reflect market developments and new available data, certain models have been modified in the course of 2013. The rating and LGD models for residential mortgages have been enhanced to increase the extent to which they take into account the availability of clients' behavioral data. A new model has been implemented for rating large multinationals, taking into account extended market information, research and analysis to assess the creditworthiness of the counterparty. To meet Basel III requirements, developments have been made in the context of the derivatives future exposure calculations, with new models for the calculation of the future close-out risk and CVA. Where required, changes to models and model parameters are approved by FINMA prior to implementation.

Comparison of actual versus expected loss

In addition to the above comparison of estimated with observed parameter values, the table below provides a breakdown over the last five years of the one-year expected loss estimate on our credit portfolios (covering banking and traded products) and the actual IFRS credit loss amount (including CVA on derivatives) charged against our income statement, according to BIS-defined exposure segments of the advanced internal ratings-based approach.

Although such a comparison may provide some insight, comparison between expected and actual losses has certain limitations and the two measures may not be directly comparable. For example, our estimates of expected loss are calibrated on a "through-the-cycle" basis, taking into account observed losses over a prolonged historical period. In contrast, the actual loss figures presented are a "point-in-time" view of our credit loss expenses, equal to the amount charged to the income statement in a specific financial year. Furthermore, the estimated expected loss at the start of the period assumes that the portfolio will be unchanged throughout the coming year. In reality, the portfolio composition changes on an ongoing basis, affecting the actual loss experience.

Total expected loss and actual credit loss

	Expected loss	**Actual loss**	Expected loss	Actual loss	Expected loss	Actual loss	Expected loss	Actual loss	Expected loss	Actual loss

Policies for past due, non-performing and impaired claims

Audited

The diagram below illustrates how we categorize banking products and securities financing transactions as performing, non-performing or impaired. For products accounted for on a fair value basis, such as OTC derivatives, credit deterioration is recognized through a CVA, and these products are therefore not subject to the below impairment framework.

We consider a claim to be past due when a contractual payment has not been received by its contractual due date. This includes account overdrafts where the credit limit is exceeded. Past due claims are not considered impaired where we expect to collect all amounts due under the contractual terms of the claims.

A past due claim is considered non-performing when the payment of interest, principal or fees is overdue by more than 90 days. Claims are also classified as non-performing when insolvency proceedings/enforced liquidation have commenced or obligations have been restructured on preferential terms, such as preferential interest rates, extension of maturity or subordination. Non-performing claims are rated as being in counterparty default on our internal rating scale.

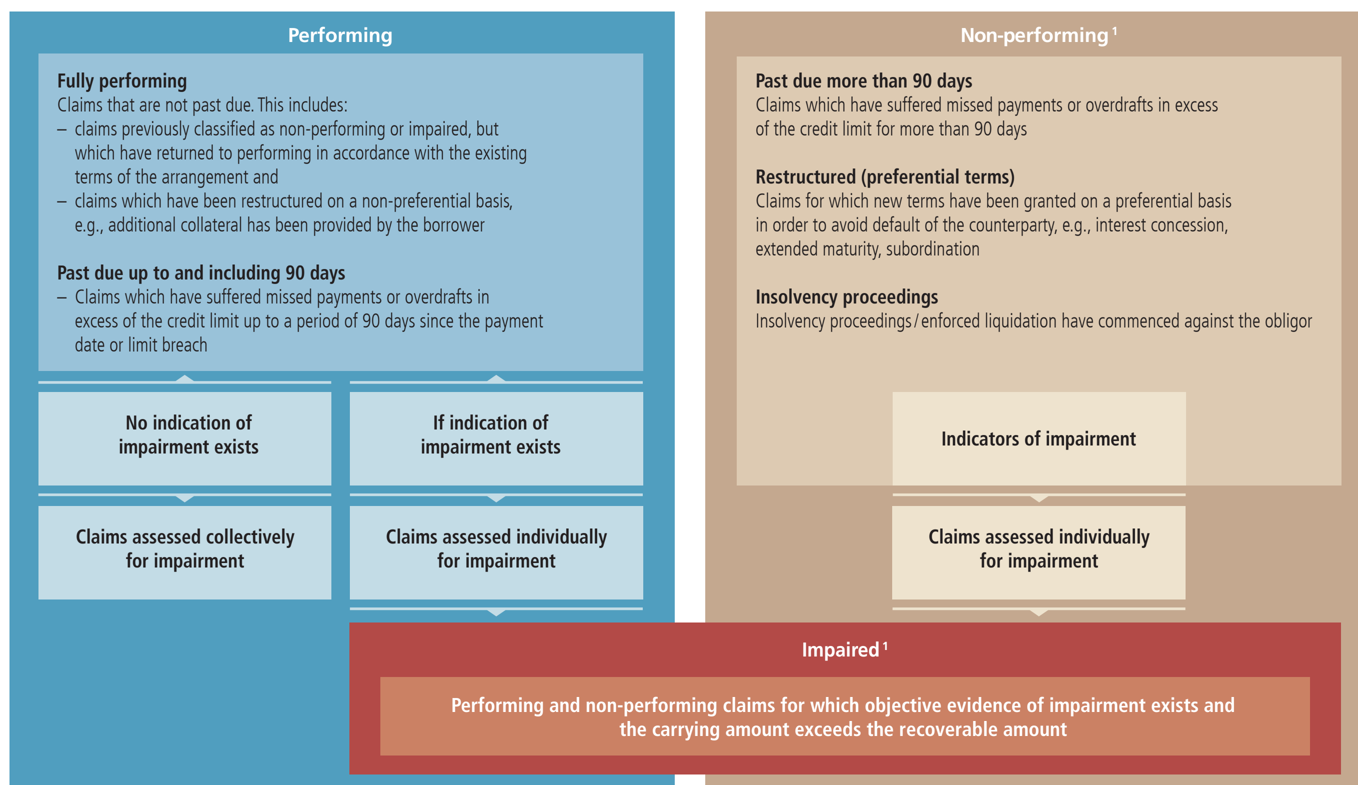
Individual claims are classified as impaired if, following an individual impairment assessment, their carrying amount exceeds the recoverable amount, where the recoverable amount is defined as the present value of the expected cash flows relating to the exposures. Accordingly, both performing and non-performing loans may be classified as impaired.

Restructured claims

Due to low volumes of distressed claims, we do not operate a general policy for restructuring claims in order to avoid default of the counterparty. Where restructuring does take place, we assess each case individually. Typical features of terms and conditions granted through restructuring to avoid default may include the provision of special interest rates, postponement of interest or principal payments, modification of the schedule of repayments or amendment of loan maturity.

If a loan is restructured with preferential conditions (i.e., new terms and conditions are agreed which do not meet the normal current market criteria for the quality of the obligor and the type of loan), the claim is still classified as non-performing and is rated as being in counterparty default. It will remain so until the loan is

Exposure categorization



1 Claims rated as in default. All such claims are excluded from collective impairment assessment.

Audited

collected, written off or non-preferential conditions are granted that supersede the preferential conditions, and will be assessed for impairment on an individual basis.

If a loan is restructured with non-preferential conditions (e.g., additional collateral is provided by the client, or new terms and conditions meet the normal market criteria for the quality of the obligor and the type of loan), the loan is classified as performing, but assessed for impairment on an individual basis. Management regularly reviews all loans to ensure that all criteria according to the loan agreement continue to be met and that future payments are likely to occur.

Individual and collective impairment assessments

Audited

Claims are assessed individually for impairment where there are indicators that an impairment may exist. Otherwise claims are included in a collective impairment assessment.

Individual impairment

Audited

Non-performing status is considered an indicator that a loan may be impaired and therefore all non-performing claims are assessed individually for impairment. However, an impairment analysis would be carried out irrespective of non-performing status if other objective evidence indicates that a loan may be impaired. Any event that impacts current and future cash flows may be an indication of impairment and trigger an assessment by the risk officer. Such events may be (i) significant collateral shortfalls due to a fall in lending values (securities and real estate), (ii) increase in loan or derivative exposures, (iii) significant financial difficulties of a client and (iv) high probability of bankruptcy, debt moratorium or financial reorganization of the client.

Individual claims are assessed for impairment based on the borrower's character, overall financial condition, resources and payment record, the prospects for support from any financially responsible guarantors, and where applicable, the realizable value of any collateral. The recoverable amount is determined from all relevant cash flows and, where this is lower than the carrying amount of the claim, the claim is considered impaired. We consider a reclassified security an impaired loan if the carrying value at the balance sheet date is, on a cumulative basis, 5% or more below the carrying value at the reclassification date adjusted for redemptions.

We have established processes to ensure that the carrying values of impaired claims are determined in compliance with IFRS requirements. Our credit controls applied to valuation and workout are the same for both amortized cost and fair-valued credit products. Our workout strategy and estimation of recoverable amounts are independently approved in accordance with our credit authorities.

Collective impairment

Audited

We assess our portfolios of claims carried at amortized cost with similar credit risk characteristics for collective impairment in order to consider if these portfolios contain impaired claims that cannot yet be individually identified. To cover the time lag between the occurrence of an impairment event and its identification based on the policies above, we establish collective loan loss allowances based on the estimated loss for the portfolio over the average period between trigger events and the identification of any individual impairment. These portfolios are not considered impaired loans in the tables shown in the composition of credit risk for business divisions above.

Additionally, for all of our portfolios we assess whether there have been any developments which might result in event-driven impairments that are not immediately observable. These events could be stress situations, such as a natural disaster or a country crisis, or they could result from significant changes in the legal or regulatory environment. To determine whether a collective impairment exists, we regularly use a set of global economic drivers to assess the most vulnerable countries and review the impact of any potential impairment event.

Recognition of impairment

Audited

The recognition of impairment in our financial statements depends on the accounting treatment of the claim. For claims carried at amortized cost, impairment is recognized through the creation of an allowance, or in the case of off-balance sheet items such as guarantees and loan commitments through a provision, both charged to the income statement as a credit loss expense. For derivatives, which are carried at fair value, a deterioration of the credit quality is recognized through a CVA charged to the income statement through the *Net trading income* line.

➔ Refer to "Note 1 Significant accounting policies" and "Note 24a Valuation principles" in the "Financial information" section of this report for more information on allowances and provisions for credit losses and credit valuation adjustments

Market risk

Key developments during the period

We maintained a low level of market risk in our trading businesses, with the risk profile of the Investment Bank reducing and moving towards less complex and more client-oriented businesses. Average exposure levels of our stress loss and statistical (value-at-risk) measures roughly halved over the course of the year.

Main sources of market risk

Audited

- Market risks arise from both our trading and non-trading business activities.
- Trading market risks arise mainly in connection with securities and derivatives trading for market-making and client facilitation purposes within our Investment Bank, and from remaining positions within Non-core and Legacy Portfolio.
- Trading market risk also arises from our municipal securities trading business within Wealth Management Americas.
- Non-trading market risk arises predominantly in the form of interest rate and foreign exchange risks in connection with our retail banking and lending in our wealth management businesses, our retail and corporate banking businesses in Switzerland and the Investment Bank's lending business, in addition to treasury activities.
- Group Treasury assumes market risks in the process of managing interest rate and structural foreign exchange risks and the funding and liquidity profile of the Group.
- Equity and debt investments can also give rise to market risks, as can some aspects of our employee benefits such as defined benefit pension schemes.

Overview of measurement, monitoring and management techniques

Audited

- Market risk limits are set for the Group, the business divisions and Corporate Center and at granular levels within the various business lines, reflecting the nature and magnitude of the market risks.
- Our primary portfolio measures of market risk are liquidity adjusted stress (LAS) loss and value-at-risk (VaR). Both are common to all our business divisions and subject to limits that are approved by the Board of Directors (BoD).
- These measures are complemented by concentration and granular limits for general and specific market risk factors. Our trading businesses are subject to multiple market risk limits. These limits take into account the extent of market liquidity and volatility, available operational capacity, valuation uncertainty, and, for our single-name exposures, the credit quality of issuers.
- Issuer risk is controlled by limits applied at business division level based on jump-to-zero measures, which estimate our maximum default exposure (the loss in the case of a default event assuming zero recovery).
- Non-trading foreign exchange risks are managed under market risk limits, with the exception of Group Treasury's management of consolidated capital activity discussed in the "Treasury management" section of this report. All foreign exchange risks are included in our Group-wide statistical and stress testing metrics which flow into our risk appetite framework.
- Our Treasury Risk Control function applies a holistic risk framework which sets the appetite for treasury-related risk-taking activities across the Group. A key element of the framework is

Audited

an overarching economic value sensitivity limit, set by the BoD. This limit is linked to the level of Basel III common equity tier 1 (CET1) capital and takes into account risks arising from interest rates, foreign exchange and credit spreads. In addition, the sensitivity of net interest income to changes in interest rates is monitored against targets set by the Group Chief Executive Officer in order to analyze the outlook and volatility of net interest income based on market expected interest rates. Limits are also set by the BoD to balance the impact of foreign exchange movements on our CET1 capital and CET1 ratio. Non-trading interest rate and foreign exchange risks are included in our Group-wide statistical and stress testing metrics which flow into our risk appetite framework. Further information on interest rate risk in the banking book can be found below, and details on Group Treasury's management of foreign exchange risks can be found in the "Treasury management" section of this report.

– Equity and debt investments are subject to a range of risk controls including pre-approval of new investments by business management and Risk Control and regular monitoring and reporting. They are also included in our Group-wide statistical and stress testing metrics which flow into our risk appetite framework.

➔ **Refer to the "Capital management" section of this report for more information on the sensitivity of our CET1 capital and CET1 ratio to currency movements**

Market risk exposures arising from our business activities

The table on the next page highlights the most significant sources of our trading market risk exposures and the interest rate risk on our banking book exposures, categorized according to the business activities that primarily generate the risks and the classification of positions on the balance sheet. In practice, and particularly for positions classified in the banking book, we take account of natural risk offsets that occur between balance sheet line items, for example loans and deposits, and manage the residual exposures. The table does not show the foreign exchange risks arising from Group Treasury's management of consolidated capital activity discussed in the "Treasury management" section of this report. Also shown in the table is the specific capital treatment for positions classified within the regulatory trading book. The amount of capital required to underpin market risk in the regulatory trading book is calculated using a variety of methods approved by FINMA. The components of market risk RWA are value-at-risk (VaR), stressed VaR, an add-on for risks which are potentially not fully modeled in VaR, the incremental risk charge, the comprehensive risk charge for the correlation portfolio and the securitization framework for securitization positions in the trading book. Further information on each of these components follows the table.

● Key contributor ○ Less significant contributor

1 Interest rate risk from Wealth Management and Retail & Corporate loans and deposits is transferred to Group Treasury and reported under Corporate Center – Core Functions in this analysis. 2 Although risk is controlled under the market risk framework, Puerto Rico closed-end fund positions are treated as banking book for capital underpinning purposes due to market illiquidity. 3 Credit spread risk arising from loan underwriting is captured through, and reported as part of, credit risk RWA. 4 Negative market risk RWA are due to diversification effects allocated to Corporate Center – Core Functions. 5 Counterparty credit risk in the valuation of OTC derivative instruments, derivatives embedded in funded assets designated at fair value and derivatives embedded in traded debt instruments is captured through credit valuation adjustment RWA calculated under the advanced IRB or standardized approach and reported as part of credit risk RWA.

Market risk stress loss

We measure and manage our market risks primarily through a comprehensive framework of non-statistical measures and related limits. This includes an extensive series of stress tests and scenario analyses that undergo continuous evaluation to ensure that, if an extreme but nevertheless plausible event were to occur, the resulting losses would not exceed our risk appetite.

Liquidity adjusted stress (LAS)

Our primary measure of stress loss for Group-wide market risk is liquidity adjusted stress (LAS). The LAS framework is designed to capture the economic losses that could arise under specified stress scenarios. This is in part achieved by replacing the standard one-day and 10-day holding period assumptions used for management and regulatory VaR with liquidity adjusted holding periods, as explained below. Shocks are then applied to positions based on the expected market movements over the liquidity adjusted holding periods resulting from the specified scenario.

The holding periods used in LAS are calibrated to reflect the amount of time it would take to flatten the risk of positions in each major risk factor in a stressed environment, assuming maximum utilization of the relevant position limits. Holding periods are also subject to minimum periods, regardless of observed liquidity levels, reflecting the fact that identification of, and reaction to, a crisis may not always be immediate.

The expected market movements are derived using a combination of historical market behavior, based on an analysis of historical events, and forward-looking analysis including consideration of defined scenarios that have not occurred historically.

LAS-based limits are applied at a number of levels: Group-wide, business divisions and Corporate Center, business areas and sub-portfolios. In addition, LAS forms the core market risk component of our combined stress test framework and is therefore integral to our overall risk appetite framework.

Value-at-risk

Audited

Method applied	Historical simulation
Data set	Five years
Holding period	10 days for regulatory VaR, 1 day for internal limits
Confidence level	99% for regulatory VaR, 95% for internal limits – both based on expected tail loss
Population	Regulatory trading book for regulatory VaR, a broader population for internal limits

VaR definition

Audited

Value-at-risk (VaR) is a statistical measure of market risk, representing the market risk losses that could potentially be realized over a set time horizon (holding period) at an established level of confidence. The measure assumes no change in the Group's trading positions over the set time horizon.

We calculate VaR on a daily basis, based on the application of historical changes in market risk factors directly to our current positions – a method known as historical simulation. We use a single VaR model for both determining market risk regulatory capital requirements and internal management purposes, although we consider different confidence levels and time horizons. The regulatory measure of market risk used to underpin the market risk capital requirement under Basel III requires a measure equivalent to a 99% confidence level using a 10-day holding period. For internal management purposes, risk limits are established and exposures are measured using VaR at the 95% confidence level with a one-day holding period, more closely aligned to the way we consider the risks associated with our trading activities.

The population of the portfolio within regulatory and management VaR is slightly different. The population within regulatory VaR meets minimum regulatory requirements for inclusion in regulatory VaR. Management VaR includes a broader population of positions. For example, the credit spread risks from the securitization portfolio are treated instead under the securitization approach for regulatory purposes.

VaR limitations

Audited

Actual realized market risk losses may differ from those implied by our VaR for a variety of reasons.

- The VaR measure is calibrated to a specified level of confidence and may not indicate potential losses beyond this confidence level.
- The 10-day time horizon used in the regulatory VaR measure, or one-day in the case of VaR used for internal management purposes, may not fully capture the market risk of positions that cannot be closed out or hedged within the specified period.
- In certain cases, VaR calculations approximate the impact of changes in risk factors on the values of positions and portfolios. This may happen because the number of risk factors included in the VaR model is necessarily limited. For example, yield curve risk factors do not exist for all future dates.
- The effect of extreme market movements is subject to estimation errors, which may result from non-linear risk sensitivities, as well as the potential for actual volatility and correlation levels to differ from assumptions implicit in the VaR calculations.
- The use of a five-year window means that sudden increases in market volatility will tend not to increase VaR as quickly as the use of shorter historical observation periods, but the increase will impact our VaR for a longer period of time. Similarly, following a period of increased volatility, as markets stabilize, VaR predictions will remain more conservative for a period of time influenced by the length of the historical observation period.

We recognize that no single measure may encompass the entirety of risks associated with a position or portfolio. Consequently, we employ a suite of various metrics with both overlapping and complementary characteristics in order to create a holistic framework which ensures material completeness of risk identification and measurement. As a statistical aggregate risk measure, VaR supplements our comprehensive stress testing framework.

Furthermore, we have an established framework to identify and quantify potential risks that are not fully captured by our VaR model. This framework is explained further on.

VaR model developments in 2013

We made no significant changes to the VaR model during 2013. During the year, we improved the VaR model by integrating selected risk-not-in-VaR items into the VaR model. The impact of incorporating these items into VaR was negligible.

Regulatory VaR for the period

The tables on the next page show minimum, maximum, average and period-end regulatory VaR by business division and Corporate Center and general market risk factor type. The decrease in the Group's regulatory VaR to CHF 38 million from CHF 63 million is primarily a result of risk reductions.

Regulatory value-at-risk (10-day, 99% confidence, 5 years of historical data) by business division and Corporate Center and general market risk factor type[1]

	For the year ended 31.12.13								
CHF million					Equity	Interest rates	Credit spreads	Foreign exchange	Commodities

Derivation of regulatory VaR-based RWA

Regulatory VaR is used to derive the regulatory VaR component of the market risk Basel III RWA, shown in "Table 2: Detailed segmentation of Basel III exposures and risk-weighted assets" in the "Supplemental disclosures required under Basel III Pillar 3 regulations" section of this report. This calculation takes the maximum of the period-end regulatory VaR and the average regulatory VaR for the 60 trading days immediately preceding the period end multiplied by a scaling factor set by FINMA, currently three. This is then multiplied by a factor of 12.5 to determine the RWA. This calculation is set out in the table below.

Backtesting of VaR

For backtesting purposes, we compute backtesting VaR using a 99% confidence level and one-day holding period for the population included within regulatory VaR. The backtesting process compares backtesting VaR calculated on positions at the close of each business day with the revenues generated by those positions on the following business day. Backtesting revenues exclude non-trading revenues, such as fees and commissions and revenues from intraday trading, to ensure a like-for-like comparison. A backtesting exception occurs when backtesting revenues are negative and the absolute value of those revenues is greater than the previous day's backtesting VaR.

Statistically, given the confidence level of 99%, two to three backtesting exceptions per year can be expected. More exceptions than this could indicate that the VaR model is not performing appropriately, as could too few exceptions over a prolonged period of time. However, as noted in the VaR limitations above, a sudden increase or decrease in market volatility relative to the five-year window could lead to a higher or lower number of exceptions respectively. Accordingly, Group-level backtesting exceptions are investigated, as are exceptional positive backtesting revenues, with results being reported to senior business management, the Group Chief Risk Officer and the divisional Chief Risk Officers. Backtesting exceptions are also reported to internal and external auditors and to the relevant regulators. We did not have any Group backtesting exceptions in 2013.

The chart "Development of backtesting revenues against backtesting VaR" on the next page shows the 12-month development of backtest VaR against backtesting revenues of the Group for 2013. The chart shows both the negative and positive tails of the backtest VaR distribution at 99% confidence intervals representing, respectively, the losses and gains that could potentially be realized over a one-day period at that level of confidence.

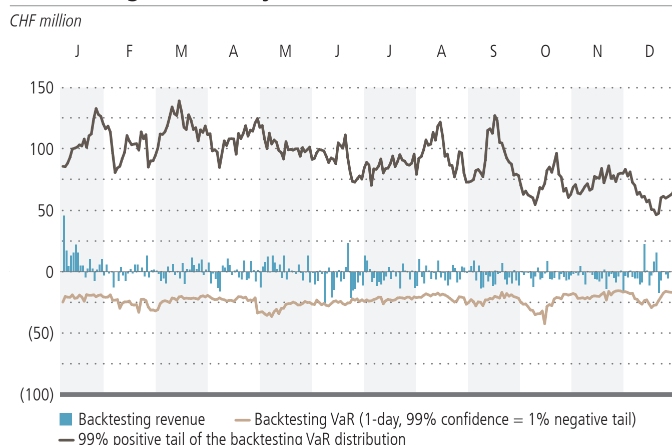
The asymmetry between the negative and positive tails is due to the significant long gamma risk profile that has historically been run in the Investment Bank. This long gamma position profits from increases in volatility which therefore benefits the positive tail of the VaR simulated profit and loss distribution. This asymmetry declined towards the end of the year as the long gamma profile reduced.

The histogram "Investment Bank and Corporate Center – Non-core and Legacy Portfolio daily revenue distribution" shows the daily revenue distribution for the Investment Bank and Corporate Center – Non-core and Legacy Portfolio for 2013. This includes, in addition to backtesting revenues, revenues such as commissions and fees, revenues for intraday trading and own credit.

Calculation of regulatory VaR-based RWA as of 31 December 2013

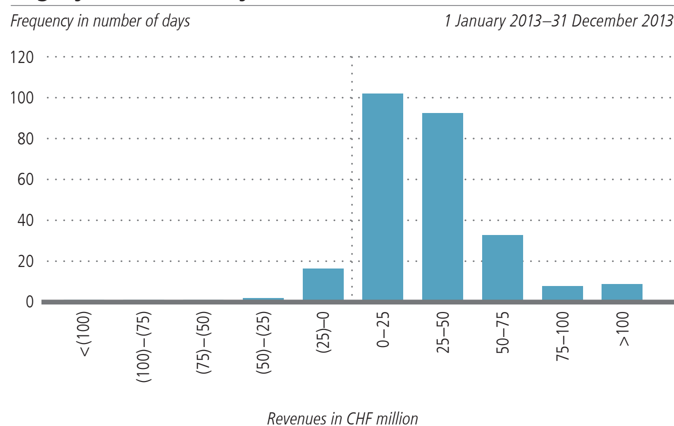
CHF million	Period end regulatory VaR (A)	60-day average regulatory VaR (B)	Scaling factor (C)	**Max (A, B x C) (D)**	Multiplier (E)	**Basel III RWA (D x E)**
	38	47	3	**140**	12.5	**1,746**

Development of backtesting revenues[1] against backtesting VaR[2] (1-day, 99% confidence)



1 Excludes non-trading revenues, such as commissions and fees, and revenues from intraday trading.
2 Based on Basel III regulatory VaR, excluding CVA positions and their eligible hedges which are subject to the new standalone CVA charge.

Investment Bank and Corporate Center – Non-core and Legacy Portfolio daily revenue distribution[1]



1 In addition to backtesting revenues, includes revenues such as commissions and fees, revenues for intraday trading, and own credit.

Group: regulatory value-at-risk (1-day, 99% confidence, 5 years of historical data)

Stressed VaR

Method applied	Historical simulation
Data set	From 1 January 2007 to present
Holding period	10 days
Confidence level	99% based on expected tail loss
Population	Regulatory trading book

Stressed VaR (SVaR) adopts broadly the same methodology as regulatory VaR and is calculated using the same population, holding period (10-day) and confidence level (99%). However, unlike regulatory VaR, the historical data set for SVaR is not limited to five years. SVaR uses continuous one-year data sets to derive the largest potential loss arising from a one-year period of significant financial stress relevant to the current portfolio of the Group.

SVaR is subject to the same limitations as noted for VaR above, but the use of one-year data sets avoids the smoothing effect of the five-year data set used for VaR, and the removal of the five-year window provides for a longer history of potential loss events. Therefore, although the significant period of stress during the financial crisis is dropping out of the historical period used for regulatory VaR, SVaR will continue to use this data. This approach is intended to reduce the procyclicality of the regulatory capital requirements for market risks.

Stressed VaR model developments in 2013

In 2013, the stressed VaR model was changed to implement an expanding historical data set, with a starting date anchored at 1 January 2007, instead of a rolling five-year historical data set. This change aimed to reduce procyclicality (e.g., the Lehman crisis dropping out of the five-year historical data window).

Stressed value-at-risk (10-day, 99% confidence, 5 years of historical data) by business division and Corporate Center and general market risk type[1]

Group, excluding CC – Legacy Portfolio	103	1,131	188	121	*76*	*110*	*282*	*87*	*23*
Legacy Portfolio[4]	43	190	62	78	*0*	*14*	*80*	*8*	*0*

1 Statistics at individual levels may not be summed to deduce the corresponding aggregate figures. The minima and maxima for each level may well occur on different days, and likewise the VaR for each business line or risk type, being driven by the extreme loss tail of the corresponding distribution of simulated profits and losses for that business line or risk type, may well be driven by different days in the historical time-series, rendering invalid the simple summation of figures to arrive at the aggregate total. 2 Difference between the sum of the standalone VaRs for the business divisions and the "Corporate Center – Core Functions" shown and the VaR for the "Group, excluding CC – Legacy Portfolio" as a whole. 3 As the minimum and maximum occur on different days for different business divisions, it is not meaningful to calculate a minimum and maximum portfolio diversification effect. 4 Numbers have not been restated to take into account the transfer of non-core positions from the Investment Bank to the Corporate Center.

Calculation of SVaR-based RWA as of 31 December 2013

CHF million	Period end SVaR (A)	60 day average SVaR (B)	Scaling factor (C)	Max (A, B x C) (D)	Multiplier (E)	Basel III RWA (D x E)
	63	69	3	208	12.5	2,604

Derivation of SVaR-based RWA

SVaR is used to derive the SVaR component of the market risk Basel III RWA shown in "Table 2: Detailed segmentation of Basel III exposures and risk-weighted assets" in the "Supplemental disclosures required under Basel III Pillar 3 regulations" section of this report. The derivation of this component is similar to that explained above for regulatory VaR, and is shown above.

Risks-not-in-VaR

Risks-not-in-VaR definition

We have an established framework to identify and quantify potential risk factors that are not fully captured by our VaR model. We refer to these risk factors as risks-not-in-VaR (RniV). This framework is used to underpin these potential risk factors with regulatory capital, calculated as a multiple of regulatory VaR and stressed VaR.

These RniV arise from approximations made by the VaR model to quantify the impact of risk factor changes on the profit and loss of positions and portfolios, as well as the use of proxies for certain market risk factors. We categorize RniV by means of items and keep track of which instrument classes are affected by each item.

When new types of instruments are included in the VaR population, we assess whether new items must be added to the inventory of RniV items.

Risks-not-in-VaR quantification

Risk officers perform a quantitative assessment for each position in the inventory of RniV items annually, as of a specific date. The assessment is made in terms of a 10-day 99%-VaR measure applied to the difference between the profit and loss scenarios which would have been produced based on our best estimate given available data, and the profit and loss scenarios generated by the current model used for the regulatory VaR calculation. Whenever the available market data allows, a historical simulation approach with five years of historical data is used to estimate the 10-day 99%-VaR for an item. Other eligible methods are based on analytical considerations or stress test and worst-case assessments. Statistical methods are used to aggregate the standalone risks, yielding a Group-level 10-day 99%-VaR estimate of the entire inventory of RniV items at the specific date. The ratio of this amount to regulatory VaR is used to produce estimates for arbitrary points in time by scaling the corresponding regulatory VaR figures with that fixed ratio. An analogous approach is applied for stressed VaR.

Risks-not-in-VaR mitigation

Material RniV items are monitored and controlled by means and measures other than VaR, such as position limits and stress limits. Additionally, there are ongoing initiatives to extend the VaR model to better capture these risks.

Derivation of RWA add-on for risks-not-in-VaR

This RniV framework is used to derive the RniV-based component of the market risk Basel III RWA, using the aforementioned approach, which is approved by FINMA and subject to an annual recalibration. As the RWA from RniV are add-ons, they do not reflect any diversification benefits across risks capitalized through VaR and stressed VaR.

In September 2013, following a new calibration approved by FINMA, RniV VaR capital was set at 58% of VaR capital, and RniV stressed VaR capital was set at 32% of stressed VaR capital, compared with prior ratios of 47% and 26% respectively. In addition, FINMA requires that RniV stressed VaR capital is floored at RniV VaR capital.

Based on the regulatory VaR and stressed VaR RWA noted above, the RniV RWA add-ons as of 31 December 2013 were CHF 1.0 billion and CHF 1.0 billion, respectively, compared with CHF 1.8 billion and CHF 1.5 billion as of 31 December 2012. The decreases in these RWA add-ons are due to the decreases in VaR and stressed VaR over the period, partially offset by the increases in the RniV VaR and stressed VaR add-on multipliers noted above.

Incremental risk charge

Method applied	Expected portfolio loss simulation
Holding period	One-year liquidity horizon
Confidence level	99.9%
Population	Regulatory trading book positions subject to issuer risk, excluding equity and securitization exposures

The incremental risk charge (IRC) represents an estimate of the default and rating migration risk of all trading book positions with issuer risk, except for equity products and securitization exposures, measured over a one-year time horizon at a 99.9% confidence level. The calculation of the measure assumes all positions in the IRC portfolio have a one-year liquidity horizon and are kept unchanged over this period.

The portfolio default and rating migration loss distribution is estimated using a Monte Carlo simulation of correlated rating migration events (defaults and rating changes) for all issuers in the IRC portfolio, based on a Merton-type model. For each position, default losses are calculated based on the maximum default exposure measure (the loss in the case of a default event assuming zero recovery) and a random recovery concept. To account for potential basis risks between instruments, different recovery values may be generated for different instruments even if they belong to the same issuer. To calculate rating migration losses a linear (delta) approximation is used: a loss due to a rating migration event is calculated as the estimated change in credit spread due to the change in rating migration multiplied by the corresponding sensitivity of a position to changes in credit spreads.

The table below provides a breakdown of the Group's period-end incremental risk charge by business division and Corporate Center. The reduction in the Group's period-end IRC, and more notably in the 12-month average IRC, was mainly attributable to the de-risking of Non-core positions.

Derivation of IRC-based RWA

IRC is calculated weekly, the results of which are used to derive the IRC-based component of the market risk Basel III RWA, shown in "Table 2: Detailed segmentation of Basel III exposures and risk-weighted assets" in the "Supplemental disclosures required under Basel III Pillar 3 regulations" section of this report. The derivation is similar to that for VaR- and stressed VaR-based RWA but without a scaling factor, and is shown below.

Incremental risk charge by business division and Corporate Center

Comprehensive risk measure

Method applied	Expected portfolio loss simulation
Holding period	One-year liquidity horizon
Confidence level	99.9%
Population	Positions in the correlation trading portfolio

The comprehensive risk measure (CRM) represents an estimate of the default and complex price risk, including the convexity and cross-convexity of the correlation trading portfolio across credit spread, correlation and recovery, measured over a one-year time horizon at a 99.9% confidence level. The calculation of the measure assumes that all positions in the CRM portfolio have a one-year liquidity horizon and are kept unchanged over this time period. The model scope covers collateralized debt obligation (CDO) swaps and credit-linked notes (CLN), first and nth to default swaps and CLN and hedges for these positions, including credit default swaps (CDS), CLN and index CDS.

The CRM profit and loss distribution is estimated using a Monte Carlo simulation of defaults over the next 12 months, and calculates resulting cash flows in the CRM portfolio. The portfolio is then revalued on the one-year horizon date, with inputs such as credit spreads and index basis being migrated from spot to horizon date. The 99.9% negative quantile of the resulting profit and loss distribution is then taken to be the CRM result. Our CRM methodology is subject to minimum qualitative standards as well as stress testing.

The table below shows the period-end comprehensive risk charge for the Group. CRM reduction was primarily due to negotiated bilateral settlements of over-the-counter derivative contracts.

Derivation of CRM-based RWA

CRM is calculated weekly, the results of which are used to derive the CRM-based component of the market risk Basel III RWA, shown in "Table 2: Detailed segmentation of Basel III exposures and risk-weighted assets" in the "Supplemental disclosures required under Basel III Pillar 3 regulations" section of this report. The calculation is subject to a floor calculation equal to 8% of the equivalent capital charge under the specific risk measure for the correlation trading portfolio. The calculation is shown below.

Securitization positions in the trading book

Our exposure to securitization positions in the trading book is limited and relates primarily to positions in Non-core and Legacy Portfolio which we will continue to wind down. A small amount of exposure also arises from secondary trading in commercial mortgage-backed securities (CMBS) in the Investment Bank. Refer to "Table 2: Detailed segmentation of Basel III exposures and risk-weighted assets" in the "Supplemental disclosures required under Basel III Pillar 3 regulations" section of this report for more information.

Interest rate risk in the banking book

Sources of interest rate risk in the banking book

Audited

Interest rate risk in the banking book arises from *Available-for-sale instruments, Loans and receivables, Debt issued* and client deposits, certain *Instruments designated at fair value through profit or loss,* derivatives measured at fair value through profit or loss and derivatives employed for cash flow hedge accounting purposes, as well as related funding transactions. These positions may impact *Other comprehensive income* or profit or loss, depending on accounting treatment.

Our largest banking book interest rate exposures arise from client deposits and lending products in both our wealth management businesses and Retail & Corporate. For Wealth Management and Retail & Corporate, the inherent interest rate risks are transferred either by means of back-to-back transactions or, in the case of products with no contractual maturity date or direct market-linked rate, by replicating portfolios from the originating business into Group Treasury, which manages the risks on an integrated basis allowing for netting interest rate risks across different sources. Any residual interest rate risks in Wealth Management and Retail & Corporate locations that are not transferred to Group Treasury are managed locally and are subject to independent monitoring and control both in the locations by local risk control units as well as centrally by Treasury Risk Control. To manage the interest rate risk centrally, Group Treasury utilizes derivative instruments, some of which are in designated hedge accounting relationships.

A significant amount of interest rate risk also arises from Group Treasury financing and investing activities, for example the financing of non-monetary corporate balance sheet items that have indefinite maturities, such as equity and goodwill. For these items senior management has defined specific target durations based on which we fund and invest as applicable. These targets are defined by replication portfolios, which establish rolling benchmarks to execute against. Group Treasury also maintains a portfolio of available-for-sale debt investments to meet the Group's liquidity needs.

Interest rate risk within Wealth Management Americas arises from the business division's portfolio of available-for-sale investments in addition to its lending and deposit products offered to clients. This interest rate risk is closely measured, monitored and managed within approved risk limits and controls, taking into account Wealth Management Americas' balance sheet items that mutually offset interest rate risk.

The Corporate Center – Legacy Portfolio assets that were reclassified to *Loans and receivables* from *Held for trading* in the fourth quarter of 2008 and the first quarter of 2009, and certain other debt securities held as *Loans and receivables,* also give rise to non-trading interest rate risk.

Effect of interest rate changes on shareholders' equity and Basel III CET1 capital

The table "Accounting and capital effect of changes in interest rates" below illustrates the accounting and Basel III CET1 capital treatment of gains and losses resulting from changes in interest rates. For instruments held at fair value, a change in interest rates results in an immediate fair value gain or loss recognized either in the income statement or through other comprehensive income (OCI), whereas changes in interest income and expense on interest-bearing assets and liabilities held at amortized cost will be realized over time. Typically, increases in interest rates would lead to an immediate reduction in the value of our longer-term assets held at fair value, but we would expect this to be offset over time through higher net interest income on our core banking products.

➔ **Refer to "Differences between Swiss SRB and BIS Basel III capital" in the "Capital management" section of this report for more information**

In addition to the differing accounting treatments, our banking book positions have different sensitivities to different points on the yield curves. For example, our portfolios of available-for-sale debt securities and interest rate swaps designated as cash flow hedges, on the whole, are more sensitive to changes in longer-duration interest rates, whereas our deposits and a significant portion of our loans contributing to net interest income are more sensitive to short-term rates. These factors are important as yield curves may not shift on a parallel basis and could, for example, exhibit an initial steepening, followed by a subsequent flattening over time.

By virtue of the accounting treatment and yield curve sensitivities outlined above, in a steepening yield curve scenario we would expect to recognize an initial reduction in shareholders'

Accounting and capital effect of changes in interest rates[1]

	Recognition		Shareholders' equity		Basel III CET1 capital	
	Timing	Location	Gains	Losses	Gains	Losses
Available-for-sale debt portfolios	Immediate	OCI	●	●		●
Economic hedges classified as held for trading	Immediate	Income statement	●	●	●	●
Designated cash flow hedges	Immediate	OCI[2]	●	●		
Loans and deposits at amortized cost	Gradual	Income statement	●	●	●	●

1 Refer to the table "Differences between Swiss SRB and BIS Basel III capital information" in the "Capital management" section of this report for more information on the differences between shareholders' equity and Basel III CET1 capital. 2 Excluding hedge ineffectiveness which is recognized in the income statement in accordance with our accounting policies.

equity as a result of fair value losses. This would be compensated over time by increased net interest income once increases in interest rates affect in particular the shorter end of the yield curve. The effect would be similar on Basel III CET1 capital, albeit less pronounced as gains and losses on interest rate swaps designated as cash flow hedges are not recognized or reversed for regulatory capital purposes.

We apply scenario analyses to monitor the effect of rising interest rates and changes in the yield curve on our interest rate sensitive banking book exposures.

Interest rate risk sensitivity to parallel shifts in yield curves

Audited

Interest rate risk in the banking book is not underpinned for capital purposes, but is subject to a regulatory threshold. The impact of an adverse parallel shift in interest rates of 200 basis points on our banking book interest rate risk exposures is significantly below the threshold of 20% of eligible capital recommended by regulators.

The interest rate risk sensitivity figures presented in the table "Interest rate sensitivity – banking book" below represent the impacts of +1, ±100 and ±200-basis-point parallel moves in yield curves on present values of future cash flows, irrespective of accounting treatment. For some portfolios, the +1-basis-point sensitivity has been estimated by dividing the +100-basis-point sensitivity by 100. Due to the low level of interest rates, downward moves by 100/200 basis points are floored to ensure that the resulting interest rates are not negative. This effect results in nonlinear behavior of the sensitivity, in particular in US dollar when combined with prepayment risk on US mortgages and related products.

The sensitivity of the banking book to rising rates decreased year on year by CHF 1.2 million per basis point mainly due to reductions in Wealth Management Americas and Corporate Center – Core Functions, partly offset by a slight increase in the Investment Bank's banking book sensitivity. Wealth Management Americas' sensitivity declined by CHF 0.9 million as the steeper USD yield curve with higher longer-term USD rates led to a shorter effective duration of client deposits, which represent the majority of Wealth Management Americas' liabilities. This effect was partly offset by a shortening of the duration in Wealth Management Americas' investment portfolio. Corporate Center – Core Functions' sensitivity is chiefly driven by Group Treasury, which was the main contributor to the reported change of CHF 0.6 million.

1 Does not include interest rate sensitivities for credit valuation adjustments on monoline credit protection, US and non-US reference-linked notes and the option to acquire equity of the SNB StabFund. Also not included are the interest rate sensitivities of our inventory of student loan auction rate securities, as from an economic perspective these exposures are not materially affected by parallel shifts in US dollar interest rates, holding other factors constant. 2 In the fourth quarter of 2013, we removed the sensitivity of the debit valuation adjustment to interest rate movements from this table, as this sensitivity is not considered to be part of the banking book for regulatory capital purposes. Prior periods have been restated. The net effect of this exclusion for the –200, –100, +1, +100 and +200 basis point shocks for 31 December 2012 was CHF 3.5, (2.8), 0.3, 31.8 and 63.7 million respectively.

Audited

The sensitivity of the banking book to rising rates includes the interest rate sensitivities arising from debt investments classified as *Financial investments available-for-sale* and their associated hedges. The sensitivity of these positions (excluding hedges and excluding investments in funds accounted for as available-for-sale) to a 1-basis-point parallel increase in the yields of the respective instruments is approximately negative CHF 8 million, which would be recorded in *Other comprehensive income* if such change occurred.

The sensitivity of the banking book to rising rates also includes interest rate sensitivities arising from interest rate swaps designated in cash flow hedges. Fair value gains or losses associated with the effective portion of these swaps are recognized initially in *Equity*. When the hedged forecast cash flows affect profit or loss, the associated gains or losses on the hedging derivatives are reclassified from *Equity* to profit or loss. These swaps are denominated in US dollar, euro, British pound and Swiss franc. As of 31 December 2013, the fair value of these interest rate swaps amounted to CHF 4.8 billion (positive replacement values) and CHF 2.3 billion (negative replacement values). The impact of a 1-basis-point increase of underlying LIBOR curves would have decreased equity by approximately CHF 22.3 million, ignoring adjustments for tax.

➔ **Refer to "Note 15 Financial investments available-for-sale" in the "Financial information" section of this report for more information**

Other market risk exposures

Own credit

We are exposed to changes in UBS's own credit which are reflected in the valuation of those financial liabilities designated at fair value, for which UBS's own credit risk would be considered by market participants. We also estimate debit valuation adjustments (DVA) to incorporate own credit in the valuation of derivatives. Changes in fair value due to changes in own credit are recognized in the income statement and therefore affect shareholders' equity and CET1 capital.

➔ **Refer to "Note 24 Fair value measurement" in the "Financial information" section of this report for more information on own credit**

Structural foreign exchange risk

On consolidation, assets and liabilities held in foreign operations are translated into Swiss francs at the closing foreign exchange rate on the balance sheet date, and items of income and expense are translated into Swiss francs at the average rate for the period. The resulting foreign exchange differences are recognized in *Other comprehensive income* and therefore affect shareholders' equity and Basel III CET1 capital.

Group Treasury employs strategies to manage this foreign currency exposure, including matched funding of assets and liabilities and net investment hedging.

➔ **Refer to the "Treasury management" section of this report for more information on our exposure to and management of structural foreign exchange risk**

Equity investments

Audited

Under IFRS, equity investments not in the trading book may be classified as *Financial investments available-for-sale, Financial assets designated at fair value* or *Investments in associates.*

We make direct investments in a variety of entities and buy equity holdings in both listed and unlisted companies for a variety of purposes. This includes investments such as exchange and clearing house memberships that are held to support our business activities. We may also make investments in funds that we manage, in order to fund or "seed" them at inception, or to demonstrate that our interests concur with those of investors. We also buy, and are sometimes required by agreement to buy, securities and units from funds that we have sold to clients.

The fair value of equity investments tends to be dominated by factors specific to the individual investments. Equity investments are generally intended to be held for the medium or long term and may be subject to lockup agreements. For these reasons, we generally do not control these exposures using the market risk measures applied to trading activities. Such equity investments are, however, subject to a different range of controls, including pre-approval of new investments by business management and Risk Control, portfolio and concentration limits, and regular monitoring and reporting to senior management. They are also included in our Group-wide statistical and stress testing metrics which flow into our risk appetite framework.

Audited

As of 31 December 2013, we held equity investments totaling CHF 1.5 billion, of which CHF 0.6 billion were classified as *Financial investments available-for-sale,* and CHF 0.8 billion as *Investments in associates.* This was broadly unchanged from the prior year.

➔ **Refer to "Note 15 Financial investments available-for-sale" and "Note 30 Interests in other entities" in the "Financial information" section of this report for more information**

Debt investments

Audited

Debt investments classified as *Financial investments available-for-sale* are measured at fair value with changes in fair value recorded through *Equity,* and can broadly be categorized as money market instruments and debt securities primarily held for statutory, regulatory or liquidity reasons.

The risk control framework applied to debt instruments classified as *Financial investments available-for-sale* depends on the nature of the instruments and the purpose for which we hold them. Our exposures may be included in market risk limits or be subject to specific monitoring such as interest rate sensitivity analysis. They are also included in our Group-wide statistical and stress testing metrics which flow into our risk appetite framework.

Debt instruments classified as *Financial investments available-for-sale* had a fair value of CHF 58.9 billion as of 31 December 2013 compared with CHF 65.7 billion as of 31 December 2012.

➔ **Refer to "Note 15 Financial investments available-for-sale" in the "Financial information" section of this report for more information**

➔ **Refer to "Interest rate risk sensitivity to parallel shifts in yield curves" in this section for more information**

➔ **Refer to the "Treasury management" section of this report for more information**

Pension risk

We maintain a number of defined benefit pension plans for past and current employees. The ability of each plan to meet the projected pension payments is maintained principally through investments. Pension risk arises because the fair value of these plan assets might decline, their investment returns might decrease or the estimated value of the defined benefit obligation might increase. If plan assets are insufficient to meet the projected pension payments, UBS may be required, or might choose, to make extra contributions to the pension plans.

Under IFRS, remeasurements of the defined benefit obligation and the fair values of the plan assets are recognized through *Other comprehensive income* and therefore affect shareholders' equity. An increase in the overall net defined benefit liability of a pension plan (where the defined benefit obligation exceeds the fair value of plan assets) will reduce our equity. Where the defined benefit obligation is less than the fair value of the plan assets, the pension plan is in a surplus position. Such surplus can only be recognized on the balance sheet to the extent that it does not exceed the estimated future economic benefit. Where the amount of surplus recognized has been capped, any reduction in the estimated future economic benefit will reduce equity. Changes in the surplus, due to changes in the defined benefit obligation or fair value of plan assets, will not affect equity until the surplus falls below any cap.

Remeasurements of the defined benefit obligations and plan assets similarly affect our Basel III CET1 capital on a fully applied basis, albeit pension surpluses are not recognized.

Investment policies and strategies are in place for our defined benefit pension plans which take account of the maturity profile of plan liabilities and ensure diversified portfolios of assets are maintained. These strategies are managed by responsible governance bodies in each jurisdiction according to local laws and regulations.

Pension risk is included in our Group-wide statistical and stress testing metrics which flow into our risk appetite framework.

➔ **Refer to "Note 28 Pension and other post-employment benefit plans" in the "Financial information" section of this report for more information**

UBS own share exposure

We hold our own shares primarily to hedge employee share and option participation plans. A smaller number are held by the Investment Bank which relate to market-making and hedging activities.

➔ **Refer to "Holding of UBS shares" in the "Capital management" section of this report for more information**

Country risk

Country risk framework

Country risk includes all country-specific events that occur within a sovereign's jurisdiction and may lead to an impairment of UBS's exposures. Country risk can take the form of sovereign risk, which refers to the ability and willingness of a government to honor its financial commitments, transfer risk, which would arise if an issuer or counterparty could not acquire foreign currencies following a moratorium of a central bank on foreign exchange transfers, or "other" country risk that may manifest itself through increased and multiple counterparty and issuer default risk (systemic risk) on the one hand, and by events that may affect the standing of a country (e.g., political stability, institutional and legal framework) on the other hand. We have a well-established risk control framework through which we assess the risk profile of all countries where we have exposure.

We attribute to each country a sovereign rating, which expresses the probability of the sovereign defaulting on its own financial obligations in foreign currency. Our ratings are expressed by statistically derived default probabilities as described in the "Probability of default" section above. Based on this internal analysis we also define the probability of a transfer event occurring and establish rules as to how the aspects of "other" country risk should be incorporated into the analysis of the counterparty rating of incorporated entities that are domiciled in the respective country.

We ensure that our exposure to all countries is commensurate with the credit ratings we assign to them, and that it is not disproportionate to the respective country risk profile. For all countries rated 3 and below we set country risk ceilings, which are approved either by the Board of Directors or under delegated authority by the Group Chief Executive Officer or Group Chief Risk Officer, depending on the size of the limit and the country rating. A country risk ceiling applies to all our exposures to counterparties or issuers of securities and financial investments in the respective country. We may limit the extension of credit, transactions in traded products or positions in securities based on a country ceiling, even if our exposure to a counterparty is otherwise acceptable.

For internal measurement and control of country risk, we also consider the financial impact of market disruptions arising prior to, during and following a country crisis. These may take the form of a severe deterioration in a country's debt, equity or other asset markets or of a sharp depreciation of the currency. We use stress testing to assess the potential financial impact of a severe country and/or sovereign crisis. This involves the development of plausible stress scenarios for combined stress testing and the identification of countries that may potentially be subject to a crisis event, determining potential losses and making assumptions about recovery rates depending on the types of credit transactions involved and their economic importance to the affected countries.

Our exposures to market risks are also subject to regular stress tests that cover major global scenarios, which are used for combined stress testing as well, whereby we apply market shock factors to equity indices, interest and currency rates in all relevant countries and consider the potential liquidity of the instruments.

In light of the ongoing European sovereign debt crisis, we maintain increased monitoring of, and focus on, the quality of collateral we hold.

Country risk exposure

Country risk exposure measure

The presentation of country risk follows our internal risk view, whereby the basis for measurement of exposures depends on the product category into which we have classified our exposures. In addition to the classification of exposures into banking products and traded products as defined in "Credit risk profile of the Group – Internal risk view," we classify within trading inventory issuer risk on securities such as bonds and equities, as well as the risk relating to the underlying reference assets for derivative positions, including those linked to credit protection we buy or sell and loan or security underwriting commitments pending distribution.

As we manage the trading inventory on a net basis, we net the value of long positions against short positions with the same underlying issuer. Net exposures are, however, floored at zero per issuer in the figures presented. We therefore do not recognize the potentially offsetting benefit of certain hedges and short positions across issuers.

We do not recognize any expected recovery values when reporting country exposures as *Exposure before hedges* except for the risk-reducing effects of master netting agreements and collateral held in the form of either cash or portfolios of diversified marketable securities, which we deduct from the basic positive exposure values. Within banking products and traded products, the risk-reducing effect of any credit protection is taken into account on a notional basis when determining the *Net of hedges* exposures.

Country risk exposure allocation

In general, exposures are shown against the country of domicile of the contractual counterparty or the issuer of the security. For some counterparties whose economic substance in terms of assets or source of revenues is primarily located in a different country, the exposure is allocated to the risk domicile of that different country.

This is the case, for example, with legal entities incorporated in financial offshore centers, which have their main assets and revenue streams outside the country of domicile. The same principle applies to exposures for which we hold third-party guarantees or collateral, where we report the exposure against the country of domicile of either the guarantor or the issuer of the underlying security, or against the country where pledged physical assets are located.

We apply a specific approach to banking products exposures to branches of financial institutions which are located in a country other than that of the domicile of the legal entity. In such cases, exposures are recorded in full against the country of domicile of the counterparty and additionally in full against the country in which the branch is located.

In the case of derivatives, we show the counterparty risk associated with the positive replacement value against the country of domicile of the counterparty (presented within traded products). In addition, the risk associated with the instantaneous fall in value of the underlying reference asset to zero (assuming no recovery) is shown against the country of domicile of the issuer of the reference asset (presented within trading inventory). This approach ensures that we capture both the counterparty and, where applicable, issuer elements of risk arising from derivatives and applies comprehensively for all derivatives, including single-name CDS and other credit derivatives.

As a basic example: if a CDS protection for a notional value of 100 bought from a counterparty domiciled in country X referencing debt of an issuer domiciled in country Y has a positive replacement value of 20, we record (i) the fair value of the CDS (20) against country X (within traded products) and (ii) the hedge benefit (notional minus fair value) of the CDS (100 – 20 = 80) against country Y (within trading inventory). In the example of protection bought, the 80 hedge benefit would offset against any exposure arising from securities held and issued by the same entity as the reference asset, floored at zero per issuer. In the case of protection sold, this would be reflected as a risk exposure of 80 in addition to any exposure arising from securities held and issued by the same entity as the reference asset. In the case of derivatives referencing a basket of assets, the issuer risk against each reference entity is calculated as the expected change in fair value of the derivative given an instantaneous fall in value to zero of the corresponding reference asset (or assets) issued by that entity. Exposures are then aggregated by country across issuers, floored at zero per issuer.

Exposures to selected eurozone countries

We continue to monitor and manage closely our exposures to peripheral European countries. Our direct exposures to Greece, Italy, Ireland, Portugal and Spain remain limited, but we nevertheless remain vigilant regarding the potential broader implications of adverse developments in the eurozone. As noted in the "Stress testing" section, the Euro Crisis scenario was our binding scenario for Combined Stress Test purposes during 2013, making it central to the regular monitoring of risk exposure against the minimum capital and earnings objectives in our risk appetite framework.

The table "Exposures to selected eurozone countries" on the next page provides an overview of our exposures to eurozone countries rated lower than AAA / Aaa by at least one of the major rating agencies as of 31 December 2013. Following the downgrade of its credit rating by Standard & Poor's from AAA to AA+ in November 2013, the Netherlands has been added to this disclosure. The table shows an internal risk view of gross and net exposures split by sovereign, agencies and central banks, local governments, banks and other counterparties (including corporates, insurance companies and funds). Exposures to Andorra, Cyprus, Estonia, Malta, Monaco, Montenegro, San Marino, Slovakia and Slovenia are grouped in Other.

CDS are primarily bought and sold in relation to our trading businesses, but are also used to hedge parts of our risk exposure, including that related to selected eurozone countries. As of 31 December 2013, and not taking into account the risk-reducing effect of master netting agreements, we had purchased approximately CHF 60 billion gross notional of single name CDS protection on issuers domiciled in Greece, Italy, Ireland, Portugal or Spain (GIIPS) and had sold CHF 57 billion gross notional of single-name CDS protection. On a net basis, taking into account the risk reducing effect of master netting agreements, this equates to approximately CHF 14 billion notional purchased and CHF 11 billion notional sold. More than 99% of gross protection purchased was from investment grade counterparties (based on our internal ratings) and on a collateralized basis. The vast majority of this was from financial institutions domiciled outside the eurozone. Approximately CHF 0.7 billion of the gross protection purchased was from counterparties domiciled in a GIIPS country and less than CHF 0.3 billion was with counterparties domiciled in the same country as the reference entity.

Holding CDS for credit default protection does not necessarily protect the buyer of protection against losses, as the contracts will only pay out under certain scenarios. The effectiveness of our CDS protection as a hedge of default risk is influenced by a number of factors, including the contractual terms under which the CDS was

written. Generally, only the occurrence of a credit event as defined by the CDS terms (which may include among other events, failure to pay, restructuring or bankruptcy) results in a payment under the purchased credit protection contracts. For CDS contracts on sovereign obligations, repudiation can also be deemed as a default event. The determination as to whether a credit event has occurred is made by the relevant International Swaps and Derivatives Association (ISDA) determination committees (comprised of various ISDA member firms) based on the terms of the CDS and the facts and circumstances surrounding the event.

Exposure to emerging market countries

The table "Emerging markets net exposure by major geographical region" on the following page shows the five largest emerging market country exposures in each major geographical area by product type as of 31 December 2013 compared with 31 December 2012. Based on the main country rating categories, as of 31 December 2013, 93% of our emerging market country exposure was rated investment grade compared with 92% as of 31 December 2012.

Operational risk

Key developments during the period

Reporting of significant risk issues and operational effectiveness was further extended and strengthened through 2013. Where a particular operational risk issue is considered of strategic concern to the Group, it is categorized as a "Group Significant Operational Risk Issue." Remediation programs related to these issues are led by members of the Group Executive Board and are subject to independent quality assurance. Completion is assessed against clearly defined success criteria to confirm that an adequate and sustainable standard of control has been achieved. The Group Executive Board members have confirmed their personal and collective commitment to the timely and sustainable remediation of Group Significant Operational Risk Issues. In 2013, we made significant progress on these remediation programs resulting in the completion of many remediation activities.

The Investment Bank's unauthorized trading incident remediation program has been completed and this has further enhanced the Group's ability to detect or prevent such incidents. Independent third-party reviews have been completed with no material issues identified.

In the past year we have entered into a number of settlements, the largest of which relates to Federal Housing Finance Agency.

Multiple security programs have been initiated in 2013 to address the evolving and increasingly complex threat of cyber-attacks and cyber-criminal activity facing the financial services industry and the increased use of mobile devices, social networking, and the growing sophistication of cyber-attacks have been identified as an area of increasing operational risk.

Operational risk is an inevitable consequence of being in business, as losses can result from inadequate or failed internal processes, people and systems, or from external events. The impact of operational risk remains at elevated levels, and can arise as a result of past and current business activities across all business divisions and Corporate Center. In acknowledgement of the dynamic industry and the environment in which we operate, we will continue to refine our framework to ensure it is adaptive to organizational changes, is responsive to regulatory requirements and supports forward-looking risk identification.

As of 1 January 2014, our Operational Risk Control unit merged with the compliance function to manage the Group's compliance, conduct and operational risks in a more integrated and effective way. The new function will continue to report to the Group Chief Risk Officer and will continue to manage, implement and enhance the operational risk framework.

Sources of operational risk

Operational risk is an inevitable consequence of being in business and managing it is a core element of our business activities. Our aim is to provide a framework that supports the identification and assessment of material operational risks and their potential concentrations, in order to achieve an appropriate balance between risk and reward.

Operational risk framework

The business division Chief Executive Officers and Corporate Center function heads are ultimately accountable for the effectiveness of operational risk management and for the implementation of our operational risk framework. The business division Chief Executive Officers are responsible for establishing and maintaining an effective front-to-back control environment, notwithstanding the delegation of those responsibilities to the business division Chief Operating Officers. Management in all functions (business, logistics and control functions) are responsible for establishing an appropriate operational risk management environment, including the establishment and maintenance of robust internal controls, effective supervision and a strong risk culture. Controls must be regularly assessed for design and operating effectiveness and supported by positive demonstrable evidence.

Operational Risk Control provides an independent and objective view of the adequacy of operational risk management across the Group. It is governed by the Operational Risk Management Committee, which is chaired by the Global Head of Operational Risk Control, who reports to the Group Chief Risk Officer and is a member of the Risk Executive Committee. The Operational Risk Management Committee oversees operational risk activities and work streams, provides oversight of the implementation and refinement of the operational risk framework and ensures an effective and independent assessment of the operational risk profile.

The operational risk framework describes general requirements for managing and controlling operational risk at UBS. The refinement of the operational risk framework was the key focus during 2013, building on the main elements previously established. The framework is built on four main pillars:

1. classification of inherent risks through the operational risk taxonomy;
2. assessment of the design and operating effectiveness of controls through the internal control assessment process;
3. assessment of residual risk through the operational risk assessment process and
4. remediation to address identified deficiencies which are outside accepted levels of residual risk.

The operational risk taxonomy provides a clear and logical classification of our inherent operational risks, across all business divisions. The operational risk framework requires that each category of the operational risk taxonomy is supported by clearly defined core controls. Core controls are the high-level critical controls that, if designed and operating effectively, will materially ensure that our operational risk profile stays within acceptable levels. The completeness of core controls is tested using scenarios through which the inherent risk, including stress and tail risk, may materialize. To support the core controls, functions are required to identify key procedural controls relevant to their activities. Full implementation and integration of scenarios, core and key procedural controls is key to ensuring a comprehensive view of residual risk in the organization. A review of these elements is achieved through a quarterly internal control assessment process that requires functions to assess and evidence operating and design effectiveness of their key procedural controls. This also forms the basis for the assessment and testing of the controls which oversee financial reporting as required by the Sarbanes-Oxley Act, section 404 (SOX 404). The enhanced framework facilitates the identification of SOX 404 relevant controls for independent testing, functional assessments, gathering of evidence, management affirmation and remediation tracking.

To further enhance and strengthen the operational risk framework, a program of independent management testing for key procedural controls commenced in 2013. The program is testing all key procedural controls in the areas with the highest levels of inherent risk in addition to those relevant for SOX 404, with full front-to-back business engagement.

Significant control deficiencies that surface during the internal control and operational risk assessment processes must be reported in the operational risk inventory and sustainable remediation must be instigated. All significant issues are assigned to owners at senior management level and must be reflected in the respective employees' annual performance measurement and management objectives to ensure effective, sustainable remediation.

The aggregated impact of control deficiencies and the adequacy of remediation efforts are assessed by Operational Risk Control for all relevant operational risk taxonomy categories as part of the operational risk assessment process. This front-to-back process, complemented by internal subject matter expertise, provides a transparent assessment of the current operational risk exposure against agreed risk appetite statements and measures.

Risk appetite measures indicate a breach of operational risk appetite limits, which requires management to adapt their business activities or adjust the internal control environment accordingly. Risk appetite can be expressed through the establishment of quantitative constraints such as operating limits or qualitative statements in the form of policies. To assist with prioritization of all known operational risk issues, irrespective of origin, a common rating methodology is adopted by all internal control functions and both internal and external audit. Assessment of all known issues irrespective of source against the same rating scale supports clear prioritization and appropriate management focus on the key issues. Group Internal Audit applies an enhanced assurance process to issue closure to promote stronger management discipline for identifying, mitigating and sustainably remediating operational risk issues. As described in the "Risk principles and risk culture" section, we have policies and initiatives in place to embed the desired risk culture within the Group and have taken steps in 2013 to strengthen our culture further, re-emphasizing the importance of a strong control culture and individual responsibility across all levels of the Group.

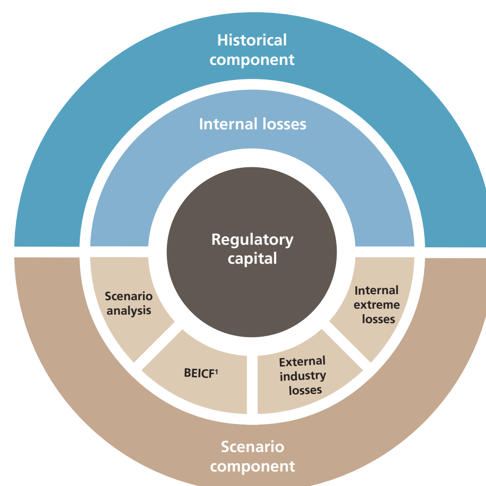
Advanced measurement approach model

The operational risk framework is aligned to and underpins the calculation of capital, representing a major step forward in our approach in quantifying operational risk and setting effective management incentives. The processes detailed above are integral to the quantification of operational risk, which reinforces integration and alignment of the operational risk framework and the calculation of capital.

We measure operational risk exposure and calculate operational risk regulatory capital by utilizing the advanced measurement approach (AMA) in accordance with FINMA requirements. For regulated subsidiaries, the basic indicator or standardized approaches are adopted as agreed with local regulators. Regulatory requirements are currently leading to the implementation of AMA models in UBS locations.

The AMA model consists of a backward-looking historical component and a forward-looking scenario component. The historical component is a retrospective view based on our history of

AMA model components and inputs



1 Business environment and internal control factors.

operational risk losses since January 2002, excluding extreme internal losses, which are captured through the scenario component. The key assumption within the historical component is that past events form a reasonable proxy for future events. A distribution of aggregated losses over one year is derived by modeling severities and frequencies separately and then combining them. This is referred to as a loss distribution approach and is used to project future total losses based on historical experience and determine the expected loss portion of our capital requirement.

The scenario component is a forward-looking view of potential operational losses that may occur taking into account the operational risk issues facing the Group. The aim is to reach a reasonable estimate of unexpected or tail loss exposure (corresponding to a low frequency/high severity event). We use 20 AMA taxonomy categories which are aligned to the operational risk taxonomy. For each of these categories three frequency/severity pairs are defined, representing the base, stress and worst case. Calibration is based on internal extreme losses, loss data from peer banks, business environment and internal control factors, as well as extensive annual verification by internal subject matter experts. Qualitative adjustments to the parameters of the scenario component utilize the assessments of operational risk exposure resulting from the operational risk assessment process as well as control deficiencies, scenarios and core controls. The chart on the previous page provides a high-level overview of the model components and their respective inputs into the calculation.

The AMA model adds the sampled losses from the historical and the scenario component to derive the regulatory capital figure which equals the 99.9% quantile of the overall loss distribution. Currently, we do not reflect mitigation through insurance or any other risk transfer mechanism in our AMA model.

In 2013, there were no methodological changes to our AMA model. Developments focused on enhancing the benchmarking framework and analysis to support the plausibility of AMA model results and establishing granular reporting of operational risk exposure by event type (i.e., AMA taxonomy) and business lines. Further progress has been made in the adaptation of the Group's AMA model to support local and regional entity-specific regulatory requirements and ensuring a consistent approach for the measurement of operational risk globally.

Operational risk regulatory capital continued to be allocated to the business divisions based on historical operational risk-related losses. In 2013, we concentrated on developing and improving the current capital allocation methodology to strengthen the linkage between the quality of operational risk management and the resulting capital allocation to promote and incentivize excellence in risk management behavior. This enhanced capital allocation methodology is planned to be introduced in early 2014.

At the end of the third quarter, we received an order from FINMA announcing the imposition, with effect from 1 October 2013, of a temporary 50% add-on to our AMA based operational risk-related RWA in relation to known or unknown litigation, compliance and other operational risk matters. During the fourth quarter of 2013 and in January of 2014, UBS and FINMA reviewed this temporary operational risk-related RWA add-on and mutually agreed that, effective on 31 December 2013, a supplemental analysis would be used to calculate the incremental operational risk capital required to be held for litigation, regulatory and similar matters and other contingent liabilities. The incremental RWA calculated based upon this supplemental analysis replaced the temporary operational risk-related RWA add-on, and is reflected in the 31 December 2013 RWA and capital ratio information in this report. The incremental RWA calculated based upon this supplemental analysis as of 31 December 2013 was CHF 22.5 billion, approximately CHF 5 billion less than the incremental RWA determined as of 1 October 2013 under the previously disclosed 50% operational risk add-on.

➔ **Refer to the "Capital management" section of this report for more information on the development of risk-weighted assets for operational risk**

Corporate Center – Non-core and Legacy Portfolio

During 2013, Non-core and Legacy Portfolio balance sheet assets declined by CHF 218 billion to CHF 211 billion, a 51% reduction, mainly due to a CHF 170 billion reduction in positive replacement values (PRV) and, to a lesser extent, a CHF 39 billion reduction in funded assets along with a CHF 9 billion reduction in collateral delivered against over-the-counter (OTC) derivatives.

Risk-weighted assets (RWA) for Non-core and Legacy Portfolio declined by CHF 39 billion to CHF 64 billion from CHF 103 billion, significantly below our target of CHF 85 billion for year-end 2013 despite increased operational risk RWA mainly resulting from the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA.

Non-core

Beginning in the first quarter of 2013, the non-core businesses formerly in the Investment Bank were transferred to Corporate Center – Non-core, and they are now managed and reported in that unit. These positions are capital- and balance sheet-intensive or are in areas with high operational complexity and long tail risks. Non-core consists of a large number of positions previously originated mainly within the Investment Bank's rates and credit businesses. The majority of Non-core positions consist of OTC derivatives reported as replacement values on UBS's balance sheet. In contrast to the Legacy Portfolio, credit risk from counterparty exposures in Non-core is well-diversified by both currency and geography, and single-name exposures are limited. Over 95% of gross PRV was collateralized as of 31 December 2013. Overall market risk is hedged and primarily relates to liquid market parameters such as interest rates and foreign currencies.

Non-core balance sheet assets decreased by CHF 204 billion to CHF 185 billion as of 31 December 2013, mainly due to lower PRV which declined by CHF 161 billion. This decrease came primarily from a reduction in OTC derivative exposures by means of negotiated bilateral settlements with specific counterparties, (i.e., unwinds), third-party novations, including transfers to central clearing houses, (i.e., trade migrations), agreements to net down trades with other dealer counterparties, (i.e., trade compressions), as well as, to a lesser extent, fair value changes due to interest rate movements. Funded assets decreased by CHF 33 billion, primarily from the exit of government and other liquid bond positions along with the sale of a portfolio of distressed assets. Remaining funded asset positions are largely corporate loans and bonds held to hedge OTC positions. Lastly, collateral delivered against OTC derivatives declined by CHF 9 billion. Funded assets and PRV classified as Level 3 in the fair value hierarchy totaled CHF 3 billion, or 2%, of total Non-core balance sheet assets as of 31 December 2013.

Non-core RWA totaled CHF 33 billion as of 31 December 2013, a decrease of CHF 32 billion compared with 31 December 2012, due to ongoing RWA reduction activity resulting in a CHF 21 billion decrease in credit risk and a CHF 10 billion decrease in market risk RWA.

Legacy Portfolio

The Legacy Portfolio was created in the fourth quarter of 2011 and comprises positions previously originated in the Investment Bank. It also included our option to acquire the equity of the SNB StabFund, which we exercised during the fourth quarter of 2013. The majority of Legacy Portfolio positions are relatively concentrated and illiquid.

Legacy Portfolio balance sheet assets decreased by CHF 14 billion to CHF 25 billion during 2013. PRV decreased by CHF 8 billion, which included the impact of the exercise of our option to acquire the equity of the SNB StabFund. Funded assets decreased by CHF 6 billion, which included sales and redemptions of student loan auction rate securities. Funded assets and PRV classified as Level 3 in the fair value hierarchy totaled CHF 4 billion, or 16%, of total Legacy Portfolio balance sheet assets as of 31 December 2013.

Legacy Portfolio RWA totaled CHF 31 billion as of 31 December 2013, a decrease of CHF 7 billion compared with 31 December 2012 due to a CHF 17 billion combined reduction in credit risk and market risk RWA, which was partly offset by a CHF 10 billion increase in operational risk RWA, mainly resulting from the aforementioned supplemental operational risk capital analysis mutually agreed to by UBS and FINMA.

An overview of the composition of Non-core and Legacy Portfolio is presented below and on the following page, including position and RWA information for the current and prior year. The groupings of positions by exposure category and the order in which these are listed are not necessarily representative of the magnitude of the risks associated with them, nor do the metrics shown in the tables necessarily represent the risk measures used to manage and control these positions. For example, OTC derivatives trading is largely conducted on a collateralized basis and under bilateral International Swaps and Derivatives Association (ISDA) or ISDA-equivalent master netting agreements, which allow for the close-out and netting of PRV with negative replacement values in the event of default. The funded assets and PRV measures presented are intended to provide additional transparency regarding progress in the execution of our strategy to exit these positions. All positions, primarily PRV, are affected by market factors outside the control of UBS, for example, by interest rate movements.

Composition of Non-core

CHF billion

Exposure category		Description	Changes in 2013	RWA [1]		Funded assets [2]		PRV [3]	
				31.12.13	31.12.12	**31.12.13**	31.12.12	**31.12.13**	31.12.12
Rates	**Linear OTC**	Government bonds and other liquid bonds along with primarily vanilla interest rate, inflation, basis, flow commodities and cross-currency swaps for all major currencies and some emerging markets. Over 95% of gross PRV is collateralized. Approximately 50% of the current gross PRV is due to mature by 2019.	Decrease in funded assets due to exit of government, agencies, CMO pass-throughs and other liquid bonds. Reduction in RWA primarily due to a decrease in PRV, mainly as a result of trade unwinds, trade compressions, transfers to central clearing houses, as well as interest rate movements.	**13.8**	29.3	**1.1**	16.0	**109.7**	222.8
	Non-linear OTC	Vanilla and structured options. Over 95% of gross PRV is collateralized. Non-linear exposures are typically longer dated than linear exposures.	Decrease in funded assets primarily due to the sale of a structured bond. Decrease in PRV mainly due to trade unwinds, trade compressions and transfers to central clearing houses, as well as interest rate movements.			**1.0**	1.7	**36.8**	72.1
Credit	**Loans and distressed trading**	Corporate lending, distressed credit trading, asset-based lending, syndicated loans, structured financing and structured repo exposures.	Decrease in funded assets and RWA reflects the sale of distressed assets, corporate loan sales, and repayments along with exit of financing positions.	**7.8**	20.3	**2.4**	5.9	**0.0**	0.7
	Cash and credit default swaps (CDS)	Vanilla CDS and corporate bonds.	Decrease in funded assets due to sales of bond positions. Decrease in PRV primarily due to transfer of CDS positions to the "Structured credit" category for risk management purposes and to facilitate unwinds with certain counterparties. Ongoing reduction in cash positions contributed to a reduction in RWA.			**0.2**	3.8	**0.1**	7.4
	Structured credit	Tranches of structured credit products, liquid index tranches, credit-linked notes, structured entities and bond-repackaged notes with granular risk characteristics and average remaining maturity of less than 4 years. This portfolio is managed under a correlation trading strategy.	Following the transfer of CDS positions from the "Cash and CDS" category as mentioned above, PRV decreased due to CDS and collateralized debt obligation (CDO) trade unwinds, maturing trades and trade netting of selected positions with counterparties resulting in RWA reduction.			**0.4**	0.5	**13.3**	16.7
Other		Exposures to precious metal deposits, equities, CVA and related hedging activity.	Decrease in funded assets mainly due to the reduction in physical gold holdings held on behalf of clients. PRV and RWA decrease due to sales of certain equity positions and ongoing CVA exposure management and hedging activity.	**1.4**	4.5	**2.2**	12.6	**0.4**	2.0
Operational risk		Operational risk RWA allocated to Non-core.	Reduction in operational risk RWA reflects a lower allocation of total Group operational risk RWA.	**9.5**	10.4	–	–	–	–
Total				**32.6**	64.5	**7.3**	40.5	**160.3**	321.7

1 Phase-in and fully applied Basel III RWA. 2 Funded assets are defined as total IFRS balance sheet assets less positive replacement values (PRV) and collateral delivered against over-the-counter (OTC) derivatives (CHF 17.4 billion as of 31.12.13 and CHF 26.5 billion as of 31.12.12). 3 Positive replacement values (gross exposure excluding the impact of any counterparty netting).

Composition of Legacy Portfolio

CHF billion

Exposure category	Description	Changes in 2013	RWA [1]		Funded assets [2]		PRV [3]	
			31.12.13	31.12.12	**31.12.13**	31.12.12	**31.12.13**	31.12.12
Collateralized debt obligations (CDO)	Includes ABS, RMBS, CDO, CMBS and CLO bonds as well as single-name CDS trades referencing these asset classes.	RWA reduction due to sales and unwinds of certain CDO positions and hedges. RWA reduced >70% since 30.9.11.	**5.1**	9.8	**2.5**	3.1	**0.5**	2.1
Reference-linked notes (RLN)	RLN consist of a series of transactions, mainly issued in note form, whereby UBS purchased credit protection on a reference portfolio of fixed income assets, along with related cash bonds held for hedging purposes.	Decrease in funded assets due to the sale of certain cash bonds. PRV increase partly due to maturity date extensions on specific RLN. RWA reduction reflective of the lower ratings of the bonds sold. RWA reduced > 70% since 30.9.11.	**3.1**	5.7	**1.7**	2.4	**0.6**	0.2
Monolines	Primarily CDS protection purchased from monoline insurers to hedge specific positions. The majority of this exposure is hedged via single-name credit default swaps.	RWA decreased due to certain trade unwinds along with ratings upgrades for specific counterparties. Total fair value of CDS protection was stable at CHF 0.4 billion (of which CHF 0.1 billion from monolines rated BBB and above) after cumulative CVA of CHF 0.1 billion.	**2.2**	4.0	–	–	**0.4**	0.5
Real estate assets	Primarily CDS on ABS and CMBX[4] derivatives positions and CMBS cash bonds.	Decrease in PRV and RWA primarily due to ongoing trade unwinds and novation of CMBX trades. RWA reduced >70% since 30.9.11.	**2.0**	2.4	**0.5**	0.5	**0.9**	2.0
Auction rate securities (ARS) and auction preferred stock (APS)	Portfolio of student loan and municipal ARS as well as APS. 100% of student loan ARS exposures were rated BB– and higher as of 31.12.13, with over 86% of the collateral backed by Federal Family Education Loan Program guaranteed collateral. All APS were rated A and higher as of 31.12.13.	Reduction in funded assets and RWA due to sales and redemptions of student loan ARS positions. Student loan ARS funded assets decreased to CHF 0.9 billion from CHF 3.8 billion. RWA reduced >90% since 30.9.11.	**1.6**	3.2	**3.8**	7.1	–	–
Muni swaps and options	Swaps and options with US state and local governments.	Decrease in PRV primarily due to interest rate movements supported by trade unwinds. RWA reduced due to a refined market risk RWA allocation benefit in line with Basel III of CHF 1.8 billion introduced in 1Q 2013, along with lower PRV.	**1.0**	4.6	–	0.0	**3.1**	5.0
Loan to BlackRock fund	Loan to structured entity managed by BlackRock Financial Management Inc. The loan's LTV ratio was below 60% as of 31.12.13.	Outstanding loan balance (including amounts held in escrow) decreased by CHF 0.9 billion to CHF 2.4 billion reflecting repayment of principal.	**0.3**	0.8	**2.4**	3.3	–	–
SNB StabFund option	Represented the value of UBS's option to acquire the equity of the SNB StabFund. The option value was directly deducted from equity.	Decrease in PRV in connection with the exercise of our option. The fund's remaining assets had a market value of less than CHF 1 million at exercise and were transferred to the "Real estate assets" category of the Legacy Portfolio.	–	–	–	–	–	2.1
Other	Includes a number of smaller positions.	Decrease in PRV mainly due to interest rate and FX movements. RWA decreased due to market movements and lower VaR.	**2.3**	3.7	**3.5**	3.9	**4.1**	6.0
Operational risk	Operational risk RWA allocated to the Legacy Portfolio.	Increase in RWA primarily reflects the effect of the supplemental operational risk capital analysis as well as an increased allocation of total Group operational risk RWA.	**13.3**	3.8	–	–	–	–
Total			**30.9**	38.0	**14.4**	20.3	**9.6**	17.9

1 Phase-in and fully applied Basel III RWA. 2 Funded assets are defined as total IFRS balance sheet assets less positive replacement values (PRV) and collateral delivered against over-the-counter (OTC) derivatives (CHF 1.5 billion as of 31.12.13 and CHF 1.7 billion as of 31.12.12). 3 Positive replacement values (gross exposure excluding the impact of any counterparty netting). 4 Index of CMBS.

Treasury management

Liquidity and funding management

Strategy and objectives

As described more fully in the "Our strategy" section of this report, we are continuing in our commitment to focus our activities on a set of highly synergistic, less capital- and balance sheet-intensive businesses dedicated to serving clients and well-positioned to maximize value for shareholders. This is reflected in the substantial progress we have made in further improving our leading capital position and in reducing risk-weighted assets (RWA).

Audited

We manage our liquidity and funding risk with the overall objective of optimizing the value of our business franchise across a broad range of temporal market conditions and in consideration of current and future regulatory constraints. In line with the implementation of our strategy, as our balance sheet assets are reduced we generate capacity within our liquidity and funding positions. This reduction in our funding needs has enabled us to execute tender offers to repurchase certain outstanding long-term debt in 2013, which lowers our interest expense and allows us to optimize our funding liability structure for the future.

Our liquidity risk management aims to maintain a sound liquidity position to meet all our liabilities when due and to provide adequate time and financial flexibility to respond to a firm-specific liquidity crisis in a generally stressed market environment, without incurring unacceptable losses or risking sustained damage to our various businesses. Complementing this, our funding risk management aims for the optimal asset and liability structure to finance our businesses reliably and cost-efficiently.

We employ a number of measures to monitor our liquidity and funding positions under normal and stressed conditions. Our primary tool for cash management is an operational cash ladder, which is used to monitor our funding requirements on a daily basis, within limits set by the Group Asset and Liability Management Committee (Group ALCO), the Group Chief Financial Officer (Group CFO) and the Group Treasurer. This cumulative cash ladder shows the projected net cumulative funding requirement for a specific day, from the current day to three months forward. We then use stress scenarios to apply behavioral adjustments and calibrate the results with external measures, primarily the evolving regulatory requirements for the Liquidity Coverage Ratio (LCR) and the Net Stable Funding Ratio (NSFR).

As of 31 December 2013, our estimated pro-forma regulatory Basel III LCR based on current supervisory guidance from FINMA was 110% and our management LCR, which includes additional available funding not eligible under the Basel III LCR framework, was 148%. Based on current regulatory guidance, our estimated pro-forma NSFR was 109% as of 31 December 2013. The Basel Committee on Banking Supervision issued a Consultative Document on the NSFR in January 2014.

➔ **Refer to the "Regulatory and legal developments" section of this report for more information**

We continued to maintain a sound liquidity position throughout the year. As of 31 December 2013, our liquidity asset buffer, that is derived from high-quality liquid assets (HQLA) and supports our estimated pro-forma regulatory LCR, was CHF 153 billion, with additional available funding of CHF 54 billion. In aggregate, these sources of available liquidity represented 28% of our funded balance sheet assets.

The remainder of this section provides more detailed information on our liquidity and funding management including our sources of funding and liquidity, our contingency planning and stress testing, current and potential future regulatory requirements and our governance structure.

Funding

Audited

Our business activities generate asset and liability portfolios that are highly diversified with respect to market, product, tenor and currency. This reduces our exposure to individual funding sources and provides a broad range of investment opportunities, reducing liquidity risk.

Our wealth management businesses and Retail & Corporate provide significant, cost-efficient and reliable sources of funding. These include core deposits and pledging a portion of our portfolio of Swiss residential mortgages as collateral to generate long-term funding through Swiss Pfandbriefe and our own covered bond program. In addition, we have a number of short-, medium- and long-term funding programs under which we issue senior unsecured and structured notes, as well as short-term secured debt – generally for the highest-quality assets. These programs allow institutional and private investors in Europe, the US and Asia Pacific to customize their investments in UBS's debt. Collectively, these broad product offerings and funding sources, together with the global scope of our business activities, support our funding stability.

Funding management

Audited

Group Treasury regularly monitors our funding status, including concentration risks, to ensure we maintain a well-balanced and diversified liability structure. Our funding activities are planned by analyzing the overall liquidity and funding profile of our balance sheet, taking into account the amount of stable funding that would be needed to support ongoing business activities through periods of difficult market conditions.

CHF billion

As of 31.12.13

1 Excluding structured debt.

Changes in sources of funding during the reporting period

During 2013, the composition of our funding sources moved towards less reliance on wholesale funding. The implementation of our strategy has driven a reduction in secured funding needs, as well as lower issuances of short-term and structured debt and the repurchase of unsecured debt. At the same time, our Retail & Corporate and wealth management businesses continued to attract new customer deposits. In 2013, total customer deposits increased to CHF 391 billion from CHF 374 billion, or 59% of our total funding sources compared with 50% as of 31 December 2012. Our ratio of customer deposits to outstanding loan balances was 136%, compared with 133% as of 31 December 2012.

In contrast, our outstanding long-term debt, including structured debt reported as financial liabilities at fair value, decreased by CHF 40 billion to CHF 124 billion as of 31 December 2013, representing 19% of our funding sources compared with 22% as of 31 December 2012. Excluding structured debt, long-term debt – which comprises senior debt and subordinated debt and is presented within *Debt issued* on the balance sheet – decreased to CHF 54.0 billion as of 31 December 2013 from CHF 72.3 billion as of 31 December 2012, primarily due to decreases in senior debt to CHF 43.0 billion from CHF 61.0 billion. Senior debt comprises both publicly and privately placed notes and bonds, as well as covered bonds. As shown on the long-term debt contractual maturity chart, CHF 8.0 billion will mature within one year, representing 15% of outstanding long-term debt excluding structured debt, compared with CHF 13.9 billion, or 19%, in the prior year. In addition, CHF 0.5 billion of subordinated debt has an early call date in 2014.

As part of our reduction in wholesale funding, we successfully completed two cash tender offers during 2013 to repurchase certain subordinated and senior unsecured bonds. In February 2013, we executed a cash tender offer to repurchase 14 senior unsecured note issuances denominated in US dollar, euro and Italian lira, with remaining maturities ranging between June 2013 and January 2027, for a total repurchase amount equivalent to CHF 5.1 billion. In December 2013, we executed a cash tender offer to repurchase certain subordinated and senior unsecured bonds denominated in Swiss franc, euro, British pound and Italian lira, with an aggregate principal repurchase amount equivalent to CHF 1.9 billion.

During the year, we continued to raise medium- and long-term funds through medium-term notes and private placements and through Swiss Pfandbriefe issuances with a principal amount of CHF 1.5 billion, as well as a USD 1.25 billion three-year covered bond. We also contributed to our targeted loss-absorbing capital by executing a USD 1.5 billion issuance of loss-absorbing Basel III-compliant tier 2 subordinated notes. These 10-year notes with an optional call at year five will pay a non-deferrable coupon at an initial rate of 4.75%. In February 2014, we issued further loss-absorbing Basel III-compliant tier 2 subordinated notes: EUR 2 billion notional with 12-year duration and an optional call in year seven and which will pay a non-deferrable coupon at an initial rate of 4.75%.

Our short-term interbank deposits (presented as *Due to banks* on the balance sheet), together with our outstanding short-term debt, represented 6.1% of total funding sources compared with 7.4% as of 31 December 2012.

Secured financing, in the form of repurchase agreements and securities lent against cash collateral received, represented 3.5% of our funding sources as of 31 December 2013 compared with 6.4% as of 31 December 2012. As of 31 December 2013, we were borrowing CHF 87 billion less cash on a collateralized basis than we were lending, significantly lower than the difference of CHF 121 billion as of 31 December 2012.

Liquidity management, contingency funding and stress testing

Audited

Our Group contingency funding plan is an integral part of our global crisis management concept, which covers various types of crisis events. This contingency funding plan contains an assessment of contingent funding sources in a stressed environment, liquidity status indicators and metrics and contingency procedures. Our funding diversification and global scope help protect our liquidity position in the event of a crisis. We regularly assess and test all material, known and expected cash flows, as well as the level and availability of high-grade collateral that could be used to raise additional funding if required. Our contingent funding sources include a large, multi-currency portfolio of unencumbered, high-quality, short-term assets managed centrally by Group Treasury, available and unutilized liquidity facilities at several major central banks, and contingent reductions of liquid trading portfolio assets.

The table below shows a breakdown of our liquidity asset buffer derived from high-quality liquid assets (HQLA) that support our regulatory LCR pro-forma calculation, analyzed by asset type, balance sheet carrying value and LCR eligible amount. In accordance with the Basel Committee on Banking Supervision's guidance issued in January 2013, HQLA comprise unencumbered cash or assets that can be converted into cash at little or no loss of value in private markets to meet liquidity needs for a 30-calendar-day liquidity stress scenario. HQLA are eligible for inclusion as our liquidity asset buffer component of the LCR after applying certain haircuts and caps, dependent on whether the assets are categorized as Level 1 (fair values based on quoted prices in actively traded markets) or Level 2 (fair values based on valuation techniques for which all significant inputs are, or are based on, observable market data) in accordance with the aforementioned Basel guidance. As of 31 December 2013, our HQLA were CHF 157 billion and our liquidity asset buffer was CHF 153 billion. Our liquidity asset buffer was also CHF 153 billion as of 31 December 2012. The monthly average for 2013 was CHF 151 billion. In addition to the liquidity asset buffer component of the regulatory LCR, for our management LCR we include additional high-quality and unencumbered contingent funding sources not eligible under the regulatory Basel III liquidity framework, primarily local funding reserves and unutilized funding capacity.

➔ Refer to "Liquidity regulatory requirements" in this section for more information

Audited

We perform stress testing to determine the optimum asset and liability structure that allows us to maintain an appropriately balanced liquidity and funding position under various scenarios. Liquidity crisis scenario analysis and contingency funding planning support the liquidity management process, which ensures that immediate corrective measures to absorb potential sudden liquidity shortfalls can be put into effect.

We model our liquidity exposures under two main potential scenarios that encompass stressed and acute market conditions, including considering the possible impact on our access to markets from stress events affecting all parts of our business.

The acute scenario represents an extreme stress event that combines a firm-specific crisis with market disruption. This scenario assumes large drawdowns on otherwise stable client deposits mainly due on demand, inability to renew or replace maturing

Composition of liquidity asset buffer component of our regulatory Liquidity Coverage Ratio

As of 31.12.13		*of which Basel III LCR eligible:*		Liquidity asset buffer
CHF billion	High-quality liquid assets	*Level 1*	*Level 2*	Total
Cash and deposits with central banks	80.1	*80.1*	*0.0*	80.1
Central bank pledges	28.3	*16.2*	*10.3*	26.5
Government bills / bonds	31.9	*31.9*	*0.0*	31.9
Corporate bonds, including covered bonds issued by financial institutions	15.0	*0.6*	*12.3*	12.9
Reverse repurchase agreements	1.8	*0.0*	*1.6*	1.6
Total	157.1	*128.7*	*24.1*	152.8

unsecured wholesale funding, unusually large drawdowns on loan commitments, reduced capacity to generate liquidity from trading assets, liquidity outflows corresponding to a three-notch downgrade triggering contractual obligations to unwind derivative positions or to deliver additional collateral and additional collateral needs due to adverse movements in the market values of derivatives. It is run both daily and monthly, with the former used to project potential cash outflows over a one-month time horizon for day-to-day risk management, while the latter involves a more detailed assessment of asset and liability cash flows.

Since a liquidity crisis could have a myriad of causes, the stressed scenario encompasses potential stress effects across all markets, currencies and products but it is not typically firm-specific and focuses on a time horizon of up to one year. As well as the loss of ability to replace maturing wholesale funding, it assumes a gradual drawdown of otherwise stable client deposits and liquidity outflows corresponding to a two-notch downgrade.

We also use a cash capital model which measures the amount of long-term funding available to fund illiquid assets. The illiquid portion of assets is the difference (the haircut) between the carrying value of an asset on the balance sheet and its effective cash value when used as collateral in a secured funding transaction. Long-term funding used as cash capital to support illiquid assets comprises unsecured funding with a remaining time to maturity of at least one year, shareholders' equity and core deposits (the portion of our customer deposits that are deemed to have a behavioral maturity of at least one year).

All these models and their assumptions are reviewed regularly to incorporate the latest business and market developments. We continuously refine the assumptions used in our crisis scenario and maintain a robust, actionable and tested contingency plan.

Asset encumbrance

Part of our future funding and collateral needs are supported by assets currently available and unrestricted. The table on the next page presents both total IFRS on-balance sheet assets and off-balance sheet assets received as collateral, allocating these amounts between those assets that are available and those assets that are encumbered or otherwise not available to support future funding and collateral needs.

Assets are presented as *Encumbered* if they have been pledged as collateral against an existing liability or if they are otherwise restricted in their use to secure funding. Included within the latter category are assets protected under client asset segregation rules, assets held by the Group's insurance entities to back related liabilities to the policy holders, assets held in certain jurisdictions to comply with explicit minimum local asset maintenance requirements and assets held in consolidated bankruptcy remote entities, such as certain investment funds and other structured entities.

➔ Refer to "Note 25 Restricted and transferred financial assets" in the "Financial information" section of this report for more information

Assets which cannot be pledged as collateral represents those assets which are not encumbered but which, by their nature, are not considered available to secure funding or to meet collateral needs. These mainly include secured financing receivables, positive replacement values for derivatives, goodwill and intangible assets.

All other assets are presented as *Unencumbered.* Shown separately are those assets that are considered to be readily available to secure funding or to meet collateral needs, consisting of cash and securities readily realizable in the normal course of business. These include cash and deposits with central banks, our multi-currency portfolio of unencumbered, high-quality, short-term assets managed centrally by Group Treasury and unencumbered positions in our trading portfolio. The majority of unencumbered assets not considered readily available are loans. This category also includes assets held by certain subsidiaries that are available to meet funding and collateral needs in certain jurisdictions which are not readily available for use by the Group as a whole.

Credit ratings

Credit ratings can affect the cost and availability of funding, especially funding from wholesale unsecured sources. Our credit ratings can also influence the performance of some of our businesses and levels of client and counterparty confidence. Rating agencies take into account a range of factors when assessing creditworthiness and setting credit ratings. These include the company's strategy, its business position and franchise value, stability and quality of earnings, capital adequacy, risk profile and management, liquidity management, diversification of funding sources, asset quality and corporate governance. Credit ratings reflect the opinions of the rating agencies and can change at any time.

In evaluating our liquidity requirements, we consider the potential impact of a reduction in UBS's long-term credit ratings and a corresponding reduction in short-term ratings. If our credit ratings were to be downgraded, "rating trigger" clauses, especially in derivative transactions, could result in an immediate cash outflow due to the unwinding of derivative positions, the need to deliver additional collateral or other ratings-based requirements. Based on UBS's credit ratings as of 31 December 2013, contractual liquidity outflows of approximately CHF 3.3 billion, CHF 5.0 billion and CHF 5.1 billion would have been required in the event of a one-notch, two-notch and three-notch reduction, respectively. Of these outflows, the portion related to derivative transactions is approximately CHF 1.4 billion, CHF 3.0 billion and CHF 3.2 billion, respectively.

Liquidity regulatory requirements

In December 2010, the Basel Committee on Banking Supervision (BCBS) published its "International framework for liquidity risk measurement, standards and monitoring" (Basel III Liquidity). The framework includes two liquidity ratios: the Liquidity Coverage Ratio (LCR) and the Net Stable Funding Ratio (NSFR). In January 2014, the BCBS published its final LCR requirements and issued a

Available stable funding	346
Required stable funding	318
NSFR (%)	109

further Consultative Document on the NSFR. Local regulators, including the Swiss authorities, are considering how to incorporate the final LCR requirements into local regulatory guidance. Consequently, banks currently employ a wide range of interpretations to calculate LCR and NSFR. We were in compliance with FINMA's current liquidity requirements throughout 2013.

The LCR provides a measure that illustrates the extent to which a bank holds enough highly liquid assets to survive short-term (30-day) severe general market and firm-specific stress. The NSFR assigns a required stable funding factor to assets (representing the illiquid part of assets) and assigns all liabilities an available stable funding factor (representing the stability of a liability) to illustrate the extent to which a bank is not overly reliant on short-term funding and has sufficient long-term funding for illiquid assets. Based on current regulatory guidance, the future minimum regulatory requirement is 100% for both the LCR (as of 2019) and NSFR (as of 2018), with minimum quantitative requirements for Switzerland expected to be effective as of January 2015.

The tables above show our pro-forma Basel III liquidity ratios based on current supervisory guidance from FINMA. These calculations include estimates of the impact of the rules and their interpretation and will be refined as regulatory interpretations evolve and as new models and the associated systems are enhanced. For the LCR, cash out- and inflows are estimated for up to a 30-day period under severe general market and firm-specific stress scenarios. The liquidity asset buffer includes our dedicated Group liquidity reserve, excess cash at major central banks and unencumbered collateral pledged to central banks. A more detailed breakdown of the liquidity asset buffer and the HQLA from which it is derived is shown in the table "Composition of liquidity asset buffer component of our regulatory Liquidity Coverage Ratio" on page 219. Available stable funding for our NSFR consists mainly of client deposits from our wealth management businesses, long-term debt issued and capital. This source of stable funding is used primarily to support residential mortgages as well as other loans.

Governance

Audited

Our liquidity and funding strategy is proposed by Group Treasury, approved by the Group Asset and Liability Management Committee (Group ALCO) and overseen by the Risk Committee.

Group Treasury monitors and oversees the implementation and execution of our liquidity and funding strategy, and ensures adherence to our liquidity and funding policies including limits and targets, reporting the Group's overall liquidity and funding position, including funding status and concentration risks, at least monthly to the Group ALCO and the Risk Committee. This enables close control of both our cash and collateral, including our stock of high-quality liquid securities, and ensures that the Group's general access to wholesale cash markets is centralized in Group Treasury. In addition, should a crisis require contingency funding measures to be invoked, Group Treasury is responsible for coordinating liquidity generation with representatives of the relevant business areas.

Audited

Liquidity and funding limits and targets are set at a Group and business division level, and are reviewed and reconfirmed at least once a year by the Board of Directors, the Group ALCO, the Group CFO, the Group Treasurer and the business divisions taking into consideration current and projected business strategy and risk tolerance. The principles underlying our limit and target framework aim to maximize and sustain the value of our business franchise and maintain an appropriate balance in the asset and liability structure. Structural limits and targets focus on the structure and composition of the balance sheet, while supplementary limits and

Audited

targets are designed to drive the utilization, diversification and allocation of funding resources. Together the limits and targets focus on liquidity and funding risk for periods out to one year, including stress testing. To complement and support this framework, Group Treasury monitors the markets with a dashboard of early warning indicators reflecting the current liquidity situation. The liquidity status indicators are used at a Group level to assess both the overall global and regional situations for potential threats.

➔ Refer to the "Corporate governance" section of this report for more information

Internal funding and funds transfer pricing

We employ an integrated liquidity and funding framework to govern the liquidity management of all our branches and subsidiaries and our major sources of liquidity are channeled through entities that are fully consolidated. Group Treasury meets internal demands for funding by channeling funds from units generating surplus cash to those in need of financing.

Funding costs and benefits are allocated to our business divisions and Non-core and Legacy Portfolio according to our liquidity and funding risk management framework. Our internal funds transfer pricing system is designed to provide the proper liability structure to support the assets and planned activities of each business division while minimizing cross-divisional subsidies. The funds transfer pricing mechanism aims to allocate funding and liquidity costs to the activities generating the liquidity and funding risks and deals with the movement of funds from those businesses in surplus to those that have a shortfall. Funding is internally transferred or allocated among businesses at rates and tenors that reflect each business's asset composition, liquidity and reliable external funding. We continue to review and enhance our internal funds transfer pricing system.

Maturity analysis of assets and liabilities

The table on the next page provides an analysis of consolidated total assets, liabilities and off-balance sheet commitments by residual contractual maturity at the balance sheet date. The contractual maturity of liabilities is based on the earliest date on which we could be required to pay and the contractual maturity of assets is based on the latest date the asset will mature. This basis of presentation differs from "Note 27b Maturity analysis of financial liabilities" in the "Financial information" section of this report, which is presented on an undiscounted basis, and the funding analysis above, for which long-term debt is presented based on original, rather than contractual maturity.

Derivative replacement values and trading portfolio assets and liabilities are assigned to the column *Due less than 1 month,* although the respective contractual maturities may extend over significantly longer periods.

Financial assets and liabilities with no contractual maturity (such as equity securities) are included in the *Perpetual/not applicable* time bucket. Undated or perpetual instruments are classified based on the contractual notice period which the counterparty of the instrument is entitled to give. Where there is no contractual notice period, undated or perpetual contracts are included in the *Perpetual/not applicable* time bucket.

Non-financial assets and liabilities with no contractual maturity (such as property, plant and equipment, goodwill and intangible assets, current and deferred tax assets and liabilities and retirement benefit liabilities) are generally included in the *Perpetual* time bucket.

Loan commitments are classified on the basis of the earliest date they can be drawn down.

Currency management

Our Group currency management activities are designed to reduce adverse currency effects on our reported financial results in Swiss francs, within limits set by the Board of Directors. Group Treasury focuses on three principal areas of currency risk management: currency-matched funding of investments in non-Swiss franc assets and liabilities, sell-down of non-Swiss franc profits and losses and selective hedging of anticipated non-Swiss franc profits and losses. Non-trading foreign exchange risks are managed under market risk limits, with the exception of Group Treasury management of consolidated capital activity.

Currency-matched funding and investment of non-Swiss franc assets and liabilities

For monetary balance sheet items and non-core investments, as far as it is practical and efficient we follow the principle of matching the currencies of our assets and liabilities for funding purposes. This avoids profits and losses arising from the retranslation of non-Swiss franc assets and liabilities.

Net investment hedge accounting is applied to non-Swiss franc core investments to balance the effect of foreign exchange movements on both the common equity tier 1 (CET1) capital ratio and CET1 capital on a fully applied basis.

➔ Refer to "Note 1a Significant accounting policies" and "Note 14 Derivative instruments and hedge accounting" in the "Financial information" section of this report for more information

Sell-down of reported profits and losses

Reported profit and losses are translated each month from their original transaction currencies into Swiss francs using the relevant month-end rate. Monthly income statement items of foreign subsidiaries and branches with a functional currency other than the Swiss franc are translated into Swiss francs using the relevant month-end rate. Weighted average rates for a year represent an average of 12 month-end rates, weighted according to the income and expense volumes of all foreign subsidiaries and branches with the same functional currency for each month. To reduce earnings volatility on the retranslation of previously recognized earnings in foreign currencies, Group Treasury centralizes the profits and losses arising in the Parent Bank and its branches and sells or buys the profit or loss for Swiss francs. Our operating entities follow a similar monthly sell-down process into their own reporting currencies. Retained earnings in operating entities with a reporting currency other than the Swiss franc are integrated and managed as part of net investment hedge accounting.

Hedging of anticipated future reported profits and losses

At any time, the Group ALCO may instruct Group Treasury to execute hedges to protect anticipated future profit and losses in foreign currencies against possible adverse trends of foreign exchange rates. Although intended to hedge future earnings, these transactions are accounted for as open currency positions and are subject to internal market risk VaR and stress loss limits.

Capital management

Our strong capital position provides us with a solid foundation for growing our business and enhancing our competitive positioning. At the end of 2013, our common equity tier 1 (CET1) capital ratio[1] was 18.5% on a phase-in basis and 12.8% on a fully applied basis, a significant increase compared with year-end 2012 pro-forma ratios, and the highest fully applied ratio in our peer group.

Capital management objectives

Audited

Adequate capital is a prerequisite to support our business activities, in accordance with both our own internal assessment and regulatory requirements. We aim to maintain a strong capital position and sound capital ratios at all times and therefore consider not only the current situation but also projected business and regulatory developments. We are committed to continuing to improve these ratios, mainly through a combination of retained earnings, the issuance of additional loss-absorbing capital (LAC) and efforts to reduce risk-weighted assets (RWA).

Ongoing compliance with regulatory capital requirements and target capital ratios is central to our capital adequacy management. We are targeting a fully applied CET1 ratio of 13% in 2014. By achieving our targets, we will exceed the Swiss Financial Market Supervisory Authority's (FINMA) requirements for Swiss systemically relevant banks (SRB), which are stricter than Basel Committee on Banking Supervision (BCBS) requirements. We believe this will provide even greater comfort to our stakeholders, further increase confidence in our firm and contribute to strong external credit ratings.

➔ Refer to the "Our strategy" section of this report for more information on our targets

➔ Refer to the "Swiss SRB and BIS Basel III capital requirements" chart in this section for more information on differences in capital requirements

Annual strategic and ongoing capital planning process

Audited

The annual strategic planning process incorporates a capital planning component and is key in defining mid- and longer-term capital targets. It is based on an attribution of Group RWA and leverage ratio denominator (LRD) limits to the business divisions. These resource allocations in turn impact business plans and earnings projections, which are then reflected in our capital plans.

Capital limits and targets are established at both Group and business division levels, and submitted to the Board of Directors for approval or for information on at least an annual basis. Group Treasury monitors and plans for consolidated RWA, LRD and capital developments. Monitoring activities may form the basis of adjustments to RWA and/or LRD limits, actions related to the issuance or redemption of capital instruments and other business-related decisions. In the event of limits being breached, an action plan is triggered, which defines remediating actions required to return the exposures to a limit-compliant level. Monitoring activities also consider developments in capital regulations.

Consideration of stress scenarios

Through a set of quantitative risk appetite objectives, we aim to ensure that aggregate risk exposure is within our desired risk capacity, based on our capital and business plans. We use both scenario-based stress tests and statistical frameworks to assess the impact of a severe stress event at an aggregate, Group-wide level. We have set an objective that our CET1 capital ratio remains at 10% or above if a severe stress event were to occur, and we are firmly committed to return capital to shareholders with a payout ratio of at least 50%, conditional on our achievement of both a fully applied CET1 ratio of a minimum of 13% and a post-stress CET1 ratio of a minimum of 10%.

➔ Refer to the "Risk management and control" section of this report for more information on our risk appetite framework

Capital adequacy management

Audited

During 2013, we managed our capital according to our capital ratio targets. In the target-setting process, we take into account the current and future capital requirements set by regulators as well as actual and potential future capital requirements including capital buffer requirements. We also consider our aggregate risk

[1] Unless otherwise indicated, all information in this section is based on the Basel III framework as applicable for Swiss systemically relevant banks (SRB).

Audited

exposure in terms of capital-at-risk, the views of rating agencies, comparisons with peer institutions and the impact of expected accounting policy changes. Our progress towards meeting the Swiss SRB Basel III fully applied capital requirements was evidenced by a series of capital transactions, including the following:
- the redemption of CHF 1.0 billion of two tier 2 capital instruments and the repurchase of CHF 1.0 billion of certain other tier 2 capital instruments in a public tender offer, as these capital instruments are not eligible for full recognition under Basel III and are being phased out by 2019;
- an increase in our Deferred Contingent Capital Plan (DCCP) of CHF 0.5 billion to a total of CHF 1.0 billion, under which deferred compensation balances will forfeit if a 7% Basel III CET1 ratio level (or 10% with respect to awards granted to Group Executive Board members) is breached or if a viability event occurs during the five-year period after the award date and
- our issuances of Basel III-compliant tier 2 loss-absorbing notes with a nominal amount of USD 1.5 billion in May 2013 and EUR 2.0 billion in February 2014, respectively, which both qualify as tier 2 capital and progressive buffer capital in compliance with Swiss SRB Basel III rules.

Active management of RWA

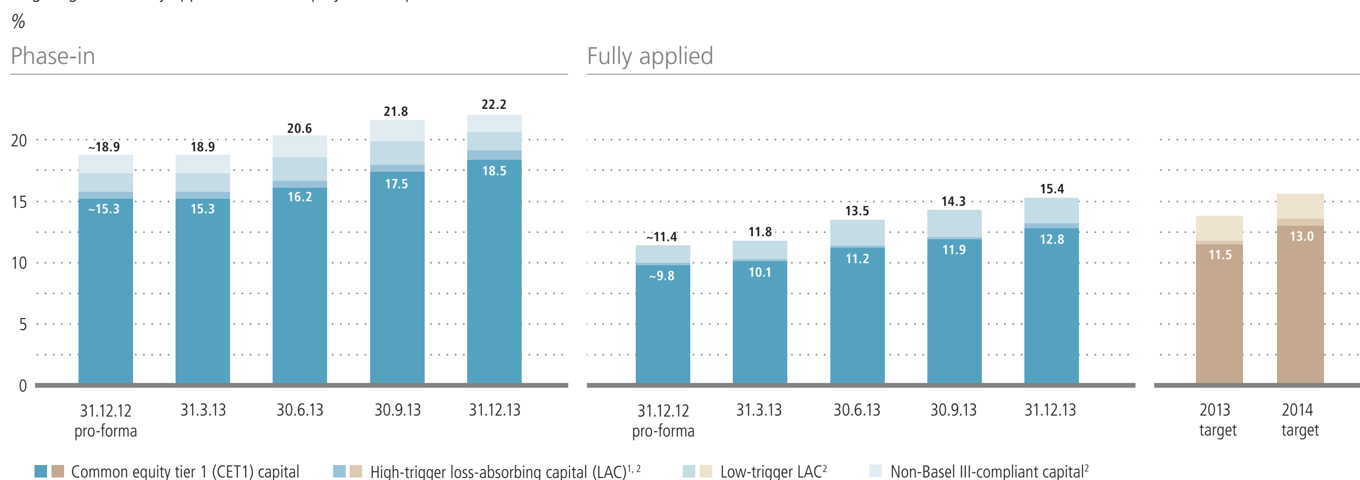
We have a strong track record of RWA reduction, surpassing our 2013 Basel III RWA targets well ahead of schedule and demonstrating progress towards achieving our RWA target of less than CHF 200 billion by 2017 on a fully applied basis, despite the incremental RWA resulting from the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA.

Having fully adapted its business to Basel III, our Investment Bank has operated with fully applied RWA of less than CHF 70 billion. In line with our strategy to deploy capital efficiently, RWA are expected to increase both in our wealth management businesses and in Retail & Corporate, as we deliver attractive lending and mortgage opportunities to our clients.

With the transfer of non-core assets from our Investment Bank to our Non-core and Legacy Portfolio unit, Corporate Center was tasked with managing these diversified assets in a manner that protects shareholder value and within the same robust oversight structure that successfully supported our RWA reduction in our Legacy Portfolio. While we managed approximately CHF 102.5 billion of RWA in our Non-core and Legacy Portfolio unit at the beginning of 2013, we reduced these to CHF 64 billion as of

Our capital ratios and targets

Targeting a 13% fully applied common equity tier 1 capital ratio in 2014



1 Consists of our Deferred Contingent Capital Plan. 2 Eligible as tier 2 capital.

31 December 2013 and therefore significantly exceeded our target of CHF 85 billion for that unit by the end of 2013. We aim to further reduce RWA in our Non-core and Legacy Portfolio to CHF 55 billion by the end of 2015 and CHF 25 billion by the end of 2017.

Active management of sensitivity to currency movements

The majority of our capital and a significant portion of our RWA are denominated in Swiss francs, but we also hold RWA and some eligible capital in other currencies, primarily US dollars, euros and British pounds. A significant depreciation of the Swiss franc against these currencies can adversely affect our key ratios, and Group Treasury is mandated with the task of minimizing such effects. If the Swiss franc depreciates against other currencies, consolidated RWA increase relative to our capital, and vice versa. The Group Asset and Liability Management Committee, a committee of the UBS Group Executive Board, can adjust the currency mix in capital, within limits set by the Board of Directors, to balance the effect of foreign exchange movements on the fully applied CET1 capital and capital ratio. Limits are in place for the sensitivity of both CET1 capital and capital ratio to a ±10% change in the value of the Swiss franc against other currencies. As of 31 December 2013, we estimate that a 10% depreciation of the Swiss franc against other currencies would increase CET1 capital by CHF 1,075 million (31 December 2012: CHF 845 million) and would decrease the CET1 capital ratio by 15 basis points (31 December 2012: 30 basis points). Conversely, we estimate that a 10% appreciation of the Swiss franc against other currencies would decrease CET1 capital by CHF 973 million (31 December 2012: CHF 764 million) and would increase the CET1 capital ratio by 15 basis points (31 December 2012: 30 basis points).

Swiss SRB Basel III capital information

As we are required to comply with regulations based on the Basel III framework as applicable for Swiss systemically relevant banks (SRB), our capital disclosures focus on Swiss SRB Basel III capital information. Differences between the Swiss SRB and BIS Basel III capital regimes are outlined in the subsection "Differences between Swiss SRB and BIS Basel III capital."

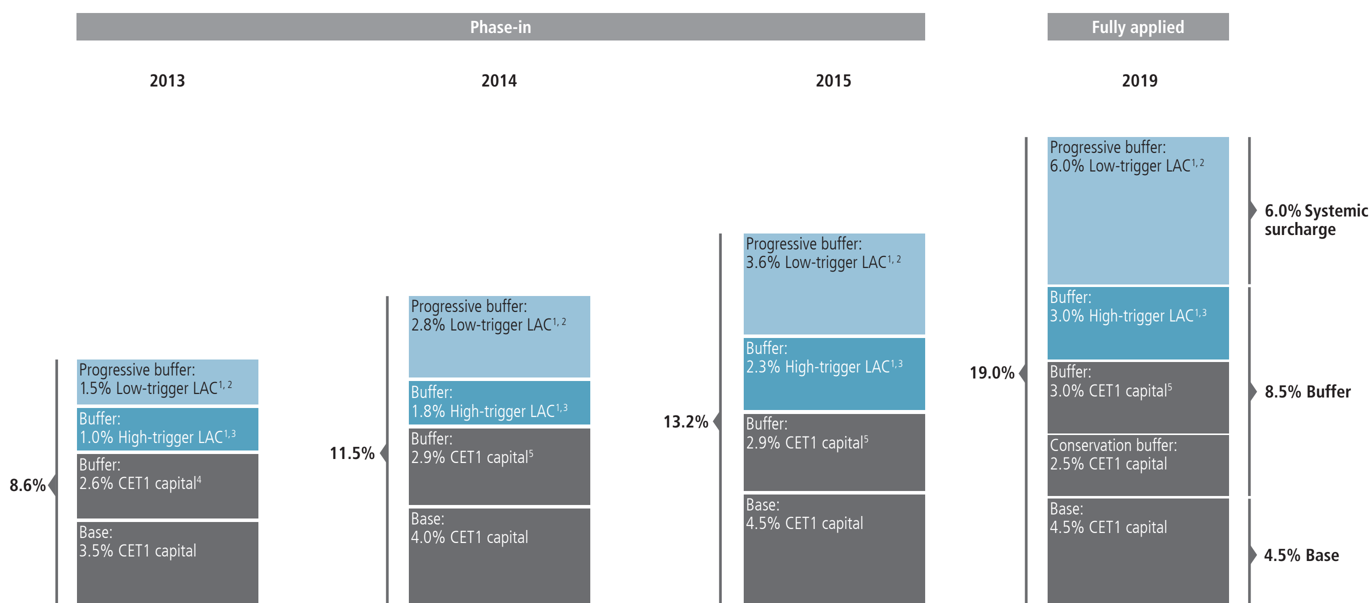
Regulatory framework

The Basel III framework came into effect in Switzerland on 1 January 2013 and includes prudential filters for the calculation of capital. These prudential filters consist mainly of capital deductions for deferred tax assets recognized for tax loss carry-forwards and the inclusion of the effects of IAS 19 (revised) relating to post-employment benefits. As these filters are being phased in between 2014 and 2018, their effects are gradually factored into our calculations of capital, RWA and capital ratios on a phase-in basis and are entirely reflected in our capital and capital ratios on a fully applied basis.

Furthermore, based on the most recent Swiss Financial Market Supervisory Authority (FINMA) regulation, capital instruments which were treated as hybrid tier 1 capital and as tier 2 capital under the Basel 2.5 framework are being phased out under Basel III between 2013 and 2019. On a phase-in basis, our capital and capital ratios include the applicable portion of these capital instruments not yet phased out. Our capital and capital ratios on a fully applied basis do not include these capital instruments.

All Basel III numbers for 31 December 2012 provided in this report are on a pro-forma basis. The pro-forma numbers were either disclosed in our report for the fourth quarter of 2012 and/or our Annual Report 2012 or were introduced as comparatives during 2013. Some of the models applied when calculating 31 December 2012 pro-forma information required regulatory

Our capital requirements



1 Loss-absorbing capital. High-trigger loss-absorbing capital qualifies as progressive buffer capital until the end of 2017. 2 Our requirement for the progressive buffer is dynamic and depends on our leverage ratio denominator and our market share in the loans and deposits business in Switzerland. Numbers are based on the latest information available to us and current supervisory guidance from FINMA. We expect our 2019 requirement of 6.0% on a fully applied basis to fall to 4.5% due to our planned balance sheet reduction related to the accelerated implementation of our strategy announced in October 2012 and the resulting reduction of the leverage ratio denominator. Systemically relevant banks (SRB) are eligible for a capital rebate on the progressive buffer if they take actions that facilitate recovery and resolvability beyond the minimum requirements to ensure the integrity of systemically important functions in the case of impending insolvency. 3 Can be substituted by CET1 capital. 4 National regulators can put in place a countercyclical buffer requirement of up to 2.5% of risk-weighted assets for credit exposures in their jurisdiction. In September 2013, the Swiss Federal Council activated a countercyclical buffer of 1% of RWA for mortgage loans on residential property in Switzerland, resulting in an overall 0.1% additional capital requirement, which is included in the 2.6% CET1 buffer capital requirement for 2013. 5 In January 2014, the Swiss Federal Council approved the increase of the countercyclical buffer requirement from the aforementioned 1% to 2%. The resulting effect is reflected in the 2.9% CET1 buffer capital requirement and will be effective 30 June 2014. Capital requirements presented for 2015 and 2019 do not include a countercyclical buffer requirement.

approval and included estimates (as discussed with our primary regulator) of the effect of these new capital charges.

Capital requirements

In Switzerland, all banks must comply with the Basel III capital framework, as required by the Swiss Capital Ordinance and regulations issued by FINMA. In addition, UBS, Credit Suisse and, since 1 November 2013, Zürcher Kantonalbank are required to comply with specific Swiss SRB rules.

Audited

As of 31 December 2013, our total capital requirement was 8.6% of our RWA. This requirement consisted of: (i) base capital of 3.5%, (ii) buffer capital of 3.6% (including a countercyclical buffer capital requirement that increased our effective capital requirement by 0.1%) and (iii) progressive buffer capital of 1.5%. As of 31 December 2013, we satisfied the base and buffer (including the countercyclical buffer) capital requirements through our CET1 capital. High- and low-trigger loss-absorbing capital significantly exceeded the progressive buffer capital requirement.

Capital ratios

As of 31 December 2013, our phase-in CET1 capital ratio was 18.5%, an increase of 3.2 percentage points compared with 15.3% as of 31 December 2012. On a fully applied basis, our CET1 capital ratio increased 3.0 percentage points to 12.8% during the year, exceeding our target ratio of 11.5% for 2013.

The significant improvement in our CET1 capital ratio was mainly due to a CHF 33.2 billion reduction in RWA, despite incre-

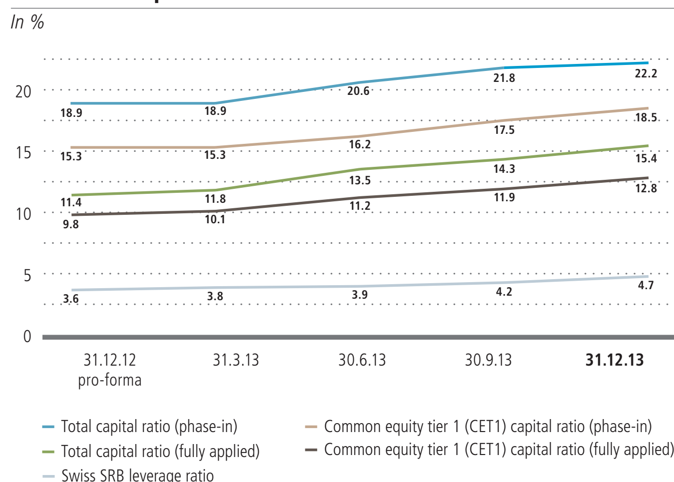
1 Includes additional tier 1 capital in the form of hybrid instruments, which was entirely offset by the required deductions for goodwill.

mental RWA of CHF 22.5 billion resulting from the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA. A CHF 2.1 billion increase in our CET1 capital, consistent with our strategy of high-quality capital accretion, also contributed to the increase in our CET1 capital ratio.

Our phase-in total capital ratio stood at 22.2% as of 31 December 2013 compared with 18.9% as of 31 December 2012. This improvement was primarily due to the aforementioned reduction in RWA and the increase in our CET1 capital. Our fully applied total capital ratio increased 4.0 percentage points to 15.4%.

➔ Refer to the "Regulatory and legal developments" section of this report for more information on the incremental RWA resulting from the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA

Swiss SRB capital ratios



Eligible capital

Common equity tier 1 (CET1) and tier 1 capital

Our CET1 capital mainly comprises share capital, share premium, which primarily consists of additional paid-in capital related to shares issued, and retained earnings. A detailed reconciliation of IFRS equity to CET1 capital is provided in the table "Reconciliation IFRS equity to Swiss SRB Basel III capital."

Our phase-in tier 1 capital is equal to our phase-in CET1 capital, as additional tier 1 capital in the form of hybrid capital instruments is entirely offset by required deductions for goodwill. These hybrid tier 1 capital instruments are not eligible as capital under Basel III and are therefore not included in our fully applied tier 1 capital.

During 2013, phase-in CET1 capital increased by CHF 2.1 billion to CHF 42.2 billion. This increase was mainly due to the full year net profit attributable to UBS shareholders of CHF 3.2 billion and the exercise of our option to acquire the SNB StabFund's equity, which resulted in a CHF 2.1 billion increase in capital. These increases were partly offset by an increased deduction for goodwill as a result of a reduction in hybrid capital against which this goodwill was previously offset, adverse foreign currency translation effects and a number of other required adjustments to regulatory capital.

On a fully applied basis, CET1 capital increased by CHF 3.7 billion to CHF 28.9 billion, largely due to the same factors that contributed to the increase in phase-in CET1 capital with the main exception being the effect of the goodwill deduction on phase-in CET1 capital, which is not relevant for the fully applied CET1 capital calculation.

A more granular analysis of our 2013 CET1 capital movement on both a phase-in and fully applied basis is shown in the table "Swiss SRB Basel III capital movement."

Tier 2 capital

Low-trigger loss-absorbing capital accounted for CHF 4.7 billion of tier 2 capital as of 31 December 2013 and consisted of three US dollar-denominated subordinated notes with a write-down threshold set at a 5% phase-in CET1 ratio (after giving effect to the write-down of any high-trigger loss-absorbing capital). Furthermore, our tier 2 capital included high-trigger loss-absorbing capital of CHF 1.0 billion, in the form of our DCCP, with a write-down threshold set at a 7% phase-in CET1 ratio or 10% with respect to awards granted to Group Executive Board members for the performance year 2013. Additionally, our loss-absorbing capital instruments would be written down if FINMA determines that a write-down is necessary to ensure UBS's viability, or if UBS receives a commitment of governmental support that FINMA determines to be necessary to ensure UBS's viability.

The remainder of tier 2 capital consisted of outstanding tier 2 instruments which will be phased out by 2019, based on the most recent FINMA regulation.

During 2013, our phase-in tier 2 capital decreased by CHF 0.9 billion to CHF 8.6 billion. This decrease was primarily due to the redemption and amortization of tier 2 capital instruments of CHF 1.3 billion, the repurchase of certain other tier 2 capital instruments of CHF 1.0 billion in a public tender offer and adverse foreign currency translation effects, partly offset by an increase of CHF 1.2 billion in low-trigger loss-absorbing capital and CHF 0.5 billion in high-trigger loss-absorbing capital in the form of our DCCP.

Fully applied tier 2 capital increased by CHF 1.5 billion to CHF 5.7 billion, almost entirely due to the issuance of loss-absorbing capital.

A more detailed overview of our tier 2 capital instruments eligible as capital on a phase-in basis under Basel III as of 31 December 2013 is provided in the tables later on in this section.

Swiss SRB Basel III capital movement

Additional capital information

In order to improve the consistency and comparability of regulatory capital instruments disclosures across market participants, BIS and FINMA Basel III Pillar 3 rules require banks to disclose the main features of eligible capital instruments and their terms and conditions. This information is available in the "Bondholder information" section of our Investor Relations website.

➔ Refer to "Bondholder information" at www.ubs.com/investors for more information on the capital instruments of UBS Group and UBS AG (Parent Bank)

In order to fulfill BIS and FINMA Basel III Pillar 3 composition of capital disclosure requirements, a full reconciliation of all regulatory capital elements to the published IFRS balance sheet is disclosed in the "Supplemental disclosures required under Basel III Pillar 3 regulations" section of this report.

➔ Refer to the "Supplemental disclosures required under Basel III Pillar 3 regulations" section of this report for more information

BIS and Swiss SRB Basel III rules require banks to disclose differences between the accounting scope of consolidation and the regulatory scope of consolidation.

The scope of consolidation for the purpose of calculating Group regulatory capital is generally the same as the scope under IFRS and includes subsidiaries directly or indirectly controlled by UBS AG that are active in the banking and finance sector. However, subsidiaries consolidated under IFRS that are active in sectors other than banking and finance are excluded from the regulatory scope of consolidation. More information on the IFRS scope of consolidation as well as the list of significant subsidiaries included in this scope as of 31 December 2013 are available in the "Financial information" section of this report. Details on entities which are treated differently under the regulatory scope of consolidation are available in the "Supplemental disclosures required under Basel III Pillar 3 regulations" section of this report.

➔ Refer to "Note 1 Summary of significant accounting policies," "Note 30 Interests in subsidiaries and other entities" and "Supplemental disclosures required under Basel III Pillar 3 regulations" in the "Financial information" section of this report for more information on the IFRS scope of consolidation

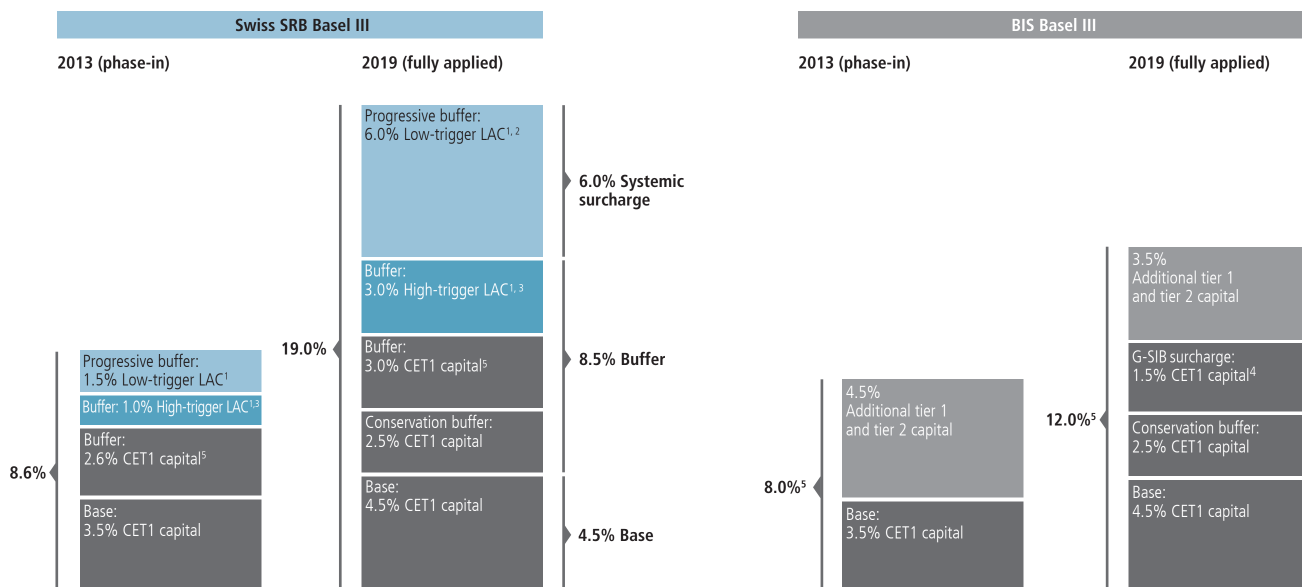
We have estimated the loss in capital that we could incur as a result of the risks associated with the matters described in "Note 22 Provisions and contingent liabilities" to our consolidated financial statements. We have utilized for this purpose the advanced measurement approach (AMA) methodology that we use when determining the capital requirements associated with operational risks, based on a 99.9% confidence level over a 12-month horizon. The methodology takes into consideration UBS and industry experience for the AMA operational risk categories to which those matters correspond in isolation from other areas. On this standalone basis, we estimate the loss in capital that we could incur over a 12-month period as a result of our risks associated with these operational risk categories at CHF 2.7 billion as of 31 December 2013. Because this estimate is based upon historical data for the relevant risk categories, it does not constitute a subjective assessment of UBS's actual exposures in those matters and does not take into account any provisions recognized for those matters. For this reason, and because some of these matters are not expected to be resolved within the next 12 months, any possible losses that we may incur with respect to these matters may be materially more or materially less than this estimated amount.

➔ Refer to "Note 22 Provisions and contingent liabilities" in the "Financial information" section of this report for more information

Differences between Swiss SRB and BIS Basel III capital

Our Swiss SRB Basel III and BIS Basel III capital have the same basis of calculation, on both a phase-in and fully applied basis, except for two specific items. Firstly, our DCCP instruments, representing high-trigger loss-absorbing capital, are amortized over five years under BIS Basel III, but are not amortized under Swiss SRB regulations, resulting in Swiss SRB Basel III tier 2 capital being higher by CHF 92 million as of 31 December 2013. Secondly, a portion of unrealized gains on financial investments available-for-sale, totaling CHF 30 million as of 31 December 2013, is recognized as tier 2 capital under BIS Basel III, but not under Swiss SRB regulations.

Swiss SRB and BIS Basel III capital requirements



1 Loss-absorbing capital. High-trigger loss-absorbing capital qualifies as progressive buffer capital until the end of 2017. 2 We expect our 2019 requirement of 6.0% for the progressive buffer on a fully applied basis to fall to 4.5% due to our planned balance sheet reduction related to the accelerated implementation of our strategy announced in October 2012 and the resulting reduction in total exposure. Systemically relevant banks (SRB) are eligible for a capital rebate on the progressive buffer if they take actions that facilitate recovery and resolvability beyond the minimum requirements to ensure the integrity of systemically important functions in the case of impending insolvency. 3 Can be substituted by Swiss SRB Basel III CET1 capital. 4 Applies to UBS as one of the global systemically important banks (G-SIB) and will be phased in between 2016 and 2018, becoming fully effective on 1 January 2019. 5 National regulators can put in place a countercyclical buffer requirement of up to 2.5% of risk-weighted assets for credit exposures in their jurisdiction. In September 2013, the Swiss Federal Council has activated a countercyclical buffer of 1% of RWA for mortgage loans on residential property in Switzerland, resulting in an overall 0.1% additional capital requirement, which is included in the 2.6% CET1 buffer capital requirement for 2013. BIS Basel III for 2013 and 2019 and Swiss SRB Basel III for 2019 presented in this graph do not include a countercyclical buffer requirement.

Differences between Swiss SRB and BIS Basel III capital information

Basel III risk-weighted assets	228,557	228,557	0	225,153	225,153	0

Risk-weighted assets

Our risk-weighted assets (RWA) under BIS Basel III are the same as under Swiss SRB Basel III. RWA on a fully applied basis are the same as on a phase-in basis, except for differences related to the adoption of IAS 19 (revised) *Employee Benefits,* which are phased in between 2014 and 2018. On a fully applied basis, net defined benefit assets/liabilities are determined in accordance with IAS 19 (revised), and any net defined benefit asset that is recognized is deducted from common equity tier 1 capital rather than being risk-weighted. On a phase-in basis, defined benefit-related assets/liabilities are determined in accordance with the previous IAS 19 requirements ("corridor method"), and any defined benefit-related asset that is recognized is risk-weighted at 100%. As a result, our phase-in RWA as of 31 December 2013 were CHF 3.4 billion higher than our fully applied RWA.

Phase-in RWA decreased by CHF 33.2 billion to CHF 228.6 billion in 2013 and fully applied RWA by CHF 32.9 billion to CHF 225.2 billion. These decreases were both mainly due to a CHF 41 billion reduction in credit risk RWA and a CHF 17 billion reduction in market risk RWA, partly offset by a CHF 25 billion increase in operational risk RWA, primarily due to the aforementioned supplemental operational risk capital analysis.

In accordance with our strategy to focus on sustainable, less capital-intensive business activities and due to our active portfolio management and risk-mitigation activities, RWA both in the Investment Bank and in Corporate Center – Non-core and Legacy Portfolio were substantially reduced during 2013.

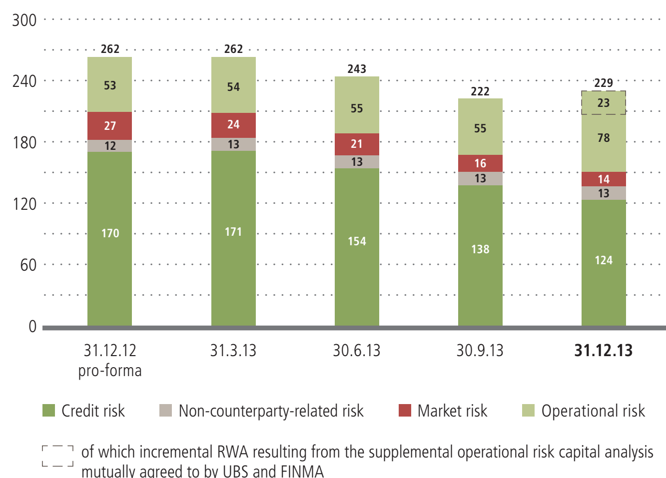
The tables "Basel III RWA by risk type, exposure and reporting segment" and "Basel III RWA movement by key driver, risk type and reporting segment" on the following pages provide more granular disclosures of RWA movements by reporting segment.

➔ **Refer to "Investment Bank" and "Corporate Center" in the "Financial and operating performance" section and to the "Risk management and control" section of this report for more information on RWA developments**

➔ **Refer to "Table 2: Detailed segmentation of Basel III exposures and risk-weighted assets" in the "Supplemental disclosures required under Basel III Pillar 3 regulations" section of this report for more information on gross and net exposure at default by exposure segment**

Phase-in Basel III risk-weighted assets

CHF billion



The following changes in our RWA calculations are expected to add approximately CHF 3 billion to our RWA in the first quarter of 2014: (i) a further reduction of the difference in the RWA calculation for Swiss residential mortgages between the advanced internal ratings-based (IRB) and the standardized approaches as a result of the FINMA requirement to apply a bank-specific multiplier for banks using the internal ratings-based approach (this difference will be reduced annually until 2019) and (ii) net long and net short securitization positions in the trading book requiring separate underpinning, (rather than the higher of net long or net short positions underpinned during the transitional phase until 31 December 2013).

1 Calculated based on our Swiss SRB Basel III total capital requirement of 8.6% of RWA. 2 In line with Basel III Pillar 1 requirements, RWA related to securitization / re-securitization in the trading book are newly presented as market risk RWA. Previously, these RWA were presented as credit risk RWA. Prior periods were restated for this change in presentation. 3 Includes stressed expected positive exposures across all exposure classes. 4 Includes securitization / re-securitization exposures in the banking book, equity exposures in the banking book according to the simple risk weight method, credit valuation adjustments, settlement risk and business transfers. 5 Corporate Center – Core Functions market risk RWA were negative as this included the effect of portfolio diversification across businesses. 6 Reflects the effect of the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA.

RWA movement by risk type, exposure and reporting segment

Credit risk

Phase-in credit risk RWA amounted to CHF 124 billion as of 31 December 2013 compared with CHF 166 billion as of 31 December 2012.

This decrease was mainly due to a CHF 24 billion reduction related to Other exposure segments. This was primarily driven by a reduction in RWA for advanced and standardized credit valuation adjustments (CVA) of CHF 18 billion, mainly due to benefits from economic CVA hedges, ratings migration, reduced exposures and market-driven reductions in Corporate Center – Non core and Legacy Portfolio and to a lesser extent in the Investment Bank. Furthermore, a decline of CHF 6 billion was realized due to the sale of securitization exposures in Corporate Center – Legacy Portfolio.

Credit risk RWA for exposures to corporates decreased by CHF 10 billion, primarily due to a reduction in drawn loans, undrawn loan commitments and derivative exposures in Wealth Management Americas, Investment Bank and Corporate Center – Non-core and Legacy Portfolio.

Credit risk RWA for exposures to banks declined by CHF 6 billion, mainly due to lower derivative exposures in the Investment Bank and Corporate Center – Non-core and Legacy Portfolio.

1 Calculated based on our Swiss SRB Basel III total capital requirement of 8.0% of RWA. 2 In line with Basel III Pillar 1 requirements, RWA related to securitization / re-securitization in the trading book are newly presented as market risk RWA. Previously, these RWA were presented as credit risk RWA. Prior periods were restated for this change in presentation. 3 Includes stressed expected positive exposures across all exposure classes. 4 Includes securitization / re-securitization exposures in the banking book, equity exposures in the banking book according to the simple risk weight method, credit valuation adjustments, settlement risk and business transfers. 5 Corporate Center – Core Functions market risk RWA were negative as this included the effect of portfolio diversification across businesses. 6 RWA related to risks-not-in-VaR are presented on a Basel 2.5 basis.

Non-counterparty-related risk

Phase-in non-counterparty-related risk RWA amounted to CHF 13 billion as of 31 December 2013 compared with CHF 12 billion as of 31 December 2012.

Market risk

Phase-in market risk RWA amounted to CHF 14 billion as of 31 December 2013 compared with CHF 31 billion as of 31 December 2012. This decline was due to a CHF 5 billion decrease in the comprehensive risk measure, a decline of CHF 4 billion in the incremental risk charge and reductions of CHF 2 billion, CHF 3 billion and CHF 1 billion in RWA related to value-at-risk (VaR), stressed VaR and risks-not-in-VaR, respectively. From a reporting segment perspective, the aforementioned decrease in market risk RWA was almost entirely recorded in Corporate Center – Non-core and Legacy Portfolio.

Operational risk

Phase-in operational risk RWA amounted to CHF 78 billion as of 31 December 2013, an increase of CHF 25 billion compared with 31 December 2012, primarily due to incremental RWA of CHF 22.5 billion resulting from the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA.

During the fourth quarter of 2013 and January of 2014, UBS and FINMA reviewed the temporary operational risk-related RWA add-on that became effective on 1 October 2013. Following a review of the advanced measurement approach (AMA) model, the litigation exposures and contingent liabilities of UBS, provisioning movements and methodologies, and progress on managing other operational risks, UBS and FINMA mutually agreed that, effective on 31 December 2013, a supplemental analysis will be used to calculate the incremental operational risk capital required to be held for litigation, regulatory and similar matters and other contingent liabilities. The incremental CHF 22.5 billion operational risk-related RWA was allocated to the business divisions and Corporate Center proportionally to the amount of allocated operational risk-related RWA excluding the incremental RWA as of 31 December 2013. The allocation methodology for operational risk-related RWA excluding the incremental RWA is based on the cumulative operational risk-related loss history of the business divisions and Corporate Center – Non-core and Legacy Portfolio.

➔ **Refer to the "Regulatory and legal developments" section of this report for more information on the incremental RWA resulting from the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA**

RWA movement by key driver, risk type and reporting segment

The following pages include information about the definitions of key driver categories and underlying judgments and assumptions.

Credit risk

The decrease of CHF 41 billion in credit risk RWA was mainly driven by reductions in book size in both Corporate Center – Non-core and Legacy Portfolio and the Investment Bank, primarily due to the aforementioned sale of securitization exposures, trade compressions and reduced derivative exposures, and a net improvement in book quality, primarily driven by economic CVA hedges in Corporate Center – Non-core and Legacy Portfolio.

Market risk

Substantially all of the decrease of CHF 17 billion in market risk RWA was the result of reduced market risk exposures. Only a small amount resulted from changes in methodology or routine model parameter updates.

➔ Refer to "Corporate Center – Non-core and Legacy Portfolio" in the "Risk management and control" section of this report for more information on RWA by portfolio composition and exposure category

Key drivers of RWA movement by risk type

We employ a range of analyses in our RWA monitoring framework to identify the key drivers of movements in the positions. This includes a top-down identification approach for several sub-components of the RWA movement, leveraging information available from our monthly detailed calculation, substantiation and control processes. Particular attention is paid to identifying and segmenting items within the day-to-day control of the business and those items that are driven by changes in risk models or regulatory methodology. We transitioned to Basel III in the first quarter of 2013. As RWA as of 31 December 2012 represent Basel III pro-forma information, certain 2013 movements were allocated to the various movement types on a best efforts basis only.

Credit risk RWA movements

Methodology changes and model parameter updates
Represents RWA movements arising from the implementation of new models and from parameter changes to existing models. This movement type also includes regulatory methodology changes, reviews of modeling assumptions and refinements to our Basel III (pro-forma) calculations applied until January 2013. The RWA impact of model and methodology changes is estimated based on the portfolio at the time of the implementation of the change. Methodology changes and model parameter updates were not segregated due to a combination of the aforementioned complexity associated with the transition from Basel III (pro-forma) to Basel III, inherent complexity related to some components of credit risk and materiality aspects.

Acquisitions and disposals of business operations
Represents the movement in RWA as a result of the disposal or acquisition of business operations, quantified based on the credit risk exposures as at the end of the month preceding a disposal or following an acquisition. Acquisition and disposal of exposures in the ordinary course of business are reflected under book size.

Book quality
Represents RWA movements resulting from changes in the underlying credit quality of counterparties. These are caused by changes to risk parameters which arise from actions such as, but not limited to, model recalibration, change in counterparty external rating or new credit hedges.

Book size
Represents RWA movements arising in the normal course of business, such as growth in credit exposures or reduction in book size from sales and write-offs. The amounts reported for each business division and Corporate Center may also include the effect of transfers and allocations of exposures between business divisions reflected in the period. Currently, the movement in book size is estimated based on amounts derived from the other four drivers. We will continue to refine our underlying RWA reporting and intend to provide more granular information in the future.

Foreign currency translation effects
Represents RWA movements as a result of changes in exchange rates of the transaction currencies versus the Swiss franc.

Non-counterparty-related risk RWA movements

Exposure movements

Represents RWA movements arising in the normal course of business, such as purchase or sale of relevant underlying exposures.

Foreign currency translation effects

Represents foreign currency translation effects on RWA movements as a result of changes in exchange rates of the transaction currencies versus the Swiss franc.

Market risk RWA movements

Methodology changes

Represents methodology changes to the calculation driven by regulatory and internal policy decisions. In some cases, the effects of methodology changes have been assessed at the time of implementation, and may not reflect the effects for the entire year 2013. Further, methodology changes may, on occasion, be implemented at the same time as parameter updates and changes in regulatory add-ons, the effects of which cannot be fully disaggregated.

Model parameter updates

Includes routine updates to model parameters such as the roll-forward of the five-year historical data used for VaR. The effect of each parameter update, assessed at the point of implementation, has been used to approximate the combined effect over the year.

Regulatory add-ons

Represents entirely the "Risks-not-in-VaR (RniV)" add-on described in the "Risk management and control" section of this report. The effect of the annual recalibration has been calculated by applying the old and new multiplication factors to the year-end VaR- and SVaR-based RWA.

Movement in risk levels

Represents changes as a result of movements in risk levels that are derived after accounting for the movements in the above three specific drivers. This includes changes in positions, effects of market moves on risk levels and currency translation effects. The amounts reported for each business division and Corporate Center may also include the effect of transfers and allocations of exposures between business divisions reflected in the period.

Operational risk RWA movements

Incremental RWA

Represents RWA movements relating to changes in the incremental RWA resulting from the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA.

Other model parameter updates

Represents RWA movements arising from the regular update of our advanced measurement approach (AMA) model.

Swiss SRB leverage ratio

Requirements

The Swiss SRB leverage ratio is calculated by dividing the relevant capital amount by the three-month average total IFRS on-balance sheet assets and off-balance sheet items, based on the regulatory scope of consolidation and adjusted for netting of securities financing transactions and derivatives and other items. The capital considered in the calculation of the phase-in leverage ratio includes CET1 capital and loss-absorbing capital, but excludes tier 2 phase-out capital.

The table "Swiss SRB leverage ratio requirements" shows our total leverage ratio requirement, as well as the requirements by capital components, and our actual leverage ratio information. As of 31 December 2013, our CET1 capital covered the leverage ratio requirements for the base and buffer capital components, while our high- and low-trigger loss-absorbing capital satisfied our leverage ratio requirement for the progressive buffer component.

The Swiss SRB leverage ratio requirement is equal to 24% of the total capital ratio requirement. As of 31 December 2013, the effective total leverage ratio requirement was 2.06%, resulting from multiplying the total capital ratio requirement of 8.6% by 24%.

The Basel Committee on Banking Supervision (BCBS) issued a consultation on "Revised Basel III leverage ratio framework and disclosure requirements" in June 2013, followed by final rules in January 2014. The final calibration, and any final adjustments to the definition, will be completed by 2017. The ratio is expected to be incorporated within Pillar 1 capital requirements on 1 January 2018. According to the BCBS's timetable, the disclosure requirements are to become effective as of 1 January 2015 subject to implementation by national regulators.

➔ **Refer to the "Regulatory and legal developments" section of this report for more information on the new BIS Basel III leverage ratio framework published in January 2014**

Calculating the phase-in Swiss SRB leverage ratio

Our phase-in Swiss SRB leverage ratio was 4.65% as of 31 December 2013.

Swiss SRB leverage ratio (phase-in) = **Total capital** (Phase-in CET1 + loss-absorbing capital) / **Total exposure**[1] (Total IFRS assets **+ adjustments**) = **CHF 47.9 billion** (= CHF 42.2 billion + CHF 5.7 billion) / **CHF 1,028 billion** (= CHF 1,017 billion + CHF 11 billion) = **4.65%**

Adding CHF 219 billion: OTC derivatives (CHF 105 billion), off-balance sheet commitments and contingent liabilities (CHF 96 billion) and other factors (CHF 18 billion)

Deducting CHF 209 billion: derivatives (CHF 197 billion), repurchase agreements covered by eligible netting agreements under the Basel II framework (CHF 2 billion) and other factors (CHF 10 billion)

1 Calculated in accordance with Swiss SRB leverage ratio requirements and representing the average of the total adjusted exposure at the end of the three months preceding the end of the reporting period. The total adjusted exposure represents assets recognized on the balance sheet in accordance with IFRS measurement principles, but based on the regulatory scope of consolidation. In accordance with current Swiss SRB leverage ratio requirements, the leverage ratio denominator excludes forward starting repos, securities lending indemnifications and current exposure method (CEM) add-ons for exchange-traded derivatives (ETD), both proprietary and agency transactions.

Swiss SRB leverage ratio requirements

	Phase-in						
	Requirements		Actual information				
	Required Swiss SRB leverage ratio (%)[1]	Swiss SRB leverage ratio capital requirement	Available Swiss SRB Basel III capital		Actual Swiss SRB leverage ratio (%)		Capital type
CHF million, except where indicated		**31.12.13**	**31.12.13**	31.12.12	**31.12.13**	31.12.12	
Base capital	0.84	**8,634**	**8,634**	10,219	**0.84**	0.84	CET1
Buffer capital	0.86[2]	**8,795**	**33,545**[3]	29,813[3]	**3.26**	2.45	CET1
Progressive buffer	0.36	**3,700**	**5,665**[4]	4,160[4]	**0.55**	0.34	LAC
Total	2.06	**21,130**	**47,844**	44,192	**4.65**	3.63	

1 Requirements for base capital (24% of 3.5%), buffer capital (24% of 3.6%) and progressive buffer capital (24% of 1.5%). 2 This includes the effect of the countercyclical buffer requirement. 3 Swiss SRB Basel III CET1 exceeding the base capital requirements is allocated to the buffer capital. 4 During the transition period until end of 2017, high-trigger loss-absorbing capital (LAC) can be included in the progressive buffer.

Developments during 2013

Our phase-in total Swiss SRB leverage ratio increased 102 basis points to 4.65% as of 31 December 2013 from 3.63% as of 31 December 2012. This increase was mainly due to a CHF 189 billion decrease in the total adjusted exposure, also known as the leverage ratio denominator, resulting in an improvement of 70 basis points to the leverage ratio. In addition, the aforementioned increases in CET1 and loss-absorbing capital contributed 32 basis points to the improvement in the leverage ratio on a phase-in basis.

The exposure reduction of CHF 189 billion mainly reflected a CHF 253 billion reduction in average on-balance sheet assets, resulting from reductions in average positive replacement values and financial investments available-for-sale, partly offset by an increase of CHF 75 billion from the combined net effect of reduced derivative and securities financing exposure netting and a lower current exposure add-on for derivative exposures. Furthermore, the adjusted exposure for off-balance sheet items and assets of entities consolidated under IFRS but not under the regulatory scope of consolidation decreased by CHF 5 billion and CHF 7 billion, respectively.

On a fully applied basis, our Swiss SRB leverage ratio increased 96 basis points to 3.39% as of 31 December 2013 from 2.43% as of 31 December 2012.

Refer to the “Supplemental disclosures required under Basel III Pillar 3 regulations” section of this report for more information on the regulatory scope of consolidation. 2 In accordance with current Swiss SRB leverage ratio requirements, the leverage ratio denominator excludes forward starting repos, securities lending indemnifications and CEM add-ons for exchange-traded derivatives (ETD), both proprietary and agency transactions.

Swiss SRB leverage ratio denominator

We implemented the disclosure of the Swiss SRB leverage ratio on a Group level in 2013, with comparative 2012 information provided on a pro-forma basis only. The table below provides Swiss SRB leverage ratio denominator information by reporting segment for 31 December 2013 which represents the average of the fourth quarter 2013. It is the first time such segment disclosure is made. No comparative information is provided in this table due to organizational changes.

Equity attribution framework

The equity attribution framework reflects our objectives of maintaining a strong capital base and managing performance, by guiding each business towards activities that appropriately balance profit potential, risk and capital usage. This framework, which includes some forward-looking elements, enables us to integrate Group-wide capital management activities with those at a business division level and to calculate and assess return on attributed equity (RoAE) in each of our business divisions.

Tangible equity is attributed to our business divisions by applying a weighted-driver approach that combines phase-in Basel III capital requirements with internal models to determine the amount of capital required to cover each business division's risk. RWA and leverage ratio denominator usage are converted to their common equity tier 1 (CET1) equivalents based on capital ratios as targeted by industry peers. Risk-based capital (RBC) is converted to its CET1 equivalent based on a conversion factor that considers the amount of RBC exposure covered by loss-absorbing capital. In addition to tangible equity, we allocate equity to support goodwill and intangible assets as well as certain capital deduction items. The amount of equity attributed to all business divisions and Corporate Center corresponds to the amount we believe is required to maintain a strong capital base and to support our businesses adequately, and can differ from the Group's actual equity during a given period.

Average total equity attributed to the business divisions and Corporate Center was CHF 43.5 billion in 2013, a decrease from CHF 50.8 billion for 2012. This reduction was due to decreases in RWA, the leverage ratio denominator and RBC as a result of the

1 Return on attributed equity shown for the business divisions and Corporate Center and return on equity shown for UBS Group.

accelerated implementation of our strategy announced in October 2012. Average attributed equity also decreased for all business divisions as a result of methodology refinements. From 1 January 2013, equity associated with goodwill and intangible assets that arose from the PaineWebber acquisition is attributed to the Corporate Center. Furthermore, attributed equity for the business divisions decreased because a number of centrally managed risks that are included in RBC have been moved from the business divisions to the Corporate Center. This change took effect in the third quarter of 2013, together with the implementation of the abovementioned RBC conversion to a CET1-equivalent measure. These changes contributed to an overall increase in average attributed equity for Corporate Center – Core Functions in 2013. Furthermore, as of 1 January 2014, equity required to underpin certain Basel III capital deduction items that are relevant from 2014 will be allocated to Group items within Corporate Center – Core Functions.

➔ Refer to the "Risk management and control" section of this report for more information on risk-based capital

Average equity attributable to UBS shareholders decreased to CHF 47.2 billion in 2013 from CHF 48.7 billion in 2012. The difference between average equity attributable to UBS shareholders and average equity attributed to the business divisions and Corporate Center increased to positive CHF 3.7 billion in 2013 from negative CHF 2.1 billion in 2012, with the 2013 difference mainly resulting from holding higher levels of equity than required under the Basel III phase-in rules.

Annualized return on attributed equity (RoAE) is a pre-tax profitability measure that is an indicator of efficiency in the usage of the firm's financial resources.

The return on equity (RoE) for the Group increased to positive 6.7% in 2013 from negative 5.1% in the prior year due to an increase in net profit attributable to UBS shareholders, coupled with a decrease in average equity attributable to UBS shareholders. For 2013, the RoE of the Group was lower than the average of the RoAE of the business divisions because of the negative RoAE of the Corporate Center and due to the fact that more equity was attributable to UBS shareholders than the total equity attributed to the business divisions and Corporate Center.

UBS shares

The majority of our common equity tier 1 capital comprises share capital, share premium and retained earnings attributable to UBS shareholders. As of 31 December 2013, total IFRS equity attributable to UBS shareholders amounted to CHF 48,002 million and was represented by a total of 3,842,002,069 shares issued.

Audited

In 2013, shares issued increased by a total of 6,751,836 shares due to exercises of employee options. Each share has a par value of CHF 0.10 and entitles the holder to one vote at the shareholders' meeting, if entered into the share register as having the right to vote, as well as a proportionate share of distributed dividends. As the Articles of Association of UBS AG indicate, there are no other classes of shares and no preferential rights for shareholders.

➔ **Refer to "Capital structure" and "Shareholders' participation rights" in the "Corporate governance" section of this report for more information**

Holding of UBS shares

We hold our own shares primarily to hedge employee share and option participation plans.

In addition, the Investment Bank holds a limited number of own shares in its capacity as a liquidity provider to the equity index futures market and as a market-maker in UBS shares and derivatives on UBS shares. Furthermore, to meet client demand, UBS has issued structured debt instruments linked to UBS shares, which are economically hedged by cash-settled derivatives and, to a limited extent, own shares held by the Investment Bank.

As of 31 December 2013, we held 73,800,252 treasury shares, or 1.9% of shares issued, compared with 87,879,601, or 2.3%, as of 31 December 2012.

As of 31 December 2013, total future share delivery obligations in relation to employee share-based compensation awards were 109 million shares, taking into account the UBS share price at year-end 2013 as well as performance conditions. Share delivery obligations related to unvested and vested notional share awards, performance share awards, options and stock appreciation rights.

As of 31 December 2013, we held 73 million treasury shares (31 December 2012: 74 million shares) which were available to satisfy delivery obligations related to notional share awards, performance share awards and options and stock appreciation rights. An additional 139 million unissued shares (31 December

Listing of UBS shares

UBS shares are listed on the SIX Swiss Exchange (SIX) and the New York Stock Exchange (NYSE). During 2013, the average daily volume of UBS shares traded on the SIX was 11.1 million shares and 0.4 million shares on the NYSE. The SIX is expected to remain the main venue for determining the movement in our share price due to the high volume traded on this exchange.

During the hours in which both the SIX and NYSE are simultaneously open for trading (generally 3:30 p.m. to 5:30 p.m. Central European Time), price differences between these exchanges are likely to be arbitraged away by professional market-makers. Accordingly, the share price will typically be similar between the two exchanges when considering the prevailing US dollar / Swiss franc exchange rate. When the SIX is closed for trading, globally traded volumes will typically be lower. However, the specialist firm making a market in UBS shares on the NYSE is required to facilitate sufficient liquidity and maintain an orderly market in UBS shares throughout normal NYSE trading hours.

Corporate governance, responsibility and compensation

Audited information according to the Swiss Code of Obligations and applicable regulatory requirements and guidance

Disclosures provided in line with the requirements of articles 663b^{bis}, 663c para. 1 and 663c para. 3 of the Swiss Code of Obligations (supplementary disclosures for companies whose shares are listed on a stock exchange: compensation and participations) are also included in the audited financial statements of UBS AG (Parent Bank) in the "Financial information" section of this report. Information that has been subject to audit is indicated by a bar stating "audited" within this section of the report.

Information assured according to the Global Reporting Initiative (GRI)

Content of the sections "Corporate responsibility" and "Our employees" has been reviewed by Ernst & Young Ltd (EY) against the GRI Sustainability Reporting Guidelines. This content has been prepared in accordance with the comprehensive option of GRI G4 as evidenced in the EY assurance report at *www.ubs.com/global/en/about_ubs/corporate_responsibility/commitment_strategy/reporting_assurance.html*. The assurance by EY also covered other relevant text and data in the Annual Report 2013 and on the website of UBS which is referenced in the GRI Content Index (*www.ubs.com/gri*).

Corporate governance

Our corporate governance principles are designed to support our objective of sustainable profitability, as well as to create value and protect the interests of our shareholders and other stakeholders. We use the term "corporate governance" when referring to the organizational structure of UBS and operational practices of our management.

We are subject to, and act in compliance with, all relevant Swiss legal and regulatory requirements regarding corporate governance, including the SIX Swiss Exchange's (SIX) Directive on Information Relating to Corporate Governance, as well as the standards established in the Swiss Code of Best Practice for Corporate Governance, including the appendix on executive compensation.

In addition, as a foreign company with shares listed on the New York Stock Exchange (NYSE), we are in compliance with all relevant corporate governance standards applicable to foreign listed companies.

Based on article 716b of the Swiss Code of Obligations and articles 24 and 26 of the Articles of Association of UBS AG (Articles of Association), the Board of Directors (BoD) adopted the Organization Regulations of UBS AG (Organization Regulations), which constitute our primary corporate governance guidelines. The currently applicable Organization Regulations date from 1 January 2013. The BoD also adopted the currently applicable UBS Code of Business Conduct and Ethics (Code) in September 2012.

➔ Refer to the Articles of Association, the Organization Regulations and the Code at www.ubs.com/governance for more information

In a referendum in March 2013, the Swiss cantons and voters accepted an initiative to give shareholders of Swiss listed companies more influence over board and management compensation (Minder Initiative). In November 2013, the Swiss Federal Council issued the final transitional ordinance implementing the constitutional amendments of this initiative, which came into force on 1 January 2014. UBS is currently in the process of implementing these requirements. The BoD intends to propose amended Articles of Association to be voted upon by shareholders at the Annual General Meeting of Shareholders (AGM) on 7 May 2014.

➔ Refer to the "Regulatory and legal developments" section of this report for more information

Differences from corporate governance standards relevant to US-listed companies

According to the NYSE listing standards on corporate governance, foreign private issuers are required to disclose any significant ways in which their corporate governance practices differ from those to be followed by domestic companies.

Responsibility of the Audit Committee for appointment, compensation, retention and oversight of the independent auditors

The Audit Committee has been assigned all the abovementioned responsibilities, except for appointment of the independent audi-

tors, who are elected by the shareholders as per Swiss company law. The Audit Committee assesses the performance and qualification of the external auditors and submits its proposal for appointment, reappointment or removal to the full BoD, which brings its proposal to the shareholders for vote at the AGM.

Discussion of risk assessment and risk management policies by the Risk Committee

In accordance with our Organization Regulations, the Risk Committee has the authority to define our risk principles and risk capacity. The Risk Committee is responsible for monitoring our adherence to those risk principles and for monitoring whether business divisions and control units maintain appropriate systems for risk management and control.

Supervision of the internal audit function

The Chairman of the BoD (Chairman), the Risk Committee and the Audit Committee share responsibility for and authority to supervise the internal audit function.

Responsibility of the Human Resources and Compensation Committee for performance evaluations of senior management

Performance evaluations of our senior management, comprising the Group Chief Executive Officer (Group CEO) and the other Group Executive Board members, are completed by the Chairman and the Human Resources and Compensation Committee, and are reported to the full BoD.

Responsibility of the Governance and Nominating Committee for the evaluation of the Board of Directors

The BoD has direct responsibility and authority to evaluate its own performance, with preparation by the Governance and Nominating Committee. All BoD committees perform a self-assessment of their activities and report back to the full BoD.

Proxy statement reports of the Audit Committee and Human Resources and Compensation Committee

NYSE listing standards would require the abovementioned committees to directly submit their reports to shareholders. Under Swiss company law, all reports addressed to shareholders by UBS, including those from the abovementioned committees, are provided and signed by the full BoD, which has ultimate responsibility vis-à-vis shareholders.

Shareholders' votes on equity compensation plans

Swiss company law authorizes the BoD to approve compensation plans. Though Swiss law does not allocate such authority to shareholders, it requires that Swiss companies determine the nature and components of capital in their articles of association, and each increase in capital is required to be submitted for shareholder approval. This means that, if equity-based compensation plans result in a need for an increase in capital, shareholder approval is mandatory. If, however, shares for such plans are purchased in the market, shareholders do not have approval authority.

➔ **Refer to "Capital structure" in this section for more information on capital**

Group structure and shareholders

UBS Group legal entity structure

Under Swiss company law, UBS AG is organized as an Aktiengesellschaft (AG), a corporation that has issued shares of common stock to investors. UBS AG is the parent bank (Parent Bank or UBS) of the UBS Group (Group).

Our legal entity structure is designed to support our businesses with an efficient legal, tax and funding framework considering regulatory restrictions in the countries where we operate. Neither our business divisions nor the Corporate Center are separate legal entities. They primarily operate out of the Parent Bank, through its branches worldwide. This structure is designed to capitalize on the increased business opportunities and cost efficiencies offered by the use of a single legal platform, and to enable the flexible and efficient use of capital. Where it is neither possible nor efficient to operate out of the Parent Bank, businesses operate through local subsidiaries. This can be the case when required for legal, tax or regulatory purposes, or when legal entities join the Group through acquisition.

As previously announced, we continue to assess the need for and feasibility of changes to our legal entity structure in light of regulatory trends and requirements. Among these are regulatory requirements addressing the "too-big-to-fail" issue, which will cause financial institutions to modify their legal entity structures to facilitate resolution in the event of a failure. In view of these factors, we intend to establish a new banking subsidiary of UBS AG in Switzerland. The scope of this potential future subsidiary's business is still being determined, but we would currently expect it to include the Retail & Corporate business division and likely the Swiss-booked business within our Wealth Management business division. We expect to implement this change in a phased approach starting in mid-2015. This structural change is being discussed on an ongoing basis with FINMA, and remains subject to a number of uncertainties that may affect its feasibility, scope or timing.

In February 2014, the US Federal Reserve Board issued final rules for foreign banking organizations (FBO) operating in the US that include a requirement for FBO with more than USD 50 billion of US non-branch assets to establish an intermediate holding company (IHC) to hold all US subsidiary operations. The IHC will be subject to US capital and other regulatory requirements. We will have until 1 July 2016 to establish an IHC and meet many of the new requirements. We must submit an implementation plan by 1 January 2015 and the IHC will not need to comply with the US leverage ratio until 1 January 2018.

Operational Group structure

On 31 December 2013, the operational structure of the Group comprised five business divisions: Wealth Management, Wealth Management Americas, Retail & Corporate, Global Asset Management and the Investment Bank, as well as the Corporate Center with its components, Core Functions and Non-core and Legacy Portfolio.

➔ **Refer to the "Financial and operating performance" section and "Note 2 Segment reporting" in the "Financial information" section of this report for more information**

Listed and non-listed companies belonging to the Group

The Group includes a number of consolidated entities, none of which, however, has shares listed on any stock exchange, other than UBS AG.

➔ **Refer to "Note 30a Interests in subsidiaries" in the "Financial information" section of this report for more information on the significant subsidiaries of the Group**

Significant shareholders

Under the Federal Act on Stock Exchanges and Securities Trading of 24 March 1995 as amended, (the Swiss Stock Exchange Act), anyone holding shares in a company listed in Switzerland, or holding derivative rights related to shares of such a company, must notify the company and the SIX Swiss Exchange (SIX) if the holding attains, falls below or exceeds one of the following threshold percentages: 3, 5, 10, 15, 20, 25, 33⅓, 50, or 66⅔% of voting rights, whether or not such rights may be exercised. The detailed disclosure requirements and the methodology for calculating the thresholds are defined in the Swiss Financial Market Supervisory Authority (FINMA) Ordinance on Stock Exchanges and Securities Trading (SESTO-FINMA). In particular, the SESTO-FINMA sets forth that all future potential share obligations irrespective of their possible contingent nature must be taken into account, and prohibits the netting of acquisition positions (in particular shares, conversion rights and acquisition rights or obligations) with disposal positions (i.e., rights or obligations to sell). It also requires that each such position be calculated separately and reported as soon as it reaches one of the abovementioned thresholds. Nominee companies which cannot autonomously decide how voting rights are exercised are not obligated to notify UBS and SIX if they reach, exceed or fall below the threshold percentages.

In addition, pursuant to the Swiss Code of Obligations, UBS must disclose in the notes to its financial statements the identity of any shareholder with a holding of more than 5% of the total share capital of UBS AG.

According to disclosure notifications filed with UBS AG and the SIX under the Swiss Stock Exchange Act, on 18 September 2013, Government of Singapore Investment Corp., Singapore, disclosed the change of its corporate name to GIC Private Limited, effective from 22 July 2013, with a holding of 6.40% of the total share capital of UBS AG. The beneficial owner of this holding is the Government of Singapore. On 30 September 2011, Norges Bank, Oslo, the Central Bank of Norway, disclosed a holding of 3.04%. On 17 December 2009, BlackRock Inc., New York, disclosed a holding of 3.45%. In accordance with the Swiss Stock Exchange Act, the percentages indicated above were calculated in relation to the total UBS share capital reflected in the Articles of Association at the time of the respective disclosure notification. Information on disclosures under the Swiss Stock Exchange Act can be found on the following website of the SIX: *www.six-exchange-regulation.com/obligations/disclosure/major_shareholders_en.html*.

According to our share register, the shareholders (acting in their own name or in their capacity as nominees for other investors or beneficial owners) listed in the table below were registered with 3% or more of the total share capital as of 31 December 2013, 2012 and 2011.

Cross-shareholdings

We have no cross-shareholdings in excess of a reciprocal 5% of capital or voting rights with any other company.

Audited

Shareholders registered in the UBS share register with 3% or more of total share capital

% of share capital	31.12.13	31.12.12	31.12.11

Nortrust Nominees Ltd., London	3.75	3.84	4.20

1 DTC (Cede & Co.), New York, "The Depository Trust Company," is a US securities clearing organization.

Capital structure

Issued share capital

Under Swiss company law, shareholders must approve, in a shareholders' meeting, any increase in the total number of shares, which may arise from an ordinary share capital increase or the creation of conditional or authorized capital. During 2013, no such increase was approved by UBS AG shareholders.

At year-end 2013, 3,842,002,069 shares were issued with a par value of CHF 0.10 each, leading to a share capital of CHF 384,200,206.90.

Changes of shareholders' equity and shares

According to International Financial Reporting Standards (IFRS), Group equity attributable to UBS shareholders amounted to CHF 48.0 billion as of 31 December 2013 (2012: CHF 45.9 billion, 2011: CHF 48.5 billion). UBS Group shareholders' equity was represented by 3,842,002,069 issued shares as of 31 December 2013 (2012: 3,835,250,233 shares, 2011: 3,832,121,899 shares).

➔ **Refer to the "Statement of changes in equity" in the "Financial information" section of this report for more information on changes in shareholders' equity over the last three years**

1 As of 31 December 2013, Chase Nominees Ltd., London, entered as a trustee/nominee, was registered with 11.73% of all UBS shares issued. However, according to the provisions of UBS, voting rights of trustees/nominees are limited to a maximum of 5% of all UBS shares issued. The US securities clearing organization DTC (Cede & Co.), New York, was registered with 5.89% of all UBS shares issued and is not subject to this 5% voting limit as securities clearing organization. The same applies to the GIC Private Limited, Singapore, which was registered as beneficial owner with 6.39% of all UBS shares issued. 2 Of the total shares registered, 409,992,696 shares did not carry voting rights. 3 Shares not entered in the share register as of 31 December 2013.

Ownership

Ownership of UBS shares is widely spread. The tables in this section provide information about the distribution of our shareholders by category and geographical location. This information relates only to registered shareholders and cannot be assumed to be representative of our entire investor base nor the actual beneficial ownership. Only shareholders registered in the share register as "shareholders with voting rights" are entitled to exercise voting rights.

➔ **Refer to "Shareholders' participation rights" in this section for more information**

As of 31 December 2013, 2,063,004,223 shares carried voting rights, 409,992,696 shares were entered in the share register without voting rights and 1,369,005,150 shares were not registered. All shares were fully paid up and eligible for dividends. There are no preferential rights for shareholders, and no other classes of shares are issued by the Parent Bank.

At year-end 2013, we owned 73,800,252 UBS registered shares corresponding to 1.9% of the total share capital of UBS AG. At the same time, we had disposal positions relating to 284,975,843 voting rights of UBS AG, corresponding to 7.4% of the total voting rights of UBS AG. 7.0% of this consisted of voting rights on shares deliverable in respect of employee awards. The calculation methodology for the disposal position is based on the SESTO-FINMA, which sets forth that all future potential share delivery obligations irrespective of the contingent nature of the delivery must be taken into account.

Conditional share capital

At year-end 2013, the following conditional share capital was available to the Board of Directors (BoD):

- At the Annual General Meeting of Shareholders (AGM) held in 2006, the shareholders approved the creation of conditional capital in the maximum amount of 150,000,000 fully paid registered shares, with a nominal value of CHF 0.10 each, to be used for employee option grants. Options are exercisable at any time between their vesting and expiration dates. Shareholders have no pre-emptive rights. In 2013, options on 6,751,836 shares were exercised under the option plans with a total of 138,759,156 conditional capital shares being available at the end of 2013 to satisfy further exercises of options.
- At the AGM held in 2010, the shareholders approved the creation of conditional capital in the amount of up to 380,000,000 fully paid registered shares, with a nominal value of CHF 0.10 each, for the exercise of conversion rights and/or warrants granted in connection with the issuance of bonds or similar financial instruments by UBS or one of its group companies. Shareholders have no pre-emptive rights. The owners of conversion rights and/or warrants would be entitled to subscribe to the new shares. At year-end 2013, the BoD had not made use of the allowance to issue bonds or warrants with conversion rights covered by conditional share capital.

In 2013, the Articles of Association were amended and the allowance to issue 100,000,000 fully paid registered shares to the Swiss National Bank (SNB), which had been approved by the AGM held in 2009, was removed. These shares could have been issued in the event of the exercise of warrants granted to the SNB in connection with the loan that the SNB provided to the SNB StabFund, to which UBS transferred certain illiquid securities and other positions in 2008 and 2009. As the loan was paid back in full in 2013, the warrants were terminated and the BoD approved the reduction of the conditional capital in the amount of CHF 10,000,000.

Authorized share capital

The BoD had no authorized share capital available as of 31 December 2013, 2012 and 2011.

Conditional capital

	Maximum number of shares to be issued	Year approved by shareholder general meeting	% of shares issued

Shares and participation certificates

We have only one unified class of shares issued. Our shares are issued in registered form, and are traded and settled as global registered shares. Each registered share has a par value of CHF 0.10 and carries one vote subject to the restrictions set out under "Transferability, voting rights and nominee registration." Global registered shares provide direct and equal ownership for all shareholders, irrespective of the country and stock exchange on which they are traded. We have no participation certificates outstanding.

➔ Refer to "UBS shares" in the "Capital management" section of this report for more information

Distributions to shareholders

The decision whether to pay a dividend, and the amount of the dividend, are dependent on our profits and cash flow generation and on our progress towards achieving our targeted capital ratios. For financial year 2013, the BoD intends to propose a dividend payment of CHF 0.25 per share against reserves from capital contribution to be voted upon by shareholders at the AGM on 7 May 2014. This is a 67% increase from last year.

Transferability, voting rights and nominee registration

We do not apply any restrictions or limitations on the transferability of shares. Voting rights may be exercised without any restrictions by shareholders entered into the share register, if they expressly render a declaration of beneficial ownership according to the provisions of the Articles of Association.

We have special provisions for the registration of fiduciaries and nominees. Fiduciaries and nominees are entered in the share register with voting rights up to a total of 5% of all issued UBS shares if they agree to disclose, upon our request, beneficial owners holding 0.3% or more of all issued UBS shares. An exception to the 5% voting limit rule exists for securities clearing organizations, such as The Depository Trust Company in New York.

Convertible bonds and options

As of 31 December 2013, there were no contingent capital securities or convertible bonds outstanding requiring the issuance of new shares.

➔ **Refer to the "Capital management" section of this report for more information on our outstanding capital instruments**

As of 31 December 2013, there were 154,636,901 employee options outstanding, including stock appreciation rights. Options and stock appreciation rights equivalent to 37,019,120 shares were in-the-money and exercisable. We source our option-based compensation plans either by purchasing UBS shares in the market, or through the issuance of new shares out of conditional capital. As mentioned above, as of 31 December 2013, 138,759,156 unissued shares in conditional share capital were available for this purpose.

Shareholders' participation rights

We are committed to shareholder participation in our decision-making process. Around 300,000 shareholders are directly registered, some 110,000 US shareholders via nominee companies. Shareholders are regularly informed about our activities and performance, as well as being personally invited to the general meetings of shareholders.

➔ **Refer to "Information policy" in this section for more information**

Since March 2013, our shareholder portal *(www.ubs.com/shareholderportal)* has allowed our registered shareholders to access personalized services and important information year-round regarding share register entries and our shareholder meetings. The shareholder portal enables registered shareholders to enter their voting instructions electronically ahead of our shareholder meetings. Shareholders can verify their voting instructions before and after the general meetings using an encryption method (cryptography). This method of encryption ensures that the voting instructions remain secret throughout the entire voting process. In addition, shareholders can order admission cards and register changes to their address details. It also enables them to manage their subscriptions to shareholder-related publications and to communicate directly with UBS Shareholder Services via a secure channel. The shareholder portal is fully integrated into our internet platform.

Relationships with shareholders

We fully subscribe to the principle of equal treatment of all shareholders, who range from large institutions to individual investors, and regularly inform them about Group developments.

The AGM offers shareholders the opportunity to raise any questions to the Board of Directors (BoD) and Group Executive Board (GEB), as well as our internal and external auditors.

Voting rights, restrictions and representation

We place no restrictions on share ownership and voting rights. However, nominee companies and trustees, who normally represent a large number of individual shareholders and may hold an unlimited number of shares, have voting rights limited to a maximum of 5% of all issued UBS shares in order to avoid the risk of unknown shareholders with large stakes being entered in the share register. Securities clearing organizations, such as The Depository Trust Company in New York, are not subject to this 5% voting limit.

In order to be recorded in the share register with voting rights, shareholders must confirm that they acquired UBS shares in their own name and for their own account. Nominee companies and trustees are required to sign an agreement confirming their willingness to disclose, upon our request, individual beneficial owners holding more than 0.3% of all issued UBS shares.

All shareholders registered with voting rights are entitled to participate in shareholder meetings. If they do not wish to attend in person, they can issue instructions to accept, reject or abstain on each individual item on the meeting agenda, either by giving instructions to an independent proxy designated by UBS or by appointing another bank or another registered shareholder of their choice to vote on their behalf. Alternatively, registered shareholders can electronically issue their voting instructions to the independent proxy using our shareholder portal. Nominee companies normally submit the proxy material to the beneficial owners and transmit the collected votes to the independent proxy.

Statutory quorums

Motions, including the election and re-election of BoD members and the appointment of the auditors, are decided at a general meeting of shareholders by an absolute majority of the votes cast, excluding blank and invalid ballots. Swiss company law requires that, for certain specific issues, a majority of two-thirds of the votes represented at a general meeting of shareholders, and the absolute majority of the par value of shares represented at the meeting, must vote in favor of the motion for it to be approved. These issues include the creation of shares with privileged voting rights, the introduction of restrictions on the transferability of registered shares, conditional and authorized capital increases, and restrictions or exclusions of shareholders' pre-emptive rights.

The Articles of Association also require a two-thirds majority of votes represented for approval of any change to their provisions regarding the number of BoD members, and any decision to remove a quarter or more of the BoD members.

Votes and elections are normally conducted electronically to ascertain the exact number of votes cast. Voting by a show of hands remains possible if a clear majority is predictable. Shareholders representing at least 3% of the votes represented may request that a vote or election takes place electronically or by written ballot. In order to allow shareholders to clearly express their views on all individual topics, each item on the agenda is put to a vote separately and BoD elections are made on a person-by-person basis.

Convocation of general meetings of shareholders

The AGM must occur within six months of the close of the financial year and normally takes place in late April or early May. A personal invitation including a detailed agenda and explanation of each motion is sent to every registered shareholder at least

20 days ahead of the scheduled AGM. The meeting agenda is also published in the Swiss Official Gazette of Commerce and in selected Swiss newspapers, as well as on the internet at *www.ubs.com/agm*.

Extraordinary General Meetings may be convened whenever the BoD or the auditors consider it necessary. Shareholders individually or jointly representing at least 10% of the share capital may at any time ask in writing for an Extraordinary General Meeting to be convened to address a specific issue put forward by them. Such a request may also be brought forward during the AGM.

Placing of items on the agenda

Pursuant to our Articles of Association, shareholders individually or jointly representing shares with an aggregate par value of CHF 62,500 may submit proposals for matters to be placed on the agenda for consideration at the next shareholders' meeting.

We publish the deadline for submitting such proposals in the Swiss Official Gazette of Commerce and on our website at *www.ubs.com/agm.* Requests for items to be placed on the agenda must include the actual motions to be put forward, together with a short explanation, if necessary. The BoD formulates opinions on the proposals, which are published together with the motions.

Registrations in the share register

The general rules for entry with voting rights into our Swiss share register also apply before shareholder meetings. The same rules apply for our US transfer agent that operates the US share register for all UBS shares in a custodian account in the US. There is no closing of the share register in the days before the shareholder meeting. Registrations, including the transfer of voting rights, are processed for as long as technically possible, normally until two days before the shareholder meeting.

Board of Directors

The Board of Directors (BoD), under the leadership of the Chairman, decides on the strategy of the Group upon recommendation of the Group Chief Executive Officer (Group CEO), exercises ultimate supervision over senior management, and appoints all Group Executive Board (GEB) members. The BoD also approves all financial statements for issue. Shareholders elect each member of the BoD, which in turn appoints its Chairman, Vice Chairmen, Senior Independent Director, members of BoD committees, their respective Chairpersons and the Company Secretary.

Members of the Board of Directors

On 12 March 2013, the BoD announced that Reto Francioni, CEO of Deutsche Börse AG since 2005, would be nominated for election to the BoD at the 2013 AGM, and Wolfgang Mayrhuber would not stand for re-election on that date. At the AGM held on 2 May 2013, Axel A. Weber, Michel Demaré, David Sidwell, Rainer-Marc Frey, Ann F. Godbehere, Axel P. Lehmann, Helmut Panke, William G. Parrett, Isabelle Romy, Beatrice Weder di Mauro and Joseph Yam were re-elected as their terms of office expired. Reto Francioni was elected to his first term of office. Following their election, the BoD appointed Axel A. Weber as Chairman, Michel Demaré as Vice Chairman and David Sidwell as Senior Independent Director.

The following biographies provide information on the BoD members and the Company Secretary.

Axel A. Weber
German, born 8 March 1957
UBS AG, Bahnhofstrasse 45, CH-8001 Zurich

Functions in UBS
Chairman of the Board of Directors / Chairperson of the Corporate Responsibility Committee / Chairperson of the Governance and Nominating Committee

Year of initial appointment: 2012

Professional history and education
Axel A. Weber was elected to the Board of Directors (BoD) at the 2012 AGM and was thereafter appointed Chairman of the BoD. He has chaired the Governance and Nominating Committee since 2012 and became Chairperson of the Corporate Responsibility Committee in 2013. Mr. Weber was president of the German Bundesbank between 2004 and 2011, during which time he also served as a member of the Governing Council of the European Central Bank, a member of the Board of Directors of the Bank for International Settlements, German governor of the International Monetary Fund, and as a member of the G7 and G20 Ministers and Governors. He was a member of the steering committees of the European Systemic Risk Board in 2011 and the Financial Stability Board from 2010 to 2011. On leave from the University of Cologne from 2004 to 2012, he was a visiting professor at the University of Chicago Booth School of Business from 2011 to 2012. From 2002 to 2004, Mr. Weber served as a member of the German Council of Economic Experts. He was a professor of international economics and Director of the Center for Financial Research at the University of Cologne from 2001 to 2004, and a professor of monetary economics and Director of the Center for Financial Studies at the Goethe University in Frankfurt / Main from 1998 to 2001. From 1994 to 1998, he was a professor of economic theory at the University of Bonn. Mr. Weber holds a PhD in economics from the University of Siegen, where he also received his habilitation. He graduated with a master's degree in economics at the University of Constance and holds honorary doctorates from the universities of Duisburg-Essen and Constance.

Other activities and functions
Mandates on boards of corporations, organizations and foundations or interest groups include:
Mr. Weber is a board member of the Institute of International Finance and the International Monetary Conference. He is a member of the European Banking Group, the European Financial Services Roundtable and the Group of Thirty, Washington, DC. He is a research fellow at the Center for Economic Policy Research in London and at the Center for Financial Research in Cologne. He is a senior research fellow at the Center for Financial Studies in Frankfurt / Main and a member of the Monetary Economics and International Economics Councils of the leading association of German-speaking economists, the Verein für Socialpolitik. He is a member of the Advisory Board of the German Market Economy Foundation and a member of the Advisory Board of the Department of Economics at the University of Zurich. He is also a member of the IMD Foundation Board in Lausanne and a member of the International Advisory Panel of the Monetary Authority of Singapore.

Michel Demaré

Belgian, born 31 August 1956
Syngenta International AG, Schwarzwaldallee 215, CH-4058 Basel

Functions in UBS
Independent Vice Chairman / member of the Audit Committee / member of the Governance and Nominating Committee / member of the Human Resources and Compensation Committee

Year of initial appointment: 2009

Professional history and education
Michel Demaré was elected to the BoD at the 2009 AGM, and in April 2010, was appointed independent Vice Chairman. He has been a member of the Audit Committee since 2009 and the Governance and Nominating Committee since 2010. He became a member of the Human Resources and Compensation Committee in 2013. Mr. Demaré joined ABB in 2005 as Chief Financial Officer (CFO) and as a member of the Group Executive Committee. He stepped down from his function in ABB in January 2013. Between February and August 2008, he acted as the interim CEO of ABB. From September 2008 to March 2011, he combined his role as CFO with that of President of Global Markets. Mr. Demaré joined ABB from Baxter International Inc., where he was CFO Europe from 2002 to 2005. Prior to this, he spent 18 years at the Dow Chemical Company, holding various treasury and risk management positions in Belgium, France, the US and Switzerland. Between 1997 and 2002, Mr. Demaré was CFO of the Global Polyolefins and Elastomers division. He began his career as an officer in the multinational banking division of Continental Illinois National Bank of Chicago, and was based in Antwerp. Mr. Demaré graduated with an MBA from the Katholieke Universiteit Leuven, Belgium, and holds a degree in applied economics from the Université Catholique de Louvain, Belgium.

Other activities and functions
Mandates on boards of corporations, organizations and foundations or interest groups include:
Mr. Demaré is Chairman of the Board of Syngenta. He is a member of the IMD Supervisory Board in Lausanne and Chairman of SwissHoldings in Berne. He is Chairman of the Syngenta Foundation for Sustainable Agriculture and a member of the Advisory Board of the Department of Banking and Finance at the University of Zurich.

David Sidwell
American (US) and British, born 28 March 1953
UBS AG, Bahnhofstrasse 45, CH-8001 Zurich

Functions in UBS
Senior Independent Director / Chairperson of the Risk Committee / member of the Governance and Nominating Committee

Year of initial appointment: 2008

Professional history and education
David Sidwell was elected to the BoD at the 2008 AGM. In April 2010, he was appointed Senior Independent Director. He has chaired the Risk Committee since 2008 and has been a member of the Governance and Nominating Committee since 2011. Mr. Sidwell was Executive Vice President and CFO of Morgan Stanley between 2004 and 2007. Before joining Morgan Stanley he worked for JPMorgan Chase & Co., where, in his 20 years of service, he held a number of different positions, including controller and, from 2000 to 2004, CFO of the Investment Bank. Prior to this, he was with Price Waterhouse in both London and New York. Mr. Sidwell graduated from Cambridge University and qualified as a chartered accountant with the Institute of Chartered Accountants in England and Wales.

Other activities and functions
Mandates on boards of corporations, organizations and foundations or interest groups include:
Mr. Sidwell is a director and Chairperson of the Risk Policy and Capital Committee of Fannie Mae, Washington, DC, and is a senior advisor at Oliver Wyman, New York. He is Chairman of the Board of Village Care, New York, and is a director of the National Council on Aging, Washington, DC.

Reto Francioni

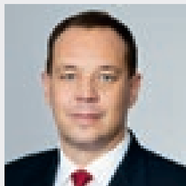
Swiss, born 18 August 1955
Deutsche Börse AG, D-60485 Frankfurt am Main

Function in UBS
Member of the Corporate Responsibility Committee

Year of initial appointment: 2013

Professional history and education
Reto Francioni was elected to the BoD at the 2013 AGM and became a member of the Corporate Responsibility Committee. He has been CEO of Deutsche Börse AG since 2005. Since 2006, he has been a professor of applied capital markets theory at the University of Basel. From 2002 to 2005, he was Chairman of the Supervisory Board and President of the SWX Group, Zurich. Mr. Francioni was co-CEO and Spokesman for the Board of Directors of Consors AG, Nuremberg, from 2000 to 2002. Between 1993 and 2000, he held various management positions at Deutsche Börse AG, including that of Deputy CEO from 1999 to 2000. From 1992 to 1993, he served in the corporate finance division of Hoffmann-La Roche, Basel. Prior to this, he worked for several years for Association Tripartite Bourses and, from 1985 to 1988, for the former Credit Suisse, holding positions in the equity sales and legal departments. He started his professional career in 1981 in the commerce division of Union Bank of Switzerland. Mr. Francioni completed his studies in law in 1981 and his PhD in 1987 at the University of Zurich.

Other activities and functions
Mandates on boards of corporations, organizations and foundations or interest groups include:
Mr. Francioni is a member of the Shanghai International Financial Advisory Committee and of the Advisory Board of Moscow International Financial Center. He also serves as a member of the International Advisory Board of the Instituto de Empresa and of the Board of Trustees of Goethe Business School. Mr. Francioni is a member of the Steering Committee of the Project "Role of Financial Services in Society," World Economic Forum, and a member of the Franco-German Roundtable. He is a member of the Strategic Advisory Group of VHV Insurance. Mr. Francioni holds various mandates on the boards of Deutsche Börse Group subsidiaries.



Rainer-Marc Frey
Swiss, born 10 January 1963
Office of Rainer-Marc Frey, Seeweg 39,
CH-8807 Freienbach

Functions in UBS
Member of the Human Resources and Compensation Committee / member of the Risk Committee

Year of initial appointment: 2008

Professional history and education
Rainer-Marc Frey was elected to the BoD at the October 2008 Extraordinary General Meeting and has been a member of the Human Resources and Compensation Committee since 2012 and of the Risk Committee since 2008. Mr. Frey is the founder of the investment management company Horizon21 AG. He is Chairman of Horizon21 AG as well as its holding company and related entities and subsidiaries. In 2013, he led the buy-out of Lonrho plc on the London Stock Exchange and became the majority shareholder of this now privately held company. In 1992, he founded and was appointed CEO of RMF Investment Group. RMF was acquired by Man Group plc in 2002. Between 2002 and 2004, he held a number of senior roles within Man Group. From 1989 to 1992, Mr. Frey served as a director at Salomon Brothers in Zurich, Frankfurt and London, where he was primarily involved with equity derivatives. Between 1987 and 1989, he worked for Merrill Lynch covering equity, fixed income and swaps markets. Mr. Frey holds a degree in economics from the University of St. Gallen.

Other activities and functions
Mandates on boards of corporations, organizations and foundations or interest groups include:
Mr. Frey is a member of the board of DKSH Group, Zurich, as well as of the Frey Charitable Foundation, Freienbach. He is Chairman of Lonrho Holdings Ltd. and Vice Chairman of its operating company.

Ann F. Godbehere
Canadian and British, born 14 April 1955
UBS AG, Bahnhofstrasse 45, CH-8001 Zurich

Functions in UBS
Chairperson of the Human Resources and Compensation Committee / member of the Audit Committee

Year of initial appointment: 2009

Professional history and education
Ann F. Godbehere was elected to the BoD at the 2009 AGM. She has chaired the Human Resources and Compensation Committee since 2011 and has been a member of the Audit Committee since 2009. Ms. Godbehere was appointed CFO and Executive Director of Northern Rock in February 2008, serving in these roles during the initial phase of the business's public ownership until the end of January 2009. Prior to this role, she served as CFO of Swiss Re Group from 2003 to 2007. Ms. Godbehere was CFO of its Property & Casualty division in Zurich for two years. Prior to this, she served as CFO of the Life & Health division in London for three years. From 1997 to 1998, she was CEO of Swiss Re Life & Health in Canada. Between 1996 and 1997, she was CFO of Swiss Re Life & Health North America. Ms. Godbehere is a certified general accountant and, in 2003, was made a fellow of the Certified General Accountants Association of Canada.

Other activities and functions
Mandates on boards of corporations, organizations and foundations or interest groups include:
Ms. Godbehere is a board member and Chairperson of the audit committees of Prudential plc, Rio Tinto plc and Rio Tinto Limited in London. She is on the board of Atrium Underwriters Ltd. and Atrium Underwriting Group Ltd., London, and chairs the audit committee. She is also a member of the boards of Arden Holdings Ltd., Bermuda, and of British American Tobacco plc.

Axel P. Lehmann
Swiss, born 23 March 1959
Zurich Insurance Group, Mythenquai 2,
CH-8002 Zurich

Function in UBS
Member of the Risk Committee

Year of initial appointment: 2009

Professional history and education
Axel P. Lehmann was elected to the BoD at the 2009 AGM and has been a member of the Risk Committee since 2009. He is a member of the Group Executive Committee of Zurich Insurance Group (Zurich) and has been Group Chief Risk Officer since January 2008 and Regional Chairman Europe since October 2011. In July 2011, he was appointed Chairman of the Board of Farmers Group, Inc., and was responsible for Group IT from 2008 to 2010. In September 2004, Mr. Lehmann was appointed CEO of Zurich American Insurance Company and the North America Commercial business division in Schaumburg, Illinois. He became a member of Zurich's Group Executive Committee and CEO of its Continental Europe business division in 2002 and, in 2004, was responsible for integrating it with UK, Ireland and South Africa. In 2001, he took over responsibility for Northern, Central and Eastern Europe and was appointed CEO of Zurich Group Germany. In 2000, Mr. Lehmann became a member of the Group Management Board with responsibility for group-wide business development functions. Mr. Lehmann holds a PhD and a master's degree in business administration and economics from the University of St. Gallen. He is also a graduate of the Wharton Advanced Management Program and an honorary professor of business administration and service management at the University of St. Gallen.

Other activities and functions
Mandates on boards of corporations, organizations and foundations or interest groups include:
Mr. Lehmann is Chairman of the Board of the Institute of Insurance Economics at the University of St. Gallen, and is a former Chairman and member of the Chief Risk Officer Forum and a board member of Economiesuisse.

Helmut Panke
German, born 31 August 1946
UBS AG, Bahnhofstrasse 45, CH-8001 Zurich

Functions in UBS
Member of the Human Resources and Compensation Committee / member of the Risk Committee

Year of initial appointment: 2004

Professional history and education
Helmut Panke was elected to the BoD at the 2004 AGM. He has been a member of the Human Resources and Compensation Committee and the Risk Committee since 2008. Between 2002 and 2006, Mr. Panke was Chairman of the Board of Management of BMW Group after becoming a member of BMW's Board of Management in 1996. Between 1993 and 1996, he was Chairman and CEO of BMW Holding Corporation in the US. Subsequent to joining BMW as Head of Planning and Controlling, Research and Development in 1982, he assumed management functions in corporate planning, organization and corporate strategy. Prior to this, he worked as a consultant at McKinsey & Company in both Düsseldorf and Munich. Mr. Panke graduated from the University of Munich with a PhD in physics, and undertook research work at both the University of Munich and the Swiss Institute for Nuclear Research.

Other activities and functions
Mandates on boards of corporations, organizations and foundations or interest groups include:
Mr. Panke is a member of the boards of Microsoft Corporation (Chairperson of the Regulatory and Public Policy Committee) and Singapore Airlines Ltd. (Chairperson of the Safety & Risk Committee). He is a member of the supervisory board of Bayer AG.

William G. Parrett
American (US), born 4 June 1945
UBS AG, Bahnhofstrasse 45, CH-8001 Zurich

Functions in UBS
Chairperson of the Audit Committee / member of the Corporate Responsibility Committee

Year of initial appointment: 2008

Professional history and education
William G. Parrett was elected to the BoD at the October 2008 Extraordinary General Meeting. He has chaired the Audit Committee since 2009 and has been a member of the Corporate Responsibility Committee since 2012. Mr. Parrett served his entire career with Deloitte Touche Tohmatsu. He was CEO from 2003 until his retirement in 2007. Between 1999 and 2003, he was a Managing Partner of Deloitte & Touche USA LLP and served on Deloitte's Global Executive Committee between 1999 and 2007. Mr. Parrett founded Deloitte's US National Financial Services Industry Group in 1995 and its Global Financial Services Industry Group in 1997, both of which he led as Chairman. In his 40 years of experience in professional services, Mr. Parrett served public, private, governmental, and state-owned clients worldwide. Mr. Parrett has a bachelor's degree in accounting from St. Francis College, New York, and is a certified public accountant.

Other activities and functions
Mandates on boards of corporations, organizations and foundations or interest groups include:
Mr. Parrett is on the boards of the Eastman Kodak Company, the Blackstone Group LP, and Thermo Fisher Scientific Inc., and chairs each company's audit committee. He is also on the board of iGATE. He is Past Chairman of the Board of the United States Council for International Business and United Way Worldwide, and a Carnegie Hall Board of Trustees member.

Isabelle Romy
Swiss, born 4 January 1965
Froriep, Bellerivestrasse 201, CH-8034 Zurich

Functions in UBS
Member of the Audit Committee / member of the Governance and Nominating Committee

Year of initial appointment: 2012

Professional history and education
Isabelle Romy was elected to the BoD at the 2012 AGM. She has been a member of the Audit Committee and the Governance and Nominating Committee since 2012. Ms. Romy is a partner at Froriep, a large Swiss business law firm. From 1995 to 2012, she worked for another major Swiss law firm based in Zurich, where she was a partner from 2003 to 2012. Her legal practice includes litigation and arbitration in cross-border cases. Ms. Romy has been an associate professor at the University of Fribourg and at the Federal Institute of Technology in Lausanne (EPFL) since 1996. Between 2003 and 2008, she served as a deputy judge at the Swiss Federal Supreme Court. From 1999 to 2006, she was a member of the Ethics Commission at the EPFL. Ms. Romy completed her PhD (Dr. iur.) at the University of Lausanne in 1990 and has been a qualified attorney-at-law admitted to the bar since 1991. From 1992 to 1994, she was a visiting scholar at Boalt Hall School of Law, University of California, Berkeley, and completed her professorial thesis at the University of Fribourg in 1996.

Other activities and functions
Mandates on boards of corporations, organizations and foundations or interest groups include:
Ms. Romy has been a member of the sanction commission of SIX Swiss Exchange since 2002, serving as Vice Chairman since 2008.

Beatrice Weder di Mauro

Italian and Swiss, born 3 August 1965
Johannes Gutenberg University Mainz,
Jakob Welder-Weg 4, D-55099 Mainz

Functions in UBS
Member of the Audit Committee / member of the Risk Committee

Year of initial appointment: 2012

Professional history and education
Beatrice Weder di Mauro was elected to the BoD at the 2012 AGM. She has been a member of the Audit Committee since 2012 and became a member of the Risk Committee in 2013. She has been a professor of economics, economic policy and international macroeconomics at the Johannes Gutenberg University of Mainz since 2001. Ms. Weder di Mauro was a member of the German Council of Economic Experts from 2004 to 2012. In 2010, she was a resident scholar at the International Monetary Fund (IMF) in Washington, DC, and, in 2006, a visiting scholar at the National Bureau of Economic Research, Cambridge, MA. Since 2003, Ms. Weder di Mauro has been a research fellow of the Center for Economic Policy Research in London. She was an associate professor of economics at the University of Basel between 1998 and 2001 and a research fellow at the United Nations University in Tokyo from 1997 to 1998. Prior to this, she worked as an economist for the World Bank and the IMF in Washington, DC. Ms. Weder di Mauro completed her PhD in economics at the University of Basel in 1993 and received her habilitation there in 1999.

Other activities and functions
Mandates on boards of corporations, organizations and foundations or interest groups include:
Ms. Weder di Mauro is on the boards of Roche Holding Ltd., Basel, and Robert Bosch GmbH, Stuttgart. She is a member of the Corporate Governance Commission of the German Government and the Expert Group of European Commission on Debt Redemption Fund and Eurobills.

Joseph Yam

Chinese and Hong Kong citizen,
born 9 September 1948
UBS AG, Bahnhofstrasse 45, CH-8001 Zurich

Functions in UBS
Member of the Corporate Responsibility Committee / member of the Risk Committee

Year of initial appointment: 2011

Professional history and education
Joseph Yam was elected to the BoD at the 2011 AGM. He has been a member of the Corporate Responsibility Committee and the Risk Committee since 2011. He is Executive Vice President of the China Society for Finance and Banking and in that capacity has served as an advisor to the People's Bank of China since 2009. Mr. Yam was instrumental in the establishment of the Hong Kong Monetary Authority and served as Chief Executive from 1993 until his retirement in 2009. He began his career in Hong Kong as a statistician in 1971 and served the public for over 38 years. During his service, he occupied several positions such as Director of the Office of the Exchange Fund from 1991, Deputy Secretary for Monetary Affairs from 1985 and Principal Assistant Secretary for Monetary Affairs from 1982. Mr. Yam graduated from the University of Hong Kong in 1970 with first class honors in social sciences. He holds honorary doctorate degrees and professorships from a number of universities in Hong Kong and overseas. Mr. Yam is a Distinguished Research Fellow of the Institute of Global Economics and Finance at the Chinese University of Hong Kong.

Other activities and functions
Mandates on boards of corporations, organizations and foundations or interest groups include:
Mr. Yam sits on the international advisory councils of a number of government and academic institutions. He is on the boards of Johnson Electric Holdings Limited and UnionPay International Co., Ltd.

Company Secretary

Luzius Cameron

Australian and Swiss, born 11 September 1955
UBS AG, Bahnhofstrasse 45, CH-8001 Zurich

Function in UBS
Company Secretary since 2005

Professional history and education
Luzius Cameron was appointed Company Secretary by the BoD for the first time in 2005. He is a Group Managing Director and was appointed to the former Group Managing Board in 2002. From 2002 to 2005, Mr. Cameron was the Director of Strategic Planning and New Business Development, Wealth Management USA. Prior to this role, he was Head of Group Strategic Analysis, and before that, Head of Corporate Business Analysis. Mr. Cameron joined Swiss Bank Corporation in 1989, where he started out in Corporate Controlling before assuming a number of senior roles at Warburg Dillon Read, including Chief of Staff to the Chief Operating Officer in London and Business Manager of the Global Rates Business in Zurich. From 1984 to 1989, he was a lecturer in astrophysics at the University of Basel. Between 1980 and 1989, he was a research analyst at the Institute of Astronomy at the University of Basel and European Southern Observatory. Mr. Cameron holds a PhD in astrophysics from the University of Basel.

Elections and terms of office

In accordance with article 19 para. 1 of the Articles of Association, all BoD members are to be elected on an individual basis for a one-year term of office. As a result, shareholders must confirm the entire membership of the BoD on a yearly basis at the AGM, which will next take place on 7 May 2014.

BoD members are normally expected to serve for a minimum of three years. No BoD member can serve for more than 10 consecutive terms of office or continue to serve beyond the AGM held in the calendar year following their 70th birthday. In exceptional circumstances the BoD can extend both these limits.

Organizational principles and structure

Following each AGM, the BoD meets to appoint its Chairman, Vice Chairmen, Senior Independent Director, BoD committee members and their respective Chairpersons. At the same meeting, the BoD appoints a Company Secretary, who acts as secretary to the BoD and its committees.

According to the Articles of Association, the BoD meets as often as business requires, but must meet at least six times a year. In 2013, a total of 22 meetings were held, eight times with the presence of GEB members and 14 times for meetings and calls without GEB participation. On average, 95% of BoD members were present at BoD meetings without GEB participation, and 97% at meetings with GEB participation. The average duration of these meetings and calls was 165 minutes. In addition, the BoD met for a one-day seminar.

At every BoD meeting, each committee chairperson provides the BoD with updates on current activities of his or her committee as well as important committee issues.

At least once per year, the BoD reviews its own performance as well as the performance of each of its committees. This review is based on an assessment of the BoD under the auspices of the Governance and Nominating Committee, as well as a self-assessment of the BoD committees, and seeks to determine whether the BoD and its committees are functioning effectively and efficiently. The last BoD committees' assessment was conducted by a third party and was completed in spring 2013. It concluded that the BoD is operating effectively. The next assessment will be conducted again as a self-assessment and will be completed in spring 2014.

The committees listed below assist the BoD in the performance of its responsibilities. These committees and their charters are described in the Organization Regulations, published at *www.ubs.com/governance*.

Audit Committee

The Audit Committee is comprised of five BoD members, with all members having been determined by the BoD to be fully independent and financially literate. On 31 December 2013, William G. Parrett chaired the Audit Committee with Michel Demaré, Ann F. Godbehere, Isabelle Romy and Beatrice Weder di Mauro as additional members. All members have accounting or related financial management expertise and the majority qualify as a "financial expert" under the rules established pursuant to the US Sarbanes-Oxley Act of 2002.

The Audit Committee itself does not perform audits, but monitors the work of the external auditors, Ernst & Young Ltd (EY), who in turn are responsible for auditing UBS AG's and UBS Group's annual financial statements and for reviewing the quarterly financial statements.

The function of the Audit Committee is to serve as an independent and objective body with oversight of the following: (i) UBS AG's and UBS Group's accounting policies, financial reporting and disclosure controls and procedures, (ii) the quality, adequacy and scope of external audit, (iii) UBS AG's and UBS Group's compliance with financial reporting requirements, (iv) the senior management's approach to internal controls with respect to the production and integrity of the financial statements and disclosure of the financial performance and (v) the performance of Group Internal Audit in conjunction with the Chairman and the Risk Committee. For these purposes, the Audit Committee has the authority to meet with regulators and external bodies in consultation with the Group CEO. Senior management is responsible for the preparation, presentation and integrity of the financial statements.

The Audit Committee reviews the annual and quarterly financial statements of UBS AG and UBS Group, as proposed by management, with the external auditors and Group Internal Audit in order to recommend their approval (including any adjustments the Audit Committee considers appropriate) to the BoD.

Periodically, and at least annually, the Audit Committee assesses the qualifications, expertise, effectiveness, independence and performance of the external auditors and their lead audit partner, in order to support the BoD in reaching a decision in relation to the appointment or dismissal of the external auditors and the rotation of the lead audit partner. The BoD then submits these proposals for approval at the AGM.

During 2013, the Audit Committee held a total of eight meetings and 10 telephone conferences. The meetings had an average duration of four hours and the telephone conferences lasted approximately one hour each. Participation was 97%. Also present at the meetings were the Chairman, the Group CEO, the Group Chief Financial Officer (Group CFO), the Head of Group Internal Audit, the Group Finance Chief Operating Officer, the Group Controller as well as EY (for the agenda items appropriate to them). The conference calls were conducted in the presence of the Audit Committee members, the Group CFO and selected management members. In 2013, eight joint Audit Committee/Risk Committee sessions were held. The Audit Committee held a session with FINMA in early 2014.

The Audit Committee reports to the BoD about its discussions with our external auditors. Once per year, the lead representatives of our external auditors present their long-form report to the BoD, as required by FINMA.

The NYSE listing standards on corporate governance set more stringent independence requirements for members of audit com-

mittees than for the other members of the BoD. Each of the five members of our Audit Committee is an external BoD member who, in addition to satisfying our independence criteria, does not receive, directly or indirectly, any consulting, advisory or other compensatory fees from UBS other than in his or her capacity as a BoD member, does not hold, directly or indirectly, UBS shares in excess of 5% of the outstanding capital and (except as noted below) does not serve on the audit committees of more than two other public companies. The NYSE listing standards on corporate governance allow for an exemption for audit committee members to serve on more than three audit committees of public companies, provided that all BoD members determine that the candidate has the time and the availability to fulfill his or her obligations. Considering the credentials of William G. Parrett and Ann F. Godbehere, the BoD has granted this exemption in their cases.

Corporate Responsibility Committee

The Corporate Responsibility Committee supports the BoD in fulfilling its duty to safeguard and advance the Group's reputation for responsible corporate conduct. It reviews and assesses stakeholder concerns and expectations for responsible corporate conduct and their possible consequences for UBS, and recommends appropriate actions to the BoD. The majority of the Corporate Responsibility Committee's members must be independent. On 31 December 2013, the Corporate Responsibility Committee was chaired by Axel A. Weber, with independent BoD members Reto Francioni, William G. Parrett and Joseph Yam as additional members. The Corporate Responsibility Committee is advised and supported by a number of senior business representatives. It met three times for 75 minutes on average in 2013, and 100% of the Corporate Responsibility Committee members were present.

➔ **Refer to the "Corporate responsibility" section of this report for more information**

Governance and Nominating Committee

The Governance and Nominating Committee supports the BoD in fulfilling its duty to establish best practices in corporate governance across the Group, to conduct a BoD annual self-assessment, to establish and maintain a process for appointing new BoD and GEB members (in the latter case, upon proposal by the Group CEO), and to manage the succession planning of all GEB members. The Governance and Nominating Committee comprises three independent BoD members and, on 31 December 2013, was chaired by Axel A. Weber, with Michel Demaré, Isabelle Romy and David Sidwell as additional members. In 2013, eight meetings and one telephone conference were held, with a 100% participation rate and a duration averaging one hour. One meeting was held with external advisors.

Human Resources and Compensation Committee

The Human Resources and Compensation Committee is responsible for the following functions: (i) supporting the BoD in its duties to set guidelines on compensation and benefits, (ii) approving the total compensation for the Chairman and the non-independent BoD members, (iii) evaluating, in consultation with the Chairman, the performance of the Group CEO and other GEB members in meeting agreed goals and objectives as well as informing the Governance and Nominating Committee of the outcome of the performance evaluation of the Group CEO, (iv) proposing, together with the Chairman, total individual compensation for the independent BoD members and Group CEO for approval by the BoD and (v) proposing to the BoD for approval, upon recommendation of the Group CEO, the total individual compensation for GEB members. The Human Resources and Compensation Committee also reviews the compensation disclosure included in this report.

The Human Resources and Compensation Committee comprises four independent BoD members and, on 31 December 2013, Ann F. Godbehere chaired it with Michel Demaré, Rainer-Marc Frey and Helmut Panke as additional members. In 2013, seven meetings and five telephone conferences were held with an average duration of 100 minutes and a participation rate of 94%. All meetings were conducted with the presence of external advisors, the Chairman and Group CEO.

➔ **Refer to "Our Total Reward Principles and compensation governance" in the "Compensation" section of this report for more information on the Human Resources and Compensation Committee's decision-making procedures**

Risk Committee

The Risk Committee is responsible for overseeing and supporting the BoD in fulfilling its duty to supervise and set appropriate risk management and control principles in the following areas: (i) risk management and control, including credit, market, country, legal and operational risks, (ii) treasury and capital management, including funding, liquidity and equity attribution and (iii) balance sheet management. The Risk Committee considers the potential effects of the aforementioned risks on the Group's reputation. For these purposes, the Risk Committee receives all relevant information from the GEB and has the authority to meet with regulators and external bodies in consultation with the Group CEO. On 31 December 2013, the Risk Committee comprised six independent BoD members. David Sidwell chaired the Risk Committee with Rainer-Marc Frey, Axel P. Lehmann, Helmut Panke, Beatrice Weder di Mauro and Joseph Yam as additional members. During 2013, the Risk Committee held a total of eight meetings and three calls, with an average member participation rate of 95%. The average meeting duration was six hours and the calls lasted approximately two hours on average.

The Audit Committee Chairperson regularly attended part or all of the Risk Committee meetings. In 2013, the Chairman, the Group CEO, the Group CFO, the Group Chief Risk Officer, the Group General Counsel, the CEO of the Investment Bank, the Group Treasurer, the Head Group Internal Audit and EY were also regularly present. In addition, the Risk Committee and Human Resources and Compensation Committee met to jointly discuss topics on which they have shared responsibility. Annually, one session is held with the Governing Board of the SNB and one

with FINMA. One meeting was held with the Federal Reserve Bank of New York and the Connecticut Department of Banking. In addition, the Risk Committee Chairperson meets at least once a year with the UK Prudential Regulation Authority and Financial Conduct Authority.

Ad-hoc Strategy Committee

In 2013, the ad-hoc committee on strategy (the Strategy Committee) focused on the agreed upon UBS strategy and the ongoing resolution and recovery program. On 31 December 2013, the Strategy Committee comprised five BoD members. Axel A. Weber chaired the Strategy Committee with Michel Demaré, Reto Francioni, Rainer-Marc Frey and David Sidwell as additional members. One telephone conference and two meetings were held with an average duration of 40 minutes and a participation rate of 100%. All these events were attended by the Group CEO and Group CFO.

Ad-hoc Special Committee

In 2013, the BoD created an ad-hoc Special Committee, composed of three independent BoD members, focusing on certain specific litigation and regulatory matters. On 31 December 2013, David Sidwell chaired the Special Committee with Isabelle Romy and Joseph Yam as additional members. The Special Committee held two meetings and five telephone conferences in 2013, which were attended by all the Special Committee members. The meetings and calls lasted on average 100 minutes.

Roles and responsibilities of the Chairman of the Board of Directors

Axel A. Weber, the Chairman of the BoD, has entered into a full-time employment contract with UBS in connection with his service on the BoD.

The Chairman coordinates tasks within the BoD, calls BoD meetings and sets their agendas. Under the leadership of the Chairman, the BoD decides on the strategy of the Group upon the recommendation of the Group CEO, exercises ultimate supervision over management and appoints all GEB members.

The Chairman presides over all general meetings of shareholders, and works with the committee chairpersons to coordinate the work of all BoD committees. Together with the Group CEO, the Chairman is responsible for ensuring effective communication with shareholders and other stakeholders, including government officials, regulators and public organizations. This is in addition to establishing and maintaining a close working relationship with the Group CEO and other GEB members, and providing advice and support when appropriate.

Roles and responsibilities of the Vice Chairmen and the Senior Independent Director

The BoD appoints one or more Vice Chairmen and a Senior Independent Director. If the BoD appoints more than one Vice Chairman, one of them must be independent. Michel Demaré has been appointed as Vice Chairman and David Sidwell has been appointed as Senior Independent Director. A Vice Chairman is required to lead the BoD in the absence of the Chairman and to provide support and advice to the Chairman. At least twice a year, the Senior Independent Director organizes and leads a meeting of the independent BoD members in the absence of the Chairman. In 2013, two independent BoD meetings were held with an average duration of 75 minutes. The Senior Independent Director relays any issues or concerns of independent BoD members to the Chairman and acts as a contact point for shareholders and stakeholders wishing to engage in discussions with an independent BoD member.

Important business connections of independent members of the Board of Directors with UBS

As a global financial services provider and a major bank in Switzerland, we have business relationships with many large companies, including those in which our BoD members assume management or independent board responsibilities. The Governance and Nominating Committee determines whether the nature of the relationships between us and the companies whose chair, chief executive or other officer is a member of our BoD compromises or not his or her capacity for independent judgment.

Our Organization Regulations require three-quarters of the BoD members to be independent. As a general rule, for a BoD member to be considered independent, he or she may not have a material relationship with UBS or one of its subsidiaries, either directly or as a partner, controlling shareholder or executive officer of a company that has a relationship with us. In addition, in order to be considered independent, our BoD members have to fulfill the additional criteria our BoD has established based on the requirements set forth in the NYSE listing standards on corporate governance, the FINMA Circular 08/24 on the supervision and internal controls at banks, and the standards established in the Swiss Code of Best Practice for Corporate Governance. These criteria, together with a definition of what constitutes a material relationship, are published on our website at *www.ubs.com/governance.*

In 2013, our BoD met the standards of the Organization Regulations for the percentage of directors that are considered independent under the criteria described above. Due to our Chairman's full-time employment by UBS, he is not considered independent.

All relationships and transactions with UBS's independent BoD members are conducted in the ordinary course of business, and are on the same terms as those prevailing at the time for comparable transactions with non-affiliated persons. All relationships and transactions with BoD members' associated companies are conducted at arm's length.

➔ **Refer to "Note 34 Related parties" in the "Financial information" section of this report for more information**

Checks and balances: Board of Directors and Group Executive Board

We operate under a strict dual board structure, as mandated by Swiss banking law. The separation of responsibilities between the BoD and the GEB is clearly defined in the Organization Regulations. The BoD decides on the strategy of the Group upon the recommendation of the Group CEO, and supervises and monitors the business, whereas the GEB, headed by the Group CEO, has executive management responsibility. The functions of Chairman of the BoD and Group CEO are assigned to two different people, ensuring a separation of power. This structure establishes checks and balances and preserves the institutional independence of the BoD from the day-to-day management of the Group, for which responsibility is delegated to the GEB under the leadership of the Group CEO. No member of one board may be a member of the other.

Supervision and control of the GEB remains with the BoD. The authorities and responsibilities of the two bodies are governed by the Articles of Association and the Organization Regulations, including the latter document's "Annex B – Responsibilities and authorities."

➔ **Refer to www.ubs.com/governance for more information on checks and balances for the Board of Directors and Group Executive Board**

Information and control instruments vis-à-vis the Group Executive Board

The BoD is kept informed of the activities of the GEB in various ways, including minutes of GEB meetings being made available to the BoD. The Group CEO and other GEB members also regularly update the BoD on important issues at BoD meetings.

At BoD meetings, BoD members may request from BoD or GEB members any information about matters concerning UBS that they require to fulfill their duties. Outside meetings, BoD members may request information from other BoD and GEB members, in which case such requests must be approved by the Chairman.

Group Internal Audit independently, objectively and systematically assesses the adherence to our strategy, the effectiveness of governance, risk management and control processes at Group, divisional and regional levels, and monitors compliance with legal, regulatory and statutory requirements, as well as with internal policies and contracts. This internal audit organization has a functional reporting line to the Risk Committee and the Audit Committee in line with their responsibilities as set forth in our Organization Regulations. The Risk Committee and the Audit Committee together approve the appropriateness of Group Internal Audit's annual audit plan and annual audit objectives and must be in regular contact with the Head Group Internal Audit. Both committees and the Chairman are provided with written reports from Group Internal Audit including an annual report summarizing the function's activities and significant audit results.

Our compliance function provided an annual compliance report to the BoD in March 2013. This report is required by section 112 of the FINMA Circular 08/24 on the supervision and internal controls at banks.

➔ **Refer to the "Risk management and control" section of this report for more information**

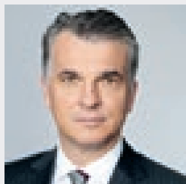
Group Executive Board

UBS operates under a strict dual board structure, as required by Swiss banking law. The management of the business is delegated by the BoD to the Group Executive Board (GEB).

Members of the Group Executive Board and changes in 2013

In spring 2013, the GEB decided that the role of the Corporate Center Chief Executive Officer would be eliminated and all responsibilities and authorities pertaining to that role would be assumed by the Group Chief Operating Officer (Group COO). On 5 December 2013, changes to the GEB and Corporate Center structure were announced. John Fraser, Chairman and CEO Global Asset Management since 2001, retired from his CEO role on 31 December 2013. Ulrich Körner assumed the role of CEO Global Asset Management and Tom Naratil, currently Group Chief Financial Officer (CFO), was also appointed Group COO, effective on 1 January 2014.

The following biographies provide information on the GEB members.



Sergio P. Ermotti
Swiss, born 11 May 1960
UBS AG, Bahnhofstrasse 45, CH-8001 Zurich

Function in UBS
Group Chief Executive Officer

Year of initial appointment: 2011

Professional history and education
Sergio P. Ermotti was appointed Group Chief Executive Officer in November 2011, having held the position of Group Chief Executive Officer on an interim basis since September 2011. Mr. Ermotti became a member of the GEB in April 2011 and was Chairman and CEO of UBS Group Europe, Middle East and Africa from April to November 2011. From 2007 to 2010, he was Group Deputy Chief Executive Officer at UniCredit, Milan, and was responsible for the strategic business areas of Corporate and Investment Banking, and Private Banking. He joined UniCredit in 2005 as Head of Markets & Investment Banking Division. Between 2001 and 2003, he worked at Merrill Lynch, serving as co-Head of Global Equity Markets and as a member of the Executive Management Committee for Global Markets & Investment Banking. He began his career with Merrill Lynch in 1987, and held various positions within equity derivatives and capital markets. Mr. Ermotti is a Swiss-certified banking expert and is a graduate of the Advanced Management Program at Oxford University.

Markus U. Diethelm
Swiss, born 22 October 1957
UBS AG, Bahnhofstrasse 45, CH-8001 Zurich

Function in UBS
Group General Counsel

Year of initial appointment: 2008

Professional history and education
Markus U. Diethelm was appointed Group General Counsel of UBS and became a member of the GEB in September 2008. From 1998 to 2008, he served as Group Chief Legal Officer at Swiss Re, and was appointed to its Group Executive Board in 2007. Prior to this, he was at the Los Angeles-based law firm Gibson, Dunn & Crutcher, and focused on corporate matters, securities transactions, litigation and regulatory investigations while working out of the firm's Brussels and Paris offices. From 1989 to 1992, he practiced at Shearman & Sterling in New York, specializing in mergers and acquisitions. In 1988, he worked at Paul, Weiss, Rifkind, Wharton & Garrison in New York, after starting his career in 1983 with Bär & Karrer. Mr. Diethelm holds a law degree from the University of Zurich and a master's degree and PhD from Stanford Law School. Mr. Diethelm is a qualified attorney-at-law admitted to the bar in Zurich and in New York State.

Other activities and functions
Mandates on boards of corporations, organizations and foundations or interest groups include:
Mr. Diethelm is Chairman of the Swiss-American Chamber of Commerce's legal committee. He is a member of the Committee on Capital Markets Regulation, the Swiss Advisory Council of the American Swiss Foundation, the UBS Foundation of Economics in Society and the Conseil de Fondation du Musée International de la Croix-Rouge et du Croissant-Rouge.

John A. Fraser
Australian and British, born 8 August 1951
UBS AG, 21 Lombard Street, London EC3V 9AH, UK

Functions in UBS
Chairman and CEO Global Asset Management until 31 December 2013, retiring from CEO role and GEB on that date.

Year of initial appointment: 2002

Professional history and education
John A. Fraser was appointed Chairman and CEO of Global Asset Management in December 2001, and was a member of the GEB from 2002 to 2013. He retired from his CEO role on 31 December 2013 and is currently Chairman of UBS Global Asset Management. Since 2008, he has been Chairman of UBS Saudi Arabia. From 1998 to 2001, he was President and Chief Operating Officer of UBS Asset Management and Head of Asia Pacific. From 1994 to 1998, he was the Executive Chairman and CEO of the Australia funds management business. Before joining UBS, Mr. Fraser spent over 20 years in various positions at the Australian Treasury, including two international postings in Washington, DC, first, at the International Monetary Fund and, subsequently, as the Economic Minister at the Australian Embassy in Washington, DC. He was the Deputy Secretary (Economic) of the Australian Treasury from 1990 to 1993. Mr. Fraser graduated from Monash University, Melbourne, in 1972 with a first-class honors degree in economics and, in 2013, was awarded an honorary Doctorate of Laws by this same University.

Other activities and functions
Mandates on boards of corporations, organizations and foundations or interest groups include:
Mr. Fraser is Chairman of the Victorian Funds Management Corporation in Melbourne, a member of the Advisory Council of AccountAbility and a member of the MSCI Advisory Board.

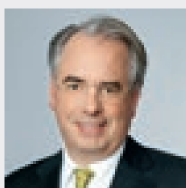
Lukas Gähwiler
Swiss, born 4 May 1965
UBS AG, Bahnhofstrasse 45, CH-8001 Zurich

Functions in UBS
CEO UBS Switzerland and CEO Retail & Corporate

Year of initial appointment: 2010

Professional history and education
Lukas Gähwiler became a member of the GEB and was appointed CEO of UBS Switzerland in April 2010. In his role as CEO of UBS Switzerland, he is responsible for all businesses – retail, wealth management, corporate and institutional, investment banking and asset management – in UBS's home market. Since January 2012, he has also been CEO of Retail & Corporate. Between April 2010 and January 2012, he combined the position of CEO of UBS Switzerland with the role of co-CEO of UBS Wealth Management & Swiss Bank. From 2003 to 2010, he was Chief Credit Officer at Credit Suisse and was accountable for the worldwide credit business of Private Banking, including Commercial Banking in Switzerland. In 1998, Mr. Gähwiler was appointed Chief of Staff to the CEO of Credit Suisse's Private and Corporate business unit and, prior to this, held various front-office positions in Switzerland and North America. He earned a bachelor's degree in business administration from the University of Applied Sciences in St. Gallen. Mr. Gähwiler completed an MBA program in corporate finance at the International Bankers School in New York, as well as the Advanced Management Program at Harvard Business School.

Other activities and functions
Mandates on boards of corporations, organizations and foundations or interest groups include:
Mr. Gähwiler is a member of the boards of the Zürcher Volkswirtschaftliche Gesellschaft, Opernhaus Zürich AG and Economiesuisse. He is Vice Chairman of the Zurich Chamber of Commerce and of the Swiss Finance Institute, as well as a member of the Foundation Board of the UBS pension fund and of the UBS Foundation of Economics in Society.



Ulrich Körner
German and Swiss, born 25 October 1962
UBS AG, Bahnhofstrasse 45, CH-8001 Zurich

Functions in UBS
CEO Global Asset Management since 1 January 2014 and CEO UBS Group Europe, Middle East and Africa
Group Chief Operating Officer until 31 December 2013

Year of initial appointment: 2009

Professional history and education
Ulrich Körner became CEO Global Asset Management in January 2014. Additionally, he has been CEO of UBS Group Europe, Middle East and Africa since December 2011. He became a member of the GEB in April 2009 and was Group Chief Operating Officer from 2009 to 2013. In 1998, Mr. Körner joined Credit Suisse. He served as a member of the Credit Suisse Group Executive Board from 2003 to 2008, holding various management positions, including CFO and Chief Operating Officer. From 2006 to 2008, he was responsible for the entire Swiss client business as CEO Credit Suisse Switzerland. Mr. Körner received a PhD in business administration from the University of St. Gallen, and for several years was an auditor at Price Waterhouse and a management consultant at McKinsey & Company.

Other activities and functions
Mandates on boards of corporations, organizations and foundations or interest groups include:
Mr. Körner is Vice Chairman of the Committee of the Governing Board of the Swiss Bankers Association, Chairman of the Widder Hotel in Zurich and Vice President of the Board of Lyceum Alpinum Zuoz. He is Deputy Chairman of the Supervisory Board of UBS Deutschland AG, Chairman of the Foundation Board of the UBS pension fund, a member of the Financial Service Chapter Board of the Swiss-American Chamber of Commerce, a member of the Advisory Board of the Department of Banking and Finance at the University of Zurich and a member of the business advisory council of the Laureus Foundation Switzerland.

Philip J. Lofts
British, born 9 April 1962
UBS AG, 677 Washington Boulevard, Stamford, CT 06901 USA

Function in UBS
Group Chief Risk Officer

Year of initial appointment: 2008

Professional history and education
Philip J. Lofts became a GEB member in 2008, and was re-appointed as Group Chief Risk Officer in December 2011 after serving in the same role from 2008 to 2010. He was CEO of UBS Group Americas from January to November 2011. Mr. Lofts, who began his career with UBS over 25 years ago, became Group Risk Chief Operating Officer in 2008 after three years serving as Group Chief Credit Officer. Prior to this, Mr. Lofts worked for the Investment Bank in a number of business and risk control positions in Europe, Asia Pacific and the US. Mr. Lofts joined Union Bank of Switzerland in 1984 as a credit analyst and was appointed Head of Structured Finance in Japan in 1998. Mr. Lofts successfully completed his A-levels at Cranbrook School. From 1981 to 1984, he was a trainee at Charterhouse Japhet plc, a merchant bank, which was acquired by the Royal Bank of Scotland in 1985.

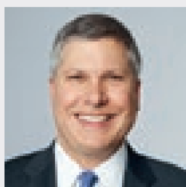
Robert J. McCann
American (US) and Irish, born 15 March 1958
UBS AG, 1200 Harbor Boulevard, Weehawken, NJ 07086 USA

Functions in UBS
CEO Wealth Management Americas and
CEO UBS Group Americas

Year of initial appointment: 2009

Professional history and education
Robert J. McCann was appointed CEO of Wealth Management Americas and became a member of the GEB in October 2009. In addition, he has been CEO of UBS Group Americas since December 2011. From 2003 to 2009, he worked for Merrill Lynch as Vice Chairman and President of the Global Wealth Management Group. In 2003, he served as Vice Chairman of Distribution and Marketing for AXA Financial. He began his career with Merrill Lynch in 1982, working in various positions in capital markets and research. From 2001 to 2003, he was Head of Global Securities Research and Economics. In 2000, he was appointed Chief Operating Officer of Global Markets and Investment Banking. From 1998 to 2000, he was Global Head of Global Institutional Debt and Equity Sales. Mr. McCann graduated with a bachelor's degree in economics from Bethany College, West Virginia, and holds an MBA from Texas Christian University.

Other activities and functions
Mandates on boards of corporations, organizations and foundations or interest groups include:
Mr. McCann is a board member of the American Ireland Fund, and is Vice Chairman of the Bethany College Board of Trustees. He is a member of the Clearing House Advisory Board, a member of the Presidents Circle of No Greater Sacrifice in Washington, DC, a member of the Committee Encouraging Corporate Philanthropy and a member of the board of the Catholic Charities of the Archdiocese of New York.

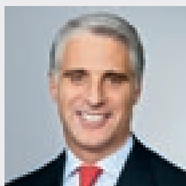


Tom Naratil
American (US), born 1 December 1961
UBS AG, Bahnhofstrasse 45, CH-8001 Zurich

Functions in UBS
Group CFO and, since 1 January 2014, Group Chief Operating Officer

Year of initial appointment: 2011

Professional history and education
Tom Naratil was appointed Group CFO and became a member of the GEB in June 2011. In addition to this role, he was appointed Group Chief Operating Officer in January 2014. He served as CFO and Chief Risk Officer of Wealth Management Americas from 2009 until his appointment as Group CFO. Before 2009, he held various senior management positions within UBS, including heading the Auction Rate Securities Solutions Group during the financial crisis in 2008. He was named Global Head of Marketing, Segment & Client Development in 2007, Global Head of Market Strategy & Development in 2005, and Director of Banking and Transactional Solutions, Wealth Management USA, in 2002. During this time, he was a member of the Group Managing Board. He joined Paine Webber Incorporated in 1983, and after the merger with UBS became Director of the Investment Products Group. Mr. Naratil holds an MBA in economics from New York University and a bachelor of arts degree in history from Yale University.



Andrea Orcel
Italian, born 14 May 1963
UBS AG, Bahnhofstrasse 45, CH-8001 Zurich

Function in UBS
CEO Investment Bank

Year of initial appointment: 2012

Professional history and education
Andrea Orcel was appointed CEO of the Investment Bank in November 2012. He had been appointed co-CEO of the Investment Bank and a member of the GEB in July 2012. He joined UBS from Bank of America Merrill Lynch, where he had been Executive Chairman since 2009, President of Emerging Markets (ex Asia) since 2010 and CEO of European Card Services since 2011. Prior to Merrill Lynch's acquisition by Bank of America, Mr. Orcel was a member of Merrill Lynch's global management committee and Head of Global Origination, which combined Investment Banking and Capital Markets. He held a number of other leadership positions, including President of Global Markets & Investment Banking for Europe, Middle East and Africa (EMEA) and Head of EMEA Origination beginning in 2004. Between 2003 and 2007, he led the Global Financial Institutions Group, of which he had been part since joining Merrill Lynch in 1992. Prior to this, he worked at Goldman Sachs and the Boston Consulting Group. Mr. Orcel holds an MBA from INSEAD and a degree in economics and commerce, summa cum laude, from the University of Rome.

Chi-Won Yoon
Korean, born 2 June 1959
UBS AG, 2 International Finance Centre
52/F, 8 Finance Street, Central, Hong Kong

Function in UBS
CEO UBS Group Asia Pacific

Year of initial appointment: 2009

Professional history and education
Chi-Won Yoon was appointed CEO of UBS Group Asia Pacific in April 2012 and has been a member of the GEB since June 2009. He held the position of co-Chairman and co-CEO of UBS Group Asia Pacific from November 2010 to March 2012. From June 2009 to November 2010, he served as sole Chairman and CEO of UBS AG, Asia Pacific. Prior to his current role, Mr. Yoon served as Head of UBS's securities business in Asia Pacific: Asia Equities, which he oversaw from 2004, and Asia Pacific Fixed Income, Currencies and Commodities, which he led from 2009. When he first joined the firm in 1997, he served as Head of Equity Derivatives. Mr. Yoon began his career in financial services in 1986, working first at Merrill Lynch in New York and then at Lehman Brothers in New York and Hong Kong. Before embarking on a Wall Street career, he worked as an electrical engineer in satellite communications. In 1982, Mr. Yoon earned a bachelor's degree in electrical engineering from MIT, and in 1986, a master's degree in management from MIT's Sloan School of Management.

Other activities and functions
Mandates on boards of corporations, organizations and foundations or interest groups include:
Mr. Yoon is on the board of UBS Securities Co. Ltd. and a member of the Asian Executive Board of MIT's Sloan School of Management.

Jürg Zeltner
Swiss, born 4 May 1967
UBS AG, Bahnhofstrasse 45, CH-8001 Zurich

Function in UBS
CEO UBS Wealth Management

Year of initial appointment: 2009

Professional history and education
Jürg Zeltner became a member of the GEB in February 2009 and is CEO of UBS Wealth Management. Between February 2009 and January 2012, he served as co-CEO of UBS Wealth Management & Swiss Bank. In November 2007, he was appointed as Head of Wealth Management North, East & Central Europe. From 2005 to 2007, he was CEO of UBS Deutschland, Frankfurt, and, prior to this, he held various management positions in the former Wealth Management division of UBS. Between 1987 and 1998, he was with Swiss Bank Corporation in various roles within the Private and Corporate Client division in Berne, New York and Zurich. Mr. Zeltner holds a diploma in business administration from the College of Higher Vocational Education in Berne and is a graduate of the Advanced Management Program at Harvard Business School.

Other activities and functions
Mandates on boards of corporations, organizations and foundations or interest groups include:
Mr. Zeltner is a board member of the German-Swiss Chamber of Commerce and Chairman of the UBS Optimus Foundation Board.

Responsibilities, authorities and organizational principles of the Group Executive Board

Under the leadership of the Group Chief Executive Officer (Group CEO), the GEB has executive management responsibility for the Group and its business. It assumes overall responsibility for the development of the Group and business division strategies and the implementation of approved strategies. The GEB constitutes itself as the risk council of the Group. In this function, the GEB has overall responsibility for the following: establishing and supervising the implementation of risk management and control principles, approving major risk policies as proposed primarily by the Group Chief Risk Officer and controlling the risk profile of the Group as a whole, as determined by the BoD and the Risk Committee. In 2013, the GEB held a total of 20 meetings, not including two GEB offsite meetings and seven ad-hoc conference calls.

➔ **Refer to the Organization Regulations at www.ubs.com/governance for more information on the authorities of the Group Executive Board**

Responsibilities and authorities of the Group Asset and Liability Management Committee

The Group Asset and Liability Management Committee (Group ALCO), established by the GEB, is responsible for setting strategies to maximize the financial performance of the Group, and is subject to the guidelines, constraints and risk tolerances set by the BoD. The Group ALCO is also responsible for managing the balance sheet of the business divisions through allocation and monitoring of limits, as well as managing capital, liquidity and funding and promoting a one-firm financial management culture. The Organization Regulations additionally specify which powers of the GEB are delegated to the Group ALCO. In 2013, the Group ALCO held 10 meetings.

Management contracts

We have not entered into management contracts with any third parties.

Change of control and defense measures

We refrain from restrictions regarding change of control and defense measures that would hinder developments initiated in, or supported by, the financial markets. We also do not have any specific defenses in place to prevent hostile takeovers.

Duty to make an offer

An investor who acquired more than 33⅓% of all voting rights of UBS AG, (directly, indirectly or in concert with third parties), whether they are exercisable or not, would be required to submit a takeover offer for all shares outstanding, according to the Swiss Stock Exchange Act. We have not elected to change or opt out of this rule.

Clauses on change of control

Neither the employment agreement with the Chairman of the BoD, nor the employment contracts with the Group Executive Board (GEB) members and employees holding key functions within the company (Group Managing Directors), contain change of control clauses.

All employment contracts with GEB members contain a notice period of six months, except for one which contains a 12-month notice period. During the notice period, GEB members are entitled to their salary and the continuation of existing employment benefits.

In case of a change of control, UBS may, at its discretion, accelerate the vesting of and/or relax applicable forfeiture provisions of employees' awards, and defer lapse date of options or stock appreciation rights.

Auditors

Audit is an integral part of corporate governance. While safeguarding their independence, the external auditors closely coordinate their work with Group Internal Audit. The Audit Committee, and ultimately the Board of Directors (BoD), supervises the effectiveness of audit work.

➔ **Refer to "Board of Directors" in this section for more information on the Audit Committee**

External independent auditors

At the 2013 Annual General Meeting of Shareholders (AGM), Ernst & Young Ltd (EY) were re-elected as auditors for the Group for a further one-year term of office. EY assume virtually all auditing functions according to laws, regulatory requests and the Articles of Association. The EY lead partner in charge of the UBS financial audit has been Jonathan Bourne since 2010 and his incumbency is limited to five years. The co-signing partner for the financial statement audit is Troy J. Butner, who has been on the audit since 2011. His incumbency is limited to seven years. The Lead Auditor to FINMA is Rolf Walker. He has been in charge of auditing UBS since 2013 and his incumbency is limited to two years due to prior audit service to UBS in another role. The co-signing partner for the FINMA audit has been Marc Ryser since 2012, with an incumbency of seven years.

Special auditor for capital increase

At the 2012 AGM, BDO AG was appointed as special auditor for a three-year term of office. The special auditors provide audit opinions independently from the auditors in connection with capital increases.

Fees paid to external independent auditors

The fees (including expenses) paid to our auditors EY are set forth in the table below. In addition, EY received CHF 34,445,000 in 2013 (CHF 33,327,000 in 2012) for services performed on behalf of our investment funds, many of which have independent fund boards or trustees.

Audit work includes all services necessary to perform the audit in accordance with applicable laws and generally accepted auditing standards, as well as other assurance services that conventionally only the auditor can provide. These include statutory and regulatory audits, attest services, and the review of documents to be filed with regulatory bodies. The additional services classified as audit in 2013 included several engagements for which EY were mandated at the request of FINMA to review new or remediated processes, whether in response to regulatory changes, such as Basel III, or as a result of control deficiency remediation, for example, in connection with the 2011 unauthorized trading incident.

Audit-related work comprises assurance and related services that traditionally are performed by the auditor, such as attest services related to financial reporting, internal control reviews, performance standard reviews, and consultation concerning financial accounting and reporting standards.

Tax work involves services performed by professional staff in EY's tax division, and includes tax compliance and tax consultation with respect to our own affairs.

Fees paid to external independent auditors

UBS paid the following fees (including expenses) to its external independent auditors.

CHF thousand	**31.12.13**	31.12.12
Audit		
Global audit fees	**49,522**	53,900
Additional services classified as audit (services required by law or statute, including work of a non-recurring nature mandated by regulators)	**17,604**	23,648
Total audit	**67,126**	77,548
Non-audit		
Audit-related fees	**11,708**	8,401
of which: assurance and attest services	***6,922***	*3,427*
of which: control and performance reports	***4,386***	*4,134*
of which: consultation concerning financial accounting and reporting standards	***400***	*840*
Tax services	**950**	817
Other	**1,601**	1,990
Total non-audit	**14,258**	11,208

"Other" services are permitted services which include on-call advisory services and assessments of regulatory and internal control frameworks. In addition, 2013 and 2012 included non-recurring expenses.

Pre-approval procedures

To ensure EY's independence, all services provided by them have to be pre-approved by the Audit Committee. A pre-approval may be granted either for a specific mandate, or in the form of a blanket pre-approval authorizing a limited and well-defined type and amount of services.

The Audit Committee has delegated pre-approval authority to its Chairperson, and the Group Chief Financial Officer (Group CFO) submits all proposals for services by EY to the Chairperson of the Audit Committee for approval, unless there is a blanket pre-approval in place. At each quarterly meeting, the Audit Committee is informed of the approvals granted by its Chairperson and of services authorized under blanket pre-approvals.

Group Internal Audit

With 352 personnel worldwide as of 31 December 2013, Group Internal Audit (GIA) performs the internal auditing function for the entire Group. It is an independent and objective function that supports both the Group, in achieving its defined strategic, operational, financial and compliance objectives, and the BoD, supported by its committees, in discharging their governance responsibilities. GIA provides assurance by assessing the reliability of financial and operational information, as well as compliance with legal, regulatory and statutory requirements. All reports with key issues are provided to the Group CEO, GEB members responsible for the business divisions and other responsible management. In addition, the Chairman, the Risk Committee and the Audit Committee are regularly informed about important issues. GIA further assures the closure and successful remediation of issues, irrespective of the function which identified them, including those which are self-identified by management (first line of defense) or are raised by control functions (second line of defense), GIA (third line of defense), external auditors and regulators. GIA closely cooperates with internal and external legal advisors and risk control units on investigations into major control issues.

To maximize its independence from management, the Head of GIA, James P. Oates, reports directly to the Chairman of the BoD as well as to the Risk Committee and the Audit Committee. In their assessment, GIA is quantitatively and qualitatively well resourced, with 390 personnel budgeted worldwide to perform its function. The role, position, responsibilities and accountability of GIA are set out in our Organization Regulations, published at *www.ubs.com/governance.* GIA has unrestricted access to all accounts, books, records, systems, property and personnel, and must be provided with all information and data needed to fulfill its auditing duties. The Risk Committee and the Audit Committee may order special audits to be conducted. Other BoD members, committees or the Group CEO may request such audits with the approval of the Audit Committee or the Risk Committee.

Coordination and close cooperation with the external auditors enhance the efficiency of GIA's work.

Information policy

We provide regular information to our shareholders and to the financial community.

Financial reports will be published as follows

First quarter 2014	6 May 2014
Second quarter 2014	29 July 2014
Third quarter 2014	28 October 2014

The Annual General Meeting of Shareholders will take place as follows

2014	7 May 2014
2015	7 May 2015

➔ Refer to the corporate calendar at www.ubs.com/investors for future financial report publication and other key dates

We meet with institutional investors worldwide throughout the year and regularly hold results presentations, attend and present at investor conferences and, from time to time, host investor days. Investor meetings always include members of our Investor Relations team and, where possible, senior management. We make use of diverse technologies such as webcasting, audio links and cross-location video-conferencing to widen our audience and maintain contact with shareholders around the world.

Registered shareholders may opt to receive our annual report or review booklet, which reflects on specific 2013 initiatives and achievements of the Group and provides an overview of our activities during the year as well as some key financial information. Each quarter, shareholders have the option to receive a brief mailed update on our quarterly financial performance. Shareholders can also request our complete financial reports, produced on a quarterly and annual basis.

We make our publications available to all shareholders simultaneously to ensure they have equal access to our financial information.

Shareholders can help us to achieve our environmental ambitions by opting to read our financial publications electronically through our Investor Relations website instead of taking delivery of printed copies. We have reviewed and shortened our distribution lists to internal and external stakeholders and reduced stocks, yielding significant annual savings. In addition, shareholders can change their subscription preferences at any time using our shareholder portal (*www.ubs.com/shareholderportal*).

➔ Refer to www.ubs.com/investors for a complete set of published reporting documents and a selection of senior management industry conference presentations

➔ Refer to the "Information sources" section of this report for more information

Financial disclosure principles

We fully support the notion of transparency and consistent and informative disclosure. We aim to communicate our strategy and results in a manner that allows stakeholders to gain a good understanding of how our Group works, what our growth prospects are and what risks our businesses and our strategy entail. We continually assess feedback from analysts and investors and, where appropriate, reflect this in our disclosures. To continue achieving these goals, we apply the following principles in our financial reporting and disclosure:

- *Transparency* that enhances understanding of the economic drivers and builds trust and credibility
- *Consistency* within each reporting period and between reporting periods
- *Simplicity* that allows readers to gain a good understanding of the performance of our businesses
- *Relevance* that prevents information overload by focusing on what is required by regulation or statute and what is relevant to our stakeholders
- *Best practice* that leads to improved standards

We endorse the work of the Enhanced Disclosure Task Force (EDTF) and our financial reports contain disclosures aligned with the recommendations issued by the EDTF on 29 October 2012 in its report "Enhancing the Risk Disclosures of Banks." Certain disclosures in our Annual Report 2012 were cited by the EDTF in its July 2013 "Progress Report on Implementation of Disclosure Recommendations" as "leading practice" and by Deloitte in its report, "Responding to the EDTF recommendations – A review of 2012 year end reporting," as "good practice." For our Annual Report 2013, we have made significant further enhancements to our disclosures in light of these recommendations. Further information on our implementation of each of the EDTF recommendations can be found at the start of the "Risk, treasury and capital management" section of this report, in which most of the new and enhanced disclosures are presented. Consistent with our financial reporting and disclosure principles, we regard the enhancement of disclosures as an ongoing commitment and we expect to make further refinements to our disclosures in 2014 and beyond.

➔ Refer to the "Significant accounting and financial reporting changes" section of this report for more information on enhancing our disclosures

➔ Refer to the "Risk, treasury and capital management" section of this report for more information on our implementation of the EDTF recommendations

Financial reporting policies

We report our results after the end of every quarter, including a breakdown of results by business division and disclosures relating to risk management and control, capital, liquidity and funding management.

Our consolidated financial statements are prepared according to International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board.

➔ Refer to "Note 1 Summary of significant accounting policies" in the "Financial information" section of this report for more information on the basis of UBS's accounting

We are committed to maintaining the transparency of our reported results and to ensuring that analysts and investors can make meaningful comparisons with prior periods. If there is a major reorganization of our business divisions, or if changes to accounting standards or interpretations lead to a material change in the Group's reported results, our results are restated for previous periods, when required by applicable accounting standards. These restatements show how results would have been reported according to the new basis and provide clear explanations of all relevant changes.

US regulatory disclosure requirements

As a "foreign private issuer," we must file reports and other information, including certain financial reports, with the US Securities and Exchange Commission (SEC) under the US federal securities laws. We file an annual report on Form 20-F, and submit our quarterly financial reports and other material information under cover of Form 6-K to the SEC. These reports are all available at *www.ubs.com/investors* and also on the SEC's website at *www.sec.gov*.

An evaluation was carried out under the supervision of management, including the Group CEO and Group CFO, of the effectiveness of our disclosure controls and procedures (as defined in Rule 13a–15e) under the US Securities Exchange Act of 1934. Based upon that evaluation, the Group CEO and Group CFO concluded that our disclosure controls and procedures were effective as of 31 December 2013. No significant changes have been made to our internal controls or to other factors that could significantly affect these controls subsequent to the date of their evaluation.

In accordance with section 404 of the US Sarbanes-Oxley Act of 2002, our management is responsible for establishing and maintaining adequate internal control over financial reporting. The "Financial information" section of this report contains management's assessment of the effectiveness of internal control over financial reporting as of 31 December 2013. The external auditors' report on this assessment is also included in this report.

➔ Refer to the "Financial information" section of this report for more information

Corporate responsibility

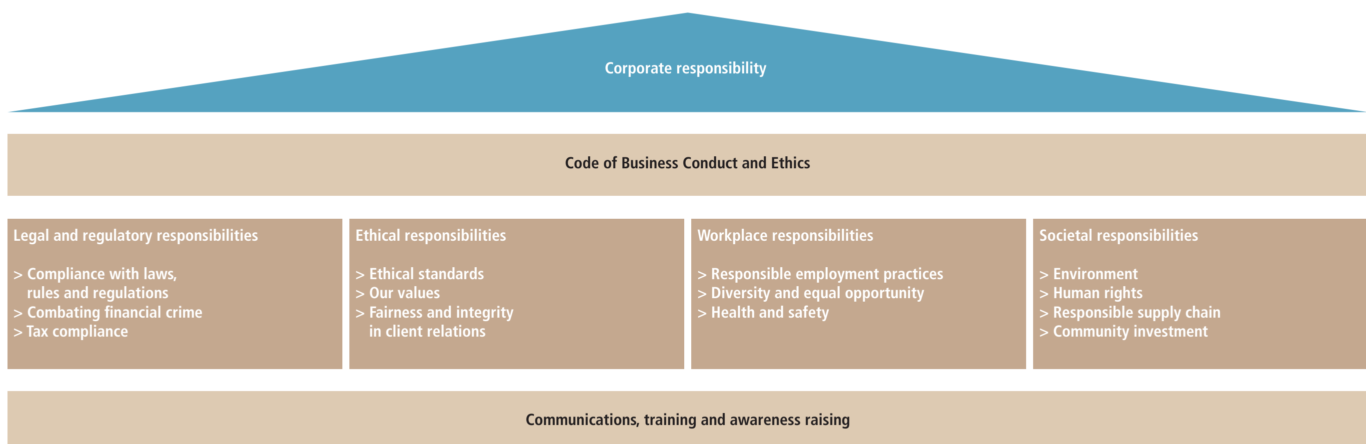
At UBS, corporate responsibility means "doing the right thing" – both now and in the future. Our commitment to this is incorporated in the principles and standards set out in our Code of Business Conduct and Ethics (Code). These apply to all aspects of our business and the ways in which we engage with our stakeholders, from the products and services we offer our clients, our management of environmental and social risks, to the way we protect the well-being of our employees. Corporate responsibility is embedded at every level of the firm, helping us to adopt a responsible and sustainable approach to doing business while underlining our desire to contribute to the communities in which we operate.

The successful delivery of our corporate responsibility commitments and activities relies on the firm conviction that, above all, we must conduct our business in a sustainable way. We have made good on this belief over the course of our over 150-year history and have demonstrated resilience in the face of the many political, economic and regulatory changes and challenges that have come to pass during this period.

We understand that to be taken seriously as a responsible corporate citizen takes time, and that a solid and proven track record counts for more than a series of quick wins. We have such a track record, as described in the following section. The guiding principles and standards set out in the Code shape our business activities and all our dealings with our stakeholders including clients, colleagues, shareholders, regulators and business partners. Proper implementation of the Code contributes to the wider societal goal of sustainable development. Policies and guidelines, as well as associated objectives related to this aspiration, are guided and supervised at the highest level of the firm. We demonstrate accountability for our corporate responsibility commitments and activities at both Board of Directors (BoD) and Group Executive Board (GEB) levels.

➔ **Refer to www.ubs.com/responsibility for more information**

Corporate responsibility at UBS



Working with our clients towards a better society

Our clients care deeply about societal issues and want to use their resources for the benefit and advancement of individuals, communities and societies around the globe. They are increasingly focused on issues such as the maintenance of functioning infrastructures, the impact of climate change, the strains imposed by demographic shifts, the growth in inequalities, and the provision of education, jobs and healthcare for all.

As a global firm, and the world's largest wealth manager, we are in a unique position to help our clients address their societal concerns. As their trusted financial advisor, we recognize this responsibility and take it seriously. For a long time, we have been helping them to invest according to sustainable and responsible criteria. Building on this capability, in 2013 we made a significant commitment to maximize these efforts through a dedicated, industry-leading platform. This will deliver comprehensive research, advisory and product capabilities in sustainable investments and philanthropy, and is currently under development. While we have always provided such offerings, it is our objective to do this holistically, channeling a growing percentage of assets, through innovative financial mechanisms, to address societal challenges and make societal performance part of every client conversation.

To date, 24% of our assets are already invested according to sustainable and socially responsible investment criteria, as illustrated in the "SRI invested assets" table in "Investment products" in this section. We want this to increase, in particular through developing innovative solutions. In 2013, a key example included our ground-breaking Impact Investing Private Equity fund for small and medium-sized enterprises (SMEs) in emerging and frontier markets. This provides our clients with yet more opportunities to direct their investments and address social and environmental challenges. Client focus is also a crucial component of our climate change strategy. In 2013, we made progress in several areas, including through the environmental optimization of our Global Real Estate investment portfolios, by offering the "Energy check-up for SMEs" to Swiss SMEs, and through our innovative UBS Clean Energy Infrastructure Switzerland fund for our institutional clients, enabling them to invest in renewable energy infrastructures.

We also continue to provide thought leadership in this area through our leading research capabilities and our active involvement in discussions on key societal topics. In 2013, an important example was the collaboration of environmental, social and governance (ESG) research experts in Wealth Management, Global Asset Management and the Investment Bank on one of our flagship publications, the "UBS Research Focus." Recognizing growing client interest in sustainable investing, this publication explored sustainability issues and demonstrated how a well-considered sustainability approach can add real value to a client's portfolio. As a second major example, we co-launched the Thun Group of Banks' discussion paper on banking and human rights, which examines the ways in which our industry can effectively implement the UN's Guiding Principles on Business and Human Rights.

Our own efforts towards the sustainable development of societies and communities, including our community investment and employee volunteering activities focused on education and entrepreneurship, complement our client-focused platform. Our response to the devastation in the Philippines caused by Typhoon Haiyan demonstrates our unique and integrated approach. UBS Community Affairs and the UBS Optimus Foundation joined forces, including both clients and employees in our firm's matched-giving schemes. This resulted in a combined (client and UBS) commitment of more than CHF 3 million in financial contributions. While the UBS Optimus Foundation established a Rapid Response Emergency Fund to provide immediate essential supplies to children and families in the hardest hit and most remote areas, contributions will also be used for the longer-term reconstruction and development efforts that must follow.

We aim to work with, and for, our clients towards a better society. The spirit and ambition of our client-focused approach is aimed at helping our clients express their values and achieve both financial and societal benefits. We will continue to expand our capabilities in order to provide our clients with an industry-leading and integrated range of sustainability and impact investment products and services, which will enable them to continue to invest with societal goals in mind.

Our approach

Corporate responsibility governance

The BoD is responsible for setting our firm's values and standards and ensuring that we meet our obligations to our stakeholders. Both the Chairman of the BoD and the Group Chief Executive Officer (Group CEO) play a key role in safeguarding our reputation and ensuring that we communicate effectively with all our stakeholders.

All BoD committees are focused on achieving our goal of creating sustainable value. Of the BoD committees, the Corporate Responsibility Committee shoulders the main undertaking for corporate responsibility. As set out in the committee's charter, it actively reviews and assesses how we meet the existing and evolving corporate responsibility expectations of our stakeholders. It also monitors and reviews our corporate responsibility policies and regulations, the implementation of our activities and commitments, as well as regularly reviewing the Code.

➔ **Refer to the UBS Code of Business Conduct and Ethics at www.ubs.com/code for more information**

➔ **Refer to the Organization Regulations of UBS at www.ubs.com/governance for the charter of the Corporate Responsibility Committee**

In 2013, Wolfgang Mayrhuber, Chairman of the Corporate Responsibility Committee, announced his intention to leave the BoD at the 2013 Annual General Meeting of Shareholders. The Committee is newly chaired by Axel A. Weber, Chairman of the BoD, has three additional members and is advised by a panel of GEB members, consisting of the Group CEO and all regional chief executive officers.

The GEB is responsible for the development and implementation of our Group and business division strategies, including those pertaining to corporate responsibility. At or directly below GEB level, there are various committees and boards responsible for tasks and activities relating to particular aspects of corporate responsibility, including the Global Environmental & Social Risk Committee, chaired by the Group Chief Risk Officer, which shapes UBS's position on controversial activities and related policies. Additionally, our Environmental & Human Rights Committee oversees the operational execution of UBS's Environmental and Human Rights Policy, which was revised in 2014 to incorporate recent commitments made in the areas of climate change and human rights.

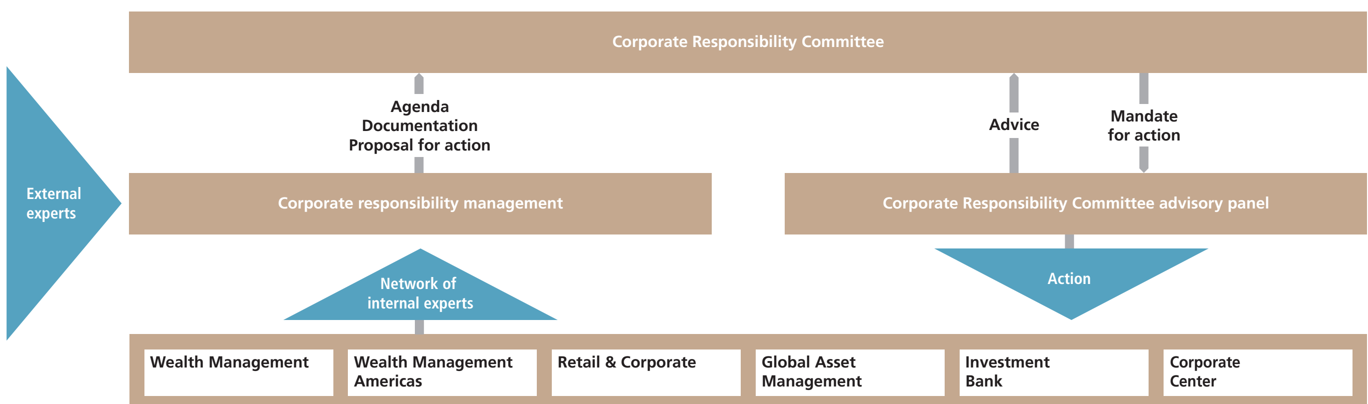
➔ **Refer to www.ubs.com/environment for more information on our environmental and human rights governance**

The GEB monitors our efforts to combat money laundering, corruption and terrorist financing. These efforts are led by the Head of Global Anti-Money Laundering (AML) Compliance and supported by a network of compliance experts. The GEB also monitors the implementation of our diversity and inclusion-related strategies and plans for each business division. Our global diversity and inclusion team supports senior management and human resources business partners in developing these plans.

➔ **Refer to the "Our employees" section of this report for more information on labor standards and diversity programs**

The Global Community Affairs Steering Committee is chaired by the Group CEO and composed of several members of our senior management. This GEB-level committee sets the overall strategic direction and goals of our community affairs. In addition, it

Our corporate responsibility governance process



is ultimately responsible for determining our response to worldwide disasters. In 2014, this committee will be integrated in the Corporate Responsibility Committee, and its advisory panel, to ensure further alignment.

➔ **Refer to "Our communities" in this section for more information on our charitable and related activities**

Our commitment to responsible banking requires us to undertake regular and critical assessments of our policies and practices. This, in turn, requires the careful consideration and assessment of societal issues of potential relevance to UBS. With committees focused on corporate responsibility topics and issues at both BoD and GEB level, we demonstrate that we have firmly established responsibility for, and supervision of, this important and complex task at the highest levels of the firm.

External commitments and initiatives

We are committed to engaging in external corporate responsibility initiatives. These support us in our efforts to advance in areas that are already mandated by government and regulators, as well as in areas that, while still largely voluntary, are nonetheless of significance in strengthening our corporate responsibility agenda.

In October 2013, we co-launched the Thun Group of Banks' discussion paper on banking and human rights. The Thun Group is an informal group of representatives from seven banks, with the name derived from the location (the UBS conference center in the Swiss city of Thun) where the group met to share experiences and ideas regarding the implementation of the UN's Guiding Principles on Business and Human Rights. The paper is the result of these discussions. It aims to support banks in mapping and analyzing their potentially adverse impacts on human rights, and also looks at related risks, including reputational, legal, operational and financial risks. The work of the Thun Group is reflected in our environmental and human rights policy framework.

External ratings, assurance and awards

Our performance and success in the area of sustainability is reflected in the key external ratings and rankings we have achieved. In 2013, we re-entered the Dow Jones Sustainability Indices (DJSI) from which we had been removed in 2012, as our score was just below the raised benchmark. This followed continuous inclusion in the DJSI since their launch in 1999. At the time, the DJSI were the first global indices to track the financial performance of the leading sustainability-driven companies worldwide. The DJSI follow a best-in-class approach and include companies from across all industries that outperform their peers in numerous sustainability metrics.

We have been a member of the FTSE4Good index series since its inception, and have also been awarded corporate responsibility prime status by oekom research, one of the world's leading sustainability rating agencies. According to oekom's corporate rating system, prime status is awarded to companies that are among the leaders in their industry and that meet industry-specific minimum requirements. We were also ranked among the top 20 financial institutions in the CDP Global 500 Climate Change Report 2013.

We received several honors in the 11th annual Thomson Reuters Extel/UKSIF Socially Responsible Investing (SRI) & Sustainability Survey of over 500 investment professionals from 27 countries. The UBS Investment Bank ESG & Sustainability Team was ranked third overall for ESG and SRI, including second for Corporate Governance and for Renewable Energy, fourth for Climate Change and for Thematic Research, and fifth for SRI Research.

Stakeholder dialogue

We regularly engage with our stakeholders on a wide range of topics which gives us important information about their expectations and concerns. This leads to a more in-depth understanding of issues relevant to our firm and their management. Our relationship with stakeholders is multi-faceted and includes interactions with large groups, regular communications with representatives from a particular group, as well as meetings with individuals (for example, clients and investors). In 2013, we also undertook an analysis of the issues deemed relevant to our stakeholders. The results of this analysis are reflected in a materiality matrix as defined by the Global Reporting Initiative (GRI). The matrix distils the views of the stakeholders with which our firm interacts and covers 20 topics including financial stability, risk behavior and culture, operational efficiency and resilience, environmental protection and climate change, and society and community.

In 2013, we engaged with experts and stakeholders on a range of topics. These included discussions with clients on values-based investing, including those taking place at the 2013 UBS Global Philanthropy Forum. Over 100 clients from around the world spent two days discussing how they can help to narrow the gender gap and ensure equal educational and employment opportunities for girls and women.

Discussions with employees covered various sustainability topics, including energy. A key annual campaign, the UBS Environmental Month in April, again raised awareness among employees and external stakeholders about our efforts towards reducing the environmental impact of our operations and banking activities. Working together with investors and rating agencies, we also considered key environmental, social and governance topics such as climate change. Discussions with non-governmental organizations focused on the subjects of reputational risks, controversial weapons, food "speculation" as well as climate change, particularly in relation to coal. In addition, we sought input from our employees regarding our corporate responsibility strategy and associated activities. An internal, cross-divisional and cross-regional network of experts continues to play an important role, with its members providing critical input on stakeholder expectations and concerns. These contributions are relayed back to the Corporate Responsibility Committee and provide a very valuable addition to information gathered through other monitoring channels.

We believe it is crucial that we keep our stakeholders informed about our sustainability commitments and activities. To this end, we include sections in our Annual Report 2013 that are dedicated to "Corporate responsibility" and "Our employees." The content

of these sections, other relevant annual report text and data and information on our website are reviewed by EY, according to the Global Reporting Initiative's Sustainability Reporting Guidelines.

➔ **Refer to www.ubs.com/gri for more information**

➔ **Refer to www.ubs.com/materiality for the GRI materiality matrix**

Training and raising awareness

We actively engage in internal and external education and awareness-raising training on corporate responsibility topics and issues. Through induction, education and broader awareness-raising activities, we ensure that our employees understand their responsibilities in complying with our policies and the importance of our societal commitments. General information is published on our intranet and on our corporate responsibility website. In 2013, training and awareness-raising activities for employees continued to embrace the Code, notably through induction events for all new employees. Employees were also made aware of the firm's corporate responsibility strategy and activities through other training and awareness-raising activities. Some 9,271 employees received training on environmental issues, of which 7,136 received general training on our environmental policy and programs and 2,135 participated in specialist training targeted within their area of expertise and influence. Employee speaker sessions, exhibitions and lunchtime training sessions were delivered in all regions alongside specific technical training for the regional environmental teams. Community Affairs engagement forms part of our key internal leadership programs, while skills-based employee volunteering further contributes towards staff development. Employees are also required to undergo regular refresher training sessions in AML-related issues. This includes online training, awareness campaigns and seminars.

➔ **Refer to "Education and development" in the "Our employees" section of this report for more information**

Our clients

We are focused on gaining and retaining the trust of our stakeholders, as well as achieving our goal of generating sustainable earnings and creating long-term shareholder value. In addition, we are constantly striving to ensure that our products and services are suited to the needs and requirements of our clients. Through our corporate responsibility efforts, we demonstrate that we are not only listening to our stakeholders, but also aiming to be in an industry-leading position and meet their expectations.

Combating financial crime

We continue to further strengthen our efforts to prevent and combat financial crime. Our commitment to assisting in the fight against money laundering, corruption and terrorist financing is illustrated by the way we take responsibility in our own operations, aiming to help preserve the integrity of the financial system. We employ a rigorous risk-based approach to ensure our policies and procedures are able to detect risks and effectively manage those risks, including, for example, managing relationships which are classified as higher risk with increased scrutiny. We adhere to strict know-your-client regulations without undermining our clients' legitimate right to privacy. Ongoing due diligence and monitoring, including the use of advanced technology to help identify transaction patterns or unusual dealings, assists in the identification of suspicious activities. If suspicious activities are discovered, they are promptly escalated to management or control functions and externally, as required.

During 2013, Global AML Compliance worked closely with the Environmental and Social Risk group to further develop effective ways of screening potential business partners, vendors and clients with regards to potential issues relating to environmental and social risk, building on the work already carried out during previous years.

In 2011, all business divisions were required to perform a legal and compliance risk assessment. This comprehensive process, which included an assessment of corruption, sanction and AML risks, was forward-looking and included follow-up actions to highlight the priorities and objectives for each business division. This risk assessment did not identify any significant incidents of non-compliance with our AML, sanctions or anti-corruption policies. Additional risk assessments that have taken place since then have confirmed this view. Nonetheless, a number of initiatives we have in place continue to strengthen our defenses against UBS being used for criminal purposes. In addition, over the course of 2014 we will continue to revise our risk assessment framework in a manner that further focuses on key risks and controls.

As part of our extensive and ongoing efforts to prevent money laundering, corruption and terrorist financing, our internal global AML policies were reviewed in 2011 and enhancements to address more specific risks in relation to corruption, sanctions and money laundering were implemented globally. In 2012, we also reviewed and amended our approach to controversial weapons in order to comply with the Swiss law that came into effect on 1 February 2013. This law implements the international bans on the use, stockpiling, production and transfer of cluster munitions and anti-personnel mines.

Our environmental and human rights policy

We are a founding member of the Wolfsberg Group, an association of 11 global banks established in 2000, which aims to develop financial services industry standards and related products for know-your-client, AML and counter-terrorist financing policies. Alongside the other members of this group, we continue to work closely with the Financial Action Task Force, an intergovernmental body that develops and promotes national and international policies to combat money laundering and terrorist financing through consultation within the private sector.

We will act decisively to prevent potentially irresponsible or harmful actions by individuals. First and foremost, this means that our employees must uphold the law, adhere to relevant regulations, and behave in a responsible and principled manner. To this effect, our business processes and control mechanisms are constantly under review in order to enhance our prevention capabilities.

Managing environmental and social risks

We apply a risk framework to all of our transactions, products, services and activities in order to identify and manage potential adverse impacts to the environment and to human rights, as well as the associated environmental and social risks to which our clients' and our own assets are exposed. Environmental and social (including human rights) risks are broadly defined as the possibility of UBS suffering reputational or financial harm from transactions, products, services or activities such as lending, capital raising, advisory services or investments that involve a party associated with environmentally or socially sensitive activities. For products, services and activities identified as potentially posing significant environmental and social risks, procedures and tools for the identification, assessment, escalation and monitoring of such risks are applied and integrated into standard risk, compliance and operations processes:

- Client on-boarding or conflict clearance: new corporate clients are assessed for environmental and social risks associated with their business activities.
- Transaction due diligence: before proceeding with a transaction, environmental and social risks are identified and analyzed as part of standard transaction due diligence processes.
- Product development: new financial products and services are reviewed before their launch in order to assess their compatibility and consistency with UBS's environmental and human rights principles.
- Supply chain management: prior to any new or renewed contract being awarded, standardized checks are completed to assess supplier- and commodity-specific environmental, labor and human rights risks.
- Own operations: our operational activities and employees, or contractors working on UBS premises, are assessed for compliance with relevant environmental, health and safety and labor rights regulations.

Business or control functions are responsible for identifying and assessing environmental and social risks as part of the client, supplier or transaction due diligence processes. Where these functions determine the existence of potential material risks, they refer the client, supplier or transaction to a specialized environmental and social risk unit for enhanced due diligence. To support the consistent identification and assessment of such risks, our internal industry sector guidelines provide an overview of key environmental and human rights issues that arise in the various life cycles of the sector, and summarize industry standards in dealing with them. These guidelines currently cover six sectors: chemicals, forestry products and biofuels, infrastructure, metals and mining, oil and gas, and utilities. If identified risks are believed to pose potentially significant environmental or social risks, they are escalated for approval to senior management, at divisional, regional, or group level, depending on their significance. We have defined controversial activities in which we will not engage, such as providing financial services to extractive industries, heavy infrastruc-

FS stands for the Performance Indicators defined in the GRI Financial Services Sector Supplement. 2 Transactions and onboarding requests referred to and assessed by environmental and social risk functions. 3 Relates to procurement / sourcing of products and services.

ture, forestry and plantation operations that risk severe environmental damage to endangered species, high-conservation value forests and world heritage sites. They also include all commercial activities that engage in child or forced labor, or threaten indigenous peoples' rights.

An enhanced due diligence and approval process is triggered for areas in which we will only provide financial services under stringent, pre-established guidelines. Such areas include palm oil production, mountaintop removal as a coal extraction method, hydraulic fracturing as an exploration or extraction method for oil and gas, and exploration and development of oil sands. Enhanced due diligence includes an assessment of the company's regulatory compliance, past and present environmental performance records, as well as concerns from stakeholder groups.

➔ **Refer to www.ubs.com/responsibility for the complete "UBS position on relationships with clients and suppliers associated with controversial activities"**

Clients, transactions or suppliers potentially in breach of UBS's position, or otherwise subject to significant environmental and human rights controversies, are identified as part of UBS's know-your-client compliance processes. Advanced data analytics on companies associated with such risks are integrated into the web-based compliance tool used by our staff before they enter into a client or supplier relationship, or a transaction. The systematic nature of this tool significantly enhances our ability to identify potential reputational risk as is evidenced by the high number of cases referred for assessment to our environmental and social risk units since 2012.

➔ **Refer to the table "Environmental and social risk assessments" in this section for more information**

Sustainable products and services

By integrating environmental and social considerations into our advisory, research, investment, finance and ownership processes across all of our businesses, we provide financial products and services which help our clients benefit from environmentally and socially related business opportunities. This is particularly the case in relation to climate change, where our activities focus on our client-centric activities of risk management, investment, financing and research.

➔ **Refer to "Our climate change commitment" in this section for more information on related business initiatives**

Investment advisory

We offer investment advisory services for wealth management and institutional clients, helping them to consider the potential social and environmental impacts, as well as the potential financial returns, of their investments. Our philanthropy and sustainable investing teams have continued to develop the holistic service offered within our wealth management businesses. These teams provide thought leadership, advice, products and solutions to existing and prospective private clients who wish to make investments in accordance with their own personal values. These services also extend to aiding philanthropic or investment decisions intended to drive positive change. Our services also include sustainable portfolio management, such as mandate solutions and separately managed accounts for private clients and institutions with a strong focus on sustainability across all asset classes. In the US, we also offer managed accounts with environmental, social and governance criteria (sourced from third-party data provider MSCI) embedded into private clients' fundamental investment process, enabling them to identify and exclude securities based on issue-oriented screens.

For institutional clients, Global Asset Management offers customized portfolios in the form of segregated mandates and institutional accounts that allow clients to define and exclude certain controversial stocks or sectors due to their perceived social or environmental impact.

Research

We produce award-winning research on the impact of environmental, social and governance issues on various sectors and companies. Our specialized teams have regularly published research on topics that will shape our future, including climate change, energy efficiency, resource scarcity and demographics. Our experience and sector knowledge help us to determine what is material by raising questions about the effect environmental, social and governance issues are having on the competitive landscape for the global sectors we cover, as well as about how companies are affected in relative terms. Increasing client demand for integrating sustainability issues into fundamental investment analysis is reflected in our publications and client conferences:

– In 2013, one of the flagship publications of UBS Wealth Management, "UBS Research Focus,"was produced in collaboration with research teams in Global Asset Management and the Investment Bank. Entitled "Sustainable investing," it discussed how sustainability considerations are increasingly incorporated into investment decisions.
– Our UBS Q-Series® reports focus on thought-provoking discussions on pivotal investment questions, and on making clear investment conclusions, leading to a Group-wide drive for more thoughtful, proprietary and valuable research. Examples of Q-Series® reports published in 2013 include "Human capital – Corporate culture: Relevant to investors?" and "Global energy markets: How much oil in the US transport sector can be displaced by cheap US natural gas?" Other publications focused on nutrition ("Nutrition: Access and traceability") and on sustainable innovation ("Integration – global sustainability and cultural change").
– Our newly established publication, "ESG Keys," addresses the what, how and why of ESG issues and sustainability investment styles. Reports in 2013 addressed corporate governance, human capital, and energy and climate change.
– The UBS European Conference hosted a number of panels on sustainability issues, featuring experts and UBS research analysts, such as "The great sustainability debate," "Human capital – driving returns" and "Energy: prospects and challenges for fracking."

– Our outreach and dialogue programs included a three-year partnership with the Smith School of Enterprise and the Environment at the University of Oxford, with which UBS hosted a series of events between 2011 and 2013, open to both UBS clients and employees, and featuring thought leaders from around the globe.

Investment products

Global Asset Management is committed to environmental, social and governance integration and has been a signatory to the United Nations-supported Principles for Responsible Investment (PRI) since 2009. These provide a voluntary framework according to which all investors can take into account environmental, social and governance issues in their decision-making and ownership practices and align their objectives with the broader objectives of society.

Global Asset Management offers a range of sustainable investment funds that integrate material sustainability factors with a rigorous fundamental investment process. We apply the concept of shared value, according to which companies that pursue sustainability practices (for example, conserving resources, maintaining a high-quality workforce and a strong supply chain) not only create value for the shareholder but also for a wider range of stakeholders. Our investment themes include energy efficiency, environment, social and healthcare, and demographics. We also manage four exchange-traded funds which track MSCI's Socially Responsible Indices and are listed on the Deutsche Börse (Xetra), the SIX Swiss Exchange and the London and Milan Stock Exchanges.

Through our open architecture, we also offer our wealth management clients the opportunity to invest in socially responsible investment bonds, equity and microfinance products from leading third-party providers. As of 31 December 2013, invested assets held in socially responsible investments (SRI) totaled CHF 576 billion, representing 24% of our total invested assets. Throughout 2013, invested assets in all of our SRI classes increased. In particular assets that are subject to UBS's policy pertaining to controversial weapons increased substantially, largely due to the global expansion of the policy.

➔ Refer to the table "Socially responsible investments invested assets" in this section for more information

Our climate change commitment

Climate change is one of the most significant challenges of our time. The world's key environmental and social challenges – such as population growth, energy security, loss of biodiversity and access to drinking water and food – are all closely intertwined with climate change. This makes the transition to a low-carbon economy vital.

We recognize that financial institutions are increasingly expected to play a key role in the transition to a low-carbon economy, and we are determined to support our clients in preparing for success in an increasingly carbon-constrained world. We are one of the leading wealth management firms worldwide, and the leading universal bank in Switzerland, backed by a top asset management business and a client-centered investment bank. Therefore, our climate change strategy focuses on the areas of risk management, investments, financing, research and in-house operations. It is in these areas that we believe we can make the greatest contribution to the transition towards a low-carbon economy. Our contribution to these areas in 2013 included:

Risk management: seeking to protect our clients', and our own, assets from climate change risks, within our sphere of influence.

We committed to participating in international efforts led by the Greenhouse Gas Protocol and the United Nations (UN) Environment Programme Finance Initiative to develop a greenhouse gas accounting and reporting guidance for financial intermediaries.

We helped our clients manage their exposure to the emissions markets and offered execution and full service clearing for contracts on, for example, EU Emissions Trading System allowances and UN Certified Emissions Reductions in Europe and North America.

Investments: helping to mobilize private and institutional capital towards investments facilitating climate change mitigation and adaptation.

We launched an Impact Investing Private Equity fund for SMEs in emerging and frontier markets. With a volume slightly in excess of CHF 50 million at closure, it is one of the largest impact funds in the sector funded by clients and private capital. The fund represents a unique investment opportunity for wealthy clients and is expected to generate significant social and environmental impact.

Our UBS Portfolio Screening Services helped Wealth Management clients align their portfolios to their values by assessing portfolios using specific sustainability criteria (including environmental topics). Based on increased interest among our clients, we screened CHF 4.2 billion of client assets in 2013.

The UBS Clean Energy Infrastructure Switzerland offers institutional investors unprecedented access to a diversified portfolio of Swiss infrastructure facilities and companies in the field of renewable energies and energy efficiency. Capital commitments had reached approximately CHF 350 million on 31 December 2013.

Six of Global Asset Management's real estate funds, with CHF 20 billion gross assets under management, obtained the top ranking ("green star"), and two of

1 All figures are based on the level of knowledge as of January 2014. 2 FS stands for the Performance Indicators defined in the Global Reporting Initiative Financial Services Sector Supplement. 3 UBS Global Asset Management Responsible Property Investment strategy. 4 Includes customized screening services (single or multiple exclusion criteria). 5 Assets subject to restrictions under UBS policy on the prohibition of investments in companies related to anti-personnel mines and cluster munitions (includes all invested assets held in Global Asset Management actively managed discretionary segregated mandates and all actively managed funds (retail and institutional) held by Global Asset Management, Wealth Management and Retail & Corporate). In 2013, the scope of this policy became global. 6 SRI products from third-party providers apply either positive and exclusion criteria or a combination thereof. 7 Total SRI / UBS's invested assets.

Socially responsible investments (SRI) are products that consider environmental, social or ethical criteria alongside financial returns. SRI can take various forms, including positive screening, exclusion or engagement.

Positive criteria apply to the active selection of companies, focusing on how a company's strategies, processes and products impact its financial success, the environment and society. This includes best-in-class or thematic investments.

Exclusion criteria whereby one or several sectors are excluded based on environmental, social or ethical criteria, for example, companies involved in weapons, tobacco, gambling, or companies with high negative environmental impacts. This also includes faith-based investing consistent with principles and values of a particular religion.

them were awarded "sector leader" status, by the 2013 Global Real Estate Sustainability Benchmark, thus recognizing our efforts in defining and implementing a sustainable and responsible property investment strategy (RPI). All six funds rank within the first and second quartiles of their respective peer set (among more than 540 real estate portfolios).

Financing: supporting this transition as corporate advisor, and / or with our lending capacity.
We supported Swiss SMEs in saving energy, as promoted by the Swiss Energy Agency's SMEs Model. Clients benefited from the agency's "energy check-up for SMEs" at reduced costs and were granted cash premiums for committing to an energy reduction plan within this scheme. By the end of 2013, 116 companies signed up.

By supporting Swiss private clients when renovating their private homes sustainably, we redistributed CHF 2.9 million in cash benefit, funded by proceeds from the Swiss CO_2 levy refund. Swiss private clients could also benefit from the UBS "eco" mortgage when building energy-efficient homes.

Expressing our commitment to being a financial partner in the energy transition in Switzerland, we are sponsors of the Swiss Energy and Climate Summit 2013 and 2014 as a Premium Partner.

In 2013, the Investment Bank supported 190 clients that provide a positive contribution to climate change mitigation and adaptation, either in equity or debt capital market transactions (total deal value CHF 28.5 billion) or as financial advisor (total deal value CHF 49.4 billion).

Research: offering world-class research capacity to our clients on climate change issues.
We continued to provide clients with award-winning research on climate change related topics. Examples include "ESG Outcomes for a 'New Global Economy,'" "Postcards from the US … on energy & climate," "Global utilities: Can utilities survive in their current form?" and "China integrated natural gas: Will a coal-to-gas boom eventually go bust?" Our thought leadership in this area was recognized by the annual Thomson Reuters Extel / UKSIF Socially Responsible Investing (SRI) & Sustainability Survey where UBS ranked fourth for Climate Change and second for Renewable Energy.

Our Chief Investment Office (CIO) Wealth Management research provided regular research updates on renewables, agribusiness, energy efficiency and water. The latter was the sustainable investment theme promoted in the 2013 UBS CIO House View.

In-house operations: reducing our own greenhouse gas emissions.
We further reduced our emissions 15% year on year, achieving a 49% reduction from baseline year 2004. This brings us very close to reaching our target of a 50% reduction by 2016. We continued to invest in sustainable real estate and efficient information technology, and reduced our energy consumption 3% year on year. We are on track to reach our target of a 10% reduction compared with 2012 levels by 2016.

➔ **Refer to www.ubs.com/climate for our complete climate change commitment**

Corporate and private clients financing and advisory

UBS globally provides capital raising and strategic advisory services to companies offering products that provide a positive contribution to climate change mitigation and adaptation, including those in the solar, wind, hydro, energy efficiency, waste and biofuels, and transport sectors. In 2013, we supported transactions that included a USD 50 million equity capital raising for Cool Planet, a US-based renewable energy company which has developed a patented process to convert non-food biomass into gasoline, a USD 300 million three-year bond offering for the China Longyuan Power Group, the largest wind power generation company in Asia, and a CHF 400 million dual-tranche bond for Sika AG, a Swiss specialty chemicals company providing products to the construction and transportation industries that enhance durability and promote the efficient use of energy, water and other resources. In addition, we helped our clients manage their exposure to the emissions markets, while in Switzerland, we helped SMEs to save energy and support retail clients when undertaking energy-efficient renovations.

Voting rights

We believe that voting rights have economic value and should be treated accordingly. Where Global Asset Management has been given the discretion to vote on behalf of our clients, we will exercise our delegated fiduciary responsibility by voting in the manner we believe will be most favorable to the value of their investments. In 2013, we voted on more than 69,000 separate resolutions at 7,075 company meetings. Our approach to corporate governance is an active one and is integral to our investment process. We are an active member of a number of collaborative shareholder bodies.

Since 2010, Global Asset Management in Switzerland has been offering UBS Voice, a free service enabling holders of Swiss institutional funds to express voting preferences ahead of shareholder meetings of major Swiss corporations. This provides additional shareholder input into the voting decisions of the funds' management company. More than 40% of invested assets for which UBS Voice is offered participate in this service.

Our operations

Continuously reducing our greenhouse gas footprint

In 2013, we reduced our greenhouse gas footprint again by decreasing our emissions 15% year on year, achieving a 49% reduction from baseline year 2004. This brings us very close to reaching our target of a 50% reduction by 2016. We also reduced our footprint per full-time employee 12% year on year. Our strong performance is a result of adopting energy efficiency measures to reduce the energy consumption of the buildings we occupy, and of critical facilities such as the data centers we use, while increasing the proportion of renewable energy. Emissions that cannot be reduced by other means (for example, business air travel) are offset.

UBS's Environmental Program was introduced in the 1970s, and since 1999, we have managed the program through an Environmental Management System in accordance with ISO 14001. At the time, we were the first bank to obtain ISO 14001 certification for our Group-wide environmental management system. In addition, our greenhouse gas emissions data is externally verified according to ISO 14064 standards.

Reducing energy consumption and improving energy efficiency

In 2013, we reduced energy consumption 3%, contributing to our target of reducing energy consumption 10% by 2016 compared with 2012 levels. Between 2009 and 2012, we overachieved on our previous targets and reduced our energy consumption 21%. We will continue to invest in energy-efficient infrastructure and implement established energy reduction measures, such as ensuring that heating, air-conditioning and lighting controls of the buildings we occupy are optimized. In addition, we

Environmental targets and performance in our operations[1]

	GRI[2]	2013	Target 2016	Baseline	% change from baseline	Progress / Achievement[6]	2012	2011
Total net greenhouse gas emissions (GHG footprint) in t CO_2e[3]	EN15–17	**183,011**	–50%	360,501[4]	–49.2	● (green)	215,279	220,593

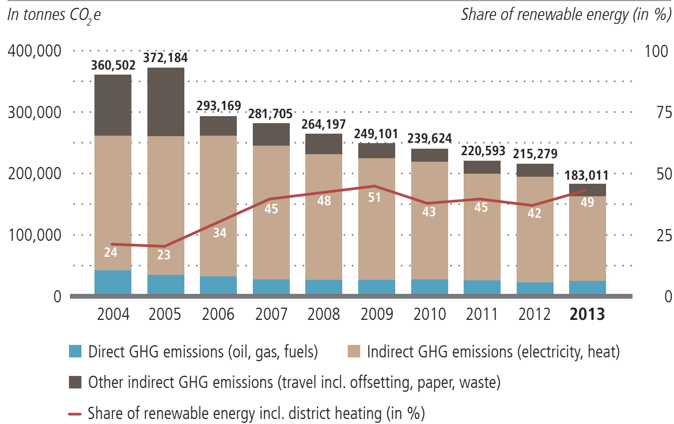
1 Detailed environmental indicators are available on the internet www.ubs.com/environment. Reporting period 2013 (1 July 2012 to 30 June 2013). 2 Related to Global Reporting Initiative (see also www.globalreporting.org). EN stands for the environmental performance indicators as defined in the GRI. 3 GHG footprint equals gross GHG emissions minus GHG reductions from renewable energy and GHG offsets (Gross GHG emissions include: direct GHG emissions by UBS, indirect GHG emissions associated with the generation of imported / purchased electricity (grid average emission factor), heat or steam and other indirect GHG emissions associated with business travel, paper consumption and waste disposal). 4 Baseline year 2004. 5 Baseline year 2012. 6 Green: on track / amber: behind schedule. 7 FTEs are calculated on an average basis including contractors.

UBS's greenhouse gas (GHG) footprint



apply externally verified standards to validate building performance.

Information technology consumes up to half of the electricity used by the Group worldwide, and consolidation, virtualization and the Desktop Transformation Program (designed to reduce the number of personal computers whilst ensuring that new computers and monitors are more energy-efficient than the equipment they replace) have contributed to significant energy savings in recent years. In 2013, we reduced the electricity consumption of our data centers more than 6% year on year.

Increasing share of renewable energy

We are reducing our use of carbon-intensive energy by replacing fossil-fuelled heating infrastructure where feasible and by purchasing renewable energy for a high proportion of the energy we use (49% in 2013).

Business travel and offsetting CO_2 emissions

We continuously try to minimize our CO_2 emissions in business travel by encouraging our employees to choose alternatives to air travel, such as high-speed rail, recording a 7% reduction in the number of flights taken, and a 2% increase in employee rail travel in Switzerland in 2013. Our investments in video-conferencing solutions also contributed to the reduction in air travel. Globally, over 400 rooms with video facilities are available and more than 80,000 room bookings were processed in 2013. The marketing and events teams adhere to environmental guidelines for client conferences and consider the impact of delegate travel, hotels, venue facilities and catering as part of their logistics and planning.

We continue to offset all CO_2 emissions resulting from agency-booked business air travel and client events and conferences, thereby supporting renewable energy and other projects reducing CO_2 emissions. Projects we selected meet the requirements of the Gold Standard for voluntary emissions reductions and also provide positive community benefits. Schemes selected include a wind power project in Turkey and community biofuel projects in China and India.

Reducing paper consumption, waste generation and water usage

We are committed to further reducing our environmental footprint and are on track to reach our 2016 targets, which use 2012 performance as the baseline:

– The amount of paper used per employee decreased 1% compared with baseline year 2012. Double-sided printing and copying, now the default setting for printers used by the majority of our employees, combined with an ongoing shift towards the distribution of electronic documents, will enable us to reach our target of reducing paper usage 5%. We increased the percentage of office paper from Forest Stewardship Council (FSC), or recycled sources, to 58% in 2013, contributing towards reaching our 60% target.
– The continued implementation of bin-less offices in many larger locations has reduced the waste per employee 8% since 2012, outperforming our 5% reduction target by 2016. Our waste recycling ratio improved from 54% in 2012 to 56%, a step in the right direction towards reaching our target of 60% by 2016.
– Our water consumption decreased 9% compared with 2012 levels, exceeding our target of 5% by 2016.

➔ **Refer to the table "Environmental targets and performance in our operations" in this section for more information**

Engaging our employees

By educating, increasing awareness among and offering incentives to our employees on environmental matters, we hope to help them behave in a sustainable way both at work and at home. As part of our commitment to reducing CO_2 emissions, we continued to support Earth Hour in March 2013, switching off lights in UBS offices in 73 cities around the world for one hour. This also marked the start of our annual internal and external environmental awareness campaign. The theme in 2013 was "Protecting our future" and focused on our renewed climate change commitment, with activities including environmental fairs, an online environmental quiz, as well as articles and interviews with senior management posted on our internal and external websites.

Responsible supply chain management

Responsible supply chain management (RSCM) principles serve to embed our ethics and values when interacting with our suppliers, contractors and service partners. As part of this commitment, we have implemented an RSCM framework to identify, assess and monitor supplier practices in the areas of human and labor rights, the environment, health and safety and anti-corruption. In 2013, we further strengthened our existing RSCM framework by focusing on suppliers that either have a potentially high environmental or social impact, or suppliers that are active in high-risk countries. We screened relevant suppliers and identified around 40 suppliers for which remediation measures have been defined in order to be in line with UBS's RSCM standards. Due diligence is performed by our experienced procurement and sourcing specialists, and is supported by a centralized team of experts.

Our communities

Within our community investment program, we aim to overcome disadvantage in our local communities by supporting education and entrepreneurship through a combination of targeted funding and the commitment and skills of our employees. Coordinated globally, our initiatives are implemented regionally. Proximity to our partners allows us to better understand the needs and requirements of our communities. Based on this, we can generate a long-term, sustainable and measurable impact on our local communities while offering volunteering opportunities for our employees. As well as direct cash donations and the commitment of our employees, our community investment program also includes matched-giving schemes and disaster relief efforts.

Community Affairs

We actively engage with the communities around the globe of which we are a part. In 2013, UBS and our affiliated foundations made direct cash donations totaling CHF 28.3 million to carefully selected non-profit partner organizations and charities. These donations were primarily aimed at our Community Affairs key themes of education and entrepreneurship. Additionally, spending on the UBS Anniversary Education Initiative amounted to CHF 14.0 million. Our contributions, combined with other significant activities, notably the volunteering activities of employees, have continued to provide substantial benefits to projects and people around the world, as demonstrated by the regional examples provided below.

Contributions were also made to other causes, in particular disaster relief, including a commitment of more than CHF 1.9 million in total financial contributions to both short-term relief and long-term rebuilding efforts in response to the devastation caused by Typhoon Haiyan in the Philippines. Community Affairs and the Optimus Foundation, UBS's independent grant-making foundation, joined forces to offer a unique and integrated approach including both clients' and employees' donations in its matched-

Key examples of UBS's community investment activities across the globe

Switzerland

Developing Switzerland's next generation of business leaders was a priority for us in 2013. One of the projects we supported was the annual company event organized by Young Enterprise Switzerland (YES). As part of this program, which we have been supporting since 2007, students from all over the country establish and manage a real company, thus learning how the business world works. For 12 months, they receive support from business mentors, their teachers and YES. At the end of the year, representatives of the 25 best-performing companies are invited to the grand final in Zurich, where the winner is crowned.

As part of the UBS education initiative, in 2013 we also supported one of the annual awards made by the Social Entrepreneurship Initiative & Foundation (seif). Each year, seif recognizes innovative business ideas that foster responses to social or environmental challenges.

In Switzerland, our community investment efforts are also advanced by the UBS Culture Foundation, the UBS Foundation for Social Issues and Education, and the A Helping Hand from UBS Employees association. In 2013, these organizations made valuable contributions to important social causes, including fostering the humanities and the creative arts, supporting communities in need, and helping disabled and disadvantaged people.

Americas

In 2013, Community Affairs & Corporate Responsibility Americas undertook a strategic re-launch of our programming to help deploy the firm's financial and human capital more effectively. This included a complete overhaul of our employee giving portal, which supports all of our engagement programs across the Americas. Within UBS's global focus areas of education and entrepreneurship, we are providing under-resourced, high-potential individuals with advice and resources to help develop more enterprising communities.

In our first major initiative following the re-launch, we coordinated UBS's second annual Season of Service, a community impact initiative open to all business divisions in the Americas. Over the course of two months, employees completed 92 different volunteer activities and logged more than 2,500 volunteer hours.

Within our flagship Elevating Entrepreneurs program, we continued to expand our lending offerings in Chicago and Los Angeles. In coordination with our partners in the UBS Bank USA Community Development Group and the Valley Economic Development Center, we committed USD 35 million in capital to qualified small businesses in Chicago, Los Angeles, New York, New Jersey, Connecticut, Salt Lake City and Las Vegas. During 2013, 29 small businesses received loans ranging from USD 50,000 to USD 250,000 totaling USD 6.4 million. Combined, these companies have created 451 new jobs.

Asia Pacific

In 2013, the UBS Finance Academy program in Sydney marked its 11th anniversary, and over the years has provided more than 550 public school students with first-hand insight into the world of finance and exposure to UBS. Over the course of the program, students

giving programs. This combined (client and UBS) commitment raised the total financial contributions to the rebuilding efforts in the Philippines to more than CHF 3 million.

Across all business regions, our employees continue to play a very active role in our community investment efforts, in particular through their volunteering activities. In 2013, 10,648 employees spent 91,370 hours volunteering. We support their commitment by offering up to two working days a year for volunteering efforts. For the second year in a row, employees who have demonstrated outstanding volunteering commitment were rewarded with the UBS Global Employee Volunteer Awards.

Furthermore, we strengthened the measurement of the impact of our Community Affairs activities. We measure the impact of projects across all regions using the London Benchmarking Group model. Understanding where we make an impact provides vital data that helps us evaluate and focus our program. Therefore, we plan to further expand measurements of our strategic programs across all regions in 2014.

Client foundation

The UBS Optimus Foundation is an expert grant-making foundation established by UBS in 1999. The Foundation works to break down barriers that prevent children from reaching their full potential by funding leading organizations to improve the health, education and protection of children. The UBS Optimus Foundation supports programs in places where children face adversity. Since its establishment, the Foundation has received more than 25,000 donations totaling over CHF 195 million. By the end of 2013, the Foundation supported 107 projects in 48 countries amounting to a total value of CHF 69.8 million. As UBS bears all administrative costs related to the UBS Optimus Foundation, 100% of every donation goes directly towards the projects funded.

were provided with the opportunity to listen to, and interact with, key industry figures. Students also gained practical knowledge of financial markets through "day in the life" presentations, merger and acquisition case studies and a field trip to both UBS's live trading floor and CNBC's filming studio.

Across the region, UBS employees continue to volunteer in a diverse variety of both skill-based and grassroots programs. Clients and family members are also often invited to join in where appropriate. In 2013, during the Regional Volunteer Experience, volunteers from across Asia Pacific traveled to Japan and joined local volunteers to work together on the Team Tohoku program in the remote northeastern community of Kamaishi City, aimed at helping the community get back on its feet following the 2011 tsunami. Led by senior management, including UBS Asia Pacific's Chief Executive Officer, Chi-Won Yoon, these volunteers focused on various projects relating to job and economic regeneration, temporary and long-term recovery housing, strengthening the skills and knowledge needed by local civil societies for further development, as well as risk reduction and future disaster preparedness.

In its second year, Singapore's Diversity in Abilities arts program, targeted at bringing visual and performing arts to children in special education, was awarded Singapore's National Arts Council Patron of the Arts Award 2013. More than 140 children were trained by renowned local and regional artists and the program culminated in a stage production that featured Singapore's Minister of Education in an acting role.

Europe, Middle East and Africa

In Europe, the Middle East and Africa, Community Affairs activities focus on sharing the workplace skills of our employees in order to help people in disadvantaged communities reach their full potential. Last year, in the UK alone, we helped 6,366 students develop employability and entrepreneurial skills through UBS work-related learning programs, which range from employability skills workshops and interview practice to work experience. In the UK, UBS was recognized with a Business in the Community 2013 Responsible Business Award for its volunteering program.

In Turkey, over 1,000 students took part in the BKD-Science Heroes Association challenge, which helps develop their technology, math and entrepreneurial skills. Hakan Habip of UBS Turkey, who co-manages our partnership with BKD, was named one of Turkey's top 100 "Changemakers" by the highly regarded Sabanci Foundation for his involvement in BKD activities. In Italy, a team of UBS managers worked with a group of students from underprivileged backgrounds to raise their aspirations and achievements, and helped them secure places at a prestigious university. In Israel, the successful partnership with Ashoka continues, supporting young social entrepreneurs to develop their projects.

Across Europe, the Middle East and Africa, employees are getting involved in their local communities and sharing their workplace and entrepreneurial skills.

Our employees

Our employees' drive, skill, insight and experience are key to meeting our clients' needs and growing our businesses. We are committed to investing in our employees and furthering our reputation as a leading employer. We promote a performance- and development-oriented culture that values integrity and encourages collaboration across the entire firm. Our principles of client focus, excellence and sustainable performance serve as the basis for all of our endeavors, helping us focus on every opportunity to create value for our stakeholders.

Our workforce

In the past two years, we have concentrated on building our capital strength, improving efficiency and effectiveness, and reinforcing risk management. These three pillars underpin our strategy and are the foundation of everything we do. A key part of this effort has been to build a strong corporate culture while ensuring that we hire, develop and retain a global workforce that not only meets today's business challenges, but also enables us to build strength as we plan for our leadership needs in the future.

We made some changes to our workforce in 2013. This was primarily due to our ongoing cost reduction programs that reduced staff numbers across the firm, particularly within the Investment Bank and the Corporate Center. These changes also reflected measures designed to improve our long-term efficiency. For example, in August 2013, we announced the creation of the UBS Nashville Business Solutions Center in the US. The Nashville location is part of our strategy to create regional centers of excellence for our support functions and allows us to increase collaboration and operational effectiveness. It also complements our existing service center in Poland and our other outsourcing and offshoring relationships elsewhere in the world.

As of 31 December 2013, we employed 60,205 people (on a full-time equivalent basis), 2,423 fewer than a year earlier. In 2013, our employees worked in 56 countries, with approximately 36% of our staff employed in Switzerland, 35% in the Ameri-

cas, 17% in Europe, Middle East and Africa and 12% in Asia Pacific.

A mobile workforce enables employees to develop relationships across business divisions, regions and cultures, increases trust and helps us to better leverage our employees' skills. It also helps ensure that we have the right people in the right roles in order to meet our clients' needs. As part of our commitment to business growth and career development, we transferred 1,105 employees between business divisions in 2013, in addition to transferring 405 employees to roles in a different region. Globally, employee turnover, as a percentage of average overall headcount, was 15% in 2013 compared with 12.9% in 2012. Employee-initiated turnover was 8.7%, an increase of 2% from 2012.

Attracting and retaining talent

We strive for excellence in everything we do, and this begins with our employees. It is fundamental to our success to recruit the most talented individuals, help them develop, and effectively leverage their skills to meet our clients' evolving needs. We try to be as forward-looking as possible when planning our talent needs and comparing them with our existing workforce. Regular talent reviews enable us to understand our employees' capabilities, potential and ambition in order to fill any gaps by developing or further recruiting talent at all levels. Our integrated approach to managing talent across the entire employee lifecycle allows us to link our recruitment, diversity, learning, mobility, performance management, talent review, compensation and succession practices in the most meaningful way.

Recruiting new employees

People join UBS from a diverse range of backgrounds. We are committed to building the skills of our existing employees while hiring the best available talent, as required, to sustain and grow our core businesses.

In 2013, we reviewed our comprehensive hiring standards and processes, especially those focused on recruiting at senior levels, to help ensure that we continue to hire people who are demonstrably qualified for their roles and are a good fit for the firm's culture. We recruited highly effective financial and client advisors in 2013 and invested in our future by hiring graduates and interns globally, as well as strengthening our commitment to apprentices in Switzerland. In total, 6,548 external hires were made across the firm in 2013, with Wealth Management recruiting 374 client advisors and Wealth Management Americas hiring 480 financial advisors.

Our own employees helped refer talent to the organization. As a result, 15% of externally sourced roles in 2013 were filled through employee referrals. Employees also expect to be considered for open roles within the firm. Therefore, in 2013, we instituted further measures to support transparent and objective internal hiring processes so that current employees have the same access to available jobs at UBS as external candidates.

Throughout 2013, we ensured a continuous and visible presence at our target universities, with UBS leaders and employees actively supporting our campus recruiting efforts. Global initiatives launched in 2013 included the Emerging Talent Program, a special internship within UBS's Education Initiative that targets students early in their academic careers. The UBS Explore career-consideration program helped increase the number of potential recruits, and our graduate trainees benefited from educational opportunities and business-specific training. In 2013, 476 university graduates were hired into one of UBS's undergraduate or MBA graduate training programs. An additional 876 interns were hired globally.

Our apprenticeship program in Switzerland continued to perform strongly in 2013, hiring 266 business and 39 information technology apprentices. This was the first year that UBS recruited an increased number of apprentices in conjunction with the UBS Education Initiative (an additional 150 apprentices over a five-year period). We also recruited 185 trainees into our All-round Traineeship Program for Swiss high school graduates.

In 2013, we continued to be seen as an attractive employer and were notably ranked in the global top 50 in Universum's 2013 World's Most Attractive Employers list. In Switzerland, UBS ranked third among business students in Universum's 2013 Ideal Employer survey.

➔ Refer to www.ubs.com/awards for more information on UBS's rankings as an employer

Strengthening our diverse workforce and inclusive work environment

Our workforce is truly global. We have 890 offices in 56 countries, and our employees, who together speak more than 137 languages, are citizens of 144 countries. In 2013, the average age of our employees was 41 years and the average length of employment within the firm was 9.2 years. In Switzerland, more than 49% of employees have worked at UBS for more than 10 years. This experience enables our employees to have stronger skills, better understanding and more institutional knowledge about our clients' needs and how to meet them.

We believe that companies with diverse workforces and inclusive work environments excel in understanding and serving clients. In all our businesses, we seek to hire and retain a broad range of talent with diversity in race, gender, business experience, perspective, ethnicity, nationality, religion, age, abilities, education and sexual orientation. As part of this goal, we seek to strengthen and sustain an inclusive work environment that encourages all employees' development and enhances client relationships. We are globally committed to offering equal employment opportunities and believe that having the right people, in the right roles, at the right time is a key factor in delivering excellence and building capability for the future.

Within our continuing effort to strengthen all aspects of diversity, increasing gender diversity remained a key priority in 2013. We again called for divisional diversity planning that includes targeted, forward-looking actions over the next several years that aim to increase the number of women working at UBS, particularly in senior roles.

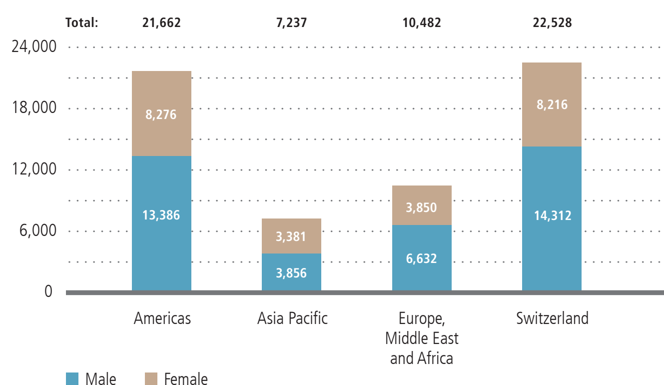
A wide range of regional initiatives complemented our global efforts. For example, we launched an 18-month sponsorship program for high-performing female Directors and Executive Directors in the US. Combining mentoring and advocacy, this program strengthens leadership skills, provides increased access to the firm's senior executives and fosters a "pay-it-forward" culture among women across the organization. We also worked with groups such as the Council of Urban Professionals and the Financial Women's Association to significantly increase the number of diverse recruitment candidates presented to managers. Numerous events for staff in the US, the UK and Asia Pacific strengthened employees' understanding and promoted a sense of personal responsibility towards issues related to culture, gender, sexual orientation and working relationships.

In Switzerland, we worked to enhance skills and representation among several employee groups in 2013. For example, a suite of practical training programs to promote life-long learning was offered to mid-life employees, focusing on career planning and skills development in technology, new media and languages. A mentoring program for 150 mid-career women combined career advice with increased visibility and access to the firm's senior management. Also in 2013, we established a partnership with Advance, an association of Switzerland-based companies that focuses on increasing the percentage of women in Swiss industries through development opportunities, role modeling and targeted events. In Asia Pacific, we sponsored workshops and events during 2013 to help our businesses better leverage their multi-generational workforces. Understanding and appreciating differences in age, behavior, attitude, motivation and working styles builds stronger teams that are better able to serve our clients.

In 2013, over 14,500 employees across UBS were members of more than 20 employee networks. These networks, representing affinities such as gender, culture, life stage and sexual orientation, help build cross-business relationships and an open workplace. Our global network guidelines enable employees to set up or join employee networks in all our operating regions. Additionally, our human resource policies and processes have global coverage and outline our commitment to a non-discriminating, harassment-free workplace, offering equal opportunities. This foundation encourages active and growing participation in our many employee networks.

Gender distribution by geographical region[1]

On 31.12.13



1 Calculated on the basis that a person (working full time or part time) is considered one headcount in this graph only. Looking at subregional data, the Americas consists of the USA at 20,328 and the rest of the Americas at 1,334. EMEA consists of the UK at 5,758, the rest of Europe at 4,564 and Middle East and Africa at 160. This accounts for the total UBS end-2013 employee number of 61,909, which excludes staff from UBS Card Center, Hotel Seepark Thun, Wolfsberg and Widder Hotel.

Managing performance

As a results-driven firm, personal accountability, effective performance management and sound compensation practices are critical for our success. Our performance management framework features regular employee-manager dialogue, consistent assessment processes and clear links between performance, behavior, achievements and compensation. We provide the tools and support employees need to set clear goals, be effective in their jobs and advance their careers.

We further strengthened our year-end evaluation processes in 2013 to more closely align individual performance with the firm's strategy and culture. More than ever, we want to evaluate not only each employee's achievements, but how those results were

Gender distribution by employee category[1]

	Officers (Director and above)		Officers (other officers)		Non-officers		**Total**	
As of 31.12.13	Number	%	Number	%	Number	%	**Number**	**%**
Male	17,995	78.3	12,463	61.4	7,728	41.5	**38,186**	**61.7**
Female	4,996	21.7	7,844	38.6	10,883	58.5	**23,723**	**38.3**
Total	22,991	100.0	20,307	100.0	18,611	100.0	**61,909**	**100.0**

1 Calculated on the basis that a person (working full time or part time) is considered one headcount (in this table only). This accounts for the total UBS end-2013 employee number of 61,909, which excludes staff from UBS Card Center, Hotel Seepark Thun, Wolfsberg and Hotel Widder.

The building blocks of effective people management

achieved. As part of this, specific corporate behaviors were integrated into our performance management processes starting with 2013 year-end evaluations. Employees and managers are expected to use concrete examples to illustrate how these behaviors were exhibited in 2013 and provide feedback on areas for future focus. We also assess employees' competencies and development needs as part of our overall performance management approach.

Appropriate awareness and management of all types of risk continues to be a focus for our businesses. As part of this, measurable and relevant risk objectives were again required for all employees in 2013 and considered in performance and reward decisions.

Performance management for our executives is especially rigorous. Senior leaders, including all Group Executive Board members, are evaluated on key achievements, business performance, risk management, leadership skills and meeting specific financial targets, in addition to acting as role models for our corporate culture. Comprehensive feedback from peers, direct reports and internal clients forms part of this assessment.

Our "key risk takers" also receive additional input and feedback in their performance reviews. These individuals may work in front office, logistics or control functions and, due to their role, are able to materially commit, use or control the firm's resources and exert significant influence over our risk profile. For this reason, in addition to self, manager and other relevant 360-degree reviewers, at least one person in a control function, such as finance or compliance, must attest to the person's attitudes and actions towards managing risk.

Our people management processes are global. In 2013, 99% of the employees eligible to participate in the firm's performance assessment processes received a performance review. We have Group-wide ranks and country-specific salary ranges that are applicable to all employees. We also have a standardized role classification model which is used across the firm. Many human resource processes are based on these global role profiles, and this supports more clearly defined career paths and development plans for all employees.

Education and development

Our Group-wide learning and development course offerings encompass senior leadership development, business education and practical training measures for employees at all levels. Our goal is to provide our employees and leaders with what they need to excel in their roles, progress in their careers and ultimately create value for our stakeholders.

In 2013, we made our education function more agile and flexible. Continuously evolving business and regulatory environments call for specialized training to be delivered to teams more quickly than traditional learning initiatives were in the past. Striking a better balance between highly customized learning activities and external training support has been key to delivering timely, topical training to front office employees in particular.

A primary aim for 2013 was to continue to offer training that helped our businesses achieve their goals. In Wealth Management Americas, for example, our financial advisor education aimed to deepen our advisors' ability to deliver holistic advice that considers clients' planning, borrowing, saving and giving needs, in addition to investing. A new, four-module Wealth Advisor program gives established financial advisors the advanced skills and knowledge to deliver comprehensive counsel to their clients. In November 2013, a national learning forum gathered hundreds of financial advisors, field and home office leaders, and external partners to discuss client trends, wealth management solutions and best practices. Additionally, select new candidates for financial advisor roles are regularly hired into a two-year, salaried Wealth Planning

UBS Wealth Management Master

Launched in late 2012 and aimed at senior client advisors across Wealth Management, the UBS Wealth Management Master is the highest internal certification available to top-performing client-facing staff in Wealth Management. The two-year program combines structured training with on-the-job development, enabling senior professionals to acquire in-depth expertise in client book management, client investment and relationship management. Since inception, 90 client advisors have entered the program.

Analyst program, which enables them to obtain relevant licensing, training and practical experience in a US branch office before joining an existing team as a qualified financial advisor.

We offer client education opportunities through our Financial Markets Education team. Numerous classes and educational events are available to clients in all of our operating regions. These initiatives cover a wide range of financial topics including equities and equity derivatives, fixed income basics, credit risk and commodities.

Role-driven business education is offered through specific learning pathways. These pathways, covering topics such as risk, compliance, sales, advisory and financial markets, help ensure consistent training across similar job roles. For example, Wealth Management expects a high and consistent level of expertise within client advisor roles. In addition to the Wealth Management Diploma and Wealth Management Master Certificate programs that are already available, in 2013 we developed specialized training for client advisors to help them strengthen client relationships, investment strategies and business focus.

All employees can access a broad range of development and training as part of their daily job and through various programs. Our eLearning portfolio consists of more than 5,100 courses on topics such as communication skills, management and leadership, financial markets and information technology. Specialized learning modules on risk, finance and compliance topics help employees develop the skills they need to work effectively in their roles and within evolving business and regulatory environments. Overall, in 2013, our employees participated in about 776,000 development activities, including approximately 512,000 mandatory training sessions focusing on compliance and regulatory topics. This equated to an average of 12.5 training experiences per employee or an average of 2.5 training days.

Compensation

We strive to offer our employees a competitive salary and performance award while maintaining our obligations to our shareholders and regulators. Our approach recognizes the need to compensate individuals for their performance within the context of market conditions, risk considerations, a fast-changing commercial environment and evolving regulatory supervision. Our foremost priority is to encourage and reward behavior that contributes to sustainable profitability and the firm's long-term success.

Our compensation structure is designed to be appropriately balanced between fixed and variable elements. We emphasize the variable component as an incentive to excel and to foster a performance-driven culture, while supporting appropriate and controlled risk-taking. Employee compensation is viewed within a total reward framework that takes into account base salary, discretionary performance awards and benefits.

Our Total Reward Principles are the foundation of our compensation framework, particularly for integrating risk control and managing performance, as well as specifying how we structure our compensation and performance award pool funding. They reflect our long-standing focus on pay for performance, sustained profitability, risk awareness and sound governance.

➔ Refer to "Our deferred variable compensation plans" in the "Compensation" section of this report for more information

Employee share ownership

We believe personal accountability for business actions and decisions can be encouraged through equity-based awards. Our employee share purchase plan, Equity Plus, is a voluntary equity-based program whereby eligible employees can purchase UBS shares at market price and receive one matching share for free for every three shares purchased. These matching shares vest in three years, subject to continued employment at UBS and retention of the purchased shares. We also use UBS shares as a significant component in our performance award deferral programs. As of 31 December 2013, current employees held an estimated 7% of UBS shares outstanding (including approximately 5% in unvested/blocked actual and notional shares from our compensation programs), based on all known shareholdings from employee participation plans, personal holdings and individual retirement plans. At the end of 2013, an estimated 48% of all employees held UBS shares.

➔ Refer to the "Compensation" section of this report for more information

Our identity and our commitment to being a responsible employer

We have a clear vision. We want to be the world's leading wealth manager and the top universal bank in Switzerland. We want to have an investment bank and an asset management business that are leaders in their chosen areas of focus and that add value to the overall franchise. We have made excellent progress in the past 18 months in implementing our strategy and in resolving legacy issues, and we are one of the world's best-capitalized banks. Our continued success depends largely on hard work and on building a strong corporate culture.

Relationships based on respect, trust and mutual understanding are the foundation for all of our business activities. The firm's guiding principles characterize the way we work together and the commitments we make to our clients. Unrivaled client focus is at the heart of our business model and we strive for excellence in everything we do, from the people we employ to the products and services we offer to our clients. We aim to deliver sustainable performance by strengthening our reputation and by delivering consistent returns to our shareholders. These concepts are integrated into our corporate decision-making and people management processes, and they are intended to shape the daily actions of our employees.

We are committed to making our unique culture a winning one. Our principles are brought to life in the actions and personal conduct that each of our employees exhibits in daily interactions with

clients and colleagues. In 2012, we developed some basic expectations for employee behavior with input from over 500 employees throughout all regions and businesses. They were discussed with the firm's 2,500 most senior managers in mid-2013 and then with more than 10,000 staff to ensure that our employees understand and act according to the values and principles that define who we are and what we stand for as an organization. In late 2013, we integrated these expectations into our promotion and performance evaluation processes to ensure that the way we achieve our goals is as important as achieving the goals themselves. We are developing a concrete plan to embed them in everything we do, from leadership skills building and business process simplification to employee engagement and the way we recruit people.

Listening to the voice of our employees

We request feedback from employees throughout the year. In 2012, we instituted a regular "Ask the CEO" event to allow employees to pose questions to our Group Chief Executive Officer Sergio P. Ermotti live in Zurich or via an interactive news and feedback channel called UBS Connections. A broad range of topics are discussed at these sessions, for example strategic direction, corporate restructurings and concepts such as collaboration and integrity.

Since 2008, we have utilized a targeted feedback tool to gauge the efficacy of our strategic communication initiatives, as well as the engagement levels of employees across the firm. This survey is sent several times a year to a representative sample of employees across all regions and business divisions. It assesses employees' familiarity with our senior management, the firm's principles and behaviors, specific measures of employee engagement, and their conviction regarding our strategic direction. We use the results to shape our communication strategies and to develop targeted initiatives that address areas of perceived weakness.

Benefits and well-being

We invest in all of our employees by offering a comprehensive suite of benefits such as insurance, pension, retirement and both paid and unpaid time off. We also offer our employees benefits beyond those required by local law or market practice. These benefits are designed to enhance employees' work experience and help them manage their professional and personal interests.

For example, we support flexible work arrangements in our major locations. In Switzerland, employees can request "Time Flex" options such as teleworking, part-time or job-sharing, or begin partial retirement starting at 58 years old. The UK and US have policies that outline part-time, flexible, job-sharing and home-working opportunities that may be appropriate for employees whose roles are amenable to flexible working conditions.

We also provide employee assistance programs in a number of locations, including the UK, US, Switzerland, Hong Kong, Singapore and Japan. These programs offer specialist support and counseling to help employees resolve issues related to stress, illness, personal conflict, finances, bereavement, mental health, performance, adult care and other work-life challenges. In addition, employees in the UK can utilize an on-site general practitioner, physiotherapist and dentist, as well as occupational health services. Employees in Switzerland have access to a child-care referral service, and employees in Stamford have access to on-site childcare.

We have a longstanding commitment to support the overall health and safety of all our employees, as noted in our Code of Business Conduct and Ethics. Our health and safety guidelines emphasize the importance of providing a good physical infrastructure and a work environment that promotes the health and safety of our employees and contractors. As part of this mandate, we track accident and illness rates. In 2013, 48,389 work days were lost to accident and 319,868 to illness. This amounts to six work days per employee.

Our commitment to being a responsible employer is present in every component of our people management process. This is especially important when necessary actions significantly impact certain employee groups in workforce-reduction exercises such as downsizings or organizational restructurings. Redeployment and outplacement initiatives in every region provide transitional support to affected employees. For example, eligible employees in the US receive career transition support, in addition to severance pay and health benefits. In Switzerland, our COACH program helps affected employees find new roles within UBS, or outside the firm, in the event of a restructuring. Employees below the level of Director participate in a social plan that sets out the terms and conditions for redundancies as well as internal hiring, job transfers and severance.

➔ Refer to www.ubs.com/health-safety for our health and safety statement

Employee representation

As part of our commitment to being a responsible employer, we work with all of our employee representation groups to maintain an active dialogue between employees and management.

The UBS Employee Forum for Europe was established in 2002 and includes representatives from 18 countries across Europe. It facilitates open dialogue on pan-European issues that may affect our regional performance, prospects or operations. Other local forums address topics such as health and safety, changes to workplace conditions, pensions, collective redundancies and business transfers. In Switzerland, for example, the elected members of the Employee Representation Committee partner with senior management for annual salary negotiations and represent employee interests on specific topics. The UK Employee Forum, with elected representatives from our UK businesses and appointed management representatives, focuses on economic, financial and social activities concerning UK employees. Collectively, the UBS Employee Forum, including the Employee Representation Committee and UK Employee Forum, represents approximately 50% of our global workforce.

Compensation

2013 compensation highlights and key changes

Performance achievements and performance award pool

A year ago, we committed to continue adapting our business to better serve clients, reduce risk, deliver more sustainable performance and enhance shareholder returns. In 2013, we made good progress in achieving all these goals and finished the year ahead of the majority of our performance targets.

Our business divisions posted strong results for 2013. Our adjusted Group profit before tax increased 44% year on year to CHF 4.1 billion. Our industry-leading fully applied Basel III common equity tier 1 (CET1) capital ratio increased by 300 bps to 12.8%, surpassing our 2013 target. Fully applied Basel III risk-weighted assets were reduced to CHF 225 billion, mainly due to disposals and other risk reduction in our Non-core and Legacy Portfolio, exceeding our 2013 year-end target and in line with our target for 2015. We significantly deleveraged our balance sheet, reducing total assets by CHF 250 billion. Maintaining cost discipline is critical to our long-term success. In 2013, we achieved our CHF 2 billion gross cost reduction target announced in July 2011.

A year ago, our 2012 performance award pool was significantly affected by the LIBOR matter, negatively impacting awards in the Investment Bank, in some areas of the Corporate Center, as well as the awards to the Group CEO and the other Group Executive Board (GEB) members. Based on the strong performance in 2013, we normalized our performance award levels for those areas most negatively affected last year and reduced gaps to market pay levels, leading to a performance award pool for 2013 of CHF 3.2 billion, which is 28% higher than for 2012. However, reflecting the reduced awards and longer deferrals in recent years which have resulted in decreased charges in 2013 for prior-year deferrals, the cost of performance awards was flat year on year on an accounting basis (IFRS).

While stability and predictability in our compensation framework are important, we have made some refinements to our framework in 2013 in response to the competitive environment and feedback from our shareholders.

Refinements to the GEB compensation framework

We introduced individual caps on performance awards of a maximum of five times the base salary for the Group CEO and a maximum of seven times the base salary for other GEB members. These caps are in addition to the overall GEB pool cap of 2.5% of adjusted Group profit before tax that we introduced last year.

We changed the GEB's performance award deferral mix by increasing the weighting of the equity portion under the Equity Ownership Plan (EOP) to at least 62.5% from 50% of the deferred amount and by decreasing the Deferred Contingent Capital Plan (DCCP) portion to 37.5% from 50%.

We increased the DCCP's phase-in CET1 capital ratio trigger to 10% from 7% for all GEB members including the Group CEO so that, if this capital ratio falls below 10%, the affected deferred performance awards would be written down to zero.

We based all GEB performance awards, including for the Group CEO, on financial and qualitative measures that were clearly defined and quantified in terms of relative weightings.

Refinements to the compensation framework for employees below GEB level

We changed the performance award deferral mix by increasing the weighting of the EOP portion to 60% of the deferred amount from 50% and reducing the DCCP portion to 40% from 50%.

Reflecting market dynamics, we raised the threshold of compensation levels subject to deferrals. We introduced deferral rates ranging from 40% to 75% compared with the previously flat rate of 60%, and better aligned performance award conditions to the firm's targets. In general, this means employees at the lower end of the compensation scale benefited from lower levels of deferral than in previous years, while those at the higher end of the compensation scale were subject to higher levels of deferral.

The combined effect of the changes to deferral rates and threshold for all employees below the GEB level resulted in additional compensation expenses of CHF 0.2 billion for 2013.

Key regulatory developments

The "Ordinance against excessive pay in stock exchange listed companies," issued by the Swiss Federal Council in November 2013 and effective from 1 January 2014, requires Swiss listed companies to submit the compensation of the GEB and Board of Directors (BoD) to shareholders for a binding vote annually. The Human Resources and Compensation Committee and BoD are being provided with regular updates on the impact and proposed implementation of the Ordinance. The first vote on BoD and GEB compensation will be held at the 2015 Annual General Meeting of Shareholders (AGM).

Another key regulatory development is the impact of the European Union's Capital Requirements Directive IV on affected employees and the related implementation of the performance award cap for 2014 for this population. As a result of these requirements, we will submit for approval at the 2014 AGM a proposal concerning the award cap for variable compensation for affected employees.

Details regarding both of these measures will be provided as part of the agenda for the AGM.

➔ **Refer to the "Regulatory and legal developments" section of our Annual Report 2013 for more information**

Dear shareholders,

We are on track with the implementation of our ambitious strategy. To ensure this continues, we further anchored our strategy and a culture of accountability into our compensation framework during 2013.

We have built on the important strides we took in 2012 with the adoption of a revised compensation model founded on incentivizing disciplined capital management and with performance awards based on risk-adjusted profitability. In 2013, the Human Resources and Compensation Committee reviewed the firm's compensation model to ensure it continues to reinforce our employees' focus on medium- and longer-term performance, and in response to the competitive environment and feedback from our shareholders. Consequently, we made two key refinements to our plans during 2013. Firstly, we increased the weighting of the Equity Ownership Plan (EOP) to sharpen employees' focus on future shareholder value creation. The increased weighting of the EOP underlines our commitment to deliver attractive returns to our shareholders and employees alike. Secondly, we raised the forfeiture trigger level of the Deferred Contingent Capital Plan (DCCP) for the Group Executive Board (GEB), thereby significantly increasing the sensitivity of their compensation to a possible common equity tier 1 (CET1) capital ratio reduction.

We aim to foster a true culture of accountability at all levels of the firm. We strive to embed this core value into our daily actions including integrating safeguards on pay with appropriate governance oversight. To this end we made the following amendments to our compensation policies: we introduced a cap on the proportion of fixed to variable compensation for GEB members in addition to the cap of 2.5% of adjusted Group profit before tax for the GEB performance pool implemented a year ago. We now disclose in more detail the parameters we considered and how they were weighted in this year's GEB performance award assessment process.

Below GEB level, we established greater differentiation in the deferral rates of the performance awards at the individual level based on total compensation. While deferral rates have been reduced for some, improving market competitiveness, the marginal deferral rate at the higher end of the scale has been increased, placing more compensation at risk. Furthermore, we continue to take a strong stance on long-term accountability with our performance award plans. The lengths of our vesting periods are demanding compared with the industry, with plan durations of three to five years for the GEB and two to five years for employees below GEB level. These lengthy deferral periods are designed to ensure appropriate risk-taking.

In 2013, we increased profits and shareholder returns. Our business divisions posted strong results and were profitable in every quarter, demonstrating that our business model has the flexibility to deliver in a variety of market conditions. Our employees met the continued challenges affecting our industry with energy, determination and commitment, enabling us to deliver for both our clients and shareholders. While the performance of our businesses improved significantly during 2013 and we finished the year ahead of many of our targets, we remain fully committed to moderation in performance-related pay.

In 2013, adjusted Group profit before tax increased 44%. Reflecting the firm's strong performance, the Board of Directors (BoD) is recommending a 67% increase in the dividend for shareholders. By way of comparison, we took the decision to increase the overall perfor-

 G-307

mance award pool 28% to CHF 3.2 billion. The increase compared with 2012 also reflects the fact that a year ago we addressed issues of the past that weighed on our performance. This resulted in pay that was understandably at the lower end of the scale compared with the industry. While the performance award pool increased 28%, the actual recognized performance award expenses remained flat compared to 2012, reflecting the lower awards in recent years and the strong deferral component in our compensation plans.

Looking ahead, we will continue to assess and refine our compensation framework to promote sustainable performance, risk alignment and competitive pay positioning against the backdrop of increasing regulation and a changing business environment. We intend to strike and maintain a balance whereby we reward employees effectively and responsibly. To ensure our continued success, we need to attract and retain the best people to deliver sustainable performance for our shareholders. As part of our endeavors, we will remain responsive to our shareholders and seek out opportunities to engage with them on compensation matters.

As a result of the implementation of the Ordinance against excessive pay issued by the Swiss Federal Council, from 2015 onwards we will not only have an advisory vote on the compensation report, but will also seek shareholder approval on the compensation for the GEB and BoD. Revised Articles of Association, outlining the framework for the binding approval, will be presented at the upcoming Annual General Meeting (AGM). Furthermore, in accordance with the EU Capital Requirements Directive 2013, the BoD will propose, via a shareholder advisory vote, a cap of 2:1 for variable versus fixed compensation for UK-based employees whose professional activities could have a material impact on the firm's risk profile in the UK.

The BoD and I would like to offer our sincere thanks to our shareholders for the time they took to meet with us and share their views on compensation. Over the following pages you will find details of UBS's compensation programs and decisions for 2013, for which we will seek your support at our AGM in May 2014.

and Compensation Committee of
the Board of Directors

Ann F. Godbehere
Chair of the Human Resources and Compensation Committee of the Board of Directors

2013 performance and compensation funding

Our performance in 2013 demonstrated both the strength of our business model, which is designed to provide sustainable and attractive results with a much lower capital and risk profile, and the focused and disciplined manner in which we continue to implement our strategy. As a result, the performance award pool for 2013 was increased to CHF 3.2 billion, 28% higher than in 2012.

Our performance in 2013

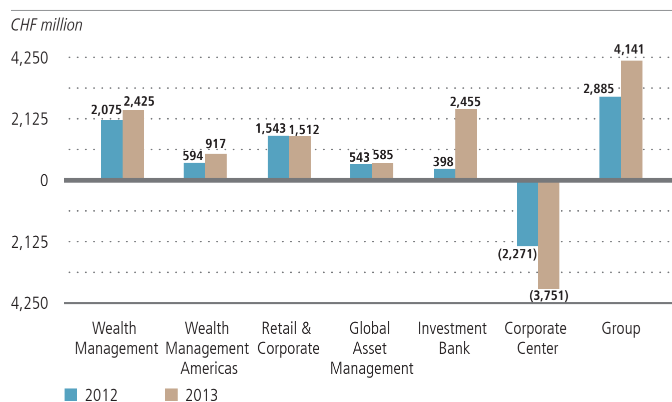
Overall for 2013, we reported an adjusted[1] Group profit before tax of CHF 4.1 billion, a net profit attributable to UBS shareholders of CHF 3.2 billion and diluted earnings per share of CHF 0.83.

In 2013, we further enhanced our position as one of the world's best-capitalized banks, exceeding our year-end capital target. On a fully applied basis our Basel III common equity tier 1 (CET1) capital ratio increased 300 bps to 12.8%, ahead of our 2013 target of 11.5%. We achieved this improvement primarily through reductions in fully applied risk-weighted assets (RWA) of CHF 33 billion to CHF 225 billion at year-end. Our capital strength gives us the flexibility to execute our strategy effectively. Additionally, it reinforces client confidence while allowing us to address the challenges of the past and to absorb unexpected events. We also continued to successfully deleverage our balance sheet, reducing total assets by CHF 250 billion. Our funding, liquidity and leverage ratios remain comfortably above our regulator's current requirements. In line with one of our strategic objectives to improve efficiency, during the year we surpassed our CHF 2 billion gross cost savings target announced in the second half of 2011, although substantial work remains to be done to achieve the gross cost savings targets we announced in 2012. As a result of our improved performance, the Board of Directors (BoD) is recommending a 67% increase in the dividend for shareholders for 2013 to CHF 0.25 per share. This is consistent with our commitment to progressive capital returns to our shareholders.

Summary of financial performance for 2013 and 2012

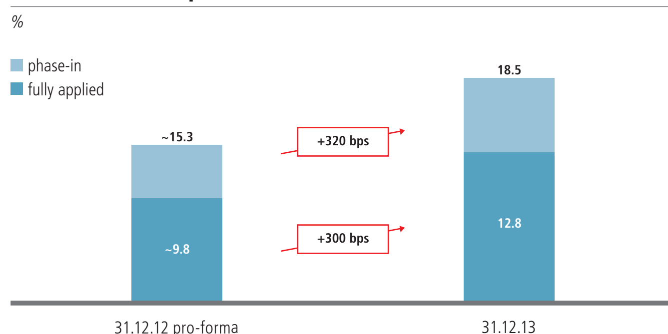
CHF billion	2013	2012
Operating profit / (loss) before tax as reported	**3.3**	(1.8)
Impairment of goodwill and other non-financial assets	0.0	3.1
Own credit	0.3	2.2
Net restructuring charges	0.8	0.4
Other	(0.2)	(1.0)
Operating profit / (loss) before tax (adjusted)[1]	**4.1**	2.9

Operating profit / (loss) before tax (adjusted)[1] for the Group and business divisions

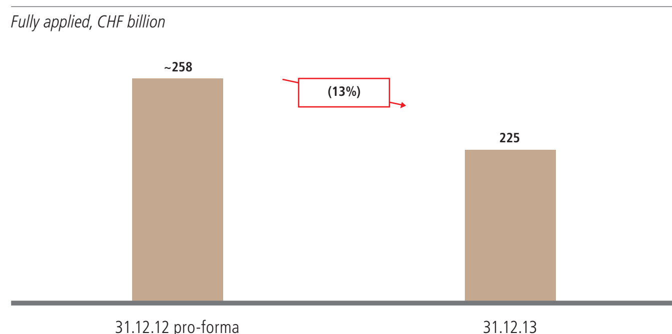


1 For 2013, adjusted operating profit / loss before tax excludes each of the following items, to the extent applicable, on a Group and business division level: an own credit loss of CHF 283 million, gains on sales of real estate of CHF 288 million, net losses of CHF 167 million related to the buyback of debt in public tender offers, net restructuring charges of CHF 772 million, a gain on sale of Global Asset Management's Canadian domestic business of CHF 34 million and a net gain on sale of remaining proprietary trading business of CHF 31 million. For 2012, the items we excluded were an own credit loss of CHF 2,202 million, gains on sales of real estate of CHF 112 million, net restructuring charges of CHF 371 million, a credit related to changes to the Swiss pension plan of CHF 730 million, a credit related to changes to our retiree benefit plans in the US of CHF 116 million and an impairment of goodwill and other non-financial assets of CHF 3,064 million. Refer to the "Group performance" section in our Annual Report 2013 for more information on adjusted results.

Basel III CET1 capital ratio



Basel III RWA



Corporate governance, responsibility and compensation

Our business divisions posted strong results for the year, demonstrating that our model has the flexibility to adapt and perform well in a variety of market conditions. Our success has given our clients even greater confidence in the firm. Net new money inflows into our wealth management businesses totaled CHF 54 billion for the year, an increase of 14% year on year. We were recognized as the largest and fastest growing large-scale wealth manager in the world[1]. Wealth Management Americas achieved new records with invested assets of USD 1 trillion[2], adjusted[3] profit before tax of USD 1 billion[4] and with revenue per financial advisor at over USD 1 million. Our Retail & Corporate business showed sustained profitability despite considerable pressure on net interest margins, and average client deposit volumes increased year on year. Global Asset Management recorded a stable performance in challenging markets with an 8% increase in adjusted[3] profit before tax, although it did experience net new money outflows, excluding money market flows, of almost CHF 5 billion. The Investment Bank delivered significantly higher adjusted[3] profit before tax of CHF 2.5 billion, achieving an adjusted[3] return on attributed equity of 31%, significantly above its target of greater than 15%. This was achieved while operating well within strict RWA and balance sheet targets. All business divisions operated within their cost/income ratio targets and focused on using resources efficiently. In the Corporate Center, profit before tax was negatively affected by continuing elevated charges for provisions for litigation, regulatory and similar matters primarily in Non-core and Legacy Portfolio, by negative treasury income and by restructuring charges. However, reduction of RWA in Non-core and Legacy Portfolio was ahead of our targets and was executed in a manner that protected shareholder value, allowing the Group to exceed its capital ratio target.

Performance award pool funding

Business performance is the basis of our compensation funding framework. We measure our performance in a variety of ways, including profitability, quality of earnings, contribution before performance award and economic contribution before performance award, which is a risk adjusted measure of performance. In addition to the key performance metric of risk-adjusted profitability, we use a number of criteria to assess the performance of each of our business divisions and Corporate Center. Examples include the following:

- In our wealth management businesses, we use criteria such as the level of net new money generated, cost/income ratio and gross margins.
- In Retail & Corporate, we consider factors such as net new business volume growth, net interest margin and cost/income ratio.
- In Global Asset Management, we use criteria such as net new money growth rate, gross margin and cost/income ratio.
- In the Investment Bank, we consider factors such as pre-tax return on attributed equity, cost/income ratio and capital utilization.
- For Corporate Center – Core Functions, we look at factors such as risk and capital management and cost reduction.
- For Corporate Center – Non-core and Legacy Portfolio, we consider RWA reductions and exit costs.

Certain risk-related objectives are common across all business divisions and Corporate Center, while others may vary. Risk-related objectives include, for example, adherence to risk investment guidelines, Group risk policies and value-at-risk limits, and the avoidance of significant operational risk events.

Each business division's performance award pool is accrued as a percentage of the pre-performance award pool profit. This figure is then risk adjusted by factoring in a risk capital charge as well as further considerations of relevant risk metrics. The percentage is further affected by items such as changes in performance during the year, quality of earnings, affordability and market positioning. The percentage increases or decreases as performance declines or improves. If a business division's profits increase, the proportion of profits we allocate to pay performance awards is generally reduced. In good years, this helps to prevent excessive compensation and allows us to return more capital to shareholders. In lean years, it provides us with the flexibility to make adequate provisions to retain key employees. For the purposes of performance award pool funding, business division performance is adjusted for items which do not reflect their underlying performance, such as gains related to divestments or sales of real estate, restructuring charges and gains or losses on own credit.

We assess the performance of the Group using criteria such as risk-adjusted profits, performance relative to the industry and general market competitiveness. We also consider progress against our strategic initiatives, including risk-weighted asset reduction, balance sheet reduction, delivery of cost efficiencies and capital accretion. We look at the firm's risk profile and culture, including the extent to which operational risks and audit issues are identified and resolved and the quality and success of the firm's risk reduction initiatives.

In determining performance award funding at all levels we take the following key risks into account, as applicable: credit, market, liquidity, funding, operational, including legal and compliance, and reputational risk. We consider as well the number of operational risks and audit recommendations that are effectively resolved.

The Human Resources and Compensation Committee (HRCC) monitors the forecasted full-year performance award pool on a regular basis. This includes a regular review of year-to-date accruals to ensure alignment to the overall performance of the firm and taking account of the competitive environment.

At the end of each year, the Group CEO, after consultation with the business division CEOs, develops the final performance award pool recommendation for the year. If the Group CEO believes that a business division's performance award pool does not properly reflect its achievements, the Group CEO can recommend a change to

1 Scorpio Partnership Private Banking Benchmark 2013, based on 2012 data for banks with assets under management of over USD 500 billion. 2 Invested assets of USD 970 billion. 3 Refer to the chart "Operating profit/(loss) before tax (adjusted) for the Group and business divisions" on the previous page for details on adjusted results. 4 Full year adjusted profit before tax of USD 991 million.

the size of the pool. The proposal is then submitted to the HRCC for consideration.

The HRCC considers all recommendations in the context of the firm's overall performance, capital strength and risk profile, market positioning and trends of the businesses and geographies in which we operate. The HRCC ensures recommendations are in line with our strategy and the philosophy and objectives embodied in our Total Reward Principles to create sustainable shareholder value. The HRCC can either accept the Group CEO's proposal, or adjust it either downwards or upwards before submitting it to the BoD for final approval.

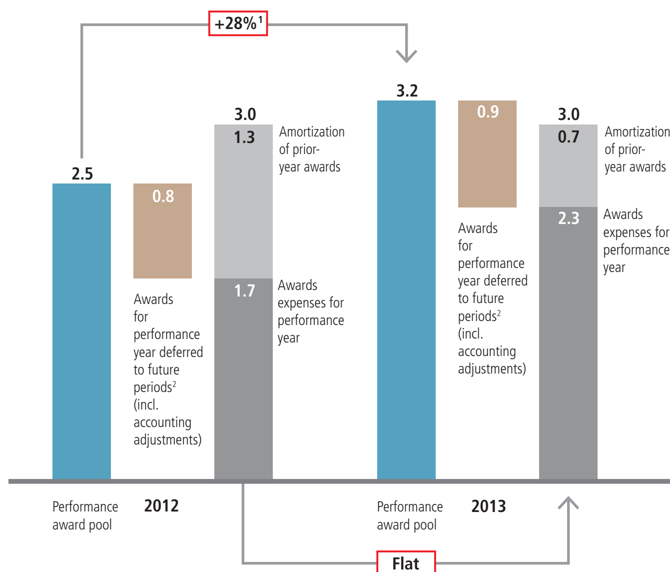
2013 performance award pool and expenses

The performance award pool for 2013 was CHF 3.2 billion, an increase of CHF 0.7 billion, or 28%, compared with 2012. The pool reflects our overall increased profitability, the quality of earnings, and our progress towards achieving our strategic objectives. Our 2012 performance award pool was significantly affected by the LIBOR matter, negatively impacting awards in the Investment Bank, some areas of the Corporate Center as well as the awards to the GEB including the Group CEO. In 2013, we finished the year ahead of many of our strategic and financial targets. We normalized performance award levels in areas negatively affected last year and reduced gaps to market pay levels in light of our absolute and relative achievements. Our achievements in 2013 and the proposed increase in distributions to our shareholders illustrate the continuing shift in the relationship between compensation, capital and dividends. The performance award pool includes all discretionary, performance-based variable awards for 2013.

The "Performance award expenses" chart below compares the performance award pool with the performance award expenses for the financial year 2013. Performance award expenses remained flat at CHF 3.0 billion and included expenses related to 2013 compensation awards and amortized expenses related to awards made in prior years. The 2013 expenses reflected increases for current year performance awards, offset by decreased amortized expenses from prior years' awards.

Performance award expenses

CHF billion



1 Excluding add-ons such as social security. 2 Estimate. The actual amount to be expensed in future periods may vary, for example due to forfeitures.

Corporate governance, responsibility and compensation

2013 compensation for the Group CEO and the other Group Executive Board members

Group Executive Board (GEB) awards are made at the discretion of the Board of Directors (BoD). The BoD takes into account the overall performance of the Group and the available performance award pool funding. For GEB members in office for 2013, performance awards were up 20% year on year, whereas the overall performance award pool for all employees increased 28%.

Key features of our 2013 compensation framework for the Group Chief Executive Officer (Group CEO) and the other members of the GEB

Pay for performance

The Human Resources and Compensation Committee (HRCC) reviews the performance of our Group CEO and other GEB members against the Group's performance targets. The GEB's performance awards are based on financial and non-financial performance measures and consider performance of the individual and the Group overall.

– In 2013, the Group CEO / GEB performance scorecard was introduced. This is based on a set of financial and qualitative measures, and provides a framework for a balanced assessment. Group level, business division, regional, functional and qualitative performance measures are included in combination, depending on the individual GEB member's remit

– Compensation plan forfeiture provisions enable the firm to reduce the unvested deferred portion if the compensation plans' relevant performance conditions are not achieved. This means

  – the vesting of EOP awards depends on both Group and divisional performance

  – DCCP awards only vest in full if the firm delivers an adjusted profit before tax and our phase-in common equity tier 1 (CET1) capital ratio does not fall below 10%. This is a higher threshold than the 7% CET1 capital ratio trigger applicable in 2012. Like last year, annual interest is only paid if UBS achieves an adjusted profit before tax during the vesting period

Safeguards

Our compensation framework contains a number of features designed to ensure that risk is appropriately managed with safeguards to limit inappropriate risk-taking. Our framework has

– a balanced mix of shorter-term and longer-term performance awards with a focus on deferral

– a cap on the total GEB performance award pool of up to 2.5% of adjusted Group profit before tax

– individual caps on the proportion of fixed to variable pay for the Group CEO and other GEB members

– a share ownership policy under which each GEB member must build up and hold a minimum of 350,000 shares. The Group CEO must build up and hold a minimum of 500,000 shares

– an evaluation of the risk control effectiveness and adherence of each GEB member as part of their individual qualitative assessment

– employment contracts that generally include a six-month notice period

– provisions that enable the firm to trigger forfeiture of some, or all, of the unvested deferred performance award if an employee commits certain harmful acts or employment is terminated for cause. Generally, we regard the following as harmful acts:

  – contributing substantially to a significant downward restatement of the Group's or a business division's results, or to the Group incurring significant financial losses

  – engaging in conduct and / or failing to discharge supervisory or managerial responsibilities that results in detriment to UBS, including reputational harm

  – engaging in conduct that materially violates legal and regulatory requirements or internal policies and procedures

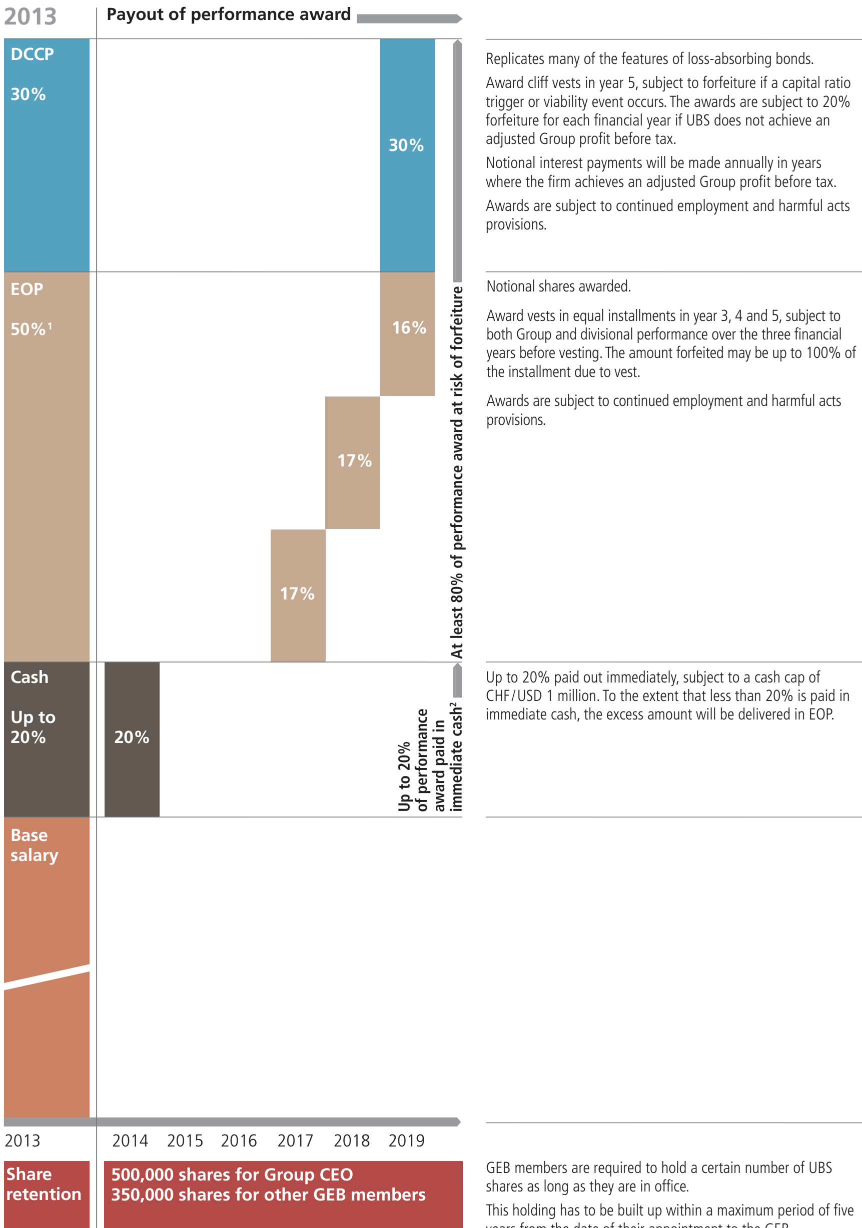
  – improperly disclosing confidential or proprietary information

  – soliciting UBS employees or clients

2013 compensation framework for GEB members

Of the annual performance award up to 20% is paid in the form of immediate cash, and 80% is paid as a longer-term performance award, with 50% paid in deferred equity and the remaining 30% in deferred notional bonds.

Illustrative example



Replicates many of the features of loss-absorbing bonds.

Award cliff vests in year 5, subject to forfeiture if a capital ratio trigger or viability event occurs. The awards are subject to 20% forfeiture for each financial year if UBS does not achieve an adjusted Group profit before tax.

Notional interest payments will be made annually in years where the firm achieves an adjusted Group profit before tax.

Awards are subject to continued employment and harmful acts provisions.

Notional shares awarded.

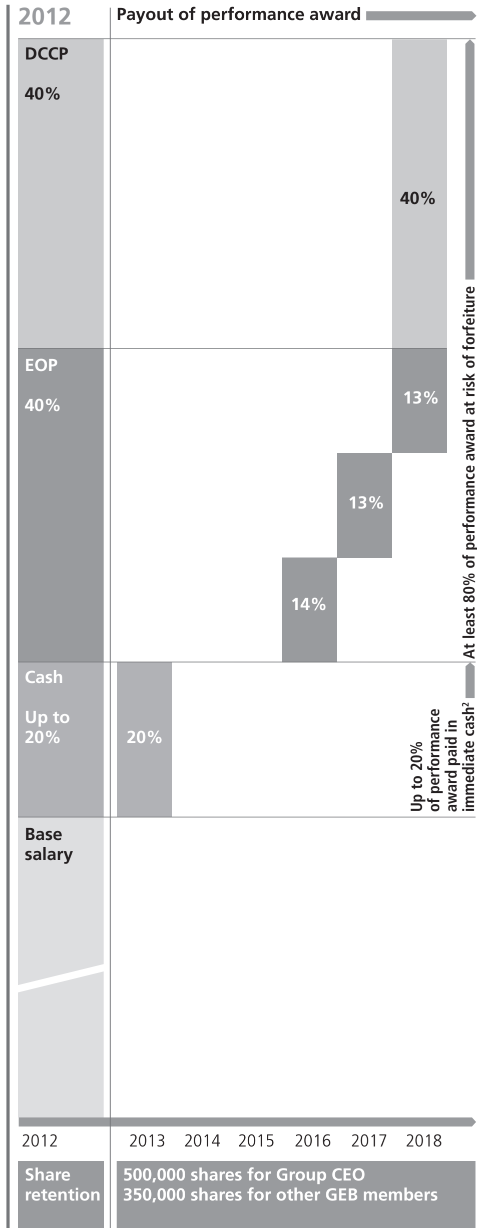
Award vests in equal installments in year 3, 4 and 5, subject to both Group and divisional performance over the three financial years before vesting. The amount forfeited may be up to 100% of the installment due to vest.

Awards are subject to continued employment and harmful acts provisions.

Up to 20% paid out immediately, subject to a cash cap of CHF/USD 1 million. To the extent that less than 20% is paid in immediate cash, the excess amount will be delivered in EOP.

GEB members are required to hold a certain number of UBS shares as long as they are in office.

This holding has to be built up within a maximum period of five years from the date of their appointment to the GEB.



1 At least 50% of the performance award is granted under EOP. 2 UK Code Staff receive 50% in the form of blocked shares.

Base salary

Each GEB member receives a fixed base salary, which is reviewed annually by the HRCC. GEB salaries, excluding the Group CEO, were unchanged from CHF 1.5 million (or currency equivalent), which was set by the BoD in early 2011. Since his appointment, the Group CEO's base salary was set at CHF 2.5 million.

Pensions and benefits

Pensions contributions and benefits for GEB members are in line with local practices for other employees.

➔ Refer to "Note 28 Pension and other post-employment benefit plans" in the "Financial information" section of our Annual Report 2013 for details on the various major post-employment benefit plans established in Switzerland and other countries

How we set variable compensation levels for our Group CEO and other GEB members – performance scorecard assessment

The Group CEO and other GEB members are eligible to receive an annual performance award at the full discretion of the BoD. In 2013, we enhanced our performance assessment approach based on a balanced scorecard. We assess an individual's performance against a number of financial and qualitative key performance indicators (KPI).

The financial factors determining the Group CEO's annual discretionary performance award are based on Group performance. For other GEB members, the financial criteria are split between Group performance and that of their relevant business division (BD) and/or region. Those who lead Group control functions, or who are solely regional CEOs, are assessed based on the perfor-

Overview of the quantitative and qualitative measures on which the performance scorecard is based

Quantitative measures (65% weighting)	Qualitative measures (35% weighting)
The quantitative factors are aligned with the Group's strategic plan. They are mainly based on the Group measures, supplemented with business division, regional or functional KPI for business division, regional or Corporate Center GEB members, and include the following: – Group return on equity (as reported) – adjusted Group profit before tax – fully applied common equity tier 1 (CET1) capital ratio – business division and/or regional KPI (if applicable) – functional KPI (for Corporate Center GEB members) Both regional and functional KPI may consist of some qualitative measures.	The qualitative factors assess how effective the Group CEO/GEB member is in respect of the following: – clients – evaluates how effective the individual is in increasing client satisfaction and maintaining high levels of satisfaction over the long term. This includes promoting cross-business division collaboration and fostering the delivery of the whole bank to our clients – people and culture – assesses the extent to which the individual actively develops successors for the most senior positions, facilitates talent mobility within the firm and promotes a diverse and inclusive workforce. Furthermore, this measure evaluates the individual's ability to reinforce a culture of accountability and responsibility, demonstrating our commitment to being a responsible corporate citizen and acting with integrity in all our interactions with our stakeholders – risk control – evaluates how effective the individual is in ensuring risk management and control principles are fully implemented and adhered to through an effective risk management and control framework. It also captures the degree to which risks are self-identified – regulatory compliance – focuses on the individual's success in ensuring regulatory compliance with the various regulatory frameworks in which we operate. It also evaluates how well the individual helps shape the firm's relationships with regulators through ongoing dialogue – execution effectiveness – assesses how the individual contributes to the development and execution of our strategy. The measure also looks to ensure there is success across all business lines, functions and regions, as applicable, through specific objectives, initiatives, timeframes and metrics – brand and reputation – assesses the individual's protection of our reputation and full compliance with our standards and principles, particularly our Code of Business Conduct and Ethics

Weightings of financial and qualitative measures

in %	Group CEO	BD / Regional CEO	Functional heads
Key performance indicators (KPI)		Weighting	
Group RoE, adjusted Group profit before tax and Basel III CET1 ratio (fully applied)	65	35	45
Business division / regional KPI		30	
Functional KPI			20
Financial	**65**	**65**	**65**
Qualitative	**35**	**35**	**35**
Total	**100**	**100**	**100**

mance of the Group and of the functions or of the regions they may oversee. Quantitative factors, such as business division financial, regional and functional measures, account for 65% and qualitative factors for 35% of the assessment. The qualitative factors considered are the same for the Group CEO and other GEB members.

The table above provides an overview of the quantitative and qualitative KPI on which the scorecard is based.

The weighting of the quantitative factors between Group, business division, regional and functional KPI varies depending on the GEB member's role, with a significant weighting on Group KPI for all GEB members.

The degree of achievement of these financial measures, coupled with the assessment of performance against the qualitative measures, gives an overall score that determines the starting point for a GEB member's annual performance award. Target total compensation is reviewed against the market value of the respective role. Scoring at target would generally result in a total compensation around the median of the industry peer group. Where the performance is below target, the score is reduced (and can be 0%), which then results in a total compensation below market median. If the performance exceeds the target, the score increases, resulting in a total compensation that can be above market median. While this method represents a more formulaic approach than in the past, it is not intended to be mechanical. The HRCC does not abdicate its responsibility to exercise sound judgment and applies an appropriate level of discretion that may result in the outcome of the above scorecard or compensation level being adjusted upwards or downwards by up to 20%. The HRCC's final compensation recommendations for GEB members are based on the scorecards, the assessment against each individual's market value for the role and the CEO's overall recommendation, excluding his own performance award. The HRCC's recommendations are then reviewed, and must be approved by the BoD, which retains full discretion in determining the variable compensation levels for GEB members and may decide not to grant any performance awards. The HRCC and BoD go through a similar process in setting the compensation for the Group CEO.

Caps

The total potential GEB performance award pool is capped at 2.5% of the firm's adjusted Group profit before tax, thereby linking overall GEB compensation to the firm's profitability. As the Group's adjusted profit before tax for 2013 was CHF 4.141 billion, the GEB 2013 performance award pool was capped at CHF 104 million.

The actual total performance award pool for 2013 was CHF 63 million, representing 1.5% (in 2012: CHF 52 million or 1.8%) of the Group's adjusted profit before tax. Furthermore, 100% of a GEB member's deferred compensation is subject to performance conditions.

For 2013, we also introduced individual compensation caps on the proportion of fixed pay to variable pay. The Group CEO's performance award is capped at five times base salary. Performance awards of other GEB members are capped at seven times base salary.

For 2013, GEB member and Group CEO performance awards were, on average, 3.7 times the base salary (2012: 3.2 times).

Benchmarking against peers

The HRCC reviews GEB compensation and benefits levels against those of a peer group of companies selected based on the comparability of their size, business mix, geographic mix, and the extent to which they are our competitors for talent. The HRCC also considers the practices of these peers that may influence their pay strategies and pay levels and their respective regulatory environments.

Year-on-year consistency of the peer group is considered an important element by the HRCC. In 2013, it reviewed our peer group and determined it remained appropriate. The group consists of the following 12 companies: Bank of America, Barclays, BNP Paribas, Citigroup, Credit Suisse, Deutsche Bank, Goldman Sachs, HSBC, JP Morgan Chase, Julius Baer, Morgan Stanley and Nomura.

Overall, total compensation of GEB members is targeted at the median of the industry peer group, adjusted for individual and Group performance.

Comparability assessment against main peers

Benchmarking ensures that our executive compensation is appropriate relative to our industry peer group. The key benchmarking criteria are summarized in the following table.

Firm	Size[1]	Business mix[2]	Geographic mix[3]	Competitors for talent[4]	HQ location: regulatory[5]	HQ location: geography[6]
Bank of America	○	◐	○	●	◐	◐
Barclays	◐	◐	●	●	◐	◐
BNP Paribas	◐	○	◐	◐	○	◐
Citigroup	○	○	◐	●	◐	◐
Credit Suisse	●	●	●	●	●	●
Deutsche Bank	●	●	◐	●	◐	●
Goldman Sachs	◐	○	◐	◐	◐	○
HSBC	○	○	◐	●	◐	◐
JP Morgan Chase	○	○	○	●	◐	◐
Julius Baer	○	○	○	◐	●	●
Morgan Stanley	●	●	◐	●	◐	◐
Nomura	○	◐	○	◐	◐	○

○ Less comparable ◐ Moderately comparable ● Comparable

1 Size: evaluated in terms of revenue, profitability, assets and employee size. This would potentially impact management complexity outside of the impact of product mix and geography. 2 Business mix: in terms of type and size of major businesses. This would impact pay strategy, pay levels and approach and, importantly, risk profile. 3 Geographic mix: evaluated not only in terms of mix, but also from a European Headquarters (HQ) perspective. This impacts executive role definition and management complexity. 4 Competitors for talent: firms from which UBS recruits and / or firms which recruit from UBS. 5 HQ location / regulatory: impact of the regulatory environment based on home regulator. 6 HQ location / geography: culture and practice that impacts pay strategy, levels.

2013 deferral of performance awards

In line with our focus on generating sustainable performance, at least 80% of a GEB member's performance award is deferred. In 2012, in light of the firm's overall results for the year, and, based on a recommendation from the Group CEO, 100% of the GEB's 2012 performance award was deferred.

For 2013, a minimum of 50% of the overall performance award is awarded under the Equity Ownership Plan (EOP), a longer-term performance award. EOP awards vest in three equal installments from years three to five, subject to performance conditions being met.

Thirty percent of the overall performance award is awarded under the Deferred Contingent Capital Plan (DCCP), another longer-term performance award which vests only in year five. Notional interest is paid for each year provided the firm achieves an adjusted Group profit before tax for that year. In addition to a phase-in CET1 capital ratio trigger of 10%, DCCP awards are subject to an additional performance condition. If UBS does not achieve an adjusted Group profit before tax for any year during the vesting period, GEB members forfeit 20% of the award for each loss-making year. This means 100% of the award is subject to an additional risk of forfeiture in addition to the capital ratio trigger.

For each GEB member a maximum of 20% of the overall performance award can be paid out in the form of immediate cash, subject to a cap of CHF/USD 1 million (or currency equivalent). Any amount above this is paid in notional shares under the EOP. In addition, for GEB members considered "UK Code Staff" for the year 2013, 50% of any immediate cash must be delivered in vested shares which are blocked until 1 September 2014, and each EOP installment vesting on 1 March will be blocked for a further six months.

The average deferral period for deferred awards for GEB members in 2013 was 4.4 years. Our compensation plans have no upward leverage, such as multiplier factors, and therefore do not encourage excessive risk-taking.

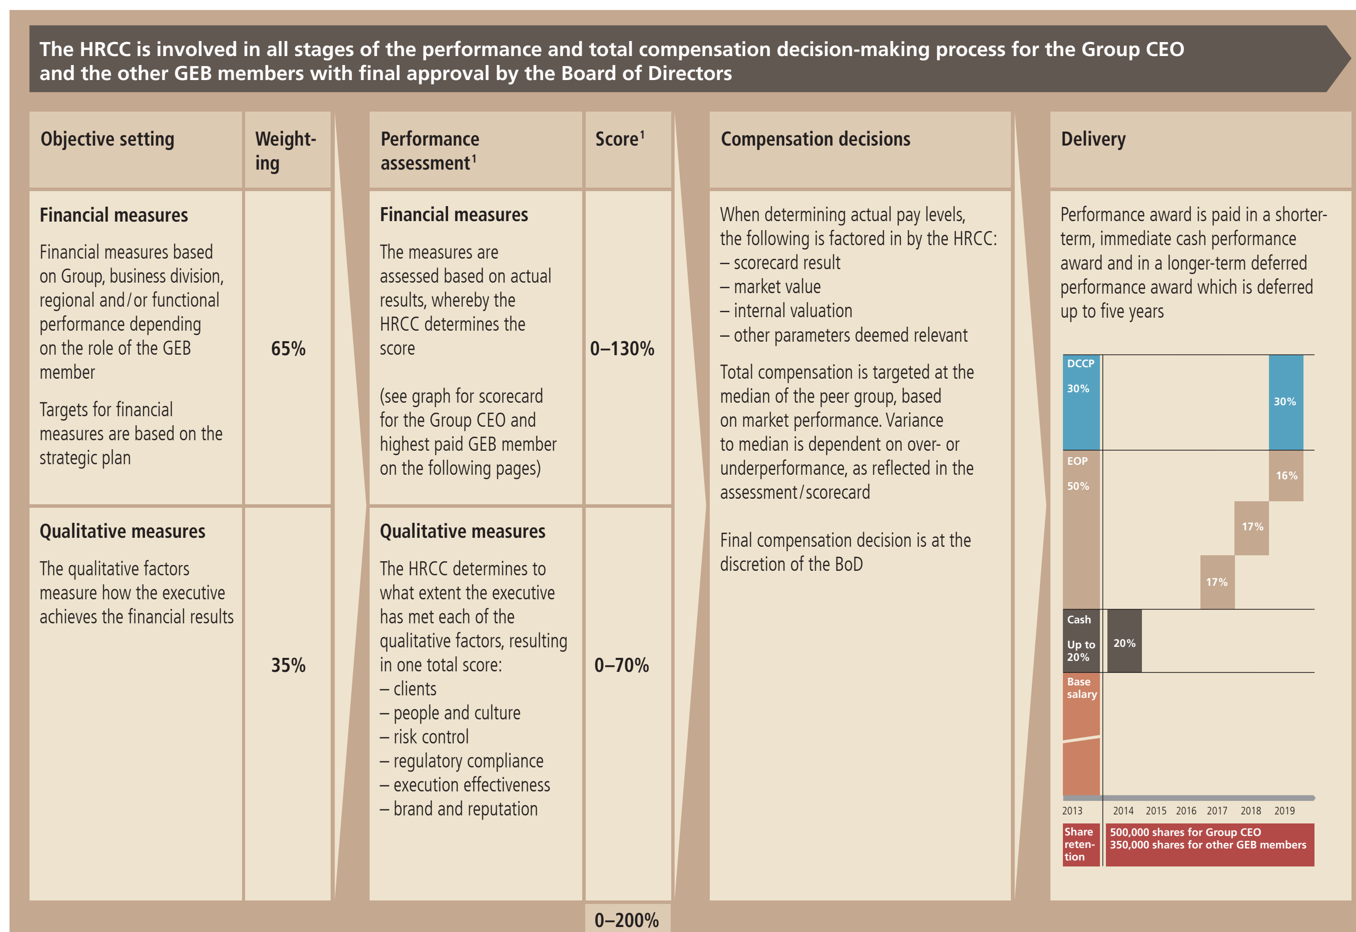
➔ Refer to the "Our deferred variable compensation plans" section of this report for more information

➔ Refer to the "Our compensation model for employees other than GEB members" section of this report for more information on UK Code Staff

Share ownership requirements

We aim to align GEB members' interests with those of our shareholders. To ensure GEB members remain focused on the longer-term success of the firm, we require the Group CEO to hold a

Overview of compensation process for the Group CEO and the other GEB members



1 The HRCC has the discretion to adjust the scoring/compensation level up- or downward by a maximum of 20%. Use of this discretion is still bounded by the defined total compensation caps.

minimum of 500,000 UBS shares and the other GEB members to hold a minimum of 350,000 UBS shares. These shareholdings must be built up within five years from the date a GEB member is appointed and must be retained for as long as they remain in office. The number of UBS shares held by each GEB member is determined by adding any vested or unvested shares to privately held shares. GEB members are not permitted to sell their UBS shares until the abovementioned thresholds have been reached. As of the end of 2013, all GEB members who have been in office for at least five years achieved their required share ownership levels.

Overview of GEB compensation determination process

The illustration above provides an overview of how GEB compensation is determined under the governance and oversight of the HRCC and the BoD.

2013 compensation

The performance awards of the Group CEO and each other member of the GEB are based on the achievement of both financial targets and qualitative performance objectives, as described earlier in this section.

As part of Mr. Ermotti's performance assessment, a 65% weighting was accorded to Group financial performance, and 35% was accorded to his performance against the qualitative criteria. In the case of Mr. Orcel (the highest paid GEB member for 2013), a 35% weighting was accorded to Group financial performance, 30% to Investment Bank performance and 35% to qualitative criteria.

A "Target score achievement" on the overall balanced scorecard supports market median level compensation.

G-317

2013 compensation for the Group Chief Executive Officer

The table below summarizes the factors on which Mr. Ermotti's performance was assessed as Group CEO for 2013 by the HRCC in consultation with the Chairman.

The BoD recognized that under Mr. Ermotti's leadership, Group financial performance for 2013 was strong and was driven by progress towards the successful implementation of the firm's ambitious strategy – a strategy focused on sustainable performance, best-in-class capital ratios, and vigilance on operational risk and on effectiveness and efficiency. In terms of the Group financial targets, the firm delivered significantly increased adjusted Group profit before tax, up 44% compared with the prior year. The Group also achieved an increased return on equity, up significantly on 2012. The firm's share price development in 2013 also reflected investor confidence in the firm's progress and future success.

Additionally, UBS further enhanced its position as one of the world's best-capitalized banks, exceeding its year-end capital ratio targets. The firm surpassed its Basel III risk-weighted assets reduction target for the year and also continued to successfully deleverage its balance sheet. The firm's Basel III funding, liquidity and leverage ratios remained comfortably above regulatory requirements in 2013.

UBS's business divisions posted strong results for the year and were profitable in every quarter. The firm's success continued to give clients great confidence in UBS's strategy. This was demonstrated by net new money inflows into the firm's wealth management businesses, which increased by 14% year-on-year to CHF 54 billion.

Against the qualitative criteria, the BoD considered Mr. Ermotti's successes in promoting a Group-wide initiative to embed the firm's principles of client focus, excellence and sustainable performance further into the fabric of the firm. This effort will be key to ensuring the right behaviors and culture which will be essential to supporting UBS's success going forward. The assessment also recognized his consistent focus on protecting and improving the firm's reputation, and the clear improvement in the firm's standing with its key regulators.

In addition to the strategic, financial and qualitative accomplishments noted above, the BoD also recognized the positive impact that Mr. Ermotti had in effectively addressing operational risk remediation requirements and also resolving a number of key legal matters from the past.

Reflecting his achievements and strong performance in 2013, the BoD approved the proposal from the HRCC to grant Mr. Ermotti a performance award of CHF 7.9 million, bringing his total compensation (excluding benefits and contributions to retirement benefit plan) for the year to CHF 10.4 million. Based on the compensation framework, he received 13% of his performance award in cash CHF 1.0 million. The remaining 87% of his performance award was deferred under EOP (57% of his performance award) and under DCCP (30% of his performance award). The future actual pay-outs under EOP and DCCP are dependent upon the firm's forthcoming performance, as described earlier in this section.

Scorecard for the Group CEO

2013 compensation for the highest paid GEB member

Andrea Orcel, the CEO of the Investment Bank, was the highest-paid GEB member for performance year 2013. The financial performance results and qualitative achievement assessment of Mr. Orcel as determined by the Group CEO are summarized in the table below. The HRCC and the BoD supported the overall assessment.

During his first full year as CEO of the Investment Bank, Mr. Orcel proved himself an effective leader and drove positive performance throughout a very successful year for the business. Mr. Orcel executed a fundamental turnaround in the Investment Bank's performance in 2013. He guided the business and its employees through a period of intense and sometimes challenging transformation following the announcement of the acceleration of the implementation of the firm's strategy in late 2012. In 2013, a more client-focused, less complex, and less risky Investment Bank delivered significantly higher profitability and outperformed on all its targets. The business achieved an adjusted profit before tax of CHF 2.5 billion for the year. It delivered an adjusted return on attributed equity of 30.6%, significantly above its 2013 target. It operated successfully below its relatively restrictive risk-weighted asset and funded asset targets. The Investment Bank remained highly focused on using its resources effectively and efficiently and achieved its cost / income ratio target for the year.

The Investment Bank reinforced its position among the global market leaders in its core businesses of advisory, research, equities, foreign exchange and precious metals. Further, Rates and Credit has transformed into a successful client-centric and capital-light business with a strong focus on improved IT effectiveness which has also led to best-in-class execution. The Investment Bank's turnaround performance was recognized with numerous industry awards, and most importantly, was applauded by clients. In line with the firm's strategy, the Investment Bank continued to work in close collaboration with all the firm's other businesses, in particular its wealth management businesses, to deliver the best of UBS to clients and drive sustainable returns for the benefit of UBS's shareholders.

In judging his achievements in relation to qualitative factors, the Group CEO considered that Mr. Orcel displayed a strong focus on ensuring the business delivered on the firm's principles of excellence, client focus and sustainable performance, and his consistent promotion of the highest standards of employee conduct and behavior whilst at the same time addressing issues from the past.

Reflecting his significant achievements and strong performance in 2013, the BoD approved the proposal from the Group CEO and the HRCC to grant Mr. Orcel a performance award of CHF 9.0 million, bringing his total compensation (excluding benefits and contributions to retirement benefit plan) for the year to CHF 10.5 million. 89% of his performance award was deferred, with 59% under EOP and 30% under DCCP.

Total compensation for GEB members for the performance years 2013 and 2012

The table below shows the total compensation for GEB members for the performance years 2013 and 2012.

➔ **Refer to the "Supplemental information" section of this report and "Note 34 Related parties" in the "Financial information" section of our Annual Report 2013 for information on vested and unvested shares and options for GEB members**

Employment contracts

Employment contracts for GEB members do not provide for "golden parachutes," that is, special severance terms, including supplementary contributions to pension plans. All employment contracts for GEB members contain a notice period of six months, except for one which contains a 12-month notice period. If a GEB member leaves the firm before the end of a performance year they may be considered for a discretionary performance award based on their contribution during the time worked in that performance year following the principles outlined above. Such awards are at the full discretion of the BoD, which may decide not to grant any awards.

	2012	16,273,460	0	31,355,592	20,903,728	640,683	1,233,719	70,407,181
Aggregate of all GEB members who stepped down during the year[8]	2013	0	0	0	0	0	0	0
	2012	1,593,288	0	0	0	105,865	14,799	1,713,952

1 Local currencies are converted into CHF using the exchange rates as detailed in "Note 36 Currency translation rates" in the "Financial information" section of our Annual Report 2013. 2 Under the 2013 compensation framework, 20% is paid out in immediate cash, subject to a cash cap of CHF / USD 1 million. Due to applicable UK Prudential Regulation Authority regulations, the immediate cash includes blocked shares for Andrea Orcel. For the performance year 2012, no immediate cash was paid. 3 For EOP awards for the performance years 2013 and 2012, the number of shares allocated at grant has been determined by dividing the amount communicated by CHF 18.60 and USD 20.88 (for notional shares) for 2013, and by CHF 15.014 and USD 15.868 (for actual shares) and by CHF 13.97 and USD 14.77 (for notional shares) for 2012, based on the average price of UBS shares over the ten trading days prior to and including the grant date (28 February 2014 and 15 March 2013 respectively). For notional shares granted under EOP 2012 the number of notional shares has been adjusted for the estimated value of dividends paid on UBS shares over the vesting period. 4 DCCP awards vest after the five-year vesting period. The amount reflects the amount of the notional bond excluding future notional interest. For DCCP awards for the performance year 2013, the notional interest rate is set at 5.125% for awards denominated in USD and 3.500% for awards denominated in CHF. For DCCP awards for the performance year 2012, the notional interest rate is set at 6.25% for awards denominated in USD and 5.40% for awards denominated in CHF. 5 Benefits are all valued at market price. 6 This figure excludes the mandatory employer's social security contributions, but includes the portion related to the employer's contribution to the statutory pension scheme. The employee contribution is included in the base salary and annual incentive award components. 7 11 GEB members were in office on 31 December 2013 and on 31 December 2012 respectively. 8 2012 includes three months in office as a GEB member for Alexander Wilmot-Sitwell and 10 months in office as a GEB member for Carsten Kengeter.

Fixed and variable compensation for GEB members[1]

	Total for the year ended 2013		Not deferred		Deferred[2]		Total for the year ended 2012[3]

1 This table includes all vested and unvested shares and options of GEB members, including related parties. 2 Includes shares granted under variable compensation plans with forfeiture provisions. The actual number of shares vesting in the future will be calculated under the terms of the plans. Refer to the "Deferred variable compensation plans" section in this report for more information on the plans. 3 Refer to "Note 29 Equity participation and other compensation plans" in the "Financial information" section of our Annual Report 2013 for more information. 4 No conversion rights are outstanding.

2013 compensation for the Board of Directors

Members of the Board of Directors (BoD) receive fixed fees for their services, of which 50% is paid in blocked UBS shares unless they elect to receive 100% in blocked UBS shares. The BoD members do not receive variable compensation. This reinforces their focus on long-term strategy, supervision and governance. It also helps them to remain independent of the firm's senior management. The Chairman, as a non-independent BoD member, receives an annual base salary, UBS blocked shares and benefits.

Chairman of the BoD

Our compensation framework provides for the Chairman of the BoD, Axel A. Weber, to receive an annual base salary of CHF 2 million and 200,000 UBS shares, blocked from distribution for four years, as well as benefits. The shares are not designed or intended as variable compensation. The value of the 200,000 UBS shares awarded for 2013 was CHF 3,720,000. Accordingly, his total compensation, including benefits and pension fund contributions for his services as Chairman from January to December 2013 was CHF 6,069,516.

This share component ensures that the Chairman's pay is aligned with the longer-term performance of the firm. The Chairman's employment agreement does not provide for special severance terms, including supplementary contributions to pension plans. Benefits for the Chairman are in line with local practices for other employees. Determining the Chairman's compensation is the responsibility of the Human Resources and Compensation Committee (HRCC), which conducts an annual assessment and takes into consideration fee and/or compensation levels for comparable roles outside of UBS.

Given the continued improvements in our share price since the inception of our compensation framework for the chairman role in 2009, the HRCC has, in agreement with the Chairman, revisited the framework for 2014 and decided to limit the upside and cap the Chairman's total compensation at the current level of CHF 5.7 million. Following market practice for company chairmen, we have implemented a pay mix shift where a larger part of the Chairman's compensation will be paid in cash (currently foreseen to be approximately 60%). The balance of the overall compensation will be delivered in UBS shares which will continue to be blocked from distribution for four years.

Independent BoD members

With the exception of the Chairman, all BoD members are deemed to be independent directors and receive fixed base fees for their services, with 50% of their fees in cash and the other 50% in blocked UBS shares that are restricted from sale for four years. Alternatively, they may choose to have 100% of their remuneration paid in blocked UBS shares. In all cases, the number of shares that independent directors are entitled to receive is calculated using a discount of 15% below the prevailing market price at the time of issuance. In addition to the base fee, independent BoD members receive fees known as committee retainers that reflect their workload in serving on the firm's various board committees. The Senior Independent Director and the Vice Chairman of the BoD each receive an additional payment of CHF 250,000. In accordance with their role, independent BoD members do not receive performance awards, severance payments or benefits. Base fees, committee retainers and any other payments received by independent BoD members are subject to an annual review: a proposal is submitted by the Chairman of the BoD to the HRCC, which then submits a recommendation to the BoD for final approval.

The "Remuneration details and additional information for independent BoD members" table on the following page shows the remuneration received by independent BoD members between the 2013 and 2014 Annual General Meetings of Shareholders (AGM). Fees have remained unchanged during this period, and have been kept largely at the same level since 1998. Remuneration levels for BoD members, other than the Chairman, ranged from CHF 375,000 to CHF 1,075,000. Total remuneration for the independent BoD members for the period between the 2013 and 2014 AGMs was CHF 7.6 million, which was flat compared with the prior period.

In accordance with normal practice, two BoD members chose to receive 100% of their fees, less applicable deductions, in UBS shares.

Loans

Loans to independent members are made in the ordinary course of business at general market conditions. Loans to non-independent members are made in the ordinary course of business on substantially the same terms as those granted to other employees, including interest rates and collateral, and do not involve more than the normal risk of collectability or contain other unfavorable features.

➔ **Refer to the "Supplemental information" section of this report and "Note 34 Related parties" in the "Financial information" section of our Annual Report 2013 for information on loans granted to current and former BoD members**

1 Local currencies are converted into CHF using the exchange rates as detailed in "Note 36 Currency translation rates" in the "Financial information" section of our Annual Report 2013. 2 Axel A. Weber was the only non-independent member in office on 31 December 2013 and on 31 December 2012 respectively. Kaspar Villiger did not stand for re-election at the AGM on 3 May 2012. 3 Benefits are all valued at market price. 4 This figure excludes the mandatory employer's social security contributions, but includes the portion related to the employer's contribution to the statutory pension scheme. The employee contribution is included in the base salary and annual incentive award components. 5 These shares are blocked for four years.
